Commerford, John (*fl* 1830–1874). Labor leader. In 1830 he supported the New York Working Men's Party, and shortly thereafter, he was elected president of the New York Chairmakers' and Gilders' Union Society. He represented the 15th ward of the city when he joined the committee of New York Workingmen Opposed to Paper Money and Banking and to All Licensed Monopolies. In 1834 the Chairmakers' Society elected him its representative to the National Trades' Union, where he served as secretary and treasurer. In the mid-1830s he agitated for prison labor reform in New York City, involved himself in Democratic politics, and joined the Locofoco movement, a radical branch of the party opposed to state banks, monopolies, tariffs, special interests, and Tammany Hall. In 1835 he succeeded Ely Moore as the president of the General Trades' Union of New York City. He helped to found the General Trades' Union journal, *The Union,* and served as its editor. In 1842 he was elected president of the Free Trade Association, became the owner of a chair-making shop, helped to found the National Reform Association, and was nominated by this group for U.S. Congress. In 1850 he was a delegate to the New York City Industrial Congress. He moved to the Republican Party in 1859 on account of its land-reform platform and became a candidate for the state assembly. In 1860 he stood as a Republican candidate for Congress, but was defeated.

Committee of Fourteen. Antiprostitution committee. In 1905 it was constituted by wealthy business leaders, university professors, and other progressive reform members of the New York Anti-Saloon League to combat the phenomenon of "Raines Law" hotels (saloons that got hotel licenses to sell liquor on Sundays). These hotels were venues for Prostitution, the main target of the committee. It promoted legislation to require investigation of such venues, and by 1911 the hotels had largely been shut down. Thereafter the committee investigated prostitution in massage parlors, restaurants, tenements, or other institutions deemed likely to produce "immoral" conditions. It worked closely with the police and gathered information on prostitution, venereal disease, rehabilitation of the females involved in the sex trades, and related public health topics. The committee began to deal with crime prevention as well before its dissolution in 1932 because of financial difficulties.

Michelle Hutt

commodity exchanges. Merchants handling commodities in New York City first gathered in the 1750s in small quarters on Broad Street and in 1768 moved to an area outside the New York Chamber of Commerce. The completion of the Erie Canal in 1825 and increased business activity led to the construction of the Merchants' Exchange (1827) on William Street, destroyed by fire in 1835 and rebuilt on Wall Street. New York City led the nation in handling goods such as sugar, coffee, and cocoa from Latin America and in conducting export business in cotton, breadstuffs, tobacco, and other farm produce. The New York Mercantile Exchange extended futures trading to perishable commodities in 1872, with limited effect. The informal, unregulated methods in commodity trading gave way in the 1860s and 1870s to organized exchanges in major American and European ports, where most trading was in a limited number of nonperishable commodities and in futures contracts. It was rare for contracts to be settled by delivery of the commodity in question; instead the difference between a contracted price and a market price was usually paid in cash. This practice led to the development of "hedging" facilities, where prices were more stable and the risk of price changes was shifted from merchants and processors to speculators. Gradually this system spread to a range of commodities during the late nineteenth and early twentieth centuries, surviving a period of stagnation during the Depression.

The federal government first imposed regulations on commodities exchanges in the 1920s. The Commodity Exchange Act and laws governing grains and cotton required exchanges to make accurate reports of their transactions and to improve their self-governance. Greater pressure was later placed on exchanges when investigations exposed instances of insider trading and manipulation of reported transactions (mostly in Chicago). A major target of these regulations was the Commodity

Exchange (COMEX), formed in 1933 by the merger of the New York Rubber, National Silk, National Metal, and New York Hide exchanges. During World War II the New York Mercantile Exchange opened a successful futures market in potatoes, eggs, butter, and rice. During the 1950s and 1960s most trading on COMEX was in gold, silver, and copper. It grew steadily by offering trading in government securities futures, foreign exchange, and stock index futures; aluminum futures met with less success. In the 1960s and 1970s the formal trading system that developed in the late nineteenth century was extended to precious metals, raw materials, and a range of financial instruments. This system required exchanges to adhere to complex rules, to use clearinghouse functions to settle differences in gains and losses, and to accept limits on the number of their members, who alone were entitled to serve as brokers.

The New York Mercantile Exchange, the chief rival of COMEX, became an important market during the energy crisis of 1973 because of its contracts for crude oil, heating oil, and unleaded gasoline. The Commodity Futures Trading Commission, formed in 1974, provided much broader, stricter regulation of futures trading in commodities than its predecessor, established under the relatively weak Commodities Exchange Act of the 1930s. In 1981 the New York Mercantile Exchange revived its potato trading, in addition to expanding into platinum and palladium. By 1990 it was the fastest-growing and most prosperous commodity exchange in New York City. Four major commodity exchanges shared trading facilities in the World Trade Center in the mid-1990s: the New York Mercantile Exchange, the New York Cotton Exchange, the Commodity Exchange, and the New York Coffee, Sugar, and Cocoa Exchange. After the terrorist attacks of 11 September 2001 on the World Trade Center, the New York Mercantile Exchange relocated its headquarters to the World Financial Center.

Morton Rothstein

Commodore Hotel. Hotel in Manhattan that later became the Grand Hyatt.

Common Council. Legislative branch of the government of New York City, established by the charter of Governor Thomas Dongan of 1686. In addition to the mayor and the recorder the council included one alderman and one assistant alderman elected to one-year terms from each of the city's six wards. Although it had the power to regulate commerce and public safety, from monitoring strangers to setting the price of bread, drawing up the rules of the city market, and controlling ever-present hogs, its actions could be vetoed by the governor and his council or simply allowed to become null if they were not approved within three months. The city's government lacked a clear separation of powers: the mayor presided over the council, and both the mayor and aldermen served as justices of the peace and as justices in the court of common pleas. In 1813 the state legislature empowered the council to act as a Board of County Supervisors for New York County, and in 1821 the council gained the power to appoint the mayor.

The charter of 1830 divided the council into a board of aldermen and a board of assistant aldermen and removed the mayor from the council. Legislation could originate in either board but required the approval of both before being forwarded to the mayor. The council could override a mayoral veto by majority vote of both boards and retained the power to appoint the heads of executive departments. The nature of the council was again

Presidents of the Board of Aldermen, Board of Assistant Aldermen, and Board of Councilmen, 1831–1897

BOARD OF ALDERMEN

1831–32	Samuel Stevens
1832–33	Henry Meigs
1833–34	John Y. Cebra
1834–35	James Monroe
1835–36	Isaac L. Varian (1 July 1835 to 28 Dec 1836)
1836–39	Egbert Benson (from 28 Dec 1836)
1839–40	A. V. Williams
1840–42	Elijah F. Purdy
1842–43	Caleb S. Woodhull
1844–45	Richard L. Schieffelin
1845–46	Oliver Charlick
1846–47	David S. Jackson
1847–49	Morris Franklin
1849–50	James Kelly (8 May 1849 to 7 Jan 1850)
1850–51	Morgan Morgans
1852–53	Richard T. Compton
1854	Nathan C. Ely
1855–56	Isaac O. Barker
1857–58	John Clancy
1859	Thomas McSpedon
1860	William J. Peck
1861	Henry W. Genet
1862	John T. Henry
1863	William Walsh
1864	John T. Henry
1865	Morgan Jones
1866	John Brice
1867	Joseph Shannon
1868–71	Thomas Coman
1872	John Cochrane
1873–74	Samuel B. H. Vance
1875–76	Samuel Lewis
1877	Henry D. Purroy
1878	William R. Roberts
1879	Jordan L. Mott
1880	John J. Morris
1881	Patrick Kiernan
1882	William Sauer
1883	John Reilly
1884	William P. Kirk
1885	Adolph A. Sanger
1886	Robert B. Nooney
1887	Henry R. Beekman
1888	George H. Forster (*d* 8 Nov)
1889–92	John H. V. Arnold
1893–94	George B. McClellan
1895–97	John Jeroloman

BOARD OF ASSISTANT ALDERMEN

1831–32	James B. Murray
1832–34	William Van Wyck
1834–35	George W. Bruen
1835–36	James R. Whiting
1837–39	Caleb S. Woodhull
1839–40	Nathaniel Jarvis, Jr.
1840–41	Frederick R. Lee
1841–42	Thomas R. Lee
1842–43	William Adams
1843–44	Charles P. Brown
1844–45	William Everdell
1845–46	Nathaniel Pierce
1846–47	Neil Gray
1847–48	Linus W. Stevens
1848–49	Wilson Small
1849–50	Edwin D. Morgan (8 May to 7 Jan)
1850	Oscar W. Sturtevant
1851	Alonzo A. Alvord
1852–53	Jonathan Trotter

BOARD OF COUNCILMEN

1854	Edwin J. Brown
1855	Daniel D. Conover
1856	Benjamin F. Pinckney
1857	Jonas N. Phillips
1858	Charles H. Haswell
1859	Charles G. Cornell
1860–61	Morgan Jones
1862	Charles T. Pinckney
1863	Morgan Jones
1864–65	James Hayes
1866	J. Wilson Green
1867	James G. Brinkman
1868	John Stacom
1869	James A. Monaghan
1870	John Riley (Jan–June)

BOARD OF ASSISTANT ALDERMEN

1870–71	John Galvin (June–Jan)
1872	Otis T. Hall
1873	William Wade
1874	Joseph P. Strack

Compiled by Edward T. O'Donnell

altered when the charter of 1849 increased the terms for aldermen (but not assistant aldermen) to two years, took away the council's power to appoint executive department heads, and required the council to muster a two-thirds majority in each board to override the mayor's veto.

In 1853 further changes in the charter eliminated the board of assistants in favor of a 60-member board of councilmen in charge of all legislation concerning expenditures. Members of the Common Council lost the right to sit in city courts and to control the police department. The comptroller assumed power over city finances in 1857, and the council no longer acted as the board of supervisors for the county. The board of assistant aldermen was reinstated in 1868 and eliminated for the last time by the "reform charter" of 1873, which vested all legislative power in a board of aldermen whose 21 members were elected annually. The board was empowered to approve or reject the mayor's appointments to executive offices; the powers of finance and taxation were increasingly the province of the Board of Estimate and Apportionment. With consolidation in 1898 the Common Council ceased to exist, and the city gained a bicameral legislature, which lasted until 1901. From that time the legislative branch of city government was a unicameral body called, successively, the Municipal Assembly, the Board of Aldermen, and the City Council.

Edward T. O'Donnell

common starling. A chunky bird about 8 inches (20 centimeters) long with a short tail that is mostly black but has some iridescent green and purple feathers; it has white spots and a dark bill in autumn and winter and a yellow bill in spring and summer. Introduced to Central Park in 1890 from Europe, it was well established by the early 1920s. It begins breeding in early spring and builds nests in nearly all available bird boxes and dead trees, thereby excluding such species as woodpeckers, tree swallows, purple martins, and eastern bluebirds.

John Bull

Commonwealth Fund. Charitable organization formed in 1918 with an endowment of $10 million from Anna M. Harkness for "benevolent, religious, educational and like purposes." In its early years the fund supported projects related to medical education and the welfare of women and children; it also contributed to war relief. Later the fund made contributions in the fields of public health (including mental hygiene), community health, and medical research. In New York City the fund has contributed to Columbia University, the Union Theological Seminary, the New York Red Cross, public television, and many settlement houses. Additional gifts to the endowment were made by Harkness, her son Edward S. Harkness (1874–1940), and his wife, Mary S. Harkness (1874–1950). In 2008 the Commonwealth Fund had assets of $750.8 million.

Erwin Levold

communism. The role played by communism in New York City was at one time so large that the drama critic Lionel Abel, a former Trotskyist sympathizer, remarked in his memoirs that in the 1930s the city "went to Russia and spent most of the decade there." In the city many former socialists joined the communist movement after the founding of the Communist International in 1919. New York City was the place of publication of two daily newspapers issued by the Communist Party USA, *Morgen Freiheit* (in Yiddish, 1922) and the *Daily Worker* (1924), as well as its influential literary magazine the *New Masses* (1926). The party also established its publishing house International Publishers in New York City and a number of schools, cultural groups, immigrant fraternal organizations, and political auxiliaries. Throughout the 1920s factional disputes among American communists mirrored those occurring in the Soviet Union. In the middle of the decade the party found strong support among workers in the garment trades, including many members of Local 25 of the International Ladies' Garment Workers' Union, with which the party lost influence after leading an unsuccessful six-month strike in 1926. During the early years of the movement most communists in the city were of foreign origin; as late as 1931 the foreign-born made up more than four-fifths of the membership in the metropolitan district.

In 1927 the party moved its national headquarters to New York City from Chicago. For the next two decades its activities were directed from the ninth floor of a building that it owned at 35 East 12th Street, one block south of Union Square. The party came close to developing a mass following in the city: at the height of its strength it drew tens of thousands to march in its annual parade on May Day and filled Madison Square Garden with 20,000 cheering spectators. On 6 March 1930, four months after the crash of the stock market, the Communist Party in the city called for a demonstration of the unemployed in Union Square; the number of participants was estimated as more than 100,000 by the *Daily Worker* and as 35,000 by the *New York Times.* Like many other communist gatherings in the early 1930s this one ended violently when mounted police swinging clubs rode into the crowd to prevent it from marching on City Hall. Later that year and in the years that followed, communists throughout the city organized councils of the unemployed, led protest marches on city relief offices, and gathered crowds to resist evictions. Some neighborhoods were likened to the "red belt" surrounding Paris; cooperative apartments organized by the Communist Party on Allerton Avenue in the Bronx were a stronghold of party support, as were parts of Harlem, East Harlem, Brooklyn, the Lower East Side, and the waterfront.

The party grew during the mid-1930s as it became more adept at attracting American-born adherents. In accord with the policies of the Popular Front approved in Moscow, American communists eschewed the revolutionary rhetoric of earlier years in favor of uniting people in a coalition against fascism. The party leader Earl Browder described communism as "twentieth-century Americanism." Communists now agreed to endorse liberal politicians they had once despised, including Fiorello H. La Guardia. Increasingly the party was made up of the native-born children of immigrant parents; it also developed a large following among blacks. Many young members had taken part in radical student politics at City College of New York and Brooklyn College.

After the formation in the 1930s of the Committee for Industrial Organization (CIO; later renamed the Congress of Industrial Organizations) communists gained unprecedented influence within the union movement. In the city they were instrumental in organizing the Transport Workers Union of America, led by their close ally Mike Quill. They were also influential in the National Maritime Union, the United Electrical Workers, District 65 of the United Retail and Wholesale Employees, and the American Newspaper Guild. Ben Gold, president of the Fur Workers Union, was one of few labor leaders in the United States who openly avowed his affiliation with the party. Although their greatest strength was in the new unions of the CIO, the communists also retained a following in locals of the American Federation of Labor (AFL), such as the Painters Union, the Hotel and Restaurant Workers Union, and the American Federation of Teachers. Communism was popular among writers, intellectuals, and artists in the city. The John Reed Clubs were formed in the 1930s, as was the League of American Writers, which sponsored congresses in the city in 1935, 1937, and 1939 that were well attended. Many who were not communists but were concerned by the spread of fascism in Europe were drawn to support antifascist groups controlled by the Communist Party, including the American League against War and Fascism, which had

as its chairman in the late 1930s Harry F. Ward, a professor at Union Theological Seminary.

By 1938 the Communist Party had 38,000 members in New York State, about half its national membership, and most of these lived in New York City. A communist candidate for the presidency of the city's Board of Aldermen received nearly 100,000 votes in 1938, and during World War II two avowed communists, Peter V. Cacchione of Brooklyn and Benjamin Davis of Harlem, held seats on the City Council. The loyalty of the party to the Soviet Union did not hinder its growth as long as Moscow advocated international collective security against the Nazis. Despite such events as the Moscow trials of the late 1930s, the faith of most communists in the virtues of the "workers' fatherland" remained unshaken. The nonaggression pact between Germany and the Soviet Union in August 1939 ended the respectability of the Popular Front in the United States; former allies dropped away and right-wing opponents of communism went on the attack. The Rapp–Coudert investigations (1940–41) by the state legislature into communist influence in the municipal colleges led to the dismissal or resignation of about 60 faculty members from City College and Brooklyn College. The party briefly regained strength during the "grand alliance" that followed the Nazi invasion of the Soviet Union in June 1941, but after the Nazis were defeated, communists came under sustained attack. The trial of 11 communist leaders in 1949 for conspiring to overthrow the government and the trial of Julius and Ethel Rosenberg in 1951 for espionage were both held in New York City, and both ended in convictions. In 1956, by which time membership had fallen to about 20,000, the party was further weakened by Nikita Khrushchev's denunciation of Josef Stalin and the suppression of the Hungarian revolution by the Soviet Union; by the end of the 1950s the party was a small sectarian group. Leadership of the party was assumed in 1959 by Gus Hall (1910–2000), a four-time candidate for the presidency of the United States. When communism collapsed in the Soviet Union in the early 1990s, the party lost many longtime members, but it remained loyal to its Leninist ideology. In the early twenty-first century its national headquarters remain at 235 West 23rd Street in Manhattan.

community gardens. New York City's community gardens have served a variety of purposes—including basic subsistence, education, social uplift, and political expression—since the first garden was founded at the municipal almshouse in 1736. Community members worked the almshouse gardens both for their own maintenance and to offset the costs associated with institutionalization. Almshouses, asylums, and other public and private social service institutions of the nineteenth and twentieth centuries, such as the New York City Farm Colony on Staten Island and the Creedmoor Psychiatric Center in Queens, had community gardens, which were worked by their residents. Public and private emergency relief programs of the late nineteenth and early twentieth centuries offered temporary subsistence relief to unemployed New Yorkers during times of economic strife. During the Depression of the 1890s families received tools, seeds, and 1-acre (0.4-hectare) allotments in Long Island City to grow vegetables, thus reducing dependence on public assistance. This idea was revived during the Great Depression of the 1930s; between 1934 and 1938 some 700 acres (283 hectares)—amounting to some 5000 allotments—were provided to unemployed men and their families so that they could raise their own food.

Other New Yorkers formed subsistence gardens on their own. Mid-nineteenth-century squatter communities such as Manhattan's Dutch Hill were surrounded by garden plots dug out among the swamps and bedrock that constituted the island's soil. It was a difficult living; during the summer of 1854, for instance, one official commented on the distress expected for these families in the coming winter due to crop failure brought on by drought. Squatter gardeners also risked eviction at a moment's notice, as happened to hundreds during the construction of Central Park in the late 1850s.

Twentieth-century urban reformers viewed community gardening as a means to teach city children about nature and the environment. In 1902 they established the DeWitt Clinton Farm School in DeWitt Clinton Park, which for 30 years provided children in impoverished neighborhoods with an alternative to the streets, and linked classroom science instruction to practical examples in the garden. The movement to integrate gardening and public school curricula declined after World War I, but two programs, the Brooklyn Botanic Garden Children's Garden (1914, the oldest community garden in the city) and the agricultural program at John Bowne High School (1917), continue. After World War I the New York City Department of Parks and Recreation assumed responsibility for the children's garden program, operating more than 1800 garden plots by 1927. The department's Farm Garden Program peaked around 1950, although many children's gardens remain in the city.

Real estate developers established community gardens in the early twentieth century as a means to encourage healthful living in modern apartment projects. The oldest of these, the "garden apartments" of Jackson Heights, dates to 1917. Later, during the 1960s, designers of public housing also adopted the private community garden concept. As of 2007, the Department of Housing Preservation and Development managed 572 community gardens, the largest single set of managed community gardens in the city.

Community gardening experienced a surge in popularity during both world wars as city residents grew vegetables in "victory gardens" created in parks, schools, and vacant lots to show their patriotism and offset increased food costs. During the 1960s, as the last few commercial farms disappeared from the city, community groups began to advocate for permission to convert vacant building lots into public gardens. These initial efforts on the part of local residents to combat crime and improve neighborhoods magnified in the 1970s through the assistance of activists, most notably the Green Guerillas (1973). In 1978 the city began offering short-term leases to community groups through the Green Thumb Program. By the twenty-first century there were more than 1300 community gardens across New York City.

Since the beginning of the twenty-first century some community garden proponents have joined a national locally grown food movement to address a range of urban social and economic problems through gardening. Private, nonprofit organizations have taught gardening techniques and business skills and promoted agriculture as means to combat poor nutrition and other effects of poverty. In eastern New York members of the United Community Centers garden sold more than $4000 worth of vegetables at a local farmers market in 2006, and the New Farmer Development Project, sponsored by Cornell University Cooperative Extension, trains immigrants with agricultural experience to become successful market gardeners and small business owners.

Louis P. Tremante

Community Service Society. Organization formed in 1939 by the merger of the Association for Improving the Condition of the Poor and the Charity Organization Society, two of the most influential private charities in New York City. Initially it concentrated on family casework, fresh-air programs, and community health (one of its legacies is establishing the prototype for the federal

school lunch program) but gradually closed its clinics and summer camps. Influenced by the poverty programs of the 1960s, it shifted its focus to legislative work and pilot antipoverty programs. During the early 1970s it gradually eliminated its social casework and sought instead to empower the poor in their own communities by helping eligible persons obtain welfare, encouraging the formation of tenants' councils in public housing, and sponsoring local programs for the elderly. In the mid-1990s it provided short-term rent grants to those facing eviction and emergency funds for public-benefits applicants, coordinated the 10,000 members of its Retired and Senior Volunteer Program, sought to develop permanent housing for the homeless, and conducted studies on poverty. It also launched a voter registration program for the poor and remained one of their most important advocates in health care, education, and housing. In the early twenty-first century it provided aid for World Trade Center employees affected by the attacks on 11 September 2001. Its advocacy efforts extended to the housing crisis and health care debates in 2009–2010.

Marilyn Thornton Williams

commuter tax. Earnings tax levied by New York City from 1966 to 2000 on nonresidents working within the city. It was first imposed 1 July 1966 as part of the city's new income tax; the rate was initially 0.25 percent of salary earned in New York City and was raised to 0.45 percent in 1971. The New York State Legislature repealed the commuter tax in May 1999 for New York suburban residents only; the tax was still levied on out-of-state commuters. New Jersey and Connecticut state governments successfully challenged that proviso; in April 2000 New York's court of appeals ruled that the repeal must include out-of-state commuters as well.

Andrew Sparberg

Composers Collective. Musical association. Founded in 1931, the collective brought together New York City–based composers and musicologists in an effort to create a new music for the American proletariat. Meeting in lofts rented by the Communist Party and in the homes of its members, the group followed in the tradition of the Pierre Degeyter clubs (named for the composer of the "Internationale") that had met in various cities for the same purpose. The group also drew inspiration from the work of Austrian-born composer Hanns Eisler, a close friend of the playwright Bertolt Brecht and himself a committed socialist. Counting among its members Henry Cowell, Jacob Schaefer, Charles Seeger, Elie Siegmeister, and Aaron Copland, the collective was in large part a response to the worsening economic conditions of the 1930s, and it viewed music as a way to unite the American working classes. Viewing classical, "bourgeois" music as inadequate for this task, the collective sought to develop an original style of music suited to the common people—one that blended modern harmonies and rhythms with tunes that were simple enough to be sung by those without musical training.

Though the collective was never officially associated with the Communist Party and most of the composers associated with the group were not communists, many of its members (especially Seeger) published frequently in such journals as the *Daily Worker* and the *New Masses.* In conjunction with the latter, the collective held a nationwide competition in 1934 for the best musical setting of Alfred Hayes' poem "Into the Streets May First." The group produced two *Workers' Songbooks* before disbanding in 1936.

Patrick Barrett

Compstat. Crime tracking system. Short for "computer comparison statistics," it was developed in 1994 by the New York Police Department (NYPD) under Deputy Commissioner Jack Maple. It uses statistical analysis and advanced technology to track and anticipate crime. Compstat involves the collection of information on crimes area by area into one citywide centralized database, enabling officers to see patterns in crime and identify and police high-risk areas. Information is overlaid onto a city map, which then allows the NYPD to use its forces more effectively. Compstat represented a new stage in the professional culture of the NYPD, as officers were required to attend weekly meetings involving patrol officers, detectives, and narcotics officers in order to coordinate their efforts. The NYPD also invited community organizations to these meetings for community feedback. Since the creation of Compstat the city has seen a drop in almost all categories of crime. The program has been copied in cities from New Orleans to Los Angeles. In 2000 New York City started a program called Healthstat to use the same idea to combat health problems.

Nathan Morgante

comptroller. The chief financial officer of New York City. The position was established in 1801 to countersign all warrants drawn on the chamberlain and was initially filled by appointment. The comptroller became the head of the department of finance in 1831, an elected official in 1884, and the head of a separate office in 1938. Elected citywide to a four-year term and second in the line of succession should the mayor's office fall vacant, the comptroller issues an annual report advising the mayor and City Council and audits all financial transactions. The abolition in 1989 of the Board of Estimate, of which the comptroller had been a member ex officio since 1874, significantly reduced the comptroller's power.

computers. New York City has an important history as a center of innovations in computing technology. The Computing-Recording-Tabulating Company, formed in the city by Thomas J. Watson, was an early leader in data processing and later became well known as International Business Machines (IBM). The Columbia Statistical Bureau, a laboratory for educational test scores, was opened at Columbia University in 1928 by Ben D. Wood with equipment borrowed from Watson; in 1930 IBM developed for the bureau the "Columbia machine," an electromechanical calculator that could interpolate tables, calculate correlation coefficients, and automatically shift numbers between its 10 registers (allowing it to handle both 10-digit numbers and 10 numbers at one time). The bureau did important work in scientific computing for the astronomy department at Columbia, and its experiments also proved useful in demographic studies and led to machines such as the IBM 600-series calculating punches. Further advances in computer technology were made during the 1930s at Columbia when the astronomer Wallace J. Eckert opened a laboratory in Pupin Hall with IBM accounting machines and other equipment: this made

possible a rudimentary program for complex calculations, an important step toward the first computer. In 1939 IBM experimented with the vacuum tube, a relatively new device, with the aim of using it in computing. Research at the firm's headquarters in New York City and at its engineering laboratory in Endicott, New York, led to the development of multipliers that were 1000 times faster than electromechanical calculators.

After the outbreak of World War II, some work in computing in New York City continued. Work on the transistor, the first generation of a silicon-based semiconductor that had a profound effect on computing technology, was conducted in the city in 1947. Fortran (formula translation), the first widely used programming language, was developed in the mid-1950s at the IBM Watson Scientific Computing Laboratory near Columbia University and at the corporate headquarters of IBM (590 Madison Avenue) by a team of scientists led by the mathematician John Backus. They also designed a compiler, a set of 28,000 programming instructions for translating Fortran into machine code. Based on algebra and containing grammar and syntax rules, Fortran was an efficient language that enabled programmers to communicate with the computer by means of straightforward mathematical instructions rather than in long strings of binary code. Because Fortran was easier to learn than earlier languages, programming was no longer the exclusive domain of the computer specialist. During the 1960s Fortran was standardized, and it long remained the most widely used scientific programming language.

After the 1960s the West Coast eclipsed New York City as a center of computer innovation and development. IBM moved its corporate headquarters to suburban Westchester County in 1964 and was soon followed by other firms, many of which nonetheless retained important offices in Manhattan. In the 1990s a number of Internet and new media firms developed in Manhattan in a corridor extending down Broadway from the Flatiron district into SoHo and Tribeca, an area that subsequently gained the nickname Silicon Alley. In the early twenty-first century the local new media industry continued to grow, and the city was home to companies such as advertising technology firm DoubleClick, new media conglomerate IAC/InterActiveCorp, and search giant Google's second-largest corporate office, located in the former Port Authority Commerce Building at 111 Eighth Avenue in Chelsea.

Elliot S. Meadows

Comstock, Anthony (*b* New Canaan, Conn., 7 March 1844; *d* Summit, N.J., 21 Sept 1915). Sex reformer. Brought up in a devout Congregationalist household, he moved to New York City after the Civil War, married, and worked in a dry-goods establishment. In 1872 he helped to form the New York Society for the Suppression of Vice, a private agency given limited powers by the police to regulate and monitor sexual behavior, and in the following year he successfully sought a federal anti-obscenity statute known as the "Comstock Law." He enforced the law as a special agent of the Post Office Department, arresting more than 3600 persons from 1872 to 1915 for selling obscene pictures, contraception articles, abortifacients, and gambling materials. He achieved his best-known exploit in 1878, when after posing as an impoverished father unable to support another child he arrested the prominent abortionist Ann Lohman, known as Madame Restell; she took her own life in prison. In 1906 he raided the Art Students League and confiscated paintings of nudes. By this time George Bernard Shaw had introduced the word *comstockery* to describe the American obsession with regulating morality and suppressing sexuality. Although Comstock's activities in New York City inspired groups around the nation, his indiscriminate raids on art galleries, newspapers, and businesses eventually called into question his campaign against obscenity. He also wrote several books about urban dangers: *Frauds Exposed* (1880), *Traps for the Young* (1883), and *Morals versus Art* (1887). From 1871 he lived at 354 Grand Avenue in the Williamsburg neighborhood of Brooklyn.

Anthony Comstock

concert saloons. Bars offering alcohol and entertainment in New York City from the 1840s until the end of the nineteenth century. They ranged from the palatial to the seedy and were initially clustered in lower Manhattan along Broadway and the Bowery, where they drew a male clientele from the working class and a few from the slumming middle class. Women who appeared in the saloons were usually waitresses or prostitutes, and sometimes both. One of the best-known establishments was Harry Hill's on Houston Street. At the beginning of the Civil War concert saloons became popular among soldiers and war contractors stationed in the city, and in 1861, 40 of the saloons advertised in local newspapers. Increased patronage caught the attention of moral reformers, who attacked the saloons for promoting drunkenness and prostitution. In April 1862 the state legislature banned the sale of alcohol and the employment of waitresses in saloons and required all places of amusement to obtain a license, the fees from which were used to support the Society for the Reformation of Juvenile Delinquents; saloon owners soon became adept at obtaining political protection and circumventing the law. The saloons became central to the culture of sporting men and eventually moved north to midtown and the Tenderloin. With the decline of prostitution in the early twentieth century, these establishments were replaced by cabarets, nightclubs, and vaudeville theaters, which offered forms of entertainment developed by such saloon performers as Tony Pastor.

Concord. Neighborhood in northeastern Staten Island, bounded to the north by Cypress Hill, to the east by Grasmere, to the south by Dongan Hills, and to the west by Emerson Hill. The area was called Dutch Farms until about 1845, when, having been visited by Ralph Waldo Emerson and Henry David Thoreau, it was renamed after their hometown in Massachusetts. In the early nineteenth century it was inhabited chiefly by German immigrants. The neighborhood now consists of one-family houses, small

Concert saloon on the Bowery presenting a "re-fined singing and dancing act," ca *1890*

apartment buildings, and new condominiums. The center of the neighborhood is traversed by some of the most heavily traveled roads in Staten Island, among them Clove Road, Richmond Road, Targee Street, and the Staten Island Expressway. In the early twenty-first century, the neighborhood's population was ethnically diverse.

John-Paul Richiuso

Concord Baptist Church. Church at 833 Marcy Avenue in Bedford–Stuyvesant, formed in 1848 by members of the Abyssinian Baptist Church of Manhattan. One of the first black churches in Brooklyn, it was initially led by the noted abolitionist Sampson White and took an active role in the antislavery movement. Over the years the church became noted for its commitment to education, adding a director of religious education in 1919, a preschool nursery in 1948, and the Concord Elementary School in 1960. It also sponsored a nursing home, a clothing exchange, a credit union, and various other enterprises. From 1942 to 1990 the church was led by Gardner Taylor, known as the dean of black pastors in the United States.

Aileen Laura Love

Condé Nast Publications. Firm of magazine publishers formed in 1909 by Condé Montrose Nast through his purchase of *Vogue* (1892), a high fashion magazine that quickly gained success. The company created publications geared toward a specific class or interest. Its reputation grew with the launching of *Dress and Vanity Fair* (September 1913, renamed *Vanity Fair* in 1914), which was edited by Frank Crowninshield and featured the art of Pablo Picasso, the photographs of Edward Steichen, and the writing of Dorothy Parker, Robert Benchley, and Colette. Nast took over *House and Garden* (1901) in 1915 and *American Golfer* in 1928. His operations were severely affected by the Depression, as a result of which *Vanity Fair* and *American Golfer* ceased publication in 1935. In 1939 he introduced *Glamour.* After his death in 1942 the firm was owned and operated by a British publisher, experiencing international growth with British and French *Vogue.* It was purchased in 1959 by newspaper magnate S. I. Newhouse, Sr., whose son S. I. Newhouse, Jr., remained chairman into the early twenty-first century. In 1993 the firm acquired Knapp Communications, the publishers of *Architectural Digest* and *Bon Appétit.* Condé Nast in 2010 published 27 titles, including *Vogue, Vanity Fair* (reintroduced in 1983), the *New Yorker* (1925), *Gentleman's Quarterly* (1957), and *Bride's* (1959). The headquarters are at 4 Times Square.

Laura Gwinn, Emily Johnson

Coney Island. Neighborhood in southwest Brooklyn (2000 pop. 106,120), bounded to the north by Coney Island Creek and the Belt Parkway, to the east by Ocean Parkway, to the south by the Atlantic Ocean, and to the west by Norton's Point. It is also home to one of the most famous amusement parks in the world. The area was named by the Dutch for the wild rabbits (*konijn*) that abounded there during the seventeenth century. The area's first resort hotel, the Coney Island House, opened in 1824 and played host to P. T. Barnum and Daniel Webster, among others. After the Civil War, development of the beachfront area accelerated, and five railroads were built connecting the area to the rest of Brooklyn. With the encouragement of the well-connected Brooklyn politician John Y. McKane, entrepreneurs began to set up innovative seasonal concessions at the shoreline, including the first American hot dog cart, carousels, and roller coasters. Other early attractions included heavyweight championship boxing matches, gambling dens, dance halls, and brothels, earning Coney Island the nickname of "Sodom by the Sea."

Between 1897 and 1904 three amusement parks opened along Surf Avenue, the avenue closest to the ocean: Steeplechase Park at West 17th Street (George C. Tilyou, 1897), Luna Park at West 10th Street (Frederick Thompson and Elmer Dundy, 1903), and Dreamland at West Fifth Street (William H. Reynolds, 1904). The new parks had several features that transformed the amusement industry: they charged admission, banned alcohol, promoted "polite vaudeville," and offered elaborate mechanical rides.

Steeplechase Park was presided over by "The Funny Face," a cartoon figure whose expression of slightly unhinged hilarity set the tone for the park's amusements, including the

namesake Steeplechase Race, in which visitors rode mechanical horses attached to high iron rails; the Blowhole Theater, where jets of air sent women's skirts skyward; and the revolving Barrel of Love. In contrast, Luna Park offered an environment more fantastical than funny: buildings adorned with Moorish spires and minarets, lit at night by tens of thousands of incandescent bulbs. In keeping with the "lunar" theme, the park's attractions included a "Trip to the Moon" in the winged airship *Luna*. In 1904 the average daily attendance at Luna Park was 90,000. Dreamland was designed as a cosmopolitan, genteel antidote to rival parks and to the crowds and noise of New York City in general. The spacious grounds were decorated with replicas of international landmarks (such as the Alps and the Tower of Seville). The amusements were less sedate: two popular attractions were the Leap-Frog Railway, in which two electric railroad cars hurtled toward each other on a single track; and the Fighting Flames show, an elaborately staged tableau vivant of a burning tenement building. Dreamland was itself destroyed by fire in 1911.

On an average weekend in 1907 visitors mailed about 250,000 picture postcards from Coney Island, spreading the reputation of the three parks nationwide. After the subway was extended to the area in 1920, there were a million visitors a day in high season. A boardwalk, built by the city in 1924, helped to ease crowding on the busy stretch between Brighton Beach and Sea Gate.

Despite the neighborhood's summertime attractions, there was almost no year-round population in Coney Island until the early twentieth century, when Italian and Jewish immigrants settled around Surf, Neptune, and Mermaid avenues. This population remained virtually unchanged until the 1940s, when then–Parks Commissioner Robert

Coney Island Beach, ca *1898. Ropes strung above the water helped bathers to keep their footing*

Coney Island, 2009

Luna Park, 1911

Moses widened the beach, demolishing many commercial amusements in favor of a new municipal aquarium and skating rink. Although Moses did not succeed in having the entire area rezoned for residential use, these developments, combined with the destruction by fire of Luna Park in 1944 and the rise in neighborhood street gangs, led to a steep decline in tourism, investment, and year-round population. By the 1960s, the development of high-rise, public housing projects near the amusement district brought a new residential population that was largely African American and Hispanic.

Steeplechase Park and the Parachute Jump closed in 1964, and the land was purchased by developer Fred Trump, who lobbied unsuccessfully for its rezoning for more than a decade before selling the property to the city. In 2001 the city used a portion of the Steeplechase Park property to build Keyspan Park, a stadium for the Brooklyn Cyclones, a minor league baseball team. A small amusement district remains in Coney Island, adjacent to the boardwalk between West Eighth and West 15th streets. Many of the surviving attractions are National Historic Landmarks, including the Wonder Wheel (a Ferris wheel with sliding and stationary cars), the Cyclone roller coaster, and the Parachute Jump (not currently in operation). A merry-go-round known as the B&B Carousel was also purchased by the city and restored prior to its reinstallation. Several historic restaurants are still in operation, including Gargiulo's (West 15th Street, 1907), Nathan's Famous Frankfurters and Seafood (Mermaid Avenue, 1916), and Totonno's Pizzeria Napolitano (Neptune Avenue, 1924).

In the early twenty-first century the future of Coney Island's beachfront real estate was the subject of ongoing negotiation and intense community concern. Private developers such as Thor Equities purchased the majority of the available properties during the first decade of the century and evicted many amusement operators, with the stated intent of transforming the area into a year-round luxury resort with hotels, high-rise condominiums, and a new theme park. A development of this scale would require the city to rezone the historical amusement area.

Coney Island's brash charms have been the subject of artists (Reginald Marsh), songwriters (Woody Guthrie, Lou Reed), filmmakers (Woody Allen, Spike Lee) and writers (including O. Henry, Neil Simon, and Lawrence Ferlinghetti, author of *A Coney Island of the Mind*). Among the area's more recent champions is the arts organization Coney Island USA, founded by Dick Zigun, which has revitalized some of the area's traditional, affordable entertainments, such as the freak show, burlesque, the popular annual Mermaid Parade, and a Coney Island Museum. The Coney Island History Project and the Lola Staar boardwalk roller rink (in the stucco and terra-cotta Child's Restaurant building) are additional examples of recent local engagement and preservation work in and around the amusement park area.

Elizabeth Bradley

Coney Island Hospital. Hospital that started as a first aid center for Coney Island beachgoers. In 1909 it moved to its current location at 2601 Ocean Parkway in southern Brooklyn. It was expanded in 1954 and again in 2006 when an extensive inpatient tower was built. The hospital offers general and specialty ambulatory care services, emergency services, and inpatient services. In the early twenty-first century it has 371 beds.

Max Seppo

confectioners. Some of the first confectioners in the colonies were Dutch bakers in New Amsterdam in the mid-seventeenth century. Confections of the sort that they made (including sugar wafers, sugar plums, and macaroons) were bought mostly by the elite until the early nineteenth century. Some of the largest firms were those of Ridley and Company (1806) on Hudson Street, R. L. Stuart, which had a factory on Greenwich Street (Stuart himself later became a prominent sugar refiner), John Stryker, James Thompson and Sons, and the Delmonico brothers. By the 1850s production increased owing to new technology such as the revolving steam pan, and the manufacture of confections became important in Manhattan, where the sugar industry was concentrated and there was a large market. A candy shop was opened on Canal Street in 1860 by William Loft and his wife; the firm, which remained in the city for almost 130 years, eventually produced more than 350 kinds of candy and operated one of the largest chains of candy stores in the

United States. Henry Heide, an immigrant, formed a business under his own name in 1869, which sold a variety of chocolates and hard candies, including Jujyfruits, Jujubes, and Red Hot Dollars. Milton S. Hershey had a candy firm in the city in the late nineteenth century before building a chocolate empire in Pennsylvania. Tootsie Rolls were introduced by Leo Hirschfield in 1896 and for a time were made in the city by the Sweets Company of America.

The number of confection factories in the city increased from 108 in 1900 to more than 1100 in 1922, but they did not gain a larger share in the national industry: many were small and sold their products directly to druggists and cigar shops. Most candy workers were immigrant women who worked in squalor for long hours and little pay. An investigation of their working conditions led to the passage of the New York State Fair Wage Bill in 1928. The chocolate bar known as Chunky was introduced in the mid-1930s by the confectioner Philip Silverstein and named after his granddaughter (who had been plump as an infant). Many popular candies were made in the city: Bonomo's Turkish Taffy by the Gold Medal Candy Corporation of Brooklyn, Mike and Ikes and Hot Tamales in Brooklyn in the 1920s by the firm of Just Born, Hopalongs by the Ryan Candy Company, and Now and Laters during the 1950s and 1960s by the Phoenix Company. Eventually the industry became automated, the demand for workers diminished, and the confection industry consolidated. As the cost of factory maintenance rose and the sugar industry declined, most confection firms left the city, went out of business, or were acquired by larger companies. In the early twenty-first century some established confectioners were holding steady, such as the 100-year-old Joyva Corporation (makers of halvah) in Brooklyn and Mondel Chocolates in Morningside Heights, founded in 1943 and a favorite of actress Katharine Hepburn. Retail sales of candy have continued to remain high, particularly those of "premium" chocolates, exquisite candies sold by department stores and mail-order firms. Confectioners such as Jacque Torres Chocolate in the DUMBO area of Brooklyn, specializing in unique, high-end chocolates, have been expanding their retail operations throughout the city.

James Bradley

Conference Board. Organization formed in 1916 in suburban Bronxville, New York, as the National Industrial Conference Board. It represented employers' associations and was intended to combat a perceived antipathy toward business among the public. During World War I it made recommendations that led to the formation of the National War Labor Board as an adjudicator of labor disputes. In its early years it also helped businesses improve relations with their employees and took stands on legislative and regulatory issues. Eventually it withdrew from its role as a partisan advocate of business interests, and in 1924 it was reconstituted in New York City as a nonprofit organization with open membership and the support of labor, which earlier had been an opponent. During the following decades the focus gradually shifted away from industrial relations and government regulation and toward broader economic concerns. Among other activities the board was responsible for beginning the scientific measurement of the cost of living. The board took its current name in 1970. Its offices are at 845 Third Avenue. Although it maintains offices in New York City, it has expanded into aiding international countries.

David Schorr

Conference House. Historic house in Staten Island at 7455 Hylan Boulevard, beside the Raritan Bay near the southernmost point of New York City and New York State. It was built as a stone farmhouse about 1680 by Christopher Billopp, a captain of the British navy. A rear lean-to added in 1720 created the present saltbox structure. The house is named after a peace conference held on 11 September 1776 between Admiral Richard Howe of the British forces and a group of American patriots, including Benjamin Franklin and John Adams, the failure of which led to the continuation of hostilities for seven more years. Later the dwelling served variously as a hotel and a small-scale factory. The Conference House Association was established in 1925 and deeded the property to the city the following year; the structure was restored and dedicated as a museum in 1937. The house is situated among large shade trees and has a spacious colonial kitchen and several period rooms.

William Thompson Davis, *The Conference or Billopp House* (Lancaster, Pa.: Science Press, 1926); *Historic Houses in New York City Parks* (New York: Department of Parks and Recreation/Historic House Trust of New York City, 1989)

Jonathan Kuhn

Confucius Plaza. Limited-equity housing cooperative located in Manhattan's Chinatown. It was constructed in 1975 for about $38 million. At 44 stories, it was the tallest building in Chinatown. In the early twenty-first century Confucius Plaza contains 762 apartments, which are largely occupied by Chinese Americans, as well as shops, community spaces, a day-care center, and Public School 124. A statue of the Chinese philosopher Confucius stands at the entrance to the plaza.

Max Seppo

Congregationalists. The origins of Congregationalism in New York City date to 1643, when English settlers from New England and Virginia formed a church in New Amsterdam. Congregationalists were given considerable freedom by the Dutch, who found no theological objections to their beliefs. A few more churches were established during the second stage of the Great Awakening (1740–60), but Congregationalists remained few in number and often sought the fellowship of Presbyterians until the early nineteenth century. Congregationalism remained largely concentrated in New England, and the General Association of New York was not formed until 1824. The oldest churches moved north as the city expanded, among them the Worth Street congregation, which was formed in 1840 and moved to 34th Street in 1857. The New Congregational Church was organized in Brooklyn Heights by 20 congregants who engaged as their first pastor Henry Ward Beecher, a nationally known proponent of progressive liberal Christianity. Soon renamed Plymouth Church, the congregation became the city's most influential Congregational church largely through Beecher's efforts. He was succeeded in 1890 by Lyman Abbott, whose writings also circulated nationally. The congregation left the General Association in 1882. Important contributions were also made by the revivalist Charles G. Finney, who as pastor of the Chatham Street Chapel stressed warm personal piety and moral conduct with attention to social improvement. Others also linked spiritual and social renewal, among them Samuel Cochran, pastor of the Sullivan Street Congregational Church. Liberal evangelical ideas about the relation of religious faith to society were explored in the *Independent,* a noted Congregational journal published in the city.

From about 1900 Congregationalists in the city focused on mission work and drew attention to the needs of immigrants and the poor. In 1902 the Worth Street congregation ceased to exist, but its ministry was continued by the Broadway Tabernacle Church at 56th Street and Broadway, which formed a mission congregation known as Bethany Church at 10th Avenue and 35th Street that extended ministries to the poor. During the first decades of the twentieth century some of the most influential work was done by college students from New England. Settlement houses were opened on the Lower East Side and in Hell's Kitchen by a number of institutions, including Yale University, Wellesley College, and Smith College, often with the help of pastors active in the Social Gospel movement. Through such measures Congregationalists gained influence disproportionate to their small number.

In 1957 the Congregational Christian churches merged with the Evangelical and Reformed church to form the United Church of Christ. In the following decades social responsibility and enlivened spirituality remained the fundamental concerns of several

Congregationalist church on Forest Avenue, 1903

parishes of the new organization. In an enduring expression of congregationalism, Riverside Church retains its affiliations to both the United Church of Christ and the American Baptist Church.

Eileen W. Lindner

Congregation Ansche Chesed. Former name of Temple Ansche Chesed.

Congregation Baith Israel Anshei Emeth. Former name of the Kane Street Synagogue.

Congregation Kehilath Jeshurun. Orthodox synagogue, formed by immigrants as Anshe Jeshurun in Yorkville in 1872. The congregation built a large Romanesque temple on East 85th Street between Park and Lexington avenues in 1902. Before World War I many of the members were Russian Jews; under the direction of Joseph H. Lookstein (1936–79) the congregation set standards for American Orthodox Judaism.

Jenna Weissman Joselit

Congregation Rodeph Sholom. Reform synagogue. Founded on the Lower East Side in 1842 by members of a Bikkur Cholim society, the congregation moved to Lexington Avenue and 63rd Street in 1891 and joined the Reform movement in 1901. In 1930 the congregation moved to its current location at 7 West 83rd Street, a Romanesque structure designed by architect Charles B. Meyers. In 1970 Rodeph Sholom established the first Jewish day school in the United States.

Kate Lauber

Congress. New York City was the seat of the national legislature, and was the nation's capital from January 1785 to 1790. For most of this time the national government operated under the Articles of Confederation (in effect from 2 March 1781). This document vested authority in a unicameral legislature, the Continental Congress, in which each state had one vote and appointed from two to seven delegates. A vote of the Continental Congress on 23 December 1784 designated New York City as its 10th meeting place, pending the construction of a federal district on the banks of the Delaware River near Philadelphia. Because no existing structure was suitable for housing the congress, a state lottery was conducted to raise funds and Pierre Charles L'Enfant (1755–1825) redesigned the Old City Hall (later Federal Hall) at the intersection of Broad and Wall streets.

The congress was overseen by a president who was given the impressive title of "President of the United States in Congress Assembled" but nevertheless wielded little power. While the congress met in New York City the presidency was held by Richard Henry Lee (11 January 1785 to 12 November 1785), John Hancock (23 November 1785 to 6 June 1786), Nathaniel Gorham (6 June 1786 to 2 February 1787), Arthur St. Clair (2 February 1787 to 22 January 1788), and Cyrus Griffin (22 January 1788 to 21 October 1788). Increasingly, power was exercised by the heads of executive departments appointed by the congress, including the postmaster general (Ebenezer Hazard, 1782–89), the secretary of foreign affairs (Robert Livingston, 1781 to 1784; John Jay, 1784 to 1789), the superintendent of finance (Robert Morris, who resigned under pressure on 1 November 1784), the members of the Board of Treasury, which replaced the superintendent of finance (Arthur Lee, Samuel Osgood, and Walter Livingston), and the secretary of war (Henry Knox, elected 8 March 1785). Jay conducted much of his business from Fraunces Tavern and from his home at 11 Broadway, at the corner of what later became Exchange Place. In April 1785 the tavern was leased to the Department of Foreign Affairs, which made the structure its virtual headquarters. Until 1788 the war and treasury departments also occupied space in the building.

The first session of the congress in New York City began on 11 January 1785, by which time the limits on its power and effectiveness had fueled growing demands for a new government; absenteeism was rampant, long adjournments were common, and so many congressional delegates attended the Constitutional Convention in Philadelphia in 1787 that the congress was virtually shut down. Nonetheless, several important pieces of legislation were ratified by the Continental Congress, notably the Northwest Ordinance of 13 July 1787, which provided the framework for the expansion of the United States.

New York State approved the Constitution of the United States on 26 July 1788, amid much rejoicing in the city. At the first session of the new congress under the U.S. Constitution (4 March 1789), the organization of the national government was the first order of business. George Washington was inaugurated president of the United States at Federal Hall on 30 April. The executive departments were organized within a year, with the Department of Foreign Affairs renamed the Department of State on 15 September 1789. The Federal Judiciary Act (24 September 1789) organized the structure of the federal judiciary and the Supreme Court, and the Department of Justice was formed on 26 September. Other important legislation included the first Tariff Act (4 July 1789), the Census Act (1 March 1790), and the Naturalization Act (26 March 1790); measures establishing a coast guard (4 April 1790) and putting into effect Alexander Hamilton's refunding plan (26 July 1790), under which the federal government assumed debts incurred by the states during the American Revolution; and the Treaty of New York (signed in Federal Hall on 7 August 1790), whereby the Creek Indians recognized the sovereignty of the United States. The crowning legislative achievement of the federal congress in New York City was the formal submission to the states on 25 September 1789 of 12 proposed amendments to the Constitution, the first 10 of which were ratified in 1791 as the Bill of Rights. On 10 July 1790 the House of Representatives voted to begin construction of a national capital on the Potomac River and to move the capital in the interim to Philadelphia. The final session of Congress in New York City concluded on 12 August 1790.

Congress of Industrial Organizations

[CIO]. Council of industrial unions formed in New York City. Its forerunner was the Committee for Industrial Organization, an association formed in Washington in November 1935 by union presidents, including John L. Lewis of the United Mine Workers, who were frustrated by the refusal of the American Federation of Labor (AFL) to organize unskilled workers in mass production. Directed by Lewis, it did not formally break with the AFL and received crucial support from labor leaders in New York City, especially David Dubinsky of the International Ladies' Garment Workers' Union (ILGWU) and Sidney Hillman of the Amalgamated Clothing Workers of America (ACWA). From the 1930s the Communist Party provided many organizers who were welcomed by Lewis, largely out of expediency, but not by Hillman, who led a faction opposed to communism. After victories at U.S. Steel and General Motors in 1936 and 1937, which set American unionism in a new direction, the committee held its first convention in 1938, where it took the name Congress of Industrial Organizations and became independent, leading Dubinsky to transfer his allegiance back to the AFL in 1940. Hillman's influence steadily increased. A supporter of state intervention to rationalize relations between labor and management, he sought to align the CIO with the Democratic Party. After a number of setbacks Hillman formed the CIO Political Action Committee in 1943 to accept money and provide support for political candidates (usually Democrats) who were sympathetic toward unions. It won a large following in heavily unionized areas and played an important role in the reelection of President Franklin D. Roosevelt in 1944, cementing the relationship between organized labor and the Democratic Party and dashing the hopes of activists who sought to form an independent labor party.

Tensions within the CIO between communists and anticommunists mounted during the 1940s. The Greater New York Industrial Council, formed in 1940 as the central body of the CIO in the city, was controlled by a powerful leftist faction that Hillman opposed. The conflict grew increasingly bitter after he withdrew the ACWA from the council, but a number of leaders with ties to the Communist Party nonetheless became highly influential, among them Mike Quill, president of the Transport Workers' Union (TWU), and Lee Pressman, Lewis's chief aide and the counsel to the CIO. In 1948 disagreements erupted over whether to support Harry S. Truman, the presidential nominee of the Democratic Party, or Henry Wallace, the nominee of the Progressive Party, which was dominated by communists. Pressman resigned to work for Wallace, Quill renounced the Communist Party at a convention of the TWU, and in 1949–50 the CIO expelled 11 unions with communist ties, ending its internal struggles. The decline of its influence was nonetheless signaled by the election of Dwight D. Eisenhower as president in 1952. Except for a few powerful unions, such as the United Auto Workers and the United Steelworkers of America, CIO affiliates were small and financially weak compared to their counterparts in the AFL. As the country moved increasingly toward the right, the leadership decided that organized labor might best close ranks, and in 1955 the CIO merged with the AFL to form the AFL–CIO. The election as its first president of George Meany, president of the AFL, indicated that the social concerns of the CIO would be subordinated to the administrative ones of the AFL.

Congress of Racial Equality [CORE].

Civil rights organization. After its establishment in 1942, the Congress of Racial Equality began as an interracial civil rights organization advocating nonviolent resistance. It organized the first "freedom ride" (1947); helped to integrate interstate bus transportation in the South; and, by utilizing sit-ins and protests, worked to change the 1940s civil rights landscape by influencing integration practices in northern cities. Over time, CORE became an unflinching and often controversial advocate of black power, emphasizing economic development, community-controlled education, and community self-determination. Early in its history, CORE's organizational structure transitioned from a decentralized network of regionally based affiliates to a more centralized program based on national direction and leadership. Roy Innis became national director in 1968; in the early twenty-first century he remained national president and CEO. In addition to his long involvement in civil rights activism, Innis was a cofounder of the Harlem Commonwealth Council. Other noted activist CORE leaders included James Farmer, cofounder, first national director, and leader of a protest aimed at ending discrimination and racism during the 1964 World's Fair in New York City; Floyd B. McKissick, the second national director; and, Bayard Rustin, a cofounder of the New York City office. In the early twenty-first century CORE's national headquarters were at 817 Broadway.

Sharon Wilkins

Connelly, Marc[us Cook]

(*b* McKeesport, Pa., 13 Dec 1890; *d* New York City, 21 Dec 1980). Playwright. Son of two actors, he worked as a journalist in McKeesport until moving to New York City in 1917 to cover theatrical news for the *Morning Telegraph.* He soon struck up a friendship with fellow theatrical journalist George C. Kaufman, and the two collaborated on a series of successful comedies, beginning with *Dulcy,* which opened in 1921 at the Frazee Theatre. A member of the illustrious Algonquin Round Table, Connelly is best known for his Pulitzer Prize–winning play *The Green Pastures.* Opening at the Mansfield Theatre in 1930, *The Green Pastures* playfully retells the story of the Old Testament through the lens of a small African American town in the South. At the time, critics hailed the production for being the first show on Broadway to have an entirely black cast, but a planned revival in 1954 failed to open because of the belief that the play perpetuated negative stereotypes of African Americans. In 1968 Connelly published his autobiography *Voices Offstage: A Book of Memoirs.*

Sarah Wansley

Connolly, James

(*b* Edinburgh, 5 June 1868; *d* Dublin, 12 May 1916). Political activist. He visited New York City in 1902 and moved to the United States in the following year. Disillusioned with the Socialist Labor Party under Daniel DeLeon, he turned to the Industrial Workers of the World (IWW), which offered him a position as a union organizer in the city. He lived in Newark, New Jersey, before moving to Elton Avenue in the Bronx at the end of 1907. From his office at 60 Cooper Square in Greenwich Village he launched the Propaganda League of the IWW and organized workers, focusing his efforts in the building trades. With a number of Irish labor leaders, including Elizabeth Gurley Flynn, he formed the Irish Socialist Federation in March 1907 at 79 MacDougal Street; to report and promote its work he launched a monthly newspaper in January 1908, the *Harp,* which had a circulation of 3000 by 1909 and ceased publication in 1910. His work with the federation led him away from the IWW and toward the brand of socialism advocated by Eugene V. Debs. In 1909 Connolly was appointed organizer of the Socialist Party of America and on its behalf embarked on an 11-month national tour in May. He was given a farewell dinner by the Irish Socialist Federation in New York City on 14 July 1910 and left for Dublin on 16 July. Later the same year he published *Labor in Irish History,* much of which he had written while in New York City. After signing the Irish declaration of inde-

pendence in 1916, Connolly commanded Republican forces during the Easter insurrection of the same year and was executed by the British.

Austen Morgan, *James Connolly: A Political Biography* (Manchester, England: Manchester University Press, 1988)

Kevin Kenny

Connolly, John (*b* Slane, Ireland, 1750; *d* New York City, 6 Feb 1825). Roman Catholic bishop. He joined the Dominican order, was ordained about 1774, and from 1775 to 1814 lived at San Clemente in Rome, where he was the librarian of the Casanate Library, an agent for several Irish bishops, and a prior (1782–96). After his appointment as bishop of the Diocese of New York on 4 October 1814, he moved to New York City on 25 November 1815. He approved new parishes, welcomed the Sisters of Charity, opened an orphanage, and dealt with conflict over the ownership by lay trustees of church property. Connolly is buried beneath St. Patrick's Old Cathedral.

Mary Elizabeth Brown

Connolly, Maurice E. (*b* Queens, 22 June 1881; *d* Queens, 24 Nov 1935). Disgraced Queens borough president. He earned a bachelor's degree from St. John's College and a law degree from Columbia University; after working as an attorney he was appointed a city magistrate. He became well known in 1911 for criticizing the administration of the borough president of Queens, Lawrence Gresser, who was soon removed from office by Governor John A. Dix for corruption. Amid calls for reform the Board of Aldermen selected Connolly as his successor. From 1911 Connolly oversaw the construction of streets, sewers, and subways. Eventually homeowners protested high assessments for sewer construction, and in December 1927 charges of fraud were filed with Governor Alfred E. Smith against Connolly, who resigned only days before public hearings were to begin. In June 1928 he was indicted by a grand jury along with the sewer contractor, John M. Phillips, and two engineers; testimony revealed that Phillips had illegally received millions of dollars from sewer contracts issued by Connolly's administration, and a jury of the state supreme court found both men guilty of conspiracy to defraud the city. Connolly was sentenced to a year in prison, which he served on Welfare Island (known today as Roosevelt Island) from 9 May 1930 to 4 March 1931.

Edward T. O'Donnell

Conservative Party. Statewide political party formed in 1962 in New York City by the lawyers J. Daniel Mahoney and Kieran O'Doherty to free the Republican Party in New York State from the influence of liberals such as Jacob K. Javits and Nelson A. Rockefeller. It opposed civil rights legislation and favored a strongly anticommunist foreign policy; its manifesto, the Declaration of Principles, expressed concern about inflation, education, taxation, labor unions, and laxness in prosecuting crime. First sponsoring candidates for office in 1962, the party sometimes nominated its own candidates and at other times endorsed Republicans or (less often) Democrats for local, state, and national offices. It became widely known in 1965 during the mayoral campaign of William F. Buckley, Jr., which was intended as a protest against John V. Lindsay's liberal Republicanism. Buckley won 13 percent of the vote, an unexpectedly high total drawn mostly from middle-class homeowners in the outer boroughs. The party outpolled the Liberal Party in the city in the gubernatorial election in 1966 and during the same year was instrumental in defeating a referendum proposing a civilian review board to oversee the police department. It reached the peak of its influence in 1970 when Buckley's brother James Buckley was elected to the U.S. Senate as its nominee, defeating the liberal Republican incumbent Charles E. Goodell and the Democratic nominee Richard Ottinger; Buckley failed to win reelection in 1976. In the 1980s and early 1990s the party lost some of its adherents to the Right-to-Life Party. James P. Molinaro, a member of the Conservative Party, was elected to be borough president of Staten Island in 2001 and reelected in 2005. The party had about 155,000 members in 2010.

Consolidated Edison. Power company. Consolidated Edison (Con Edison) was initially formed in 1823 as the New York Gas Light Company. Publicly traded since 1824, the company is the longest continuously listed stock on the New York Stock Exchange. The Edison Electric Illuminating Company was formed in 1880 as Thomas Edison applied to New York City for a permit to build the country's first commercial electric power station, located at Pearl Street, which initially supplied 59 customers in lower Manhattan. By 1884 the six major gas companies in New York City, pressured by the increased popularity of electricity, combined to form the Consolidated Gas Company of New York. Between 1898 and 1899, much of New York City's electric power supply was collected under the title of the New York Gas & Electric Light, Heat & Power Company. In 1901 Consolidated Gas became the main electric supplier to New York City, forming a new company, New York Edison, from the companies it controlled, including Edison Electric Illuminating and the New York Gas & Electric Light, Heat & Power Companies. By 1932 Consolidated Gas and New York Edison were providing more electricity to consumers than any other power company in the world. In 1936 the two merged to form the Consolidated Edison Company of New York, the city's only power supplier. In 1998, following the deregulation of New York State utilities, the newly created Consolidated Edison, Inc., became one of the largest investor-owned energy companies in the United States. In 2009 Con Edison's revenues topped $14 billion, providing electricity and natural gas to more than three million customers in Greater New York City.

Anne Epstein

Consolidated (Stock and Petroleum) Exchange [CSE]. Stock exchange formed in 1885 by the merger of four smaller exchanges to handle odd lots, which brokers belonging to the New York Stock Exchange (NYSE) discouraged because of the low commissions they generated. Four hundred brokers who began to sell odd lots contrary to the rules of the NYSE attended the formation of the Consolidated Exchange, which soon became known as the "Little Board." The new exchange printed the transactions of the New York Stock Exchange with Western Union tickers and drew away some of its business. Although its issues and brokers were marginal, the Consolidated Exchange was one of the city's first workable clearinghouses and made innovations in recruiting small investors. It eventually became the second-largest stock exchange in the city and for a time was the only major rival of the NYSE, which sought to destroy it. The exchange suffered from poor leadership, and in 1903 a series of government investigations began. The Consolidated Exchange had only a marginal role in securities trading by the early 1920s and ceased operations in 1928.

Jonathan Aspell

consolidation. The incorporation on 1 January 1898 of New York City within its present boundaries. It grew out of efforts by the merchant elite, led by Andrew Haswell Green, to improve the harbor and promote the development of shipping, railroads, and utilities by substituting centralized municipal government for the existing system, which was highly fragmented with control shared among 40 separate local governments. During its first two centuries New York City was coextensive with Manhattan; Kingsbridge, Morrisania, and West Farms, then in Westchester County, were annexed in 1874. As early as 1868 Green had advanced a plan to annex to New York City all the territory now making up the Bronx, Brooklyn, Queens, and Staten Island. The Chamber of Commerce of

the State of New York and Mayor Abram S. Hewitt endorsed Green's plan in 1888, and through Thomas C. Platt, the "easy boss" of the state Republican Party, who considered consolidation to be politically advantageous, saw it through the state legislature in 1894. Many residents of Brooklyn and outlying districts objected; they feared consolidation would deprive them of local control over taxes, expenditures, development policies, and even the racial and ethnic composition of their neighborhoods. The Loyal League of Brooklyn and the *Brooklyn Eagle* argued outspokenly that consolidation would destroy what they described (not entirely correctly) as the homogeneously Protestant character of their community. But the City of Brooklyn was so deeply in debt that it could not build needed water mains, sewer lines, or schools. Property owners there and in northern Manhattan and the Bronx favored consolidation so that their communities could draw on revenues from real estate taxes in central Manhattan. A nonbinding 1894 referendum in all areas to be affected approved consolidation everywhere except in two villages in eastern Queens, with a total vote of 176,170 in favor and 131,706 opposed; the governor approved the plan in 1896. In 1895 the city annexed the rest of the territory now making up the Bronx. A charter of the greater city was issued by a state commission under the direction of Seth Low and approved in 1897, and the new city's first elections were held in the same year. The consolidated city was known as Greater New York, a term later more often applied to a larger area including parts of Westchester, Long Island, New Jersey, and Connecticut.

Consolidation made New York City the most extensive and populous city in the United States (its population increased instantaneously from two million to 3.4 million), brought property tax rates and assessments under a consolidated system, and gave the city jurisdiction over nearly all areas to be developed as suburbs during the next 50 years (with the significant exception of northern New Jersey). For 50 years the bulk of the suburban development of the New York metropolitan region actually took place within the enlarged City of New York. But the new city's bicameral legislature was unwieldy, and procedures for planning and making public improvements were complicated. As a result a commission appointed by the state legislature drafted a new charter, which provided for an elected mayor and comptroller, a powerful Board of Estimate that included the five borough presidents, and a single Board of Aldermen composed of members from 73 districts; the new charter took effect in 1901. Consolidation made it possible for the Greater City to use Manhattan's large tax base to borrow money needed to build streets, water and sewer lines, schools, firehouses, rapid transit, and parks throughout its vast territory; inevitably, electoral politics led to standardization in those facilities. "Local control" was often lost, but for decades, at least, New Yorkers often expressed pride in the high standard of the facilities their city provided.

David C. Hammack, *Power and Society: Greater New York at the Turn of the Century* (New York: Russell Sage Foundation, 1982)

David C. Hammack

consulates. The first consulates in New York City were set up by France, Spain, and the Netherlands shortly after the American Revolution. The city now has more than 100 consulates, most of which are on the Upper East Side and in east midtown. Established by foreign governments to promote their interests abroad, consulates and their employees enhance the city's status as an international center and, along with the United Nations, annually contribute tens of millions of dollars to the local economy. The city strives to maintain good relations with diplomats: the Commission for the United Nations, Consular Corps and Protocol meets newly appointed consuls general; provides information about diplomatic immunities and privileges; advises on housing, schools, and cultural events in New York City; sponsors outings and seminars; and mediates disputes between diplomats and the city's government, businesses, and private citizens. The security of the Consular Corps is the responsibility of the New York Police Department. Local precincts assign regular patrols to consulates, and the department assigns extraordinary security concerns to the dignitary protection unit of its intelligence division. The city absorbs much of the cost for these services, but the federal government partially reimburses expenses associated with the protection of consulates and periodic visits from foreign dignitaries. Consular employees are typically posted to the United States for two to four years. New members must be accredited by their embassy in Washington, D.C., and by the U.S. State Department. Some members of the consular community live in the suburbs, but most prefer to spend their few years in the United States within the five boroughs.

Lauren Markoe

Consumers' League. See National Consumers' League.

Continental Corporation. Holding company based in New York City for a group of insurers active principally in commercial, personal-property, and casualty insurance. Its origins can be traced to 1853, when a group of 12 prominent businessmen from New York City set up the Continental Insurance Company, a fire-insurance firm with capital of $500,000. The first president was William V. Brady, a former mayor of the city, and the first office was in the basement of 6 Wall Street. In 1860 the offices were moved to Broadway, where many other insurers soon followed. During the Civil War the sympathies of the firm lay squarely on the Union side, and leaves of absence with full pay were granted to employees who volunteered for the Union army. The firm also donated funds to establish a local guard for the city's financial institutions while the militia was at war; this guard served during the draft riots of July 1863. In 1864 the firm contributed to the establishment of a full-time, professional fire department in New York City. The company opened an office in Brooklyn in 1868, but during the next 40 years most of its capital was spent outside the metropolitan area on claims that followed devastating fires in Chicago, Boston, Baltimore, and San Francisco. Rapid growth occurred after 1911, when the firm began issuing automobile and, later, aviation insurance. By 1918 it owned other smaller insurers that formed a corporation called the America Fore Group. The Continental Insurance Company weathered the Depression and World War II, prospered during the 1950s, and later evolved into the Continental Insurance Companies (1962) and the Continental Corporation (1968). As of 2007 Continental was a publicly owned, multinational firm with more than $60 billion in assets.

Chad Ludington

Continental Grain. Firm of commodity traders, formed and incorporated in New York City in 1944 by the Fribourg family of Belgium. Its headquarters were originally at 2 Broadway and were moved in 1974 to Park Avenue and 43rd Street. During the 1980s the firm entered the international agribusiness market while continuing to trade commodities. Continental Grain was the most profitable privately held company in the city by the mid-1980s, with sales in 1990 of more than $15 billion. In 1996 the company went public and in 1999 Continental Grain sold its commodity marketing business and became known as ContiGroup Companies.

James Bradley

Continental Iron Works. Foundry and shipyard. In 1859 Thomas F. Rowland and Samuel Sneeden opened a large factory at Calyer and West streets on the Greenpoint, Brooklyn, waterfront. This firm made wrought- and cast-iron pipes for the Croton Aqueduct. The next year, Rowland took control of the business, renamed it Continental Iron Works, and with the outbreak of the Civil War, began making mortar beds and gun carriages for the U.S. Navy. Soon Rowland contracted to build the hull of the groundbreaking Union ironclad, the *Monitor.* The *Monitor* was launched from the shipyard's docks on 30 January 1862. Hundreds

of men had labored on the vessel, often working in shifts around the clock; the firm received seven and a half cents for each pound of iron used. With peace, Continental Iron Works fabricated steamboats, ferryboats, steam boilers, and engines; after 1887 an internal furnace designed for boilers was a core product. The family continued to operate the firm after Rowland's death in 1907 until its closing in 1928.

Convent of the Sacred Heart. Catholic school for girls spanning all grades from kindergarten through high school. It was opened in 1881 at 533 Madison Avenue and run by the Society of the Sacred Heart, an order formed in France in 1801. The school moved in 1934 to the former mansion of Otto H. Kahn at 1 East 91st Street (1918, designed by J. Armstrong Stenhouse with C. P. H. Gilbert) and expanded in 1966 to the adjacent Burden House (1905, designed by Warren and Wetmore); both buildings are designated city landmarks. From 1976 the board of trustees was composed predominantly of laity. In 2008 the student enrollment was 670.

Gilbert Tauber

Coody, Abimelech. Pseudonym of Verplanck, Gulian C.

Coogan's Bluff. Neighborhood in northern Manhattan, bounded to the north by 160th Street, to the east by the Harlem River, to the south by 155th Street, and to the west by the Harlem River Drive. The area is known for a steep escarpment that descends 175 feet (53 meters) to sea level. It is named for James Jay Coogan, a real estate merchant who served as borough president of Manhattan (1899–1901), was twice an unsuccessful mayoral candidate, and owned much property in the area, including the Polo Grounds (built in 1890 as Brotherhood Park), a stadium that was the home of the (baseball) New York Giants and the New York Mets, among other teams. After the Giants moved to California the city took over the stadium, which it demolished in 1964 to make way for a public housing project. From that time the name Coogan's Bluff fell into disuse.

James Bradley

Cook, Will Marion (*b* Washington, D.C., 27 Jan 1869; *d* New York City, 20 July 1944). Musician and composer. In 1889 he made his musical debut at Carnegie Hall. In his twenties, he moved to New York City and studied at the National Conservatory of Music under Antonín Dvořàk. Working toward creating a "Negro" statement in music, he utilized the genre of musical theater. In 1898 he wrote the first black musical, *Clorindy,* and five years later he wrote *In Dahomey,* the first full-length Broadway musical written and performed by African Americans. He was a regular diner at the Marshall Hotel on 53rd Street, where he discussed black musical theater with prominent black Broadway stars. Cook notably composed ragtime-style syncopated numbers, and his musicals had distinctively "Negro" lyrics. In 1910 he formed the New York Syncopated Orchestra. From 1918 to 1944 he lived at 221 West 138th Street. The house became a National Historic Landmark in 1976. He was also a mentor to jazz greats Duke Ellington and Eubie Blake.

Jessica Montesano

Cooke, Terence Cardinal (*b* New York City, 1 March 1921; *d* New York City, 6 Oct 1983). Archbishop. The son of Irish immigrants, he was born on the Upper West Side, grew up in Throgs Neck in the Bronx, and attended Catholic schools. He received his bachelor's degree from Cathedral College, entered St. Joseph's seminary (1940), and was ordained a priest in 1945; his first posting was Bronx parish St. Athanasius (1946–47). After receiving his master's in social work from Catholic University (1949) he worked for the Catholic Youth Organization, taught at Fordham University (1949–56), and was procurator at St. Joseph's Seminary in suburban Yonkers (1954–57). In 1957 he became secretary to Francis Cardinal Spellman, archbishop of New York, and later became a vice chancellor (1958–61), chancellor (1961–65), and vicar general and titular bishop (1965–67). After Spellman's death in 1967 Cooke rose to archbishop (1968) and then cardinal (1969). He also succeeded Spellman as military vicar for the United States Armed Forces (1968).

Matthew J. Brennan

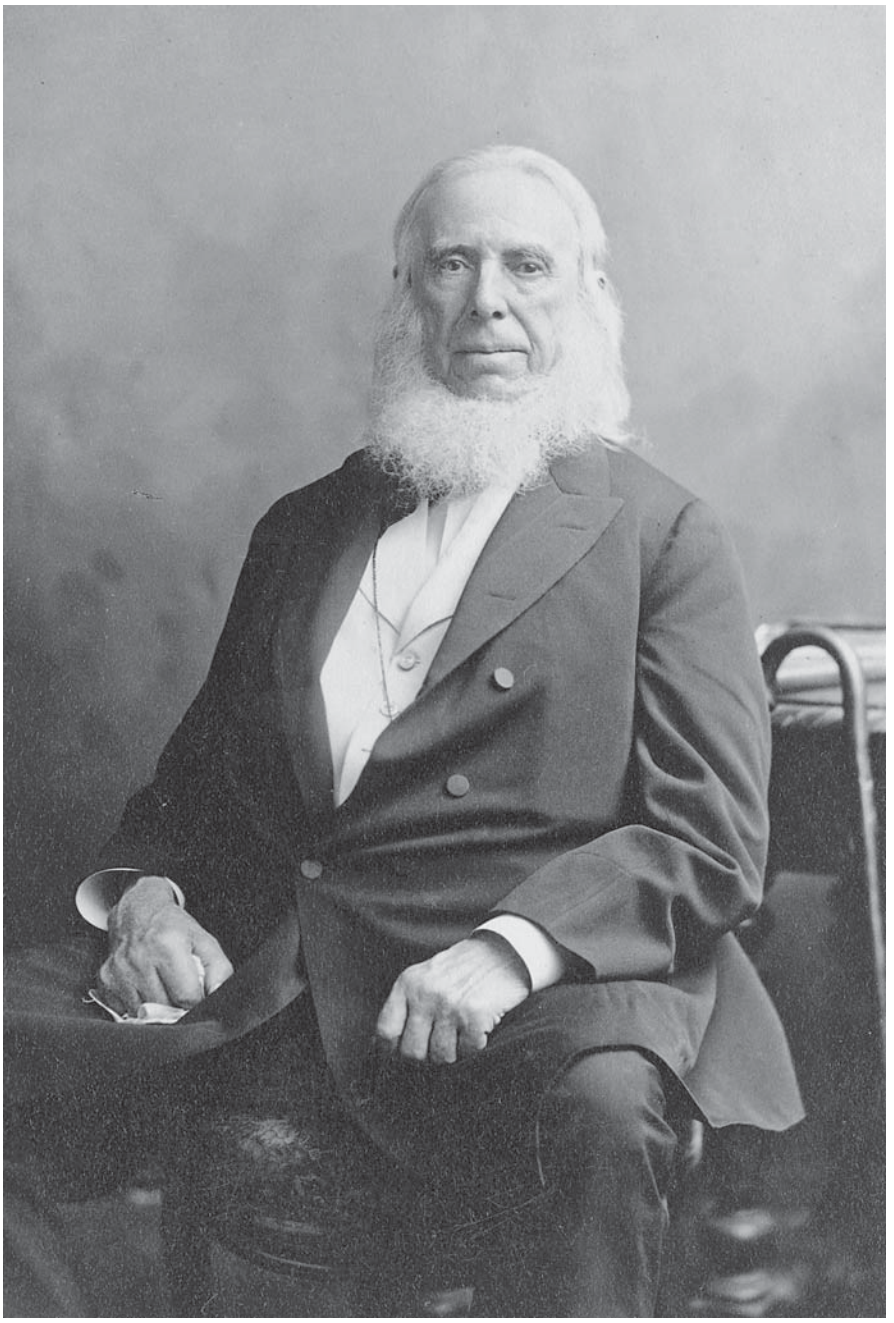
Co-op City. Housing development. One of the largest housing developments in the United States, it is located in Baychester, in the Bronx, next to the Hutchinson River, and consists of 15,372 apartments on 338 acres (137 hectares). In colonial times Sir Thomas Pell, for whom nearby Pelham Manor and Pelham Parkway are named, owned the land. The main road to Co-op City, Bartow Avenue, is named for John Bartow, owner of a Revolutionary War–era grist mill on the site. Before construction for Co-op City began in 1966, it was the site from 1960 to 1964 of Freedomland U.S.A., the world's largest outdoor family entertainment center at the time. When it opened in 1968, Co-op City was the largest cooperative housing project in the United States. Under the state's 1955 Limited Profit Housing Law, also known as the Mitchell–Lama program, it was a racially diverse, moderate-income housing development. The basic room price started in the late 1960s at $450; by 2008 room prices were $3,500. Minimum and maximum income requirements have always been in place for each apartment size. Co-op City has been plagued with sev-

Convent of the Sacred Heart, ca *1900*

eral problems throughout its history, including major structural issues in some of the buildings; a payment strike in the mid-1970s in response to increases in monthly maintenance costs; the management corporation's mounting debt from repairs; as well as various controversies, such as one in 2002 over a parking shortage. In 2004, heavily in debt, it reached a $475 million agreement with the state to refinance and fix many of its facilities. In the early twenty-first century, Co-op City had three shopping centers, which included supermarkets, dry cleaners, restaurants, shops, and community rooms; a 25-acre (10-hectare) educational park of three elementary schools, two middle schools, a high school, and a planetarium; and 15 houses of worship. The complex had approximately 55,000 residents, with more than 8300 over the age of 60; about 55 percent were African American, 25 percent Hispanic, and 20 percent white. Well-known former residents include Representative Eliot L. Engel (D-N.Y.), actress Queen Latifah, and novelist Richard Price.

Jessica Montesano

Cooper, Edward (*b* New York City, 26 Oct 1824; *d* New York City, 25 Feb 1905). Mayor and industrialist, son of Peter Cooper. He graduated from Columbia College and with Abram S. Hewitt opened a firm of iron manufacturers. During the 1870s he investigated William M. "Boss" Tweed's bank accounts and promoted sanitation reform; he won the mayoral election of 1879 as a fusion candidate supported by Republicans and by fellow Democrats opposed to Tammany Hall. An earnest reformer, Cooper helped to enact the Tenement House Law of 1879. He lived at 8 Lexington Avenue.



James E. Mooney

Cooper, James Fenimore (*b* Burlington, N.J., 15 Sept 1789; *d* Cooperstown, N.Y., 14 Sept 1851). Novelist, social critic, and historian. He first lived in New York City in 1808 as a naval recruiter and frequently visited it for social reasons while residing in Westchester County (1811–13; 1817–22). After he started writing in 1820, he traveled often to the big city—he finished *The Spy* (1821) and began *The Pioneers* (1823) in a series of stays at the City Hotel in the fall of 1821—and in 1822 he and his family relocated to Manhattan and remained until leaving for Europe in 1826. During his city years he became the first American novelist to make a living by his pen, writing *The Pilot* (1824), *Lionel Lincoln* (1825), and *The Last of the Mohicans* (1826) and starting *The Prairie* (1827). Collectively, these six early books included the first fictional treatment of the sea, of ordinary Americans at war, and of interracial friendship based on equality. In addition, *The Pioneers* and *The Last of the Mohicans* gave inspiration to the Hudson River School of artists and helped shape American attitudes toward nature, conservation, and the environment. After returning home from his seven-year European stay in 1833, Cooper divided much of his time between New York City and Cooperstown. His many friends in Manhattan, most associated with his 1820s Bread and Cheese Club (forerunner of the Century Association), included lawyers, artists, businessmen, politicians, and other writers. Among his better fictional portrayals of city life are those in *The Water Witch* (1830), *Afloat and Ashore* (1843–44), *Satanstoe* (1845), and *The Ways of the Hour* (1850). Of Cooper's *Towns of Manhattan,* intended as the first history of Greater New York, only fragments survive, the rest having been lost in a fire at his printer's shop.

Wayne Franklin

Cooper, Peter (*b* New York City, 12 Feb 1791; *d* New York City, 4 April 1883). Inventor, manufacturer, and philanthropist. He had almost no formal education but was trained in business by his father and demonstrated unusual talents as an inventor and entrepreneur. During the War of 1812 he prospered by making equipment for cutting cloth. He then

Peter Cooper, 1882

became a grocer and by his early twenties was a wealthy glue manufacturer. In 1828 he opened the Canton Iron Works in Baltimore, where he built the country's first functional steam engine, the "Tom Thumb," and greatly enlarged his fortune. Among his later ventures were rolling mills and wire factories; eventually he controlled more than half the telegraph lines in the United States. He also manufactured the first structural beams for fire-retardant buildings, introduced the Bessemer process to the United States, invented a number of mining devices, and helped finance the first transatlantic telegraph cable. An adherent of Jacksonian principles, Cooper was elected to the Common Council of New York City (1828–31), with the backing of Tammany Hall, and the Civic Reform Party (1840–41). As a member of the council and the Citizens' Association, a nonpartisan group of politically engaged citizens in the city, he sought to free the police and fire departments from political interference, ensure an adequate water supply and better sanitation, provide public education for the poor, and improve prison conditions. In 1857–59 he formed the Cooper Union for the Advancement of Science and Art to provide a free education to gifted students from the working class. Cooper unsuccessfully sought the United States presidency as a Greenback in 1876. The campaign of his Democratic opponent, Samuel J. Tilden, was led by Cooper's son-in-law Abram S. Hewitt, who served in Congress and was later elected mayor, as was Cooper's son Edward. Cooper is buried in Green-Wood Cemetery in Brooklyn.

cooperage. Manufacture of barrels and casks. The barrel was once a unit of measurement, and cooperage played such a large role in the development of commerce in New York City that two casks are prominently depicted on the city's official seal. In the late seventeenth century the flour trade depended on barrels; so, too, did the city's sugar refineries (after 1730), local distilleries, breweries, taverns, and coffee merchants. Until the Civil War most barrel wood was floated down the Hudson River from upstate and stored at docks in Brooklyn and Manhattan. Coopers worked in small artisanal shops near the wharves, and traditional methods of production were employed longer than in most other trades. In 1855 there were 1018 coopers in the city, almost three-fourths of whom were immigrants. In 1860 Anson T. Briggs of Brooklyn became one of the first coopers in the United States to employ mechanical production. When the Brooklyn Cooperage Company of Lowell M. Palmer began manufacturing staves by machine in 1865, employees staged a four-month strike in protest; by 1895 the firm was sufficiently prosperous to expand nationwide. In 1900 there were 90 coopering firms in Manhattan and 36 in Brooklyn. In the following decades coopering plants left the city for locations closer to large forests, and by 1922 they employed only 1258 unskilled employees citywide, most of them near the sugar refineries in Brooklyn. There were only 21 coopering shops in the city by 1930. Prepackaging of goods formerly sold in barrels and the use of plastic, fiberboard, and steel containers virtually eliminated commercial coopering from New York City, except for a few firms that built the wooden water tanks seen on the roofs of apartment buildings.

Marc Ferris

Cooper and Hewitt. Firm of iron manufacturers. It was opened about 1850 by Edward Cooper and Abram S. Hewitt, the son of an engineer, after they were given the Trenton Iron Works by Peter Cooper. It had the country's first open-hearth furnace and produced some of the first iron beams and girders, at one time employing 3000 men. During the Civil War it provided steel for gun barrels.

James E. Mooney

cooperatives. Apartment buildings with ownership arranged on a corporate basis. They first became popular in the late nineteenth century. Cooperatives differ from condominiums in that they provide for ownership of shares in a corporation rather than outright ownership of an individual residential unit. Residents of a cooperative may usually sell their shares at any price, provided that the board of directors approves of the prospective buyer. The first cooperative in New York City was probably the Rembrandt on West 57th Street, designed by Philip Hubert in 1881 (demolished). Buildings with a similar form of ownership were soon erected, including the Gramercy at 34 Gramercy Park East (1883, George da Cunha) and the Chelsea at 222 West 23rd Street (1884, Hubert, Pirsson and Company; later converted into the Chelsea Hotel). All these buildings had spacious apartments planned for prosperous upper-middle-class families. The Central Park Apartments at Central Park South and Seventh Avenue (1883, Hubert, Pirsson and Company; often called the Navarro) failed in 1888. This ended the construction of cooperatives until 1901, when a group of artists began the 67th Street Studios at 23 West 67th Street (1903, Sturgis and Simonson), which had large units containing studios two stories tall and adjacent duplex living spaces. Their success led to a wave of cooperative construction during the first two decades of the twentieth century. Duplexes planned for artists or those who wished to live in an artistic milieu were especially popular, among them the Hotel des Artistes on West 67th Street (1918, George Mort Pollard). The Bryant Park Studios on West 40th Street (1901, Charles A. Rich) and the Gainsborough Studios on Central Park

Certificate of membership in the New York Cooper Society, 1827

South (1908, Charles Buckham) were erected on sites with unobstructed northern exposure. Cooperatives were also built on Gramercy Park and the Upper East Side, most of them by syndicates or clubs of prospective tenants rather than by firms of developers. Generally, not all the units were individually owned; some were rented for income.

By the 1920s cooperatives were so popular in New York City, especially on the Upper East Side, that speculators became active in their construction. At the same time middle-class cooperatives became common: the first was Linden Court (1919, Andrew J. Thomas) in Jackson Heights, built by the Queensborough Corporation as a complex of 10 buildings and interior gardens on one city block. Many similar developments were built in Jackson Heights. Elsewhere in the city the most important middle-class cooperative was Hudson View Gardens in Washington Heights (1924, George Pelham), a picturesque complex in a Tudor style built around a semicircular drive and a large garden.

The first nonprofit, or limited-dividend, cooperative was the Alku at 816 43rd Street in Sunset Park (1916, Maxwell Cantor), one of several cooperatives built by Finnish immigrants. In these cooperatives residents usually owned a single share, and shareholders could not sell at a profit; the idea was to create high-quality rather than profit-making housing. The number of nonprofit cooperatives increased during the 1920s, many built by labor unions and other groups seeking to provide comfortable housing for workers. The largest such complexes were in the Bronx and were known for their high quality, among them the Amalgamated Houses on Van Cortlandt Park South and the United Workers Houses (known as the coops) on Bronx Park East.

Many cooperatives failed during the Depression and were converted into rental housing. After World War II government programs such as Mitchell–Lama and Section 13 (overseen by the Federal Housing Administration) provided incentives for building nonprofit cooperatives for working- and middle-class families. Cooperatives regained their popularity during the 1970s, leading to new construction (generally at the luxury level) and the conversion of thousands of rental apartments. By the early twenty-first century condominiums had become more popular than cooperatives for new construction, and many of the limited-dividend cooperatives, including many Mitchell–Lama projects, had been converted into market-rate housing.

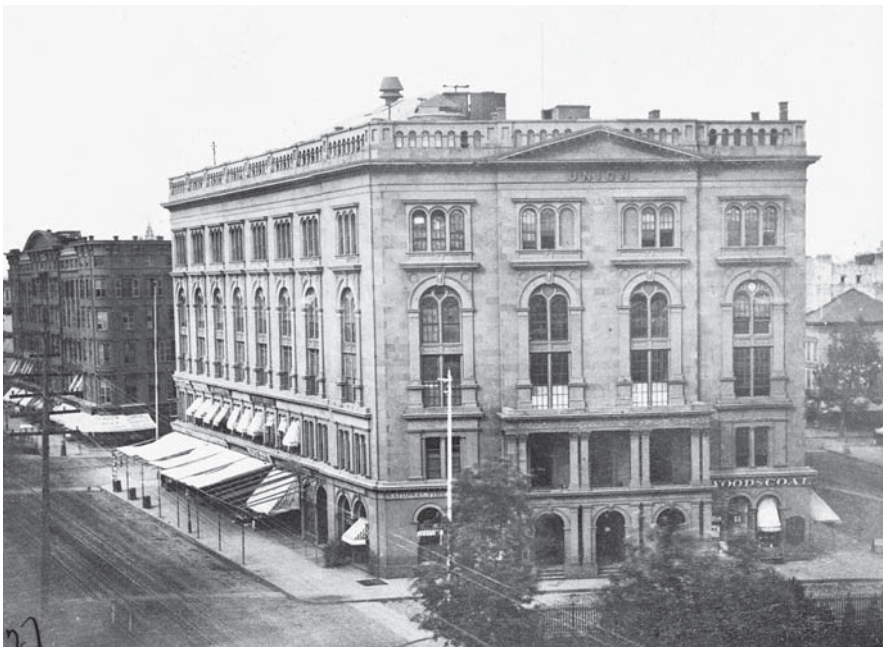
Cooper–Hewitt Museum. Art museum opened at Cooper Union in 1897 as the Cooper Union Museum of Art and Decoration. A small museum for instruction in the applied arts at Cooper Union was planned by Peter Cooper but did not open until his granddaughters Eleanor Hewitt and Sarah Hewitt raised sufficient funds to form and maintain a collection. Modeled after the Musée des Arts Décoratifs in Paris, it contained scrapbooks, patterns, drawings, prints, and decorative art objects and was intended to instruct professional designers and workers. With the help of such well-known patrons as the merchant George A. Hearn, the Hewitts amassed holdings during the first decades of the twentieth century that included several important collections of textiles given by J. P. Morgan, more than 300 drawings and small paintings from the estate of Winslow Homer, and 2000 sketches by Frederic E. Church given by Church's son. The museum became part of the Smithsonian Institution in 1969 and moved in 1976 to the former Andrew Carnegie mansion at Fifth Avenue and 91st Street. The museum expanded its exhibitions and programs for the public and introduced a graduate curriculum in decorative arts in conjunction with Parsons School of Design.



Russell Lynes, *More Than Meets the Eye: The History and Collections of the Cooper–Hewitt Museum* (New York: Smithsonian Institution, 1981)

Peter L. Donhauser

Coopers and Lybrand. Accounting firm formed as Lybrand, Ross Brothers and Montgomery on 1 January 1898 in Philadelphia by William Lybrand, T. Edward Ross, Adam A. Ross, and Robert H. Montgomery. On 1 June 1902 it opened an office at 25 Broad Street that became influential in local and national affairs. From 1916 it often handled funding reports and party records during presidential campaigns. The office donated its services to the city through the Emergency Unemployment Relief Committee in 1930, and several partners acted as comptrollers from 14 September 1931 to 8 February 1932. In 1947 one of the partners, Prior Sinclair, led opposition to a bill that would have allowed accountants to become licensed without passing the state examination for certification. In 1998 the firm merged with Price Waterhouse to form PricewaterhouseCoopers.

Janet Frankston

Cooper Union (for the Advancement of Science and Art). Private, tuition-free college at 41 Cooper Square offering degrees in engineering, architecture, and art. Formed by Peter Cooper to provide higher education for workers, it opened at Astor Place in 1859 and initially had a free reading room, classrooms, and exhibitions of art and technology. It also absorbed the Female School of Design, formed in 1846 to provide women with an alternative to menial employment. Public debates, lectures, and speeches were often held in the Great Hall (Abraham Lincoln spoke there in 1860). Under the direction of Cooper's son-in-law Abram S. Hewitt, the school became more like a traditional college

Cooper Union, 1876

after the Civil War, offering degrees in engineering from 1886. Its practical curriculum and nonsectarian, coeducational approach were emulated by other institutions such as Rice University and the Tuskegee Institute. Hewitt and the department store owner George A. Hearn encouraged a plan by Cooper's granddaughters to form the Museum for the Arts of Decoration, which opened in 1897 and was later renamed the Cooper–Hewitt Museum. An autonomous school of architecture opened in the same year. At the turn of the twentieth century the School of Art became less of a philanthropic venture and more of a professional school. Between 1898 and 1933 the People's Institute directed public programs in the Great Hall, where Felix Frankfurter, Samuel Gompers, and Jacob A. Riis were among those introduced to political activism and higher learning. Programs in the Great Hall led to the formation of the National Woman Suffrage Association, the International Ladies' Garment Workers' Union, and the National Association for the Advancement of Colored People (NAACP). As of 2010 Cooper Union had about 900 students in its three schools: the Irwin S. Chanin School of Architecture, the School of Art, and the Albert Nerken School of Engineering.

Peter G. Buckley

Copacabana. Nightclub at 10 East 60th Street in Manhattan, opened in 1940. Until the late 1950s it was a glamorous venue for performances by such entertainers as Frank Sinatra, Ella Fitzgerald, Nat King Cole, and Jimmy Durante. It then declined in popularity and closed in 1973. During the 1980s the space was used as a discothèque and as a facility for various functions. In 1992 a new club by that name opened at 617 West 57th Street. In 2001 it moved to West 34th Street and 11th Avenue and played mostly hip-hop and salsa music. In 2007 the building was condemned and the club was forced to close.

James E. Mooney

Copland, Aaron (*b* New York City, 14 Nov 1900; *d* North Tarrytown, N.Y., 2 Dec 1990). Composer. The son of Russian immigrants, he studied composition with Rubin Goldmark at 140 West 87th Street from 1917 to 1921. From 1921 to 1924 he was one of the first of the many young American composers who studied with Nadia Boulanger in Paris. After his return to the United States he provoked controversy with dissonant, angular compositions influenced by jazz, such as *Music for the Theater* (1925). He also wrote for the journal *Modern Music,* spoke on musical topics at the New School for Social Research, and with Roger Sessions organized concerts in 1928 to introduce new compositions; during the Depression he was allied with the Composers Collective and took an interest in writing music with an overtly political content. Copland's compositional style became less astringent in the 1930s and 1940s: he frequently evoked American legend and folklore, especially in his well-known ballet scores for Agnes de Mille (*Billy the Kid,* 1938; *Rodeo,* 1942) and Martha Graham (*Appalachian Spring,* 1944). In the 1950s and 1960s his compositions again became less accessible. His *Connotations* (1962), commissioned for the opening of Philharmonic Hall in 1962, was written in a densely serial style. He lived at the Empire Hotel, just across from Lincoln Center, until 1961, when he moved to Peekskill, in Westchester County. After a rich and varied compositional life his output ebbed after 1970. Copland was the most influential American composer of the twentieth century. Although best remembered for his celebrations of rural America, he proved equally adept at portraying the urban pastoral in such works as *Quiet City* (1940) and *Music for a Great City* (1963). In 1982 Queens College of the City University of New York named its music school in his honor. With Vivian Perlis he wrote two volumes of memoirs (1984, 1989).

Barbara L. Tischler

Copperheads. Name applied to Confederate sympathizers in the North during the Civil War, of whom New York City had many. Denounced by Republicans as traitors, poisonous snakes-in-the-grass within the "loyal" states, Copperheads responded by wearing badges made from copper Liberty-head pennies to condemn northern oppression. New York's extensive commercial ties to the South led much of the city's merchant and white working classes—mostly Democrats—to call for a negotiated settlement, allowing the South to return to the Union with slavery intact or to secede peacefully. In January 1861 the Copperhead mayor, Fernando Wood, even proposed that the city should also secede, becoming a duty-free port trading equally with the North and South. President Abraham Lincoln countered the forces of secession by concentrating unprecedented power in the federal government. His Emancipation Proclamation, on 1 January 1863, angered white workers in the North, who had been told by Copperhead politicians and newspapers, including the *Daily News,* the *Express,* the *Caucasian,* and the *Copperhead,* that freed slaves would take their jobs at lower wages. In May, Wood and other so-called Peace Democrats held mass meetings in the city to denounce the arrest by federal troops of the prominent Ohio Copperhead Clement Vallandigham on charges of sedition. In July, the first federal draft—with a $300 exemption fee—triggered four days of rioting and attacks on the city's African American population. Charges of a Copperhead and Confederate conspiracy behind the draft riots were never proved, but the riots did inspire Confederate attempts to sabotage cities across the North with support from local Copperheads. On 25 November 1864 a failed attempt to burn New York City damaged 19 hotels and Barnum's Museum. The Copperheads' ultimate triumph came after the Civil War, with the defeat of Reconstruction in 1877 by a resurgent Democratic Party, led by New York politicians including Congressman Fernando Wood.

Barnet Schecter

Corbett, Harvey Wiley (*b* San Francisco, 8 Jan 1873; *d* New York City, 24 April 1954). Architect. After studying at the University of California, Berkeley, and the École des Beaux-Arts he moved to New York City in 1901, where he worked for several firms before forming a partnership with F. Livingston Pell in 1903. The two were known for their designs in revival styles, among them the neoclassical New York School of Applied Design for Women at 160 Lexington Avenue (1909). In 1912 Corbett became a partner of Frank J. Helmle, who had a practice in Brooklyn. In the 1920s he became a leading defender of skyscrapers and increased urban density, wrote extensively on the effect of the zoning law of 1916, and offered futuristic proposals for multilevel traffic separation and pedestrian bridges. Among the many skyscrapers he designed was the Bush Tower at 132 West 42nd Street (1918), which was widely acclaimed and housed his offices in its two top stories. The firm was renamed Corbett, Harrison, and MacMurray after Helmle's retirement in 1928 and later became Harvey Wiley Corbett Associates. Other commissions included the Master Apartments at 310 Riverside Drive (1929), the National Title Guaranty Building of Metropolitan Life Insurance on Madison Square (1932, with D. Everett Wald), and the Criminal Courts Building at 100 Centre Street (1939).

Carol Willis

Corbett, James J(ohn) (*b* San Francisco, 1 Sept 1866; *d* Queens, 18 Feb 1933). Boxer. The son of Irish immigrants, in May 1891 he fought 61 rounds over four hours with Peter Jackson, and in September 1892 he won the world heavyweight championship from John L. Sullivan. Known as "Gentleman Jim," he was popular among fans for his speed and finesse in the ring. Corbett was the world

heavyweight champion from 1892 to 1897, losing the world title to Bob Fitzsimmons in March 1897 (in 14 rounds). After retiring from the ring in 1903 he moved to New York City, where he engaged in fight promotion, as well as broadcasting and stage and screen acting. He also wrote a book, *The Roar of the Crowd: The True Tale of the Rise and Fall of a Champion* (1925). In 1954 he was posthumously inducted into the Ring Boxing Hall of Fame and in 1990 into the International Boxing Hall of Fame.

John J. Cancannon

Corbin, Austin (*b* Newport, N.H, 11 July 1827; *d* Newport, R.I., 4 June 1896). Railroad tycoon. He formed the Corbin Banking Company in New York City in 1865, and while on vacation in Coney Island in 1873 made plans to develop a lavish summer resort at its eastern tip called Manhattan Beach, which eventually included the Manhattan Beach Hotel and the Oriental Hotel. Corbin was the owner (1880–96) and president (1881–96) of the Long Island Rail Road.

Stephen Weinstein

Corigliano, John (*b* New York City, 16 Feb 1938). Composer. Born in Brooklyn into an Italian American family of professional musicians, he studied at the Manhattan School of Music and Columbia University where he received his bachelor's degree in 1959. He has composed symphonies, concertos, works for solo instruments and chamber groups, operas, and film scores, including Sonata for Violin and Piano (1963). The New York Philharmonic commissioned Corigliano to write several works, as did the Chamber Music Society of Lincoln Center and the New York State Council on the Arts. He was awarded the Grawemeyer Award for Symphony no. 1 (1991), which was inspired by his feelings of loss and anger over the AIDS crisis. Corigliano also won an Academy Award in 1999 for his work on the film *The Red Violin.* In 2001 he was awarded the Pulitzer Prize for Symphony no. 2. He has taught at the Manhattan School of Music, Lehman College, and the Juilliard School.

Max Seppo

Corlear's Hook. Former neighborhood in lower Manhattan, covering 50 acres (20 hectares) and bounded to the north by Delancey Street, to the east by the East River, to the south by Montgomery Street, and to the west by east Broadway. Before Dutch settlement it was known as Rechtauck but was renamed for a Dutch family that settled there in the seventeenth century. In 1776 the American army built a fortification there. It became home to shipbuilding in the late eighteenth century. Into the nineteenth century it struggled with crime and vice, and large tenements sprang up during the 1830s and 1840s. In the early twentieth century activists from the Henry Street, University, and Grand Street settlements advocated the removal of the area's "old law" tenements (tenements built before passage of the 1901 Tenement House Act) and decaying piers so that low-income housing could be constructed. The Amalgamated Dwellings (1930) and the Vladeck Houses (1940) were developed through municipal and federal financing and built by the city housing authority; the Hillman Houses (1949) and Corlear's Hook project (1955), conducted under Title I of the Housing Act of 1949, were sponsored by the United Housing Foundation, with the intention of transforming slums into middle-income developments. The New York City Housing Authority started $50 million of improvements on the Vladeck Houses in 1998.

Joel Schwartz

Cornbury, Lord. See Hyde, Edward.

Cornell, Joseph (*b* Nyack, N.Y., 24 Dec 1903; *d* Queens, 29 Dec 1972). Sculptor. In 1929 Cornell moved into an ordinary house at 37-08 Utopia Parkway in Flushing where he lived and worked to the end of his life. He frequented the city's museums and galleries as well as Woolworth's. An avid collector, Cornell often visited the secondhand book dealers on Fourth Avenue in search of old books, engravings, and souvenirs. He is best known for his typically small assemblages—sectioned wooden boxes filled with photographs, maps, and an array of found objects. He characterized his work as "a natural outcome of love for the city."

Diane Waldman, *Joseph Cornell: Master of Dreams* (New York: Harry N. Abrams, 2002)

Harriet F. Senie

Cornell, Katharine (*b* Berlin, 16 Feb 1893; *d* Vineyard Haven, Mass., 9 June 1974). Actress. Made independently wealthy by a legacy, she moved to New York City in 1916 to become an actress. She joined the Washington Square Players, performed her first important roles with Jessie Boustelle's stock company, and in 1924 appeared on Broadway as the star of George Bernard Shaw's *Candida.* She later acted in such classics as *Romeo and Juliet, St. Joan,* and *Three Sisters* and a number of inferior plays that she sustained by her talent. Her greatest roles were Candida and Elizabeth Barrett in Rudolf Besier's *The Barretts of Wimpole Street.* In 1921 she married Guthrie McClintic, with whom she formed Cornell and McClintic Productions in 1930; with Cornell in starring roles and McClintic as the director the two mounted shows on Broadway and toured the country. She lived from 1921 to 1952 at 23 Beekman Place and from 1961 on East 51st Street.

George A. Thompson, Jr.

Katharine Cornell

Cornell University Medical College. Former name of Weill Medical College of Cornell University.

corners and panics. Financial crises brought on by speculation in securities markets have played an important role in the economic and political history of New York City. During the early Federal period an increase in trading in government bonds helped to bring about the formation in 1790 of the New York Stock Exchange, and eventually rampant speculation that one writer characterized as "scriptomania" caused a panic in 1792. Alexander Hamilton, the secretary of the treasury, was criticized for his handling of the crisis, which ultimately had little effect on the economy. As finance and industry took on a larger role in the city, however, panics assumed larger proportions. In the 1830s Jacob Little and other speculators made huge profits by organizing pools of investors and manipulating stock prices. A period of speculation in railroads, canals, cotton, and real estate ended in 1837 when a financial panic ruined many banks and speculators. The depression that followed constrained Wall Street until the 1850s, when economic growth and easy credit ignited another round of speculation, primarily in railroads. The market collapsed in August 1857, and by December the streets of New York City were filled with rioters and unemployed workers, who blamed the banks and speculators for their troubles. The panic of 1857 brought about a generational change on Wall Street, and a new breed of speculator dominated the market after the Civil War, at a time when the markets had gained such a powerful influence on the U.S. economy that financial panics frequently led to severe economic dislocation. One of the most profitable schemes of the speculators during these years was known as executing a corner, that is, buying all available supplies of a stock or commodity to drive up the price. This specu-

lative maneuver created a financial panic in 1869 when Jay Gould made $40 million by trying to corner the market for gold. Speculators like Daniel Drew and Cornelius Vanderbilt also manipulated share prices during their takeover battles for the Erie Railroad and other firms. A major national financial scandal resulted from the bankruptcy in 1873 of Crédit Mobilier, which had bribed scores of politicians to obtain government subsidies for the building of the Union Pacific Railroad. The scandal caused stock prices to plunge, producing the worst depression of the nineteenth century, and ruined Jay Cooke, then the most powerful man on Wall Street. The failure of a brokerage house owned by Ulysses S. Grant after his presidency produced a minor panic in 1884, and the federal government nearly became bankrupt between 1893 and 1895; it recovered only when J. P. Morgan bought several bond issues on the condition that the federal government return to the gold standard. Panics were caused by attempted corners in 1901 (by James Hill and Edward H. Harriman for control of the Northern Pacific Railroad) and 1907 (by Frederick Heinze and Charles Morse for control of United Copper), when Morgan again played an important, stabilizing role; after several banks closed and the stock market fell sharply, he joined with the U.S. Department of the Treasury to shore up the banking system with fresh capital.

After the turn of the twentieth century it became more difficult to manipulate prices because of the creation of the Federal Reserve in 1913 and because more shares were traded.

"The Great Financial Panic—Closing the Doors of the Stock Exchange on Its Members, Saturday, Sept. 20th," Frank Leslie's Newspaper, *4 October 1873*

Even so, Allan Ryan in 1920 was able to increase the price of shares in the Stutz Motor Company by buying all the stock, and Jesse Livermore, working at the behest of Clarence Saunders, was able to corner the stock in the grocery firm Piggly Wiggly. The New York Stock Exchange forced Ryan and Saunders to give up their shares, but throughout the 1920s easy credit fueled widespread speculation by allowing corporations to go heavily into debt and encouraging speculators to buy stocks on credit. In 1928 a pool of speculators organized by William Durant cornered the stock in the Radio Corporation of America (RCA), which increased in price by 60 points a share in just four days. The market finally stalled in September 1929 and crashed in October, the economy slipped into the worst depression of the twentieth century, and the stock market lost 80 percent of its value by 1933. By this time it was clear that the nation's financial markets suffered from enormous structural weaknesses, which the reforms of the New Deal were intended to remedy: the federal government formed the Securities and Exchange Commission in 1934, outlawed manipulation of the stock market, and strengthened regulations. These reforms made panics and corners considerably more rare but did not eliminate them. Prices dropped 27 percent in a panic between December 1961 and June 1962 known as the Kennedy slide, and the Dow Jones Industrial Average lost 37 percent of its value between 1968 and 1970. As late as 1979 the brothers Nelson Bunker Hunt and W(illiam) H(erbert) Hunt unsuccessfully tried to corner the market in silver, but federal regulators intervened to prevent a financial crisis, and the Hunts lost more than $4 billion (they eventually declared bankruptcy). On 19 October 1987 the Dow Jones Industrial Average underwent a decline of 508 points, or 23 percent, the largest single day percentage decline in its history. In the late 1990s speculation in Internet and technology stocks pushed the markets into a new bubble. When it burst, the tech-heavy NASDAQ index fell from a peak of 5048 on 10 March 2001 to less than half that by October 2002. Investigations by then New York State Attorney General Eliot Spitzer and federal regulators led to multibillion dollar settlements with brokerage firms and banks that had touted a number of Internet companies and telephone companies that eventually went broke; ultimately, investors in Internet and tech stocks lost some $7 trillion in equity from the market's peaks.

In the twentieth century, steep stock market declines were often followed by slumps in the New York City housing and commercial real estate markets; in the years following the 1907, 1929, 1968–70, and 1987 stock market crashes, a number of prominent New York City developers declared bankruptcy. After the 1907 crash, discounted sales of homes in the 1910s helped transform Harlem, and the 1987 crash caused commercial property values to fall by nearly half in some parts of Manhattan. The collapse of the Internet bubble of 2001 hurt commercial real estate in some areas, particularly the so-called Silicon Alley areas of lower Manhattan, but the slump was temporary and a booming global property market soon pushed the price of New York City real estate to record levels. During the summer of 2007, worries that U.S. borrowers might default on $200 billion to $300 billion worth of home mortgages roiled global stock markets and produced a global credit crunch that made it difficult for companies and investors to borrow money or sell mortgage-backed securities. That forced New York–based banks and brokerages to write off large losses in mortgage-backed securities and prompted widespread litigation and government investigations into fraud in the mortgage markets.

Robert Sobel, *Panic on Wall Street: A History of America's Financial Disasters* (New York: Collier, 1972)

George Winslow

Cornish, Samuel Eli (*b* Sussex Co., Del., *ca* 1795; *d* Brooklyn, 6 Nov 1858). Civil rights leader. He formed the First Colored Presbyterian Church (later renamed Shiloh Presbyterian Church) in 1821 and was its pastor until 1827, when with John B. Russwurm, a proponent of the "Back to Africa" movement, he launched *Freedom's Journal*, the first black newspaper in the United States, from an office at 150 Church Street. After the journal ceased publication in 1829 he edited several others devoted to abolition and civil rights, including *Rights for All* (1829) and the *Colored American* (1837–41). Cornish attended the first National Negro Convention, held in Philadelphia in 1830, as a delegate from New York City and became a prominent figure in the black convention movement. An advocate of practical education, he promoted literacy among blacks in the North and with philanthropists raised money to build schools dedicated to preparing black youths for industrial work. In 1833 he was appointed to the executive committee of the American Anti-Slavery Society.

Thelma Foote

Corona. Neighborhood in north central Queens (2009 pop. *ca* 70,000), adjoining Flushing Bay and Flushing Meadow Park. It was developed in 1854 by a group of speculators from New York City and named West Flushing. The same year marked the beginning of service by the Long Island Rail Road and the opening of the National Race Course (later Fashion Race Course), which continued to operate until the Civil War. Developers planned the streets according to the route of

the railroad. In 1872 the village changed its name to Corona (the "crown" of villages on Long Island). Early factories made china, portable houses, and from 1893 into the 1930s, Tiffany glass. The population reached 2500 by 1898 and 6200 by 1910, and it continued to grow after the introduction of rapid transit in 1917. The commercial center shifted in the 1920s from near the railroad station to Northern Boulevard. From 1943 to 1971 the great jazz trumpeter Louis Armstrong lived in the neighborhood, which was then largely Italian and Jewish. The area attracted a large Latino community after World War II, at first Puerto Rican and after 1965 increasingly Dominican. Immigration to the neighborhood in the 1980s was heavy: the Dominican Republic accounted for almost half of all immigrants who settled there, while China and Colombia accounted for about one-tenth each. Other countries that were well represented included Korea, India, the Philippines, Ecuador, Pakistan, Peru, and Guyana. In the early 1970s the neighborhood was the site of heated conflicts between middle-class homeowners and advocates of low-income housing. Corona was the fictional home of Archie Bunker in the popular television series *All in the Family* (1971–83). In the early twenty-first century, Corona remained ethnically diverse, inhabited mostly by Latinos, with smaller populations of Italian Americans, Asian Americans, and African Americans.

Vincent Seyfried

coroner and medical examiner. Under English law, which from the 10th century mandated that the government investigate deaths, colonial governors appointed coroners for Manhattan and other counties. While some coroners were medical doctors, many were not, and reports were unreliable. The job was often a lucrative political sinecure that paid a fee for each body that was examined. Coroners were known to recycle corpses and take bribes from families or the police to come up with desirable rulings. Among the 20 inquest reports that City Coroner Thomas Shreve filed with his invoice for £66 to the Common Council on 19 April 1771 was a verdict that a certain Samuel Belknap, described as "a prisoner confined in jail," had died by "the hand of God." Attempts to reform the coroner's office were generally ineffectual. Richard Croker, a young blacksmith and Tammany Hall functionary, was named one of the city's four coroners in 1873 with the promise of earning $15,000 a year in fees. He was no more qualified for the job than two of the other coroners, a lawyer turned editor and another Tammany ward heeler (the fourth coroner was the only physician). Mayor William F. Havemeyer's attempts to unseat him failed, and Croker held the position for three years. A state senate committee investigating the city government reported that Croker had no conception of his duties and was skilled only in getting the same corrupt individual, who had been convicted of necrophilia, appointed to coroner's juries a total of 118 times. Croker was nevertheless elected to his second three-year term (he later became the boss of Tammany Hall). Of the 65 coroners elected between the consolidation of New York City in 1898 and 1915, none was chosen for ability. Nineteen were physicians with political pull; eight were undertakers; seven were politicians; six were real estate agents; two were saloon keepers; two were plumbers; and the remainder included a musician, a dentist, and a butcher.

Critics of the system were concerned that even honest coroners were unaware of advances in medical science and developments in pathology. They pressed Albany to follow the lead of Massachusetts and replace coroners with certified medical doctors. In 1914 Mayor John Purroy Mitchel and the City Club, a reform group, commissioned a report that concluded that the position was political and many coroners unqualified. An additional accusation, that the physician appointed by the coroner "is a law unto himself," reflected a widespread conviction that coroners tolerated abortions and, to please families, reported that persons committing suicide had died of natural causes. In 1915 a new law replaced the coroner as of 1918 with a medical examiner. This official was required to be both a medical doctor and a pathologist, pass a written test, and demonstrate an ability to perform a successful autopsy. The first chief medical examiner was the former head of Bellevue Hospital, Charles Norris.

At the end of the twentieth century, the medical examiner became a lightning rod for controversies concerning poor administration and apparent cover-ups of causes of the deaths, not only of well-known individuals (such as former Governor Nelson Rockefeller) but also of several African American men while in police custody. Three medical examiners in succession were fired by mayors. As one of them, Elliott Biden, observed, "These days, it's a rare M.E. who manages to stay out of trouble for any length of time and still maintain his independence."

John Rousmaniere

corporate headquarters. Corporate headquarters concentrated in New York City at the end of the nineteenth century, when proximity to centers of transportation and communication was increasingly important to businesses with operations extending across the country. Because of its role in finance the city attracted a disproportionate number of the country's corporate headquarters, which were initially clustered in lower Manhattan around Wall Street. The city's position was solidified when Standard Oil moved its headquarters from Cleveland in 1882. After the rapid transit system opened and tracks north of Grand Central Terminal were covered (1910), publishers, chemical and drug companies, and eventually airlines formed a second business district between 42nd and 60th streets, and for the next 50 years construction east of Sixth Avenue slowed only during the Great Depression and World War II. By the mid-1960s New York City was home to headquarters of 136 of the nation's 500 largest firms, vastly more than any other U.S. city.

When an economic decline during the late 1960s and 1970s severely hurt the city, a number of firms moved to suburban New York State, New Jersey, and Connecticut where they found larger and cheaper facilities, lower taxes, and less crime. Between 1969 and 1976 only four corporations opened headquarters in the city and 55 among the largest 500 moved out. By the mid-1970s some companies followed shifting markets and moved to such cities as Dallas, Houston, and Los Angeles. Despite economic growth during the 1980s and 1990s New York City continued to have a net loss of corporate headquarters as more companies left then came, but it also achieved some gains, as industries such as banking, insurance, and transportation became stronger.

Zoning changes eventually encouraged the construction of offices west of Sixth Avenue. Largely because of corporate headquarters and the ancillary businesses they attracted, midtown emerged as the largest central business district in the world. As many firms became part of conglomerates and multinational corporations or were decentralized, the continuing role of the city as a hub of corporate headquarters remained unclear, especially as developments in communications and information technology threatened to diminish the importance of headquarters by permitting central operations to be carried out in offices across the country and overseas. There was apprehension after the terrorist attacks of 11 September 2001 that fear of future attacks would speed up corporate departures, especially from the downtown business district. New York City, however, rebounded quickly. A turning point was the decision of Goldman Sachs to remain in downtown rather than relocate across the Hudson. This decision was in response to the city's giving Goldman Sachs $1 billion in tax-free bonds to build a new office tower in lower Manhattan as well as the reluctance of many top employees to leave the city. In 2010 the city housed 44 of the Fortune 500 companies as compared with 41 in 1990.

corporation counsel. Lawyer appointed to defend the legal interests of New York City. A similar office was held first by James Graham, the city's recorder from 1683 to 1701, and in the following century by such distinguished men as Robert R. Livingston and Richard Varick. It was merged into a new position known as attorney of the corporation in 1801. After the offices became separate again on 14 May 1839, Peter A. Cowdrey became counsel and Samuel J. Tilden attorney. In April 1849 the counsel became an elected official in charge of the new Municipal Law Department; the election held soon after was won by Henry Davies. The position became appointive again under William M. "Boss" Tweed's charter of 1870, and the corporation counsel then exercised nearly complete control over litigation involving the city. While in office, William C. Whitney (1875–82) introduced divisional specialization. The city's counsel was used by Mayor John F. Hylan to block proposals for increasing transit fares and utility fees, and by Mayor Fiorello H. La Guardia to prepare a new administrative code. By the mid-1970s the office performed so poorly that it was denounced by Judge Bentley

Kassal, leading Allen Schwartz to carry out reforms and secure agreements from major law firms to provide lawyers to the city free of charge. The corporation counsel continued to serve the city in the early twenty-first century.

George J. Lankevich

Corporation of the City of New York. In addition to wielding government powers, the city is a corporation, a status giving it the legal capacity to own property, sue and be sued, and exercise other functions. New Amsterdam was granted a limited municipal government in 1653. The charter promulgated by Governor Richard Nicolls (1665) changed the "Forme and Ceremony" of government to conform with British practice but recognized the city as a "body Politick and Corporate." Under the laws of that time the corporation, although having governmental powers, was treated as a private institution. Successive colonial charters, especially that of Governor John Montgomerie (1731), defined its rights and privileges and gave it an endowment of "private" land that included most of Manhattan Island north of the present Canal Street as well as the underwater land adjacent to the shoreline in lower Manhattan. Voting and the holding of municipal office were limited to freemen (Dutch burghers), who were required to meet certain property and residence qualifications and were the only people allowed to engage in trade or skilled occupations in the city. The freemanship was gradually expanded, but it persisted as a distinct class even after American independence. The early Corporation of the City of New York did not have the authority to levy direct taxes. Its revenue derived mainly from regulatory and licensing fees, franchises, and income from its property. Throughout the eighteenth century the corporation made numerous grants of underwater land to be filled in. The grantee typically paid a modest quit rent in cash but was also required to build specific public improvements such as streets, piers, and bulkheads. In this way the city was able to manage its expansion and provide improved facilities for its growing maritime trade. The growth of population in the late eighteenth century and the early nineteenth created a need for additional public services and facilities. The corporation became increasingly dependent on the state legislature for the authority to levy taxes and do other things not contemplated in the colonial charters. Through a series of court decisions and charter revisions, the Corporation of the City of New York by the 1860s had lost nearly all of its former autonomy and like other municipal corporations was an instrumentality of the State of New York. By this time the corporation had also divested itself of most of its former landholdings or turned them over to public purposes such as parks.

Corridan, John M. See WATERFRONT PRIEST.

Corrigan, Michael A(ugustine) (*b* Newark, N.J., 13 Aug 1839; *d* New York City, 2 May 1902). Archbishop. He was a coadjutor bishop to Cardinal John McCloskey from 1880 until being appointed archbishop of New York City in 1885. Responding to the needs of Catholic immigrants, he opened 75 parochial schools, centralized the parochial system, and built St. Joseph's Seminary (Dunwoodie) in Yonkers, New York. He also formed a number of charitable institutions (consolidated in 1902 as the Association of Catholic Charities), which he staffed by attracting 24 religious orders to the archdiocese, including the Scalabrinians and the Missionary Sisters of the Sacred Heart. He emerged as a conservative leader and drew sharp criticism from many Catholics after excommunicating the priest Edward McGlynn for supporting Henry George in the mayoral campaign of 1886 (over Corrigan's protests, McGlynn was reinstated by the Vatican in 1892). Corrigan's antiprogressive position was nonetheless supported by papal encyclicals, culminating in *Testem Benevolentiae* (1899).

Robert Emmett Curran

Corso, Gregory (*b* 26 March 1930, New York City; *d* 17 Jan 2001, Robbinsdale, Minn.). Poet and member of the Beat literary movement. He grew up in orphanages and foster homes and was sentenced to three years in Clinton State Prison for robbery when he was 16. He spent his time in jail reading classic works of literature and writing poetry. After he was released from prison in 1950, he met the poet Allen Ginsberg at the Pony Stable, a bar in Greenwich Village. Ginsberg introduced Corso to Jack Kerouac and William Burroughs, who were also living in New York City at the time. These writers influenced Corso, and his poetry developed from conventional verse to a more free-form style. Corso, Ginsberg, Burroughs, and Kerouac formed the nucleus of the Beat literary movement during the 1950s and 1960s, and they alternated living in New York City and San Francisco. Corso briefly taught at the State University of New York at Buffalo in the early 1960s but was dismissed in 1965 when he refused to certify that he was not a member of the Communist Party. Corso published 13 books of poetry, one novel (*American Express*), and two plays and taught and lectured extensively. He died of prostate cancer.

Breanne Scanlon

Cortelyou, Jacques (*b* Utrecht, Netherlands, *ca* 1625; *d* ?New Utrecht, New Netherland, between 28 Feb and 27 July 1693). Landowner and surveyor. Of French parentage, he attended the University of Utrecht and worked as a tutor and land surveyor in America. In 1652 he settled in New Netherland, where he tutored the children of Cornelis Van Werckhoven, a member of the Dutch West India Company. After Van Werckhoven's death he secured a patent in 1657 for land that is now the site of Fort Hamilton in Brooklyn; Cortelyou then divided this land into 20 lots and established the town of New Utrecht. As the surveyor general of New Netherland he drew the first map of New Amsterdam in 1661. He lived at Fort Hamilton and traveled daily to his office on Whitehall Street. Cortelyou's descendants include Isaac Cortelyou, a fence viewer (an official who administered fence laws) and an overseer of the poor in the 1770s who lived in a stone house in Gowanus (eventually known as the Vechte–Cortelyou House) that was the scene of fierce fighting during the Battle of Long Island (August 1776), and George B. Cortelyou, a prominent Republican politician who was chairman of the Republican National Committee (1904), postmaster general (1905), and secretary of the treasury (1907).

Stephen Weinstein

cosmetics. Wigs, rouge, and face powder were used by both men and women in colonial New York City. After the American Revolution most face and hair powder, toilet waters, and lotions were made at home; chemists prepared more complex products such as oils, creams, pomades, perfumes, and dyes; and such prominent merchants in New York City as Nicholas Low and James Rivington imported cosmetics from England and France. The nineteenth century saw a decline in the use of cosmetics, but the city remained the site of many cosmetics firms and of several innovations in the industry, as well as the central receiving point for English and French cosmetics bound for the United States. The English chemist Robert Bach, who set up shop at 128 Pearl Street in 1798, imported most of his preparations. His business evolved by 1872 into the prosperous firm of Dodge and Olcott, which distilled raw materials for export and operated from 88 William Street until it moved to New Jersey in 1904. Two cosmetics firms in the city during the early nineteenth century later evolved into multinational conglomerates: those of Robert Chesebrough and the chemist Theron Pond (whose enterprises merged to form Chesebrough–Pond's in 1955), and of the candle and fancy soap maker William Colgate at 6 Dutch Street (1806), which eventually became the Colgate–Palmolive Company. Both businesses also had operations in Brooklyn: Pond bottled his immensely popular witch hazel there from 1846, and Chesebrough manufactured petroleum jelly at 24 State Street from 1870. Pond later manufactured cold cream, for which he became widely known.

In New York City there were 90 hairdressers operating in 1890, most of whom visited customers in their homes. Commercial beauty salons and makers of hair-care products gradually increased in number. Manuel Besosa manufactured a brand of hair dye called Orija at 66 West 125th Street, and 44 perfumers and seven importers did a thriving business. In a brochure in 1882, Simonson's Human Hair Emporium at 34 East 14th Street advertised not only its usual supply of wigs, toupees, and human hair but also cosmetics imported from France, including the cream Fountaine de la Beauté, the hair color Fluide Magique, and Velontine Face Powder. Mary E. Cobb offered complete beauty treatments in 1886 at her salon at 66 West 23rd Street and remained in business until 1906. The nation's largest cosmetics firm, Avon, began in the city in 1886 and within a decade employed 100 salesmen and operated from a warehouse at 126 Chambers Street.

New York City is the hub of the cosmetics industry

Several developments in the first decades of the century solidified the city's position as the center of the world's cosmetics industry: manufacturers, importers, and marketers believed that an address on Fifth Avenue would lend their products an aura of elegance and gentility, and as they relied increasingly on advertising, transportation, and distribution through department stores, the need to locate in New York City became more pressing. Beauty products, salons, and exclusive sales outlets multiplied rapidly in the early twentieth century, spurred primarily by such locally based pioneers as Elizabeth Arden and her business rival, Helena Rubenstein. Among their successful competitors was Dorothy Gray, who began her career as a custom cosmetician for Elizabeth Arden in 1915 and in the following year opened her own salon at 57th Street and Madison Avenue (moved in 1926 to 753 Fifth Avenue); her business was eventually acquired by the firm of Lehn and Fink.

The Manufacturers' Perfumers Association of the United States was formed in New York City in 1894. In 1920 the group, which later became known as the Toilet Goods Association, published a comprehensive register of wholesalers, manufacturers, and importers of cosmetics and raw materials that listed 480 cosmetics firms operating in Manhattan, 48 in Brooklyn, three in Long Island City, and one in Flushing. Among these were a number of large chemical firms that supplied raw materials for cosmetics, including Pfizer, Squibb, Burroughs–Wellcome, Merck, Schmid, and Schiefflin, as well as the firm of Maurice Levy, who invented the lipstick case. In 1937 the catalogue listed 506 cosmetics businesses in Manhattan, of which many were branches of foreign firms like Chanel, Fabergé, and Jean Naté; others were chemical factories like the Adams Chemical Laboratories at 561 West 147th Street. One of the smaller firms in the catalogue was Revlon, a five-year-old business led by Charles Revson and based at 125 West 45th Street. One of the city's most important cosmetics manufacturers from the 1950s was Estée Lauder. By 1965 Lauder's firm was encroaching on Revlon's market, and a strong rivalry ensued.

Very little cosmetics manufacturing remained in the city after World War II. Although the largest firms maintained their headquarters there, high land costs, wages, and taxes made it more economical for them to operate their factories elsewhere. The industry also experienced a trend toward consolidation, exemplified by the acquisition of Almay, a small firm based in Brooklyn, by the conglomerate TLC Beatrice. In the early twenty-first century, virtually every major cosmetics firm in the world maintained at least an office in the city, including such French firms as Lancôme, L'Oréal, and Chanel, and the giant Japanese firm Shiseido. The cosmetics industry remained an integral part of the magazine, television, department store, chemical firm, and fashion industries.

Marc Ferris

Cosmopolitan. Monthly magazine. It was launched in Rochester, New York, in 1887 and moved to New York City, where in 1888 it was purchased and developed into a magazine of domestic and foreign policy by John Brisben Walker, a former newspaperman who had made a fortune in iron and real estate. During the Spanish–American War two reporters covered the front, while Theodore Dreiser wrote a story on a munitions factory and Stephen Crane reported on the Boer War. Walker was not averse to influencing public policy: in 1895 he used the magazine to offer Spain $100 million in exchange for Cuban independence; in 1902 he proposed a world congress of nations; and he also advocated nationalizing the railway system. He was an early proponent of aviation, and in 1892 he used the magazine to provide one of the first forums for articles on "aerial navigation." In 1905 Walker sold the magazine for $400,000 to William Randolph Hearst, who was more assertive than Walker in using the magazine as a vehicle for venting his opinions. A *Cosmopolitan* story published in 1905 called "The Treason of the Senate," about the alliance between big business and several senators, led President Theodore Roosevelt to coin the term *muckraking* to describe what he saw as sensationalistic but incisive reporting. From 1912 the magazine emphasized fiction: a serial by Robert W. Chambers entitled "The Common Law" and illustrated by Charles Dana Gibson increased circulation by 70 percent. Fiction continued to be published for the next 30 years. By 1965, with circulation foundering, the Hearst Corporation appointed as its editor Helen Gurley Brown, the author of *Sex and the Single Girl,* who sought out a readership of single working women by celebrating a decadent, materialistic way of life. She briefly published centerfold photographs of male nudes and introduced various changes in format that eventually increased circulation from 700,000 to two million. Clearly, the sexual explicitness of the magazine became one of its main selling points. In the early twenty-first century *Cosmopolitan* had 58 international editions, was printed in 34 languages, and was distributed in more than

100 countries. It also expanded to include three American television networks and Cosmo Radio.

Benjamin Yakas, Rachel Sawyer

Cosmopolitan Club. Private women's club located at 122 East 66th Street in Manhattan. Its 10-story clubhouse was designed by Thomas Harlan Elett and opened in 1932, but the club organization itself dates to 1909. "The Cos," as it has since been dubbed, counts Eleanor Roosevelt, Helen Hayes, Pearl Buck, Marian Anderson, Margaret Mead, Willa Cather, and Abby Aldrich Rockefeller among its distinguished past members.

Elizabeth L. Bradley

Costello, Frank [Castiglia, Francesco] (*b* Laurapoli, Calabria, Italy, 1891; *d* New York City, 18 Feb 1973). Gangster. When he was nine years old, his family moved to East Harlem. After being jailed several times as a youth for petty crimes and concealed weapons, he refined his trade, buying favors from political leaders, judges, and the police. For many years he had a penthouse in the Majestic Apartments at 115 Central Park West. After his release from prison, he formally changed his name to Frank Costello. He was nicknamed the "Prime Minister of the Underworld" for his infamous negotiating skills and in 1916 forged an alliance with Ciro Terranova, head of the Morello crime family and the 107th Street gang. Through Morello, Costello was introduced to Charles Luciano, the Sicilian leader of the Lower East Side gang. In 1931, after the killing of several rival bosses, Luciano became the new leader of the crime family and appointed Costello the *consigliare*, or the second in command. Luciano was later convicted for his role in a prostitution ring, leaving Costello in charge of the family. Members of the Luciano crime family, notably Vito Genovese, made an unsuccessful assassination attempt in 1956 to gain control. After serving a short term at the federal penitentiary in Atlanta in 1959, Costello retired to his estate on Long Island. He died of a heart attack.

Cotton Club. Dance hall and supper club. Established in 1920 by the former heavyweight boxing champion Jack Johnson, "Club Deluxe" was located in a dance hall of the Douglas Casino at 142nd Street and Lenox Avenue in Harlem. The notorious gangster "Owney" Madden soon purchased the club and struck a deal that allowed Johnson to remain as manager. The renamed Cotton Club was a whites-only cabaret famous for its fake jungle decor, exotic draperies, and lavishly costumed dancers. The club premiered in 1923 as a replication of popular Broadway "Negro Revues," featuring chorus girls and male dancers. In 1927 Duke Ellington's Washingtonians began a five-year booking and, owing to the primitive backdrop and exotic dancing of Earl "Snakehips" Tucker, were quickly dubbed Duke Ellington's Jungle Band. The club garnered national attention after the Columbia Broadcasting System (CBS) began broadcasting the performances, which had previously been aired by local station WHW. Because Ellington was a valuable commodity, the club acknowledged his request for racial inclusion and relaxed the "whites only" policy for relatives of the band. It was not until 1932, however, that Lucille Wilson, the future wife of Louis Armstrong, successfully challenged the "nothing darker than a light olive tint" policy for Cotton Club dancers. By this time, Cab Calloway headlined and gained fame with his hit "Minnie the Moocher." The club also became a fashionable spot for celebrities; it was there that Adam Clayton Powell, Jr., who was light-skinned enough to gain admission, met his first wife, Isabel Washington, a Cotton Club girl.

In 1936 the Cotton Club closed in Harlem and reopened at Broadway and 48th Street. With the arrival of the swing era, the newly designed interior featured a mural of the white bandleaders Benny Goodman, Gene Krupa, and Tommy Dorsey all in blackface. In 1939 Louis Armstrong and Stepin Fetchit headlined, but the club had been handed indictments for income tax evasion and closed in 1940. Ultimately, America's changing appetite for swing bands led to the demise of lavish venues like the Cotton Club.

Cotton Exchange. See New York Cotton Exchange.

Council of Jewish Women. Volunteer organization formed in 1893. A local chapter formed in New York City the following year was led by Rebekah Kohut and Sadie American, who developed programs to aid Jewish immigrants, especially women and children. It sent volunteers to the docks to help women traveling alone, founded the Lakeview Home for Girls, and maintained recreation rooms on the Lower East Side. It also served refugees from both world wars, set up programs to aid the blind, handicapped, and hospitalized, and worked with other civic groups to pass social legislation.

Council of Learned Societies. See American Council of Learned Societies.

Council on Foreign Relations. Nonprofit organization formed in 1921 to bring together leading figures in academia, business, law, and journalism to study issues of foreign policy; it occupied offices at 45 East 65th Street, next door to Franklin D. Roosevelt's townhouse, before moving in 1945 to the Harold Pratt House, a five-story mansion on the southeast corner of 68th Street and Park Avenue, across from Hunter College. The building was given to the council by the widow of Harold Pratt, one of the original directors of the Standard Oil Company; John D. Rockefeller donated a fund for its maintenance. The leadership of the council reflected its strong ties to the Morgan family of bankers until the early 1950s, when David Rockefeller and other members of his family became prominent among its senior officers and directors. The council played an important role in both Democratic and Republican presidential administrations after World War II and was an early supporter of the presidential candidacy of Dwight D. Eisenhower, who, while serving as president of Columbia University, led a group at the council during 1949–50 that studied aid to Europe. The

council publishes the influential quarterly journal *Foreign Affairs,* sponsors meetings and conferences at Pratt House and occasionally on Wall Street, and produces a program for the city's radio station (WNYC). The members of the council join by invitation; the by-laws require that a third of them live or work near the city. In 2010 membership stood at about 4300; more than 160 people work at its offices in New York City.

Marjorie Harrison

Couney, Martin A. (*b* Alsace, 30 Dec 1870; *d* Brooklyn, 1 March 1950). Pediatrician. He studied in Paris under the pediatrician P. C. Budin, and in 1896 at an international exposition in Berlin he demonstrated an incubator for infants modeled after a device used in poultry breeding. The invention proved a medical and financial success and was demonstrated in London, Paris, Omaha (Nebraska), and Buffalo between 1897 and 1901. In 1903 he opened a nursery on Coney Island where he was able to offer free treatment for premature infants by charging an admission fee of 25 cents to sightseers. His work was exhibited in New York City at the World's Fair of 1939–40 and at Luna Park and Dreamland until 1943, about which time the Cornell Medical Center opened a central hospital ward for premature infants. Couney lived at 3728 Surf Avenue in Sea Gate.

counterfeiting. Counterfeiting was rampant in colonial New York City, even though it was a capital offense. Few counterfeiters were executed, however, as juries usually acquitted defendants regardless of the evidence against them. When a bag of halfpence was examined in 1753, a third were found to be counterfeit, many having been cast in sand. During the American Revolution the British counterfeited Continental currency on a warship in New York Harbor. Foreign coins that predominated in the circulation of New York City, such as the Spanish colonial 2-reale coin, were widely counterfeited. Counterfeiters forged the notes of good state-chartered banks, printed up others for nonexistent banks, and raised the denominations of small notes. Fruit-stand owners who sold produce near the ferries in lower Manhattan passed off counterfeit coins regularly. Counterfeiting became riskier during the Civil War, when uniform banknotes were introduced and the Secret Service was formed, but it revived in the 1930s during the Depression. New York City subway tokens were extensively counterfeited from 1970 until 1995; in the twenty-first century attempts have been made to counterfeit the subway MetroCard, but none is known to have succeeded.

counter-terrorism. Counter-terrorism, the actions the government takes both to thwart potential terrorist acts and to react to any acts that occur, is of paramount concern in New York City.

Public attention focused on terrorism following the 26 February 1993 attack on the North Tower of the World Trade Center that killed six and injured more than 1000 people. Counter-terrorism steps in response to this included monitoring vehicle access to the basement parking garage and requiring personal identification for admission to the World Trade Center buildings. In 1999 the city's emergency command center was moved to the 23rd floor of 7 World Trade Center.

After the attacks of 11 September 2001, when al Qaeda terrorists destroyed both towers of the World Trade Center, killing more than 2600 people, new security measures were put into place to protect the city. The USA Patriot Act, which expanded federal jurisdiction, became law 26 October 2001. Federal counter-terrorism forces under the umbrella of the Department of Homeland Security gained major responsibilities in New York City. U.S. Customs and Border Protection stepped up terrorist and weapons interdiction at John F. Kennedy International Airport. Inspection was augmented on merchant and cruise ships entering the New York–New Jersey seaport, the East Coast's largest. Agreements with foreign nations allowed U.S. customs agents stationed overseas to check shipping containers dockside before they are transferred to vessels headed for U.S. ports. The regional Joint Terrorism Task Force based in Manhattan accelerated operations. Staffed primarily by Federal Bureau of Investigation agents and New York City police officers, the Task Force integrates additional federal law enforcement and intelligence resources. The Federal Emergency Management Agency revised its Urban Search and Response System mandate, originally to respond to natural disasters, to include terrorist attacks.

The most visible aspect of counter-terrorism is the protection of structures and public spaces. Police contingents are positioned at bridges, tunnels, landmarks, and transportation centers. Truck traffic is limited to the upper level of the George Washington Bridge. Visitors can no longer climb the stairs above the Statue of Liberty's pedestal, and public tours of the New York Stock Exchange have been discontinued. Police conduct random sweeps and bag searches in the subway system. NYPD harbor and aviation units and U.S. Coast Guard crews from Staten Island and Kings Point patrol New York City's vast port, 578 miles (930 kilometers) of waterfront, including the United Nations frontage on the East River and the Statue of Liberty in the Lower Harbor. "Operation Hercules" units, the NYPD's version of "showing the flag," make unannounced lightning displays of force. Massed police vehicles, sirens, flashing lights, and helmeted officers with assault weapons flood target areas to create a "curtain of mystery," a Rand Corporation concept that attempts to complicate terrorists' plans by adding additional layers of uncertainty. Security has been hardened in the downtown financial district, home to the New York and American Stock Exchanges, the Federal Reserve Bank, and an intricate road, tunnel, bridge, and subway network. The NYPD's Lower Manhattan Security Initiative has an around-the-clock uniformed presence, comprising combat-equipped officers, canine teams, emergency service units, and a video surveillance system. Unauthorized vehicular traffic is barred from core streets in the Wall Street area, and plans have been advanced to scan all traffic below Canal Street.

Counter-terrorism is also a function of the Port Authority of New York and New Jersey police who patrol the Port Authority Trans-Hudson train system, the Holland and Lincoln tunnels, the George Washington Bridge, Kennedy and LaGuardia airports, and the World Trade Center site. The Metropolitan Transportation Authority has its own police force, supervising security on the seven bridges and two tunnels entirely within the city and an enormous regional transportation system of buses, subways, and Metro–North and Long Island Rail Road trains. It has also developed a widespread counter-terrorism ad campaign: "If You See Something, Say Something; call the terrorism hotline at 1-800-NYC-Safe."

The NYPD assigns more than 1000 of its officers to counter-terrorism duty every day. Ever-expanding intelligence operations include financial investigations and cyberintelligence. Law enforcement officials are concerned about threats from domestic as well as international terrorists. New York City's diverse population provides a reservoir of foreign-language skills, enhancing police operations. Arabic-speaking New York City police officers monitor jihadist Internet sites. To gather intelligence about international terrorist activities, New York City detectives have been deployed abroad at sites including Madrid, London, Tel Aviv, Toronto, Amman,

Abu Dhabi, Singapore, and Interpol headquarters in Lyon, France.

Nexus, the NYPD program that educates and enlists the support of the private sector, aims to deny sensitive resources to terrorists. To share and collect information, each year detectives visit thousands of businesses, including tourist attractions, hotels, retail stores, garages, theaters, self-storage warehouses, and salvage yards. Among the items they monitor are fertilizer and other bomb components, as well as other chemical, biological, radiological, and nuclear materials, which are available—by purchase or theft—from commercial sources. Oil tanker trucks as well as aircraft are subject to hijacking and subsequent use as weapons. Police specialists also coordinate private barrier construction and conduct seminars for private security personnel. Most funding for counterterrorism operations in New York City, which annually runs over $200 million, comes from the municipal budget.

Arnold Markoe

counties. New York City is made up of five separate and complete counties (New York County, Bronx County, Kings County, Queens County, and Richmond County), unlike other American cities, which are either parts of counties (Los Angeles is part of Los Angeles County, Chicago is part of Cook County, Miami is part of Dade County, Detroit is part of Wayne County), coterminus with a single county (Philadelphia, for example), or stand outside of any county (Baltimore and St. Louis). Among other things, the counties administer the court system.

Country Club. Neighborhood in the northeastern Bronx, bounded to the north by Pelham Bay Park, to the east by Long Island Sound, to the south by Throgs Neck, and to the west by Bruckner Boulevard. The land was owned by the Ferris family during the eighteenth century and most of the nineteenth. Country Club Road once led to the Westchester Country Club, which was patronized by yachtsmen and polo players during the nineteenth century. A development called the Country Club Land Association was mapped in 1892, and in the 1920s more lots were added after the adjoining estate of the Spencer family was dissolved. In the twenty-first century the area is known for its stately homes and quiet streets.

courthouses. In the 1650s courts of law in New Amsterdam were usually housed in buildings also used for other government offices. In 1802 the city sponsored a competition to design a new city hall, specifying that the building must include chambers for both the local legislature and the judiciary. The winning entry, designed by John McComb, Jr., and Joseph François Mangin, was completed in 1812 and had a broad flight of exterior stairs, an entrance portico, classical details, and a cupola adorned with John Dixey's statue *Justice.* During the early nineteenth century courts that became too large for their quarters were moved to other buildings in City Hall Park. The Richmondtown Courthouse (1837–39) on Staten Island was built in a Greek Revival style that incorporated severe classical details, an exterior flight of stairs, an entrance portico, and a cupola. It housed all judicial offices of the county until consolidation in 1898; it became part of the Richmondtown Restoration during the 1990s and is now the oldest courthouse in the city.

Several police courts, such as the Jefferson Market Courthouse, were constructed during the late 1840s and 1850s. In 1861 construction began on a county court building in City Hall Park. Designed by John Kellum and often called the Tweed Courthouse, it was one of the first eclectic style courthouses (called Anglo-Italianate by some). Kellum used such traditional features as a broad flight of exterior stairs, a portico, and classical details; the southern wing, designed by Leopold Eidlitz, has Romanesque details. The city paid for labor that was never performed and overpaid for materials, and this extra money lined the pockets of William M. "Boss" Tweed and his cronies. The courthouse was not completed until 1880, and the scandals eventually led to Tweed's imprisonment. The building was restored during 1999–2001 and became the Department of Education's offices. Eclecticism also marked the beaux-arts courthouse of the state supreme court in Long Island City (1876, George Hathorne; rebuilt in 1908 by Peter Coco) and a Romanesque courthouse in Harlem (1893, Thom and Wilson).

In the early twentieth century several majestic courthouses were built as elements in well-designed clusters of buildings, according to the principles of the "city beautiful" movement. A courthouse at 26th Street and Madison Square for the appellate division of the state supreme court (1900, James Lord Brown) was praised for its stylistic coherence. Its park setting and marble colonnades gave it an urban grandeur; judicial themes were depicted in exterior allegorical sculptures by Daniel Chester French and interior murals completed under the supervision of John La Farge. Similar principles guided the design of the borough courthouse at East 161st Street and Brook Avenue in the Bronx (1906, Michael Garvin) and the county courthouse on Richmond Terrace in Staten Island (1913–19, Carrère and Hastings).

In 1912 Guy Lowell won a competition to design a county courthouse to replace Tweed. His entry called for a monumental scale, austere details, and a circular plan with traditional exterior stairs, classical porticoes, and allegorical sculptures. Many feared the building site in City Hall Park would detract from

Foley Square, ca *1940. Diagonally from lower left: New York County Courthouse; left, New York City Department of Health; right, Department of Motor Vehicles; New York City Criminal Courts Building and Men's House of Detention*

Brooklyn Courthouse, 2009

City Hall, and in 1915 Lowell and the city chose the area now known as Foley Square. Concerns about expense forced Lowell to make his design smaller and hexagonal, though he retained the stairs, portico, sculpture, and austerity of the first design. The rotunda and interior balcony were decorated with a cycle of frescoes, *Law through the Ages* (1936–38, Attilo Pusterla). After the courthouse was completed in 1926 a cluster of others were built in Foley Square; Lowell's innovations inspired the plans for several. Cass Gilbert integrated a skyscraper with a base similar to that of the county courthouse in his design for the federal courthouse (1936). In planning the state criminal courts building (1939; also known as "the Tombs") Harvey Wiley Corbett rejected traditional styles for a setback shape and a simplicity typical of American skyscrapers of the 1920s. He also included a huge granite base that made an abstract portico at the entrance. For the appellate court building on Monroe Place and Pierrepont Street in Brooklyn (1937) the firm of Slee and Bryson adopted pared-down versions of traditional elements, including a short stairway leading to a door flanked by two Doric columns and sculptural medallions across the attic depicting judicial figures. Foley Square was extended by the civil courthouse (1960, William Lescaze), in which a modern metal-and-glass, non–load-bearing curtain wall made up the exterior.

Conrad Duberstein Bankruptcy Courthouse, 2009

A shortage of courtroom space in the 1990s resulted in several new courthouses. Kohn Pedersen Fox designed the United States Courthouse annex (1991–94) located behind Lowell and Gilbert's buildings on Foley Square. Its massive, abstracted piers and simplified moldings echo the older buildings without overtly quoting classical forms. Maya Lin's *Sounding Stones* sculpture (1996) is located in the plaza. Many of the new buildings reject the traditional forms associated with courthouse architecture. Rafael Viñoly's high-style modernist Bronx Housing Court (1997) on the Grand Concourse juxtaposes large windows with expanses of brick and sandstone, an overscaled entry canopy, and the eye-catching extruded glass volume of the ninth-floor library. Pei Cobb Freed and Partners and Gruzen Samton's Queens Family Courthouse (2003) on Jamaica Avenue places different functions in separate volumes of varying heights and clads the rationalist exterior with curtain walls and window grids. The grand public entry has Ursula von Rydingsvard's *Katul Katul* sculpture.

courts. The Dutch established the first judicial system, and after the English took New York the city had the first provincial courts. When Albany became the state capital in 1797, the principal state courts moved there. New York City was the site of the first federal court, and the U.S. Supreme Court held its first sessions there. Many important federal cases have been heard in U.S. district courts for the Southern District of New York and the Eastern District of New York.

1. Municipal

In the early years of New Amsterdam, the director and his appointed council heard all cases, civil and criminal, brought by the schout-sifcall (the sheriff-prosecutor). In 1653 a new charter gave the city autonomy from the province of New Netherland and the West India Company. The judicial system consisted of a schout, who prosecuted cases and executed the court's orders and judgments, two burgomasters, and five schepens (aldermen), all appointed by the director. Similar courts were soon set up in Harlem and the five Dutch towns in what is now Brooklyn. In 1665, a year after taking the colony from the Dutch, Governor Richard Nicolls installed an English system, with a mayor, five aldermen, and a sheriff, who together formed the mayor's court. From 1684 the mayor and aldermen and a recorder held a court of sessions to try felonies, misdemeanors, and ordinance violations. The charter promulgated by Governor Thomas Dongan (1686) designated the mayor's court a court of common pleas with common-law jurisdiction over contract, tort, and property disputes; it consisted of the

mayor and recorder (one presided) and at least two of the aldermen. The charter of Governor Richard Montgomerie (1730) retained the court. Provincial acts in 1732 and 1744 authorized magistrates to hold a special court of sessions to try minor offenders who were unable to post bail within two days of arrest (those convicted were publicly flogged).

With New York under British occupation during the American Revolution, city courts were suspended between 1776 and 1783, and the civilian population of the city and Long Island was subject to courts-martial. Soon after resuming in early 1784 the mayor's court tried the case of *Rutgers v. Waddington,* with Alexander Hamilton defending the wartime tenant of a brewery against a suit by its previous owner for back rent. Mayor James Duane's ruling awarded only partial damages, weakening the state's Trespass Act (aimed at Loyalists) and helping to establish the principle of judicial review of legislation. The city's rapid growth led to the formation of lower civil courts. Under a statute of 1782 magistrates were permitted to try lawsuits involving claims of less than £10. Beginning in 1787 assistant justices presided over such cases, and in 1800 they gained jurisdiction over lawsuits between seamen and ship captains or owners. Reorganized as a justice's court in 1807, in 1819 the assistant justice's court was renamed the marine court, where seamen could have a jury trial and plead their cases orally instead of filing written pleadings. Its civil jurisdiction increased incrementally, reaching $2000 by 1875. Assistant justices' courts established in 1807 were the lowest civil courts, organized initially by wards and later by districts; from 1822 the assistant justices were appointed by the Common Council, and in 1852 the courts were renamed the district courts. The lowest criminal tribunal, the police court, was formally named the police office in 1798 and was overseen by "police justices" who issued warrants, arraigned suspects, granted bail, and in lieu of bail committed arrested individuals to jail pending trial; they were appointed by the Common Council from 1797. Corporal punishment for misdemeanors was limited by statute in 1785 and 1789 and abolished in 1801 (hard labor or fines were substituted).

The city's court system continued to grow during the nineteenth century. In 1821 the mayor's court became the court of common pleas (the mayor had long since ceased presiding), with a chief judge and associate judges (Charles P. Daly served variously in both capacities for 41 years); the aldermen were removed in 1847. The Village of Brooklyn had justices of the peace and in 1827 received a municipal court to handle civil cases. In 1828 a superior court began operation in New York City to handle a backlog of civil cases from the court of common pleas and the supreme court. After 1847 its jurisdiction and that of the court of common pleas were the same, giving the city three higher civil courts (common pleas, superior, and supreme), each with its own judges, clerks, trial and appellate terms, and case reports, sometimes handing down conflicting decisions. Under the state constitution of 1894 the superior and common pleas courts were merged into the supreme court, effective in 1896. There were three levels of criminal courts. The court of general sessions tried felony cases: the recorder presided and any two of the common pleas judges, the mayor, and the aldermen completed the bench. The court of special sessions tried misdemeanors and ordinance violations, but with a panel of three judges instead of juries as in the rest of the state. This consisted of the recorder and two common pleas judges from 1830 until 1858, when they were replaced by the police justices. In 1849 the courts in Brooklyn were reorganized so that justices of the peace tried small civil cases, and police justices held preliminary hearings and courts of special sessions. A city court with higher civil and criminal local jurisdiction equivalent to that of the supreme court was also formed and in 1896 was merged into the supreme court.

Police court at the Tombs, ca *1870*

The selection of judges became a highly contentious issue in the mid-nineteenth century. Originally, city magistrates were not locally elected or appointed; rather, the governor, with the consent of the state senate, appointed the recorder and the judges of the common pleas, superior, and marine courts. Statutes enacted between 1847 and 1850 made these and the police justices elective. Beginning in 1848 police justices were assigned to districts, and in 1860 a board of police justices was formed to supervise the system. By the 1860s Tammany Hall controlled the judicial nominations for the police and district courts and filled court jobs at all levels with party hacks and no-shows. Many cases were dismissed by recorder John Hackett and superior court judge John McCunn, both chosen by the Tweed Ring, in exchange for political favors and bribes. The police courts were especially lax and corrupt, and after the fall of the Tweed Ring in 1873 the police justices ceased to be elected and were instead appointed by the mayor, who remained the city's chief magistrate; aldermen were barred from becoming police justices. In 1883 the marine court was renamed the city court.

Efforts at reorganization and reform began in the last decades of the nineteenth century. Problems in the police courts persisted, leading to an investigation into the courts and the police force by State Senator Clarence Lexow in 1894 that began a municipal reform movement. In 1895 the police courts were replaced by magistrates' courts and a separate court of special sessions was also established, the justices appointed by the mayor. After 1892 state law required that children under 16 charged with crimes be detained and tried separately from adults, and between 1902 and 1910 children's courts opened in each borough as divisions of the court of special sessions. After consolidation in 1898 the city court replaced the district and justice's courts in Brooklyn and Long Island City, and the magistrates' and special sessions courts of New York City were extended to Brooklyn, Queens, and Staten Island, which continued to have their own county courts; in 1914 the Bronx became a separate county and gained its own county court. Specialized magistrates' courts were set up after 1900, among them a women's court (1910) in Manhattan and the Bronx to handle prostitution cases; night, felony, and homicide courts for arraignments; and traffic, probation, gambler's, and commercial-frauds courts to relieve the caseloads of the district

Court System in New York State, 1777–1847

Court	Jurisdiction	Appeals to
Court for the Correction of Errors	Final Appeals and Impeachment	
Supreme Court, General Term	Intermediate Appeals	Court for the Correction of Errors
Supreme Court		
Circuit Courts	Civil	Supreme Court, General Term
Courts of Oyer and Terminer	Criminal	Supreme Court, General Term
Court of Exchequer (to 1823)	Fines and Penalties	Supreme Court, General Term
Court of Chancery	Civil (Equity)	Court for the Correction of Errors
Court of Probates (to 1823)	Probate	Court of Chancery
Surrogate Courts (after 1787)	Probate	Court of Probates (to 1823); Court of Chancery (1823–47)
Courts of Common Pleas	Civil	Supreme Court, General Term
Courts of Sessions	Criminal	Supreme Court, General Term
Justices of the Peace Courts (to 1824)	Limited Civil	Supreme Court, General Term
Courts of Common Pleas (after 1824)		
Courts of Special Sessions (to 1824)	Limited Criminal	Supreme Court, General Term
Courts of Common Pleas (after 1824)		
City and Village Courts	Limited Civil and Criminal	Various
Surrogate Courts	Probate	Supreme Court, General Term or Appellate Division or Appellate Term
City Courts	Limited Civil and Criminal	County Courts; Supreme Court, Appellate Term, Long Island
Town and Village Justice Courts	Limited Civil and Criminal	County Courts; Supreme Court, Appellate Term, Long Island
District Courts (Long Island only, after 1973)	Limited Civil and Criminal	Supreme Court, Appellate Term

Compiled by James D. Folts with the assistance of Kevin Kenny

magistrates' courts. Despite these structural changes, ethical problems remained. A legislative commission under Alfred R. Page in 1910 criticized the treatment of women and children in magistrates' courts and recommended improvements in decorum and facilities; legislative acts during the same year and in 1915 provided for better administration. The children's court became a separate division with its own probation department in 1915, and a family court opened in 1918 as a division of the magistrates' court to handle spousal and child-support cases.

During state constitutional conventions in 1915 and 1921, proposals were made to combine the city's lower civil courts and abolish the four county courts; these were voted down by the public, but a constitutional amendment in 1925 transferred the civil jurisdiction of the county courts to the city court, effective in 1927. The children's court became independent in 1924 and was given jurisdiction over juvenile criminals and delinquents, as well as cases of child neglect. From this time the courts of general and special sessions tried criminal defendants between the ages of 16 and 19 as "youthful offenders," with probation the usual outcome. Public policy increasingly directed the court to rehabilitate young offenders rather than punish them. In 1932 Judge Samuel Seabury issued a report on the magistrates' courts and found that bribery, extortion, and the use of political influence were widespread. A domestic relations court was set up to administer the family and children's courts in 1933. Branches of the magistrates' courts known as adolescent courts opened in Brooklyn and Queens in the 1930s and later in the other boroughs to try youths between the ages of 16 and 18 as "wayward minors"; these were intended to separate minors from older and more hardened offenders, but failed to stem the rise in juvenile crime after World War II. In 1934 a small-claims division of the municipal court was formed to clear a backlog of small suits. During the same year the women's court was extended citywide.

After the war the city's caseload increased rapidly, first in automobile accident claims and later in criminal and family cases. From 1951 jurisdiction over delinquent girls between the ages of 16 and 20 was given to a girls' term. Overlapping jurisdictions and uncoordinated administration hampered city courts, and in 1955 a state commission under Harrison Tweed recommended the consolidation of all the city's lower civil and criminal courts into one court. The plan failed, largely because of opposition from politicians who relied on the courts to distribute patronage, but reorganization was finally mandated under a constitutional amendment in 1961. In September 1962 the Court of Special Sessions and the magistrates' courts merged into a criminal court responsible for trying misdemeanors and ordinance violations and for preliminary felony hearings; the mayor was empowered to appoint the judges to 10-year terms. The court of general sessions in each of the five counties was abolished, their criminal business transferred to the state supreme court, and the domestic relations court was replaced by a statewide family court. The city court and the municipal court were merged in 1962 into a civil court responsible for lawsuits up to $25,000 under judges elected to 10-year terms. The women's court was abolished in 1967. Cases involving minor traffic and housing codes were removed from the criminal courts; in 1970 moving violations were handled by the state department of motor vehicles, and in 1972 a new housing section of the civil court handled housing code and rent cases. The development of a statewide judicial administration during the 1970s helped to unify the city's court system. A deputy administrative judge supervised all state and local courts in the city after 1974 and assigned judges wherever needed. The state assumed all operating costs for the city courts in 1977 in the wake of the fiscal crisis.

2. State

New York City was the seat of the major colonial and state courts until 1797, when the capital was moved to Albany. The "Duke's Laws" of 1665, issued under authority of the duke of York, established a court of assizes

composed of the governor, his council, and other officials meeting yearly in the city to try important cases. With the division of the province into counties in 1683 came new county courts of oyer and terminer empowered by the first colonial assembly to "hear and determine" major criminal and civil cases, with two provincial judges and designated local magistrates. A court of chancery handled matters of equity including injunction, the foreclosure of mortgages, the discovery of evidence, and the appointment and supervision of trustees. It met in New York City beginning in 1683 and the royal governor was chancellor. Probate jurisdiction was vested in the colonial governor and (after 1691) his delegate or "surrogate."

An act of the assembly in 1691 replaced the courts of oyer and terminer with a supreme court of judicature possessing all the civil, criminal, and appellate jurisdictions of English common-law courts; court terms were held in the city by an appointed chief justice and two associates. The act also established courts of common pleas (civil) and sessions (criminal) in each county. In 1692 the assembly empowered a supreme court justice to preside over circuit courts in each county and try major civil and criminal cases. The governor objected to the assembly's attempts to reenact the judiciary act of 1691, and after 1698 ordinances of the governor were the legal basis for the supreme and chancery courts. English court procedure was introduced rapidly, allowing the city's merchants to use the courts to collect debts more easily.

The most notable, and divisive, political trial began in 1733, when incoming Governor William Cosby sued Acting Governor Rip Van Dam for back salary. He ordered the state supreme court to sit as a court of exchequer so that the case could be tried without a jury. When Chief Justice Lewis Morris challenged the legality of this arrangement, he was dismissed and replaced by James de Lancey. Morris and his supporters then launched the *New-York Weekly Journal,* a publication dedicated to attacking Cosby. Cosby bypassed the grand jury in having the editor, John Peter Zenger, charged with seditious libel. Andrew Hamilton, a lawyer from Philadelphia, won that historic case for Zenger by arguing brilliantly for freedom of the press and for the jury's right to decide not only the fact of publication but also the truth of the libel. The supreme court was at the center of controversy again during the 1760s, when a political faction led by the Livingston family opposed Acting Governor Cadwallader Colden's plan to appoint supreme court justices to serve at pleasure rather than for life. Colden stubbornly sought to review on appeal the facts as well as the law in *Forsey v. Cunningham,* a case argued before the state supreme court, but failed and was denounced by the provincial elite for undermining the right of juries to determine facts.

Court System in New York City

Court	Jurisdiction	Appeals to
CIVIL COURTS (ARRANGED CHRONOLOGICALLY)		
Mayor's Court, 1665–73, 1674–1821[1] (also known as Court of Common Pleas after 1686)	Civil and criminal	Court of Assizes, 1665–73, 1674–84; Court of Oyer and Terminer, 1683–91; Supreme Court after 1691
Court of Common Pleas, 1821–95 (merged into Supreme Court)	Civil	Court of Common Pleas (General Term), 1848–95; Supreme Court (General Term), 1828–48, 1877–95; Court of Appeals, 1848–77
Superior Court, 1828–95 (merged into Supreme Court)	Civil (commercial)	Superior Court (General Term), 1848–95; Supreme Court (General Term), 1828–48, 1877–95; Court of Appeals, 1848–77

Court System in New York City (*Continued*)

Court	Jurisdiction	Appeals to
Criminal Court, 1962–	Limited criminal	Supreme Court (Appellate Term)
Family Court (branch of Magistrates' Court), 1918–33 (merged into Domestic Relations Court)	Family	Same as Magistrates' Court
Children's Court, 1923–33 (formerly branch of Court of Special Sessions; merged into Domestic Relations Court)	Juvenile	Supreme Court (Appellate Division)
Domestic Relations Court, 1933–62 (succeeded by Family Court: see table of New York State courts)	Family and juvenile	Supreme Court (Appellate Division)

1. The Mayor's Court was also known as the Court of Common Pleas from 1868. In 1821 the name was legally changed to Court of Common Pleas, as the mayor no longer presided.

2. Intermediate and limited civil jurisdiction were defined in terms of the value of cases heard by each court.

3. General Term courts were appellate panels, in this case selected from the Marine Court and in others selected from the Marine Court and in others selected from other courts. For clarity the General Terms of the Marine Court, Superior Court, and Court of Common Pleas have been omitted from this table.

4. Bronx County existed legally from 1898, although it was not organized until 1914.

Compiled by James D. Folts with the assistance of Kevin Kenny

Under the first state constitution of 1777, the trial court system was retained unchanged and a court was added for the correction of errors, replacing the governor and council as the highest appellate court. During the colonial period the governor had served as chancellor and set up the court of chancery without legislative consent. After 1778 there was an appointive chancellor. In 1787 the court of chancery received jurisdiction over divorce cases and a surrogate's court was established in each county. Until 1823 a court of probates heard appeals from the county surrogates' courts and supervised the settlement of estates of persons who had died out of state. The office of public administrator opened in 1799 to settle estates of city residents without heirs. The 1822 state constitution created circuit judges in eight circuits who would travel to each county to try civil cases originating in the supreme court and to hold courts of oyer and terminer for felonies, including all capital crimes. (New York City was in the first circuit.) The supreme court heard appeals from the lower courts and ruled on points of law raised in the circuit courts. From 1823 equity powers were divided between the court of chancery and a supreme court circuit judge or a vice chancellor assigned to New York.

During the 1820s William Sampson and Henry D. Sedgwick, prominent lawyers in the city, called for a reform of the state's antiquated common-law court procedure; a code of civil procedure became law in 1848. Under the constitution of 1846 the state courts were reorganized, and in 1847 an elective court of appeals replaced the court of errors as the highest appellate court. An elective supreme court was established in 1847 to combine law and equity jurisdictions. A second division of the court of appeals was established in the city to handle a large backlog of cases between 1889 and 1892. Supreme court justices appointed to hear appeals in a general term took appeals from higher trial courts, while appeals from the superior and common pleas courts in New York County and from the city court in Brooklyn went directly to the court of appeals. Circuit courts and courts of oyer and terminer remained the county-level trial terms of the supreme court until 1896, when the supreme court justices continued to preside over trial terms of the supreme court in each county. The state constitution of 1894 established a supreme court appellate division, which began in 1896 and had in its first department New York County (and later Bronx County as well) and in its second Kings, Queens, and Richmond counties. A court of claims was formed in 1897 to handle claims against the state, holding sessions in New York City.

The early twentieth century saw the construction of several court buildings, among them the ornate courthouse of the supreme court appellate division (first department) at 27 Madison Avenue in 1900, the Queens County Courthouse in Long Island City (1908), and the Hall of Records on Chambers Street (1911), erected to house the many books and files of the surrogate's court of New York County, the busiest in the state. Special terms were added in the first and second departments to hear appeals from the city and municipal courts in 1914 and later from the court of special sessions as well. A number of courts moved to new quarters during the following decades: the Richmond County Courthouse (1919) replaced a courthouse erected in Richmondtown in 1839; the New York County supreme court building on Foley Square (1927) took over the functions of the courthouse built under William M. "Boss" Tweed from 1861 to 1872; and new quarters were assumed by the Bronx County civil courts (in the county building, opened in 1934), the Bronx County appellate division, second department (in a building at 45 Monroe Place in Brooklyn, 1938), the supreme court of Queens County (in a building completed in Jamaica in 1939), and the supreme court of Kings County (in the civic center, 1957). In response to a report prepared by James A. Foley, the New York County surrogate, practice of the surrogate's court and the law of estates was reformed during the 1930s.

Justices are elected to the state supreme court by district to 14-year terms. In New York City, New York County is the first district; the second district was Kings and Richmond counties until 2008, when the state legislature established a long-sought thirteenth district, separating Staten Island from Brooklyn; the eleventh district was Queens County, established 1963; and the twelfth district was the Bronx, established 1983.

3. Federal

The most important federal court in New York City is the District Court for the Southern District of New York State. Its precursor, the U.S. District Court of New York, was established under the Judiciary Act of 1789 and was the first federal court to meet under the Constitution, convening on 3 November 1789 in the Exchange Building on Broad Street, across from Fraunces Tavern (the supreme court did not meet until February 1790). Like the Admiralty Court in Britain, the court had jurisdiction over cases arising under the Constitution and federal statutes, admiralty and maritime cases, disputes between citizens of different states and between states and the federal government, and all "Controversies to which the United States shall be a Party." President Washington appointed distinguished lawyer James Duane as the court's first justice; attorneys admitted to practice in the court on its first day included Alexander Hamilton and Aaron Burr. The number of cases was at first small but grew so rapidly that on 9 April 1814 Congress divided the court into the Northern and Southern districts of New York State.

The earliest cases dealt with admiralty and maritime law, and in both precedent and practice the court followed the tradition of the British Admiralty Court in the Province of New York. The court inherited the records of the British court as well, cases involving piracy and privateers (such as letters of marque from the French and Indian War), the treatment of seamen (who often had to sue ships' owners and captains for their wages), and smuggling or other violations of the Navigation, Townshend, Sugar, and Tea acts. Many cases involved American ships trading with French and Dutch ports in the Caribbean. When the British confiscated a ship and its cargo on charges of smuggling, officials responsible for enforcing the law often acquired the goods at auction, a blatant conflict of interest that fed the growing discontent of colonial merchants in the years before the American Revolution. Precedents established in the admiralty court remained in force after independence. During the undeclared naval war with France, the USS *Constitution* brought a captured merchantman into New York Harbor and asked the court to declare it a legitimate prize of war, the proceeds from its sale to be distributed among the officers and crew. This traditional law of the sea remained in practice as late as the Civil War, when ships of the U.S. Navy brought in captured Confederate blockade runners as prizes. Other maritime cases involved accidents at sea; the court was the venue for lawsuits against owners of the *General Slocum, Titanic, Lusitania,* and *Andrea Doria.*

Important obscenity cases were also heard in the Southern District of New York, because under federal law the court was responsible for determining whether materials imported into the United States were obscene or indecent. In the nineteenth century the articles in question included books, photographs, playing cards, and drugs, articles, and medicines "used for the prevention of conception or for causing unlawful abortion." The court ruled in 1932 that D. H. Lawrence's *Lady Chatterley's Lover* was obscene and in 1939 that James Joyce's *Ulysses* was not. During World War I John Reed was among many who were indicted on charges of sedition. In 1919 Emma Goldman was deported to Russia as an "alien anarchist" after her writ of habeas corpus was denied in the court. Her lawyer had unsuccessfully argued that an individual could not be deported for an "attitude of mind or the holding of political, social or economic views, or the expression thereof." During the "Red Scare" after World War II the court was the venue for three major trials: the conviction of 11 communists under the Smith Act (1949), the perjury trial of Alger Hiss (1950), and the espionage trial of Julius and Ethel Rosenberg, with Justice Irving Kaufman presiding (1953). It also heard a large number of cases in corporate law, antitrust law (including the landmark prosecution of the American Tobacco Company), and bankruptcy (including those of Mathew Brady and the City Housing Corporation). During Prohibition there were prosecutions under the Volstead Act, ranging from the sale of a single glass of beer to the tax evasion trial of Dutch Schultz. In the area of patent law and copyright infringement, Thomas Edison, Rudyard Kipling, Irving Berlin, and the creators of the Lone Ranger, Mickey Mouse, and Batman have all at one time or another asked the court to protect their copyrights. The terrorists who bombed the World Trade Center in 1993 were convicted in the Southern District of New York (1994, 1995).

Congress created the U.S. District Court for the Eastern District of New York in 1865, splitting Long Island and Staten Island from the Southern District of New York, but both courts held jurisdiction over the harbor. The first judge appointed to the bench of the new court was Charles Linnaeus Benedict; the number of judgeships was later increased to two in 1910, six in 1940 (after Prohibition and the Depression had swelled the caseload), and eight in 1960. The courthouse is in downtown Brooklyn. A second courthouse opened in Westbury (Nassau County) in 1971, moving to Uniondale in 1981; the third opened in Hauppauge (Suffolk County) in 1987. Major cases tried in the Eastern District of New York include *Schechter Poultry Corp. v. United States* (1935), which resulted in a ruling that the National Industrial Recovery Act was unconstitutional; a case concerning the deplorable conditions for the severely mentally challenged at the Willowbrook State Development Center on Staten Island (1975); the successful challenge to the constitutionality of the Board of Estimate (1984); the bribery trials of Brooklyn Democratic leader Meade Esposito (1987) and Representative Mario Biaggi (1988); the mail fraud and extortion trial of Nassau County Republican leader Joseph Margiotta (1981); the bribery trial of Judge William Brennan of the New York State supreme court (1985); the prosecution of Staten Island Congressman John Murphy and others in the "Abscam" case, an FBI "sting" operation (1980); *Beekman v. City of New York* (1979), which challenged the physical examination administered by the Fire Department of the City of New York on the grounds that it discriminated against women; *Arthur v. Starrett City* (1985), over the use of quotas to maintain racial balance in a housing complex; the prosecution of individuals involved with the Puerto Rican terrorist organization Fuerzas Armadas de Liberación Nacional (FALN) for as many as 30 bombings in New York City (1983); and the conviction of mob boss John Gotti (1992). Ronell Wilson, the killer of two undercover police officers on Staten Island in 2003, was convicted in the Eastern District Court and sentenced to death (2007), the first such sentence since the Rosenbergs; Staten Island District Attorney Daniel Donovan handed the prosecution to federal prosecutors in the Eastern District after New York's death penalty was ruled unconstitutional.

James D. Folts, Jeffrey A. Kroessler

Cousy, Robert Joseph [Bob] (*b* New York City, 8 Aug 1928). Basketball player. The son of French immigrants, Cousy grew up playing stickball and boxball on Manhattan's East Side. At age 12 Cousy moved with his family to St. Albans, Queens, where he began playing basketball. Despite being twice cut from the Andrew Jackson High School team, he won the city scoring championship as a senior and earned a scholarship to Holy Cross College in Worcester, Massachusetts. An innovative guard with unprecedented ball handling and passing skills, Cousy became known as "the Houdini of the Hardwood." He won a collegiate title at Holy Cross and six professional titles with the Boston Celtics; in 1996 a National Basketball Association (NBA) panel named him one of the 50 greatest players in NBA history.

Ben Silk

Covello, Leonard (*b* Avigliano, Italy, 26 Nov 1887; *d* Messina, Sicily, Italy, 19 Aug 1982). Teacher and principal. When he was nine, his family moved to East Harlem, where he found schools indifferent or hostile to Italians. He became a high school language teacher in 1913 and in 1922 persuaded officials to make Italian an elective language; he also advocated academic rather than vocational education for Italians. In 1934 he was appointed the first principal of Benjamin Franklin High School, which he made an integrated school despite racial tensions in East Harlem. On his retirement in 1956 he became the educational consultant to the Puerto Rican Migration Division and continued to write about education. He returned to Italy in 1972. Covello wrote a memoir, *The Heart Is the Teacher* (1958).

Mary Elizabeth Brown

Covenant House. Nonprofit charitable organization that operates shelters for homeless and runaway youths. The first Covenant House was opened in 1968 by Bruce Ritter, a Franciscan friar, in two abandoned tenements in the East Village. The organization went on to open several shelters throughout New York

City, including one on 41st Street near Times Square kept open 24 hours a day, and an outreach center on West 44th Street. In 1990 Ritter was forced to resign amid allegations of sexual and financial misconduct. In the early twenty-first century Covenant House was the largest privately funded organization in the world devoted to helping teenage runaways, serving over 70,000 a year through its 20 shelters in the United States, Canada, and Latin America.

Frank Morrow

Cowley, (David) Malcolm (*b* Belsano, Pa., 24 Aug 1898; *d* New Milford, Conn., 27 March 1989). Writer, editor, and literary historian. He volunteered as an ambulance and munitions truck driver in France during World War I and reported from the Western Front for the *Pittsburgh Gazette*. In 1920 he graduated from Harvard University and wrote for the *New York Daily Post* and *The Dial* until he moved to Paris, where he was exposed to the emerging styles of Dadaism and Surrealism and edited *Gargoyle,* the first continental European English-language publication between the world wars. While living abroad, he was associated and worked with members of the "Lost Generation," including F. Scott Fitzgerald, Ernest Hemingway, John Dos Passos, and Ezra Pound, among others. In 1929 he published his first book of poetry, built around his poem "Blue Juniata." He then started a 15-year career at the *New Republic* magazine, where he wrote book reviews. In 1934 he published *Exile's Return: A Literary Odyssey of the 1920s,* which came to be regarded as the definitive chronicle of the 1920s. He helped to organize the first American Writer's Congress in 1935. From the early 1930s to November 1935 he lived at 360 West 22nd Street. In 1941 he was hired as a deputy for the Office of Facts and Figures, a government agency responsible for disseminating information about the government's defense efforts during World War II. He resigned in 1942 under pressure from the Federal Bureau of Investigation because of his past ties to communists and left-wing organizations.

B. Kimberly Taylor

Craft Museum. See Museum of Arts and Design.

Crain's New York Business. Business magazine. Launched in 1985 by Crain Communications, Inc., the magazine provides local New York City business news and coverage. It also has an online version, complete with industry coverage, New York City industry lists, and research guides.

Jessica Montesano

Crane, (Harold) Hart (*b* Garretsville, Ohio, 21 July 1899*; d* Gulf of Mexico, 27 Apr 1932). Poet. Born to Clarence Crane, inventor of the Life Saver candy, he moved to New York in 1917 but rarely settled down, spending much of his time in Cleveland, Mexico, Cuba, and Europe. It was in New York City, however, that he developed his career as a poet, socializing with such writers as E. E. Cummings and Allen Tate. Influenced by Walt Whitman and T. S. Eliot, Crane focused on urban scenes and developed a unique poetic style that readers sometimes found challenging. Many of his poems were set in New York City, such as "The Bridge" (1930), in which the Brooklyn Bridge served as the poetic centerpiece. He at one time lived near the bridge at 110 Columbia Heights in Brooklyn but wrote the collection of poems while living on the Isle of Pines in the Caribbean. Crane lived a mostly troubled life, struggling with bouts of depression and alcoholism, which worsened during 1931–32 while in Mexico on a Guggenheim Fellowship. He committed suicide by jumping from the deck of the SS *Orizaba* off the coast of Florida en route to New York City from Mexico.

David White

Crane, Stephen (*b* Newark, N.J., 1 Nov 1871; *d* Badenweiler, Germany, 5 June 1900). Novelist. He briefly attended Lafayette College and Syracuse University but left to pursue a writing career. In 1891 he moved in with his brother in suburban New Jersey, where he wrote stories and articles for various newspapers, including the *New York Tribune* and the *New York Herald.* During this period, he began taking trips to the Bowery, exploring its tenements and nightlife. His experiences there would serve as the foundation for *Maggie: A Girl of the Streets* (1893), *George's Mother* (1896), and an article for *New York Press* entitled "An Experiment in Misery." In 1892 he moved to Manhattan, living at 165 West 23rd Street between Sixth and Seventh avenues. *The Red Badge of Courage,* an unromanticized account of the Civil War written despite Crane's never having been a solider, was first published in 1894 in various newspapers. After its publication Crane went on a long journalistic tour of North America, one of many in his lifetime. He would later cover the Spanish–American War in a brief stint for the *New York World.* When he returned to New York City after five months traveling, Crane joined the Lantern Club, a group of writers who gathered at 126 William Street. After 1894 Crane published mostly short stories (*Wounds in the Rain,* 1900) and poems (*The Black Riders and Other Lines,* 1895). He died of tuberculosis.

Max Seppo

Crater, Joseph F(orce) (*b* Easton, Pa., 1889; *d* ?1930). Judge who disappeared. He earned a law degree at Columbia Law School, opened a private practice that became successful, and took up quarters at 40 Fifth Avenue; he also became politically active and was made president of the Cayuga Democratic Club, an organization closely associated with Tammany Hall. In April 1930 he was appointed to the state supreme court by Governor Franklin D. Roosevelt. After dinner at a restaurant in Manhattan on 6 August he stepped into a taxicab with about $5000 in his wallet, waved goodbye to a friend, and disappeared. An investigation by a grand jury hinted at corruption in the Cayuga Club; Crater was never found.

James E. Mooney

Crazy Eddie. Chain of retail electronics stores opened by Eddie Antar, an entrepreneur from Brooklyn and the grandson of Syrian immigrants. It began as a store which Antar opened in Brooklyn in 1969 that sold electronic equipment (mainly televisions and stereos) nearly at cost. The firm prospered during the early 1980s with the rising popularity of videocassette recorders; more stores opened throughout the metropolitan area, and television commercials were made featuring Jerry Carroll, who waved his arms and frantically screamed, "Crazy Eddie's prices are insane!" At its peak the chain consisted of 43 stores. Sales declined from late 1986, and the firm filed for bankruptcy protection in 1989. Antar was arrested in Israel in June 1992 on suspicion of having passports under three names and of carrying millions of dollars stolen from the stockholders of Crazy Eddie; he was later sentenced to 12 and a half years in prison for fraud and ordered to repay $121 million in restitution.

Melissa M. Merritt

Credit Suisse. Firm of investment bankers. It was formed in New York City as the First Boston Corporation in June 1934 by a merger of the investment banking divisions of First National Bank of Boston and Chase National Bank after the Glass–Steagall Act required the separation of commercial and investment banks. In the 1930s and 1940s First Boston was the only large publicly owned firm of its kind and underwrote securities for many corporations and public utilities, including electric and oil companies, as well as for commercial banks and securities firms. After the stock market crash of October 1987 the firm sought to refinance temporary loans that it had made during the 1980s; it received capital from Credit Suisse and was restructured in December 1988, becoming a privately held subsidiary of an international investment bank controlled by CS Holding, the parent company of Credit Suisse. The firm took the name CS First Boston in September 1993. In 1990 CS Holding gained a majority share in CS First Boston by increasing its holdings from 44.5 percent to 64 percent. In 1996 CS First Boston became Credit Suisse First Boston when the CS Holding Group reorganized itself into the

Credit Suisse Group. In 2006 the name First Boston was dropped entirely and the company became known as Credit Suisse. It retains investment banking headquarters at 11 Madison Avenue.

Mary E. Curry

credit unions. The first credit union in New York City was organized in 1914 by the employees of Bing and Bing after the Russell Sage Foundation had prevailed on New York State to make credit unions legal. By the following year there were 19 credit unions in the state, 11 of which were in New York City. Mayor John Purroy Mitchel organized a credit union in 1916 for municipal workers, in order to end the practice of garnishing their salaries. During the 1920s credit unions increased in number and size, though many failed during the Great Depression of the 1930s. Those that survived benefited from a loss of faith in commercial banks and other financial institutions that were perceived as impersonal. Credit unions grew slowly in the 1940s, but picked up again in the 1960s and, with assistance from the provision of the federal "share-draft" insurance in 1971, rapid expansion resumed thereafter.

In the early 1970s, the Municipal Credit Union of New York City became one of the largest credit unions in the country. In 1977, however, rumors that it was in difficulty generated a run by shareholders that threatened its existence, despite the protection of federal insurance. It recovered after a temporary takeover by the New York State superintendent of banking. In 1980 there were about 440 credit unions in New York City; congressional legislation to "deregulate" banking in 1980 and 1982 freed credit unions from restrictions on the interest rates they could pay and expanded the kinds of loans and investments they could make. Among other things, it allowed them to provide checking accounts and to make commercial loans. The legislation also imposed Federal Reserve System reserve requirements.

In the last decades of the twentieth century, credit unions emerged as full-service banks for consumers. But the common bond—their distinguishing quality—weakened. In a quest for growth, credit unions with different common bonds have merged. The number of credit unions has also declined due to conversions into savings institutions and banks. By the early twenty-first century, the number of credit unions in New York City had fallen to less than 140.

Amel, "Trends in Banking Structure since the Mid 1970s," *Federal Reserve Bulletin,* March 1989, pp. 120–3; *Annual Report of the New York State Banking Department* (Albany: New York State Banking Department, 2005)

Bernard Shull

Creedmoor. A tract of land in east central Queens, one mile (1.6 kilometers) north of Queens Village and centered on Braddock Avenue and old Rocky Hill Road (now Braddock Avenue), named for the family that farmed there. The name is used only locally and does not refer to any village or settlement, past or present. Conrad Poppenhusen of College Point ran a railroad through the area parallel to Braddock Avenue in 1871 and donated some of the surplus land to the National Rifle Association for use by the state National Guard, which opened firing ranges in 1873. The growth of Queens Village from the 1890s and the hazards connected with the firing ranges led to the eviction of the National Guard in 1908. In 1910 the tract became the site of a large state mental hospital.

Vincent Seyfried

Creedmoor Psychiatric Center. State mental hospital on Winchester Boulevard near Queens Village, built on land originally owned by the Creed family. It opened in 1912 as a "farm colony" for the Brooklyn Psychiatric Center in facilities formerly used as barracks for the National Guard. With the construction of new buildings in 1926, 1929, and 1933 Creedmoor became a separate state hospital. Although its nominal capacity was 3300 patients, there were 6000 patients by the 1940s, and overcrowding was exacerbated by staff shortages and limited funds. During these years various new treatments for mental illness were introduced at Creedmoor, including hydrotherapy, insulin therapy, electroshock therapy, and in a few cases lobotomy. A more important innovation was the introduction of antidepressant and tranquilizing drugs, which became widely used in the state mental health system in 1955. At Creedmoor the new drugs meant quieter wards, fewer injuries to staff members and patients, and a dramatic increase in the number of patients who could manage daily life in the community. As a result the number of inpatients at the hospital declined to 1100 by 1991, while outpatient services and residential placements were expanded in keeping with the new policy of deinstitutionalization. When it became clear during the late 1980s that many of the homeless in New York City had urgent psychiatric needs, Creedmoor established a special inpatient program of psychiatric rehabilitation intended specifically for the homeless. The Living Museum, presenting art by patients, was founded by Bolek Greczynski in 1984 in the hospital. In 2001 the city sold part of the mental hospital to residential developers and used another portion to develop three schools and athletic fields.

Sandra Opdycke

Creelman, James (*b* Montreal, 12 Nov 1859; *d* Berlin, 12 Feb 1915). News correspondent. He moved from Montreal to New York City in 1872 and worked for several newspapers, including the *Brooklyn Eagle* and the *New York Herald.* Creelman was considered a "yellow journalist," actively inputting his own opinion during interviews and articles and traveling to find and report on stories. He covered the tensions between Japan and China in 1894 for the *New York World.* William Randolph Hearst hired Creelman to cover the war between Cuba and Spain in 1898 for the *New York Journal.* He favored Cuba so strongly that he convinced the U.S. general in command to let him help American soldiers invade a Spanish blockhouse. Creelman was injured from gunfire during the invasion. He wrote editorials for the *World* until 1906 when he became a civil servant. He returned to the *Journal* to cover World War I and did so until his death. He wrote *On the Great Highway: The Wanderings and Adventures of a Special Correspondent* (1901).

Max Seppo

Cremin, Lawrence A(rthur) (*b* New York City, 31 Oct 1925; *d* New York City, 4 Sept 1990). Educator and historian. After graduating from Townsend Harris High School and City College he took his master's and doctoral degrees at Columbia University. He served as president of Teachers College at Columbia (1974–84), the Spencer Foundation (1985–90), the National Academy of Education (1969–73), the History of Education Society (1959–60), and the National Society of College Teachers of Education (1961–62). Among his many honors were a Guggenheim Fellowship (1957), the Bancroft Prize (1962), the award of the American Education Research Association (1969), and the Pulitzer Prize for history (1981). He wrote more than a dozen major books and was writing a biography of the educator John Dewey at the time of his sudden death of a heart attack. A lifelong resident of Manhattan, Cremin was the foremost historian of education in the United States.

Kenneth T. Jackson

cricket. Organized cricket in New York City began in 1838, with the founding of the St. George Cricket Club; in 1844 John Richards and William T. Porter formed the New York Cricket Club. English-born merchants, professionals, diplomats, and military officers dominated these clubs, but some native-born Americans also joined. From the mid-nineteenth century until the early twentieth, teams representing these and other organizations from Manhattan, Brooklyn, and Staten Island competed against teams from Boston, Philadelphia, and Newark, New Jersey. Several of the clubs from Manhattan established playing grounds in Staten Island and in or near Hoboken, New Jersey. The St. George Cricket Club arranged international contests that matched select teams from the United States against teams from Canada and England.

Cricket was eclipsed in popularity first as a team sport by baseball in the 1860s, then as a pastime for the elite by tennis and golf in the early twentieth century. After World War I, immigrants from Great Britain and its colonies kept cricket alive. In the early twenty-first century several thousand West Indians and other immigrants continued to pitch their wickets in public parks throughout the city.

crime. A growth in crime during the eighteenth century paralleled the growth of New York City as a cosmopolitan center. Crime surged with the population and economic fluctuations of the 1730s and 1760s. The number of thefts and assaults rose as the city became more crowded: maritime trade brought more sailors to the city and more prostitution (often prosecuted as "keeping a disorderly house"). In general the legal system could not control crime, especially theft. RIOTS were tolerated as expressions of political discontent.

The crime rate remained low during the first two decades of the nineteenth century but rose rapidly from the 1820s when immigration and the growth of manufacturing and trade gave rise to ethnic and class tensions. Recent immigrants often fell prey to swindlers and were also blamed for disorderliness, public drunkenness, and more serious crimes; Irish immigrants who moved to the city in the 1840s were especially singled out. Temperance advocates tried to close saloons frequented by immigrants, especially the Irish, whose gangs often fought against nativist gangs. The number of murders per 100,000 inhabitants increased from 2.5 in the late 1840s and early 1850s to 4.4 in the 1850s and 1860s. In the middle of the century ethnic and racial hostility and economic inequities led to racist assaults on blacks and made riots more common and more dangerous. The worst riots in the history of the city were the DRAFT RIOTS of 1863, which began as a protest against the first federal conscription policies and degenerated into a race riot. During the second half of the century violent crime decreased owing to the ministrations of political machines, improved policing, and residents' adaptations to the strains and discipline of urban life; but vices such as prostitution and gambling flourished, often with the cooperation of the political machines. Most criminal operations were run by successive members of immigrant groups—at mid-century the Irish, and at the turn of the twentieth century Jews and Italians. Eventually moral reformers pressured government to control saloons, brothels, and gambling dens, which turned for protection to Tammany Hall and other political organizations. The red-light district in the city, the TENDERLOIN, became a national symbol of urban depravity that was widely depicted in novels and tabloid newspapers.

The number of murders declined by the turn of the twentieth century. Widely differing murder rates among whites and blacks continued to reflect economic disparities: the rates per 100,000 inhabitants for whites and blacks, respectively, were 3.7 and 9.8 in 1900, 5.1 and 21.7 in 1910, 5.0 and 23.0 in 1920, and 5.8 and 28.7 in 1930. Murders reached a peak during Prohibition, when violence worsened as crime GANGS were reorganized. As the gangs imported liquor and distributed it throughout the nation, they adopted conventional business techniques and redefined their relations with government; they continued to do so after the repeal of Prohibition in 1933. At the same time, organized crime in the city focused increasingly on narcotics, gambling, and waterfront racketeering. In 1935 acute economic trouble in black neighborhoods caused the murder rate among blacks to reach 35.1 citywide (compared with 4.3 per 100,000 for whites citywide).

During the 1960s New York City, like most American cities, witnessed a dramatic increase in violent crime. Riots in minority neighborhoods and the overrepresentation of blacks among criminals and victims inevitably linked discussions of crime and race, much as nineteenth-century New Yorkers had linked their crime problem to the Irish. The number of murders reached 1116 in 1969, after which the number remained above 1000 into the 1990s. People felt unsafe and routines of life changed. Many businesses retained private security guards, and features intended to thwart criminals became incorporated into the design of buildings. Signs reading "no radio" were routinely placed in the windows of automobiles to discourage thieves. Despite some fluctuations, crime continued to increase during the 1970s and 1980s, virtually overwhelming the municipal justice system. The number of reported incidents of rape nearly doubled, from 2141 in 1970 to 3875 in 1979 (perhaps in part because it became a crime that women were more willing to report). Other American cities had proportionately more crime, but New York City became a symbol of urban lawlessness because of its size and prominence. On average more than 1500 murders a year were committed during the 1970s and 1980s. The increase in the number of assaults, automobile thefts, and other thefts was linked to the abuse of drugs, especially heroin, cocaine, and crack cocaine, which became enduring features of urban life. Aided by the Racketeer Influenced and Corrupt Organizations (RICO) laws, federal law enforcement agencies continued to fight organized crime but could not extinguish it. Frustration with crime undermined the city's reputation for liberalism. In 1977 Edward I. Koch, a congressman from the East Side with a liberal voting record, was elected on a platform emphasizing law enforcement and the death penalty.

During the 1980s the boom on Wall Street created opportunities for corrupt practices like insider trading that led to prosecutions of prominent financial figures such as Ivan Boesky. Felonies remained a major concern of voters and politicians, but racial and ethnic divisions among New Yorkers prevented the formation of a united front against crime. Investigations of racial bias among police officers, and the racially motivated killings of black men in Howard Beach and Bensonhurst and of a Hasidic Jew in Crown Heights, elicited much controversy. In 1989 David N. Dinkins, a liberal black Democrat, was elected mayor after promising to be firm with criminals. His victory suggested that a stern attitude toward crime was widely shared by New Yorkers of all races. Dinkins expanded the police force and saw crime decline during his term in office, but he failed to increase his political base, suffered from the charge that he was indecisive, and battled with the police over departmental reforms. In 1993 he was

defeated for reelection by Rudolph W. Giuliani, a former prosecutor who made fighting crime a major theme of his campaign.

The Giuliani administration combined strong support for the police with aggressive crime-fighting strategies that mixed active street-level enforcement with computerized statistical analysis of crime. Crime declined throughout Giuliani's two terms in office, but his mayoralty saw clashes over police shootings and charges of police brutality; his lack of close ties to the city's minority communities sharpened disputes when victims of police action were black or Hispanic.

When Giuliani left office in 2001, New York City led the nation in levels of crime reduction. The drop in crime confounded beliefs that policing had little effect on crime and that crime could not be reduced without addressing the "root causes" of crime in inequality. Crime continued to fall during the first and second terms of Giuliani's successor, Michael Bloomberg, who maintained the strategic approach to crime fighting that marked the Giuliani years but was more solicitous of black and Hispanic concerns in confrontations with police. In the twenty-first century New York City streets once known for fearsome levels of danger became dramatically safer.

Robert W. Snyder

Crimmins, John D(aniel) (*b* New York City, 18 May 1844; *d* New York City, 9 Nov 1917). Businessman and art collector. He was a partner in his family's firm, the Crimmins Company, which made a fortune in the construction of the Croton Aqueduct, the extended waterfront, sewers, gas mains, electric duct lines, streets, and elevated railways. From 1883 to 1887 Crimmins was the president of the Board of Commissioners of Public Parks of New York City, and he belonged to the Greater New York Charter Revision Commission of 1901; he was also on the boards of many financial institutions, including the New York Title and Mortgage Company, of which he was president from 1901 to 1914. A trustee of several cultural and charitable organizations, he also funded the building of St. Patrick's Cathedral's Chapel of St. Anne and in 1888 dedicated it to his late wife, Lily Lalor Crimmins. Crimmins had the most complete collection of maps and pictures of old New York City (about 5000 items), as well as a large collection of Gaelic manuscripts and books on Irish subjects. He wrote two books, *St. Patrick's Day: Its Celebration in New York and Other American Places, 1737–1845* (1902) and *Irish American Historical Miscellany* (1905).

Marion R. Casey

Cripplebush. Name applied to Williamsburg until the 1820s, centered around the intersection of Nostrand and Flushing avenues. The Dutch West India Company bought the land from the Canarsie tribe in 1638. The area was named for the thickets of scrub oak that proliferated until the American Revolution and which British troops harvested for fuel. The first school was established there in 1775. Farms were built after the war; the area remained sparsely populated.

James Bradley

Crisis. Monthly periodical. Launched in 1910 in New York City with W. E. B. Du Bois as editor, it became the official publication of the National Association for the Advancement of Colored People (NAACP). Du Bois covered activities of the association as well as incidents of antiblack discrimination; he also published articles by young black authors. Although Du Bois built a sizable circulation, his independent way of operating and certain viewpoints prompted criticism, which led to his resignation in 1934. The magazine has always kept its subscription prices extremely low. The NAACP continued to publish the *Crisis* into the early twenty-first century, focusing predominantly on issues of political and legal discrimination.

Croatians. A Croatian community formed in New York City about 1888 and consisted mostly of young Dalmatian men who lived on the West Side in the area bounded by 48th Street, 10th Avenue, 34th Street, and 11th Avenue. Poor economic conditions, compulsory military service, and political unrest due to an increased Magyarization policy in Croatia also led men to move to New York City, where they found work as stevedores, longshoremen, tugboat crewmen, freight handlers, and railroad employees, often with the New York Central Railroad. They frequently lived as boarders with relatives or fellow villagers, or in cooperative households known as *društvo.* The weekly newspaper *Narodni List* (National Gazette) was launched by 1898 and published daily from 1902. A number of other newspapers were published at the time, including *Hrvatski Svijet* (Croatian World) and *Domovina* (The Homeland); they provided news of developments in Croatia and the United States, and their nationalistic editorial policies divided the community. Men often gathered at Croatian groceries, barber shops, and steamship agencies; Croatian saloons were the center of their social life, and saloon keepers acted as bankers, steamship agents, and subscription agents for Croatian newspapers.

Before World War I, Croatian immigrants were listed in immigration records as Austrians, Hungarians, Slovenians, or members of southern Slavic groups. In 1912 the Croatian population in Manhattan was estimated at between 2500 and 3000 and included few women and children and only 150 to 200 families; most were men between the ages of 17 and 45, 60 percent were from Dalmatia, few became American citizens, and nearly 50 percent returned to Croatia after saving money for their families. The war and the southern Slav unification movement in Croatia intensified nationalistic sentiments and led many Croatians to understand the importance of American citizenship and the vote. A Croatian Roman Catholic Church, Saints Cyril and Methodius, was formed in 1913 by the Franciscan Fathers to offer religious services in Croatian. The chuch was located at 552 West 50th Street from 1913 to 1974, when the congregation began to share space with the Irish Catholic parish of St. Raphael at 502 West 42nd Street. At the end of World War I rates of immigration and repatriation increased as news of American prosperity spread. The incorporation of Croatia into a kingdom dominated by Serbs led many Croatian immigrants to remain in the United States. In the following years immigration decreased after quotas were imposed and the economy declined. A few Croatians were drawn to the city for the World's Fair of 1939–40 and remained after the outbreak of World War II. The community in New York City became divided over the issue of support for the fascist Ustašha government of Ante Pavelic but reunited against the communist dictatorship of Josip Broz Tito after receiving reports of atrocities in Yugoslavia.

The political refugees who settled in the city after World War II were usually educated and led opposition to the Yugoslavian government. An educational organization known as the Croatian Academy of America was formed in 1953 to focus on Croatian history and culture and by 1960 published the *Journal of Croatian Studies.* The *Croatian Press* moved to the city in 1956 and became a leading proponent of Croatian independence. Croatians held liberation parades along Fifth Avenue, raised funds to repair churches and establish ambulatory services in Croatia, and also sent food, clothing, and medical supplies. At the same time a number of Croatian doctors settled in the city. Other immigrants found employment as kitchen workers, waiters, longshoremen, construction workers, and painters and often held two jobs; women worked in factories, cleaned offices, and took clerical positions. In many families both husband and wife worked, one during the day and the other at night if there were children, allowing them to buy homes in Brooklyn and Queens. After a failed attempt to separate from Yugoslavia in 1971, Croatian nationalists sought refuge in the United States, especially New York City: according to the 1980 census, 22,000 Yugoslavs lived there at the time. During the following decade the number who settled in the city declined to a few hundred a year.

In 2000 there were 12,000 Croatians living in New York City, most of them American citizens; the largest concentration was in Queens. Well-known Croatians in the city have included the artist Ivan Mestrovic, the opera singers Zinka Kunc-Milanov and Milka Trnina, and the conductor Ivan Cerovac.

Croker, Richard (*b* Blackrock, near Dublin, 24 Nov 1841; *d* Dublin, 29 April 1922). Powerful Tammany Hall political leader. He immigrated with his parents to New York City at age two. In his youth he was a machine-tool worker, earned a reputation as a fighter, and became the leader of the Fourth Avenue Tunnel Gang, which he used as a political base. He was elected an alderman in 1869 and held a series of appointed and elected city government offices until 1886, when he became the leader of the Democratic organization in New York County, known as Tammany Hall. His tenure was marked by widespread disclosures of political corruption that hurt his candidates. Revelations in 1894 by a state investigating committee that Tammany Hall had

Richard Croker

abused the Police Department cost it the mayoralty in 1895. An investigation in 1900 led to the election of the fusion candidate Seth Low as mayor in 1901 and weakened Croker's credibility. He ceased to lead Tammany Hall in 1902. By then a wealthy man, Croker retired to Ireland to breed horses and engage in philanthropy.

Chris McNickle

Croly, Herbert (David) (*b* New York City, 23 Jan 1869; *d* Santa Barbara, Calif., 17 May 1930). Writer and magazine editor. Born to a middle-class family of New York City journalists (his parents were David Goodman Croly of the *New York World* and Jane Cunningham Croly of the *New York Herald* and the *New York World*), he learned the value of education and expertise as the foundation of social improvement. He promoted big government and labor unions, considering them an inevitable result of industrialization, and supported an interventionist foreign policy despite his disillusionment with the outcome of World War I. After attending City College and Harvard University, he returned to New York City in 1899 and became the editor of *Architectural Record.* In 1909 he wrote *The Promise of American Life,* in which he took issue with what he perceived as a Jeffersonian bias toward small-scale organization among American reformers. In 1914 he launched the *New Republic* with the help of a young Walter Lippmann. Croly remained editor of the magazine until his death.

David W. Levy, *Herbert Croly of the New Republic: The Life and Thought of an American Progressive* (Princeton, N.J.: Princeton University Press, 1985)

Croly, Jane Cunningham [June, Jenny] (*b* Market Harborough, Leicestershire, England, 19 Dec 1829; *d* New York City, 23 Dec 1901). Journalist. She moved to New York State as a child and to New York City in 1855, where she remained for most of her life. Through her work for several newspapers she became well known as one of the first female syndicated columnists in the country; she also contributed regularly to the *New York World* and several popular periodicals. She formed Sorosis in 1868, one of the first women's clubs in the nation, and the General Federation of Women's Clubs in 1890, a national network of volunteer organizations. Her pen name, "Jenny June," recalls Fanny Fern, the pseudonym of antebellum female columnist Sarah Willis. *Memories of Jane Cunningham Croly, "Jenny June"* (1904) was compiled by friends after her death.

Karen J. Blair

Cromwell Recreation Center. Public park and recreation facility named for the first borough president of Staten Island, George Cromwell. Built by the Works Progress Administration on the northwestern coast of Staten Island from 1934 to 1936, the recreation center offers athletic, social, and educational activities, in addition to swimming off Cromwell Pier. Recent additions include gymnastics equipment, facilities for computer and photography classes, exercise rooms, and Staten Island's first sports gallery, in the center's lobby. An estimated 100,000 people use the center annually.

Ben Silk

Cross Land Savings Bank. Formed as the East Brooklyn Savings Bank by Samuel C. Barnes, it opened at Myrtle Avenue in Bedford (now Bedford–Stuyvesant) in 1860 and primarily served customers in the neighborhood. Its headquarters were moved to Bedford Avenue in 1922 and to Montague Street in Brooklyn Heights in 1962. The firm was renamed the Metropolitan Savings Bank in 1969 and acquired the Fulton Savings Bank in 1978, before merging with Brooklyn Savings Bank and Greenwich Savings Bank in 1981. It became a federal mutual savings bank in 1985, at which time it took its current name. By 1988 the bank had assets of more than $15 billion and was New York's largest savings bank, as well as a major lender in the city's commercial and residential real estate market. It was severely weakened by its large-scale investments in "junk bonds," leveraged buyouts, and real estate during the 1980s. The federal government seized control of the bank in January 1992 and renamed it the Crossland Federal Savings Bank. Many of the bank's housing projects were subsequently sold.

James Bradley

Crotona Park East. Neighborhood lying north of Hunts Point and east of Morrisania in the west central Bronx, bounded to the north by the Cross Bronx Expressway, to the east by the Bronx River, to the south by Westchester and Prospect avenues, and to the west by Crotona Park; it is sometimes considered part of Hunts Point and Morrisania (2000 combined pop. 68,574). The area was the site of large estates in the town of West Farms in Westchester County until it was annexed to New York City in 1874. Some sections were developed in the 1890s after trolley connections were built to the Third Avenue elevated line; the rest became densely covered by apartment buildings after the subway was extended in 1904. The population became predominantly Jewish, but there were also German, Irish, and Italian immigrants. During the 1950s an increasing number of blacks and Puerto Ricans settled there. By the 1970s the many burnt-out apartment buildings of the neighborhood became a national symbol of inner-city decay. Charlotte Street was visited by presidential candidates: Jimmy Carter in 1976 and Ronald Reagan in 1980. (Later, Bill Clinton visited in 1997.) With funds from public programs, one-family houses were built on Charlotte Street in the early 1980s, put up for sale in 1983, and first occupied in the summer of 1984. Other new housing was also built during the 1980s using funds from community groups and public programs. By the early twenty-first century most of the neighborhood had been rebuilt and had a suburban character.

Evelyn Gonzalez

Croton Aqueduct. The first public water supply for New York City. Opened in 1842, the Croton Aqueduct bought pure and ample water from a mainland watershed, ending the city's long reliance on inadequate and increasingly polluted well water. The aqueduct was conceived in 1832 after a cholera epidemic killed more than 3500 residents (one in 60). It was authorized by the state legislature (1834) and overwhelmingly approved in a referendum of city voters (1835). A state-appointed commission, led by former mayor Stephen Allen, supervised the project. David Bates Douglass conducted the original surveys of the Croton River and its tributaries in Westchester and Putnam counties and laid out the route of the aqueduct (1833–36); John Bloomfield Jervis perfected the engineering plans and oversaw construction (1836–42). A dam on the lower Croton River created a 500-million-gallon reservoir, from which an unpressurized conduit of brick and masonry, averaging 7.5 feet (2.3 meters) wide and 8.5 feet

Croton Aqueduct, 1893

(2.6 meters) high and laid mostly at or just below ground level, led the water by gravity south to the Harlem River. The High Bridge (completed 1848) carried the water in iron pipes onto rural upper Manhattan at what became 174th Street. The water continued in conduit or pipe to a 150-million-gallon receiving reservoir on open ground in what became Central Park between 79th and 86th streets; pipes carried the water down to a landmark 20-million-gallon distributing reservoir on high ground at the future intersection of Fifth Avenue and 42nd Street, then 1 mile (1.6 kilometers) north of the city limits. The total distance from dam to distributing reservoir was 40.5 miles (65.2 kilometers); a network of cast iron pipes distributed Croton water in the city. The completion of the aqueduct was commemorated with a citywide celebration in October 1842, one of the largest in the city's history. "Croton" became a byword for good water, and the aqueduct a model for American urban water supplies.

New Yorkers, formerly limited to a few daily pails of well water, became prodigious water users. As use rose beyond the aqueduct's daily capacity of 90 million gallons in the mid-1880s, work began on the New Croton Aqueduct, a pressurized tunnel three times the size of the old aqueduct and the world's longest and largest tunnel when completed (1893). The 240-foot (73-meter)–high New Croton Dam, the largest masonry dam in the world when opened (1905), submerged the original dam. New Croton water entered Manhattan in a pressure tunnel under the Harlem River. The addition of nine mainland reservoirs by 1911 increased the total daily supply of the Croton system to 400 million gallons and obviated the need for the original receiving reservoir (filled during the 1930s to become Central Park's Great Lawn) and the distributing reservoir (demolished during the 1890s to allow construction of the New York Public Library).

As the vast Catskill and Delaware aqueduct systems came into service during the twentieth century, the Old Croton was gradually cut back and stopped supplying water to the city (1955). It was designated a National Historic Landmark in 1992. In 2007 High Bridge, the city's oldest bridge, was in the early stages of rehabilitation as a park. The New Croton Aqueduct continues to supply 10 percent of the city's water.

Gerard T. Koeppel, *Water for Gotham: A History* (Princeton, N.J.: Princeton University Press, 2000); *Water-Works: The Architecture and Engineering of the New York City Water Supply*, ed. Kevin Bone (New York: Monacelli Press, 2006)

Gerard Koeppel

Crouch and Fitzgerald. Firm of luggage and leather-ware retailers, formed in 1839 by George Crouch as a harness and luggage maker. The firm achieved early success by supplying wood-framed leather trunks to traveling salesmen. By 1892 it had a factory on West 41st Street, three retail outlets in Manhattan, and 200 employees. In 1988 the firm was bought by Lenox, Inc., a division of the Brown–Forman Corporation.

Kenneth T. Jackson

Crow Hill. Former neighborhood in northeastern Brooklyn, stretching from the hills east of Prospect Park to East New York. According to folklore it was named for the largest hill in the area, which was infested with crows; the *Brooklyn Eagle* in 1873 suggested that the area was named for a settlement begun in the 1830s by blacks, who were called "crows" by whites. Many residents worked in the fish and meat markets in Manhattan and lived in shanties on the hill. As the city limits were extended and whites bought property in the area, blacks were forced out. The Kings County Penitentiary was built on the crest of Crow Hill after a land purchase in 1846; eventually considered a blight, the penitentiary was demolished in 1907 and the land became the site of Brooklyn Preparatory School and the Church of St. Ignatius Loyola. By a slight change of orthography, the area was renamed Crown Heights in the early twentieth century.

Ellen Marie Snyder-Grenier

Crown Heights. Neighborhood in west central Brooklyn, bounded to the north by Atlantic Avenue, to the east by Ralph Avenue, to the south by Empire Boulevard, and to the west by Washington Avenue. The first settlements in the area, Weeksville and Carrville, were formed by free blacks in the 1850s. Mansions were built after mid-century on former farmland in the northern section and were eventually followed by limestone row houses. The street grid was laid out in 1855 and Eastern Parkway was completed in 1874, facilitating the development of mansions, row houses, detached houses, and apartment buildings. Originally called Crow Hill, the name *Crown Heights* came into use in the early twentieth century. The construction of the Interborough Rapid Transit Company Eastern Parkway subway increased land values and expanded suburban development south of Eastern Parkway. But by the 1960s there was significant decay, and efforts to improve the neighborhood were made in the 1970s and 1980s; preservationists recognized the distinctive brownstones that marked the neighborhood.

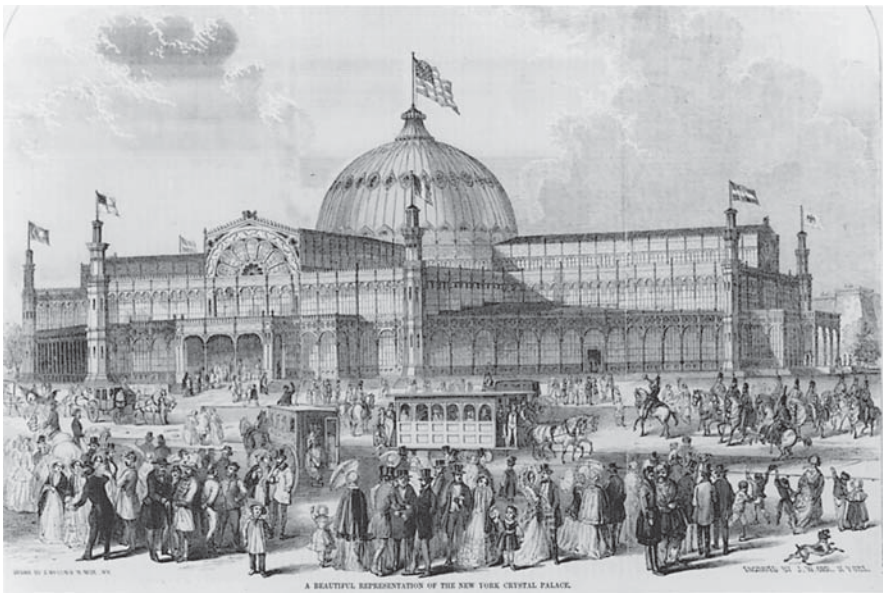
Caribbean immigrants arrived in the area in the early twentieth century. In the 1920s German, Scandinavian, Irish, Italian, and Jewish immigrants also settled in the area in large numbers. The neighborhood attracted the Hasidic sect of Lubavitchers; by 1950 the neighborhood's population was half Jewish. After World War II many white residents moved to the suburbs, while Caribbeans and African Americans moved in. Tensions increased following an incident in 1991 in which an African American child was accidentally killed by an automobile driven by a Lubavitcher. A riot followed during which a visiting Lubavitcher was killed.

The principal thoroughfare of the neighborhood is Eastern Parkway; the main commercial districts center on Franklin, Nostrand, Kingston, and Utica avenues. The neighborhood is home to many cultural institutions and landmarks: Prospect Park (which borders it), the Brooklyn Museum, the Brooklyn Children's Museum, the Botanic Gardens, the central branch of the Brooklyn Public Library, the Society for the Preservation of Weeksville and Bedford–Stuyvesant History, and Medgar Evers College. The West Indian Day Parade held on Eastern Parkway every Labor Day is the largest parade in New York City, attracting millions of spectators. The

Lubavitch world headquarters are at 770 Eastern Parkway.

Ellen Marie Snyder-Grenier, Kate Lauber

Cruger, John (*b* Germany, *ca* 1680; *d* New York City, 13 Aug 1744). Mayor, father of John Cruger, Jr. He moved to New York City from Bristol, England, in 1698. After becoming successful as a shipper and slave trader, he won election as an alderman from the dock ward in 1712, a position he retained until 1735. Appointed mayor in 1739, he remained in office for five consecutive one-year terms. Cruger is remembered for having ruthlessly suppressed the "Negro plot" of 1741.



Thomas J. Davis, *A Rumor of Revolt: The "Great Negro Plot" in Colonial New York* (New York: Macmillan, 1985)

David William Voorhees

Cruger, John, Jr. (*b* New York City, 18 July 1710; *d* New York City, 27 Dec 1791). Mayor. A son of Mayor John Cruger, he was a New York City alderman from 1754 until being appointed mayor in 1756. In 1765, the last year of his tenure, he saw the city through the Stamp Act protests. Cruger was the last speaker of the provincial assembly, where he held a seat from 1759 to 1775. In 1768 he helped to organize the New York Chamber of Commerce and Industry, of which he was the first president.

David William Voorhees

Crystal Palace. Cast-iron and glass building completed in 1853 on a site bounded to the north by 42nd Street, to the east by the Croton distributing reservoir, to the south by 40th Street, and to the west by Sixth Avenue. Designed by the architects Georg J. B. Carstensen and Charles Gildemeister, it was built in the shape of a Greek cross with a dome at its center and reputed to be fireproof. The building opened on 14 July 1853 as the site of the first World's Fair in the United States, an event entitled "Exhibition of the Industry of All Nations" that was inspired by the Great Exhibition at the Crystal Palace in London of 1851. The fair had more than 4000 exhibitors from around the world, of which those from the United States were the most numerous. Like its predecessors in London and Dublin (1852), the fair in New York City exhibited the products of agriculture and industry and housed a collection of sculpture; it was also the first World's Fair to exhibit paintings in a picture gallery. Although paid attendance at the exhibition exceeded one million, the sponsors were left with $300,000 in debt when the exhibition closed on 1 November 1854. In the following years space was leased out to various organizations for events such as one celebrating the laying of the transatlantic telegraph cable. The Crystal Palace caught fire on 5 October 1858 and was completely destroyed, purportedly within 15 minutes. Bryant Park was later developed on the site.

Cuban Giants. Baseball team. Formed in the summer of 1885, it was the first black ball club to play professionally. Its amateur forerunners included the Brooklyn Uniques (in the late 1860s) and other teams that often played against white teams with support from wealthy sponsors, until a growing prohibition against interracial games took hold after Reconstruction. The founder of the Cuban Giants was Frank Thompson, the head waiter at the Argyle Hotel in Babylon, Long Island, and the players included a number of his fellow waiters. The name of the team was taken in the belief that the players would encounter less racial discrimination if they were thought to be foreigners, and for this reason they also spoke gibberish on the field. Bought by John L. Lang, who was white, soon after it was formed, the team achieved a record in 1885 of six wins, two losses, and one tie. George Williams, Abe Harrison, and Shep Trusty were signed by Lang from the Philadelphia Orions and helped the Cuban Giants to become the best black team before 1890. Lang then sold the team to another white man, Walter Cook, who engaged a black manager, S. K. Govern. Salaries typically ranged from $10 a week for pitchers and catchers to $12 a week for outfielders; white major leaguers earned about $50 a week at the time. In the first Colored Championships of America in New York City in 1888, the Cuban Giants finished first and the New York Gorhams third. After the Cuban Giants moved to Pennsylvania and became the York Monarchs, there emerged a new team called the Cuban Giants (later the Genuine Cuban Giants); another team with a similar name, the Cuban X Giants, was formed by E. B. Lamar and won the Colored Championships in 1895 against the Page Fence Giants.

Arthur Ashe

Cubans. A few Cuban immigrants settled in New York City during the 1870s and 1880s. Most had fled the Cuban struggle for independence from Spain, were Catholic, and worked in cigar factories opened by fellow immigrants. The most important member of this community was José Martí, a writer, politician, and leader of the Cuban independence movement who escaped prison in Spain and moved to the city in 1880. Living among tobacco workers, he continued to lead the independence movement, formed the Partido Revolucionario Cubano in 1892, gave the order to resume hostilities against Spain in 1895, and left the city to join the battle. During the 1940s and 1950s musicians such as Machito, his wife, Graciella, and her brother Mario Bauzá introduced Afro-Cuban jazz to the city, which profoundly influenced such jazz musicians as Dizzy Gillespie. Immigration from Cuba reached a peak between 1959 and 1962, when 155,000 members of the Cuban elite fled Fidel Castro's communist gov-

ernment. The New York City area was the second-most popular destination (after southern Florida), a pattern that held during an influx of white-collar and unskilled workers between 1962 and 1973. During the early 1970s between 12 and 13 percent of the Cuban immigrants who moved to the United States settled in the city. After declining in the mid-1970s, Cuban immigration increased during the 1980s and early 1990s, when more than 5000 Cubans settled in New York City, about 4 percent of all those who moved to the United States. The cigar factories eventually closed and unemployment among Cubans rose above the national average, but many family businesses were successful, among them restaurants popular for their fish, pork, and chicken dishes accompanied by rice and black beans. Although known to be sometimes divided by racial antagonism, the Cuban community in New York City is conspicuously tight-knit and politically conservative. The largest Cuban neighborhoods in the early twenty-first century were Washington Heights, Morris Heights, Crown Heights, East Flatbush, Astoria, Elmhurst, and Jackson Heights. In 2000 Cubans were the 26th-largest foreign-born population in New York City.

Chad Ludington

Cullen, Countee (Porter) (*b* New York City, 30 May 1903; *d* New York City, 9 Jan 1946). Poet and novelist. After graduating from DeWitt Clinton High School in the Bronx, he earned his bachelor's degree from New York University and a master's degree from Harvard University in 1926. He worked briefly as an assistant editor of *Opportunity: A Journal of Negro Life* before winning a Guggenheim fellowship to travel in France, where he wrote *Black Christ and Other Poems* (1929) and the novel *One Way to Heaven* (1932). In 1934 he returned to New York City, where he taught at Frederick Douglass Junior High School and wrote until the end of his life. A branch library and a school in Harlem are named for him.

Margaret Perry, *A Bio-Bibliography of Countee P. Cullen* (Westport, Conn.: Greenwood, 1971)

See also Harlem Renaissance.

James E. Mooney

Cullen, Michael J(oseph) (*b* Newark, N.J., 10 April 1884; *d* Queens, 24 April 1936). Businessman. He worked as a clerk in an A&P store in Newark from 1902 until 1919, when he moved to the Midwest to work for other grocery chains. He developed a plan for selling food on a large scale, but his attempts to have it put into effect were rebuffed in 1929 by Kroger (a grocery chain for which he worked as a manager in Illinois) and then by A&P. In August 1930 he opened King Kullen, the country's first supermarket, in a garage at 171-06 Jamaica Avenue in Queens. The store attracted customers by offering ample parking and merchandise in convenient displays. The business controlled expenses by keeping furnishings to a minimum and emphasizing self-service. Cullen called himself the "world's greatest price wrecker," advertised in newspapers, and distributed circulars that read "Save, Save, Save . . . Low, Low, Low Prices." By 1932 he had eight supermarkets that earned $6 million a year in sales.

John J. Concannon

Culver Line. Railway incorporated in 1869 as the Prospect Park and Coney Island Railroad by the lawyer Andrew R. Culver, to whom the state legislature granted permission to build a line along McDonald Avenue from Ninth Avenue and 20th Street in Park Slope to Gravesend. Culver proceeded to consolidate a route to the beachfront at Coney Island by successively leasing Gravesend Road, buying out the Coney Island Bridge Company, and then buying out a horse-car line on Vanderbilt Avenue (1871) to gain access to downtown Brooklyn. In June 1875 he opened a steam line that popularized the day excursion to Coney Island and transported as many as 20,000 passengers each Sunday. The line was extended to Norton's Point in 1879, and during the 1880s patrons were attracted by the addition of parlor cars and a newly constructed pier and observatory at Coney Island. In 1885 the Long Island Rail Road (LIRR) permitted Culver to run trains from Parkville to the 65th Street ferry terminal over its tracks in Bay Ridge, and in 1889 the Brooklyn Union Elevated Railroad permitted the connection of the line to the elevated terminus at Fifth Avenue and 36th Street; to make this connection the Culver Extension was built over the West End line from McDonald Avenue to Fifth Avenue and 37th Street. Service began in June 1890, and the extension was soon the most heavily used section of the line. In January 1893 Culver sold the line to the LIRR, and in August 1895 its president, Austin Corbin, arranged with Brooklyn Union Elevated to run elevated trains on both the Culver Line and the Culver Extension, making the entire system a continuous rapid transit line. Despite these developments the line lost money in the 1890s. In 1899 it was electrified: elevated trains on Fifth Avenue ran to 36th Street on power from a third rail, and then to Coney Island on trolley wire. In 1902 the line was leased and then sold to the Brooklyn Rapid Transit Company. It was completely integrated into the rapid transit system in 1919, when the entire line from Ninth Avenue to Coney Island was elevated and converted to operate with Fourth Avenue subway trains. In 1954 a connection was built between Church and Ditmas avenues, integrating the Culver Line into the Independent Subway System.

Vincent Seyfried

Cummings, E(dward) E(stlin) (*b* Cambridge, Mass., 14 Oct 1894; *d* North Conway, N.H., 3 Sept 1962). Poet. Educated at Cambridge University, he drove an ambulance in France during World War I and later moved to New York City, settling in Greenwich Village; he made extended trips to Paris and to New Hampshire, where he wrote and painted. After returning from travels in Europe in 1923 he moved to quarters at 4 Patchin Place in Greenwich Village that he retained for the rest of his life. Cummings's poetry was highly personal; he saw conventional capitalization and punctuation as impediments to expression and generally eschewed them in his poems (he also omitted capital letters from his name). Because publishers often rejected his work, he used family money to produce his first collections *W* (1931), *no thanks* (1935), and *Is 5* (1926) and the play *Him* (1927). He received the Dial Award in 1925 and became well known during the 1950s when he was elected to the National Institute of Arts and Letters and published *95 Poems* (1958).

Cunard Line. First transatlantic passenger line. An English company formed in 1840 by Samuel Cunard (1787–1865), of Nova Scotia, its first scheduled trips connected England with Halifax, Nova Scotia, and with Boston. The company chose New York City in 1847 as its western terminal port and later occupied offices at the Cunard Building, 25 Broadway (built 1921). The steamers of the Cunard Line were at first recognizable by their assonant names: the *Britannia* (its first steamer), the *Mauritania* (built in 1907 and long known as the "speed queen" of the Atlantic), and the *Lusitania* (sunk by a German U-boat in 1915 off the coast of Ireland). Perhaps its best-known ships were the *Queen Mary,* the *Queen Elizabeth,* the *Queen Elizabeth II,* and the *Queen Mary II.* The first *Queen Mary* arrived in New York City in 1936 and gained an enduring popularity for its speed, service, and beautiful interiors. It carried soldiers between New York City and the United Kingdom during World War II and later resumed commercial service from New York City. The flagship of Cunard after 2004 was the superliner *Queen Mary II,* which sailed between New York City and the Caribbean during the winter and across the Atlantic during the summer. In 2005 Carnival Cruise Lines took over the Cunard Line but continued to operate the cruise ships *Queen Mary II, Queen Elizabeth II,* and *Queen Victoria* under the Cunard name.

Frank O. Braynard

Cunningham, Merce (*b* Centralia, Wash., 16 April 1919; *d* New York City, 26 July 2009). Dancer and choreographer. After moving to New York City he was a principal dancer in Martha Graham's company from 1939 to 1945. In 1942 he began collaboration with the composer John Cage that lasted until Cage's death in 1992. The two performed together in the city in 1944 and were commissioned by Lincoln Kirstein in 1947 to create *The Seasons* (sets and costumes by Isamu Noguchi), performed by the Ballet Society (forerunner of the New York City Ballet). In the early 1950s Cage began radical, influential experiments in which random methods such as tossing coins were used to determine musical pitch, duration, and dynamics. Cunningham also began to use such processes for choreographic elements like sequence, the number of dancers involved, and their location in space. Another cardinal principle of their aesthetic was that the music and the dance should be independent of one another. Merce Cunningham Dance Company was formed in the summer of 1953 at Black Mountain College in North Carolina and has since been based in New York City. The original members included Carolyn Brown, Viola Farber, Remy Charlip, and Paul Taylor (dancers), Cage (music director), and David Tudor (composer and pianist); later members included the painters Robert Rauschenberg (resident designer, 1954–64), Jasper Johns (artistic adviser, 1967–84), and Mark Lancaster (artistic adviser, 1980–85). Cunningham also collaborated with many other visual artists, including Frank Stella, Andy Warhol, Robert Morris, and Bruce Nauman, as well as with the composers Morton Feldman, Earle Brown, Christian Wolff, David Behrman, John King, and Takehisa Kosugi, who was appointed music director in 1995. In the early 1970s Cunningham began making choreography specifically for the camera in conjunction with filmmakers Charles Atlas and later Elliot Caplan. These works were later adapted for the stage, notably *Channels/Inserts* (1981) and *Points in Space* (1986). Both have produced documentaries: *Cage/Cunningham* (Caplan, 1991) and *Merce Cunningham: A Lifetime of Dance* (Atlas, 2001). In 2003 the company celebrated its 50th anniversary; in those 50 years Cunningham created upward of 150 works.

CUNY. See City University of New York.

Cuomo, Mario M(atthew) (*b* Queens, 15 June 1932). Governor. The son of Italian immigrants, he attended St. John's University Law School and was admitted to the bar in 1956. He worked for liberal causes, defended community groups, and proved an adept mediator during a dispute over low-income housing in Forest Hills in the 1960s. Appointed secretary of state of New York by Governor Hugh L. Carey in 1975, Cuomo investigated abuses in nursing homes and negotiated solutions to various disputes on the governor's behalf. In 1977 he was persuaded by Carey to seek the mayoralty of New York City, but lost the Democratic primary to Edward I. Koch, whom Carey supported in the general election—even though Cuomo remained on the ballot as the candidate of the Liberal Party. During Carey's second term (1979–83), Cuomo served as lieutenant governor. Cuomo sought the governorship when Carey declined to seek reelection in 1982, defeating Koch in the Democratic primary and the Republican businessman Lewis Lehrman in the general election. As governor, Cuomo was an independent thinker and eloquent speaker who differed with his own (Catholic) church by favoring abortion rights and with a large segment of the electorate by opposing the death penalty. He was reelected to the governorship by overwhelming margins in 1986 and 1990. Widely regarded as a prospective candidate for the presidency, he spent a good deal of time in 1991 considering whether to mount a campaign before deciding to remain in Albany. In 1994 he was defeated in his attempt to win a fourth consecutive term. After 1995 Cuomo became of counsel to the corporate and financial services department and litigation department of Willkie Farr and Gallagher LLP in New York City.

Leslie Gourse

Curb. Original name of the American Stock Exchange.

curling. Game of Scottish origin in which a disc of stone or iron is slid toward a target by two teams of four players each. It became popular in New York City during the late nineteenth century. Among the many clubs formed, the best known was the New York Caledonian Curling Club, which had headquarters on Sullivan Street; others included the St. Andrew's Curling Club, the New York Thistle Curling Club, and the Brooklyn Caledonian Curling Club. Matches were often held on Central Park Lake, and the Grand National Curling Club championships attracted crowds from throughout the Northeast. In Brooklyn matches were held at Prospect Park Lake. Curling was soon eclipsed in popularity by baseball and other sports.

Curling match, 1870

James Bradley

Currier and Ives. Firm of lithographers, formed in New York City in 1857. Its elder partner was Nathaniel Currier (*b* Roxbury [now in Boston], 27 March 1813; *d* New York City, 20 Nov 1888), who served an apprenticeship in Boston with the lithography firm of William and John Pendleton before settling in New York City, where he was in business as N. Currier by 1835. Originally he was a job printer who produced tickets, billheads, flyers, and certificates commissioned by others; one highly successful image was *Awful Conflagration of the Steam Boat Lexington,* a dramatic scene of the disaster of January 1840 that appeared in editions of the *Sun.* About 1840 Currier put into effect a plan to produce and market works by his own firm. Among the decorative and timely lithographs that he offered were *City Hotel: Broadway, New York, Jenny Lind: Als Tochter des Regiments,* and a temperance caricature, *The Drunkard's Progress.* In 1852 Currier engaged as his bookkeeper James Merritt Ives (*b* New York City, 5 March 1824; *d* Rye, N.Y., 3 Jan 1895), who proved an indispensable businessman and became a partner. The firm of Currier and Ives had two main locations in lower Manhattan, at Nas-

sau Street and 33 Spruce Street, near Gold Street.

During the following decades the firm of Currier and Ives virtually abandoned job printing and focused on providing reasonably priced decorative images to the general public. The firm's work displayed little artistic or technical superiority, but its skill at marketing enabled it to become the most successful lithography firm in the United States. Currier and Ives's huge inventory of about 7000 titles included sporting prints (such as *The Yacht Dauntless of N.Y.* and *Mr. William H. Vanderbilt's Celebrated Team Small Hopes and Lady Mac: Driven by their Owner*), views (*Great East River Suspension Bridge, Central Park, the Drive, The Narrows from Staten Island,* and *New York and Brooklyn*), comic series (*Life in New York*), fashion prints (*The Grecian Bend: Fifth Avenue Style*), romantic images (*The Belle of New York*), and political portraits (*Hon. Wm. A. Wheeler: of New York*). Among the artists whose works the firm reproduced were Louis Maurer, James Buttersworth (who specialized in depicting ships), George Henry Durrie (who made country scenes, especially seasonal ones), and Fanny Palmer (who made still lifes and rural views). The best-known lithographers employed by the firm were James Cameron and Napoleon Sarony.

Currier retired in 1880, and under Ives's direction the firm worked in chromolithography until 1888. Both men are buried in Green-Wood Cemetery in Brooklyn. The business closed in 1907. After World War I businessman Harry Peters formed a major collection of the work of Currier and Ives: his collection is now held by the Museum of the City of New York. Other important holdings are at the Library of Congress and the New-York Historical Society.

Currier and Ives, The Age of Iron *(1869)*

Curry, John F(rancis) (*b* Ireland, 2 Nov 1873; *d* Coral Gables, Fla., 25 April 1957). Tammany Hall political leader. After election to the state assembly in 1902, he became the leader of his district on the West Side in 1905 and commissioner of records (1911–29). Long at odds with the "new Tammany," he was elected by his colleagues to lead Tammany Hall in 1929, with the backing of Mayor James J. Walker and powerful Tammany politician James J. Hines. In 1931 he refused to waive immunity during the investigation of municipal government led by Samuel Seabury. His fatal mistake was to try to block the nominations of Franklin D. Roosevelt for president and Herbert H. Lehman for governor in 1932. In the following year the mayoral candidate whom he backed, John P. O'Brien, was defeated; Curry was himself ousted from the leadership of Tammany Hall in 1934.

Frank Vos

Curtis, George William (*b* New York City, 24 Feb 1824; *d* New York City, 31 Aug 1892). Writer, editor, and reformer. After a youth spent in New England and abroad he returned in 1850 to New York City and began a career in book publishing and journalism at a time when the city was increasingly dominating the fields. He first gained recognition for a series of popular travel narratives and social satires, including *Nile Notes of a Howadji* (1851), *The Potiphar Papers* (1853), and *Prue and I* (1856). During the mid-1850s he edited the short-lived but influential *Putnam's Monthly* with his friend Frederick Law Olmsted and began an association with the leading publishing house Harper and Brothers that lasted for 35 years. From his office in the Harper Building on Franklin Square and more often from his suburban villa on Staten Island, he composed monthly essays for *Harper's New Monthly Magazine* under the rubric "Editor's Easy Chair" (1854–92), a series of moral and social sketches entitled "Manners upon the Road" for *Harper's Bazar* (1867–73), and the editorial columns for *Harper's Weekly* (from 1863 until his death). In his writings he advocated woman suffrage and attacked high tariffs and patronage politics; he also led the campaign for a professional civil service and was the president of the National Civil Ser-

vice Reform League during 1881–92. With E. L. Godkin at the *Nation,* Curtis was a powerful shaper of elite public opinion during the Gilded Age. His career exemplified the close links between professional journalism, literary culture, commerce, and public activism among upper-class intellectuals in the late nineteenth century. Curtis High School in Staten Island is named after him.

David Scobey

Curtis High School. First secondary school opened in St. George, Staten Island, in 1904 at Hamilton Avenue and St. Mark's Place. Named after the editor, writer, and reformer George William Curtis, it was the first public high school in Staten Island. In 1982 the school was designated a New York City landmark. As of 2007 it had 2600 students and offered programs in fashion design, theater arts, computer science, and international service as well as an international baccalaureate degree.

Erica Judge

Cushman, Charlotte (Saunders) (*b* Boston, 23 July 1816; *d* Boston, 18 Feb 1876). Actress. She made her debut in New York City as Lady Macbeth (1836) and in several appearances abroad became the first American-born actress to earn an international reputation. She gave successful performances in many roles in 1871 at Booth's Theatre on the corner of West 23rd and Sixth Avenue (1869–83, demolished in 1965). She also gave her farewell performance as Lady Macbeth on 7 November 1874 at Booth's.

Don B. Wilmeth

Cushman, Don Alonzo (*b* Coventry, Conn., 1 Oct 1792; *d* New York City, 1 May 1875). Businessman. He made his fortune in wholesale dry-goods trade during the 1820s. In 1830 he purchased a sizable piece of land at what is now 172 Ninth Avenue in Chelsea and built a house that still stands. He later became a principal developer of the area and built several buildings, a handful of which survive in the twenty-first century. Cushman was a leading member of both Trinity Church and St. Peter's Church, founder of the Greenwich Savings Bank, and director of the Erie Railway Company. Cushman Row (406–18 West 20th Street), a series of four-story Greek Revival buildings, built in 1840, and the residential Donac apartment building (402 West 20th Street), built in 1898, are named for him. He was the great-grandfather of J. Clydesdale Cushman, who cofounded the global real estate service company Cushman and Wakefield.

Val Ginter

Custom House. See U.S. Custom House.

Cutter, Bloodgood H(aviland) (*b* Little Neck [now in Queens], 5 Aug 1817; *d* Queens, 26 Sept 1906). Poet. Born to a long-established Flushing family, he was the master of a coastal schooner before inheriting his grandfather's estate, settling into the life of a gentleman farmer; in 1840 he married Emmaline Allen, daughter of a prosperous Little Neck farmer. Known as the Long Island Farmer Poet, he penned verse for any and all occasions; several refer to incidents of the Civil War. His best-known include "On Laying the Corner Stone of the Town Hall at Flushing, Long Island," "To the Health Authorities of Naples," "On Tobacco Smoking in Queens County Court House," and "Spare That Cottage." Cutter's 500-page collection, *The Long Island Farmer's Poems,* appeared in 1886. He was the "poet lariat" in *Innocents Abroad* (1869) by Mark Twain, who described his verse as "barbarous rhyme." Cutter is buried in Zion Episcopal Church in Douglaston, Queens, and left the bulk of his $1.5 million estate to the American Bible Society.

Jeffrey A. Kroessler

cycling. See Bicycle messengers; Bicycle racing; and Bicycling.

Cyclone. Roller coaster at Astroland Amusement Park at Coney Island. The site had previously been occupied by the first modern roller coaster, the Switchback Railway, as well as the world's first successful looping roller coaster, Loop the Loop. The Cyclone opened on 26 June 1927; it was designed by Vernan Keenan and built by Harry Baker. The wooden structure had steel tracks over a distance of 1.6 miles (2.6 kilometers) with a ride time of one minute and 50 seconds and a 24-person seating capacity. Its first owners, Jack and Irving Rosenthal, passed operation to Chris Feuchts, and he to the city. It was operated for some time by the city's Parks Department until the new owners of Astroland Park, Dewey and Jerome Alberts, were authorized to operate the coaster in 1975; major renovations were done that year. The Cyclone was designated a New York City landmark in 1988 and was added to the National Register of Historic Places in 1991. In 2002 the ride celebrated its 75th anniversary. Astroland closed in 2008 and so too did the famed Cyclone.

Jessica Montesano

Cypress Hills. Neighborhood in northeastern Brooklyn, lying on a terminal moraine and bounded to the north by the Queens county line, to the east by Eldert Lane, to the south by Atlantic Avenue, and to the west by Pennsylvania Avenue. It was called Union Place after a local racecourse during the 1820s before being renamed for the trees growing on hills in the area. To the north lie Highland Park and 18 cemeteries that contain the graves of 20,000 veterans from the Civil War and later wars, as well as those of Harry Houdini, Mae West, Edward G. Robinson, and Sholem Aleichem. Cypress Hills residents are predominantly working class, and the housing consists of one-, two-, and three-family structures; Fulton Street is the main commercial thoroughfare.

Alter Landesman, *A History of New Lots, Brooklyn to 1887* (Port Washington, N.Y.: Kennikat, 1977)

John J. Gallagher

Cypriots. Cypriots first immigrated to the United States during the early twentieth century; they entered through Ellis Island, and the great majority settled in New York City. Large numbers followed in the 1950s, and many Greek Cypriots arrived after the Turkish invasion of Cyprus in 1974. Greek Cypriots initially settled in Manhattan and later moved to Queens, New Jersey, and Long Island. They formed many cultural organizations under the auspices of the Cyprus Federation of America (1951), as well as three Greek Cypriot community centers in Astoria. Their high level of education enabled Greek Cypriots to rise socially and economically along with other Greek Americans. Turkish Cypriots settled at first in the Bronx and formed the Turkish-Cypriot Aid Society (1931) and the Inonou School (1979) to teach Turkish language and culture to children. In later years a number of Turkish Cypriots moved to Queens, upstate New York, and New Jersey.

Antonia S. Mattheou

Czechs. Czech immigrants, originally known as Bohemians after the medieval kingdom that became part of the Austrian Empire, began arriving in New York City in large numbers during the middle of the nineteenth century. Although not a Czech major center like Chicago, New York was the only coastal city with a significant Czech population, numbering almost 41,000 at its peak in 1910. The first wave of immigrants settled on Manhattan's Lower East Side, where Avenue B was known as the Czech Boulevard. An estimated 75 percent of these immigrants worked as cigar makers living in the city's slums, whose wretched living conditions were depicted in Jacob Riis's landmark photojournalistic study *How the Other Half Lives* (1890). In the 1880s the factories and their workers began to relocate to the Upper East Side of Manhattan, transforming the area between 65th and 78th streets from Second Avenue to the East River into a Czech enclave. Czech immigrants also dominated the pearl button industry, which used a manufacturing process invented in Bohemia. By 1920 there were 19 pearl button manufacturers in Manhattan, 12 in Winfield (now part of Woodside) in Queens, and seven

in Astoria. In addition, Czech tradespeople worked as furriers, piano makers, brewers, stonecutters, and metalworkers. During World War I the Czech community supported the drive for an independent Czechoslovakia led by the émigré politician and future president Tomáš Masaryk, whose wife, Charlotte Garrigue, was a Brooklyn native. After the creation of this new country in 1918, the term *Czech* to designate the immigrant community replaced the older usage *Bohemian*. Although the golden age of Czech immigration ended in 1930, the turbulent history of Czechoslovakia, especially the Nazi occupation in 1939, the communist coup in 1948, and the Soviet invasion in 1968, brought fresh waves of immigrants. In the 2000 census 18,813 inhabitants of New York City listed their ancestry as Czech or Czechoslovakian.

Although most Czech immigrants were Roman Catholic, Free Thought flourished among them before World War I, and others became Protestant. The Jan Hus Presbyterian Church at 351 East 74th Street, named after the fifteenth-century Czech martyr, had a Neighborhood House that served the Czech community for more than 50 years. In addition to religious institutions, club life flourished. The gymnastic club Sokol (Falcon), founded in 1867 as part of a Prague-based movement, erected a training hall in 1896 at 420 East 71st Street that remains its headquarters in the twenty-first century. In 1892 a socialist gymnastic club originated in New York City called the Workers–American Sokol, and in 1909 a Catholic gymnastic club called Orel (Eagle) was founded as an affiliate of an organization in the Czech lands. In 1894 the Bohemian Benevolent and Library Association, an umbrella organization of various Czech clubs, built the Bohemian National Hall at 321 East 73rd Street, a grand structure featuring a ballroom, library, and numerous meeting rooms. Owned by the Czech Republic in the twenty-first century, it is being refurbished to house the country's Consulate-General, a government-run cultural organization called the Czech Center, and other facilities. The Bohemian Hall and Park, completed in 1919 at 29-19 24th Avenue in Astoria, Queens, is still run by the Bohemian Citizens Benevolent Society of Astoria and boasts the only original outdoor beer hall in the city.

Czechs were especially prominent in the musical life of the city, among them Antonín Dvořák, who lived at 327 East 17th Street from 1892 to 1895 when he was director of the National Conservatory of Music; the soprano Emma Destinn (Ema Destinnová), who starred at the Metropolitan Opera for eight seasons until 1916; Jarmila Novotná, another soprano who headlined in the same house from 1940 until her retirement in 1956; and the pianist Rudolf Firkušný, who settled in the city in 1940 and taught at the Juilliard School.

D

Daché, Lilly (*b* Beigles, France, ?1892; *d* Louvecienne, France, 31 Dec 1989). Milliner. At the age of 14 she left school to assist her aunt, a milliner, and after an apprenticeship in Paris she moved to the United States in 1924. She began by selling hats at R. H. Macy and soon was able to open her own shop, where she introduced one of her signature designs, a hat molded snugly to the head. In 1937 she moved into a building on East 57th Street that served as her work studio, sales floor, and home. She created custom hats for fashionable customers, including many film stars, and also began selling ready-to-wear hats through department stores. Her turban, snood, and war worker's hats were among her most famous designs. As her store became more successful, she expanded her design repertory to include gloves, lingerie, dresses, perfumes, and men's shirts and ties. When she retired in 1968 her daughter Suzanne pursued millinery in her stead. Daché wrote *Talking through My Hats* (1946) and *Glamour Book* (1956).

Anne E. Kornblut

D'Agostino. Firm of food retailers. It was formed by brothers Nicola and Pasquale D'Agostino, who moved to New York City from Abruzzi, Italy, in 1921. The brothers became pushcart peddlers and later worked in a butcher shop. In 1932 they combined several specialized food shops into one emporium at Lexington Avenue and 83rd Street that was a forerunner of the modern supermarket. After Pasquale died in 1960, Nicola retired four years later and passed the business on to his sons. In 1986 Nicholas D'Agostino, Jr., became chairman of the board; Nicholas D'Agostino III, the son of Nicholas, Jr., was named president and chief operating officer during the same year. The supermarket had 26 locations in New York City and Westchester County in the early twenty-first century.

Mary Elizabeth Brown

Dahesh Museum of Art. Art museum. The Dahesh Museum of Art has its origins in the collection of Salim Moussa Achi, a Lebanese writer and philosopher who was known by his pen name as Dr. Dahesh, which means "wonder" in Arabic. For 50 years Dahesh, the leader of a universalist religious movement called Daheshism, collected paintings, sculptures, drawings, and other artworks by nineteenth- and twentieth-century European artists with academic training, with the intention of eventually creating a museum to show his collection. When the Lebanese Civil War began in 1975, Dahesh moved his home and vast art collection to suburban Greenwich, Connecticut. He died there in 1984 and willed the collection to the Zahid family, who incorporated the Dahesh Museum of Art in 1987. In 1995 the Dahesh Museum officially opened in a small gallery space at 601 Fifth Avenue. Although it was named after Dahesh, museum administrators took strides to distance the museum from the spiritual life of its founder and to focus attention instead on the European academic art collection, which is characterized by highly detailed, realistic depictions of historic and mythological subjects. These artworks were largely in vogue before the rise of the impressionist art movement. After a failed attempt to purchase gallery space at 2 Columbus Circle, the museum reopened at 580 Madison Avenue in September 2003.

Breanne Scanlon

Daily Mirror. Newspaper launched in 1924 in New York City by William Randolph Hearst. It began as a tabloid indistinguishable from its competitor, the heavily illustrated *Daily News,* but later developed a more sensational style characterized by manufactured stories and heavy use of doctored photographs and "picture snatching" (the taking of unauthorized photographs). Its writers included the gossip columnist Walter Winchell and the political commentator Drew Pearson. Although the newspaper drew many advertisers, it was second in both advertising and circulation to the *Daily News* for many years and in the 1950s experienced declining profits. A newspaper strike that lasted 114 days in 1962 further weakened the *Daily Mirror,* which on 16 October 1963 printed its final edition.

Lindsay Chaney and Michael Cieply, *The Hearsts: Family and Empire: The Later Years* (New York: Simon and Schuster, 1981)

Madeline Rogers

Daily News. Newspaper. First published on 26 June 1919 as the *Illustrated Daily News* by Joseph Medill Patterson; the name changed to its current form during the first year. Inspired by Lord Northcliffe's *Daily Mirror* of London, Patterson intended to publish the first successful American tabloid by reaching a mass audience. The newspaper became noted for halftone photographs and its focus on popular feature stories, local news, and personality profiles. The offices were situated first in the Evening Mail Building at 25 City Hall Place and moved after two years to 25 Park Place. During the early years Patterson oversaw operations from Chicago where his family's Tribune Company, the parent company to the *Daily News,* was located. The earliest editions were cheaply printed on rented presses and circulation was disappointing, but by late 1920 the newspaper began to show a profit as New Yorkers responded to its convenient size and gritty sensationalism. In 1922 circulation reached 400,000 and a Sunday edition was introduced, and in 1924 circulation reached 750,000, making the *Daily News* the most widely read newspaper in the United States.

The popularity of the *Daily News* during the 1920s was due to its numerous photographs, illustrations, comic strips, contests, and coupons as well as its sensationalist coverage of scandals, fires, and crime. A famous front-page photograph in January 1928 of the execution of the murderess Ruth Snyder, taken surreptitiously by a photographer who had strapped a camera to his leg, sold thousands of extra copies of the newspaper. Techniques were developed to include sex and violence in otherwise mundane articles, and great effort was taken to make reading the newspaper a participatory experience, for example by including the full names and addresses of those interviewed. The most popular items were the "Inquiring Photographer" (a feature widely imitated) and a section of letters called "Voice of the People." In the spring of 1926 circulation exceeded one million on weekdays and 1.25 million on Sundays. In 1930 the newspaper moved to a 37-story art deco skyscraper at 220 East 42nd Street, designed by John Mead Howells and Raymond M. Hood and erected at a cost of more than $10 million.

Patterson tempered the newspaper's sensationalism during the 1930s and began to address the issues brought on by the Depression and by the New Deal, which the newspaper supported for most of the decade. But it continued to exemplify tabloid journalism as it inaugurated a "beautiful baby" contest, sponsored dance marathons, and defended itself against libel suits by Lou Gehrig and others. By 1939 the Sunday edition was the most widely read newspaper in the world, selling more than three million copies. Notwithstanding its support for Franklin D. Roosevelt, the *Daily News* took a staunchly isolationist stand toward Nazi aggression in Europe, opposing the Lend–Lease bill in 1940 and gasoline rationing in 1941 and eventually likening Roosevelt to Napoleon and Mussolini. On Patterson's death in 1946 control of the newspaper passed to Roy Hollis, who died in an automobile accident three months later. Richard Clarke was then named executive editor, reporting to the new head of the News Syndicate Company, Eleanor "Cissy" Patterson (sister of the founder).

After World War II the newspaper became more conservative in its politics. It continued to be identified with a lively writing style characterized by breeziness, puns, and aphorisms: a front-page headline that appeared when the federal government refused to extend help to the city during its fiscal crisis in 1975, "Ford to City: Drop Dead," became a classic of tabloid journalism. In the meantime

readership steadily declined as the newspaper lost much of its traditional base of blue-collar workers, immigrants, and members of racial minorities to the suburbs and television and to a lesser extent to the foreign-language press. The *Daily News* lost $11 million in 1981 and the owners made an unsuccessful attempt to sell the newspaper in the following year. By that time circulation stood at 1.5 million on weekdays and 2.1 million on Sundays.

A crippling strike by deliverers begun in October 1990 threatened the newspaper's survival and led to profound changes. The owners continued to publish by urging employees to cross picket lines and securing replacement workers, and the union urged boycotts by advertisers and news dealers. In March 1991 negotiations collapsed, and it was announced that the newspaper would cease publication unless a buyer was found. Robert Maxwell, a successful newspaper publisher from Britain, then purchased the *Daily News* when the union agreed to drastic staff reductions. Maxwell drowned under mysterious circumstances in November; in the following year control was assumed by Mortimer B. Zuckerman, a successful real estate developer. By the mid-1990s the *Daily News* had recovered much of the circulation that it had lost during the strike, and at the opening of the twenty-first century it broke with the national trend and saw a gain in circulation to more than 700,000.

Steve Rivo, Thorin Tritter

Daily Worker. Newspaper of the American Communist Party, later known as the People's Weekly World.

dairying. Cattle were introduced to New Amsterdam in 1625, including a few milk cows. According to a report by Jonas Michaëlius in 1628, dairy products were sought after but scarce in Manhattan. Local herds proliferated, and in 1644 colonists built a wall near what is now Wall Street to prevent cattle from leaving pastures in Battery Park. Larger grounds near City Hall were used for summer pastures from 1653, and meadows in northern Manhattan were used into the nineteenth century. Each morning summer herdsmen employed by the city blew horns to move the cattle to fresh pasture; in the evening they returned each animal to its owner, ready to be milked and bedded down. Winter fodder was mostly corn or wild marsh-hay from Long Island. Throughout the seventeenth and eighteenth centuries dairying remained a practice of general farming, and milk, butter, and cheese (which was especially scarce) were sometimes bartered to neighbors or traded to local retailers. Ice cream made by skilled confectioners became popular in the city during the American Revolution, and by 1779 it was made for home delivery by Joseph Corree in his shop at 17 Hanover Square; it soon became known as "everyman's dessert." In 1806 the cheese maker Ephraim Perkins urged wheat farmers of Herkimer County, New York, to shift to dairying and produce cheese for the city market. He himself opened a dairy farm in Herkimer County that by 1828 had 78 cows and shipped as much as 16 tons (14.5 metric tons) of cheddar cheese a year to the city; farms in the surrounding counties soon also became suppliers. The merchant and geographer John Melish wrote in 1807 that the first milkmen walked around the city carrying two buckets of tepid milk suspended from a yoke.

As the city grew during the nineteenth century, farmland and cattle became scarce in Manhattan and dairy farmers moved to Williamsburgh, other parts of Brooklyn, and Queens County. Haphazard breeding practices and poor management left dairying primarily in the hands of farmers who sought large profits and followed advice given in newspapers and agricultural tracts by Zadock Pratt, Silas L. Loomis, and Xerxes A. Willard. Local dairies were unable to satisfy demand, and in the 1820s swill milk was first offered; it was produced by cows fed a mixture of mash, warm slop from stills, and brewer's grain and kept in sheds attached to breweries and distilleries. Swill milk producers rented stalls to cattle owners in Manhattan for $5 a year and sold their milk (labeled "pure country milk") for four or five cents a quart (or liter); the largest firm was that of William M. Johnson and Son on 16th Street. The cows were often unhealthy, tied in stalls 3 feet (1 meter) wide and fed 32 gallons (120 liters) of slop and 3 pounds (1.4 kilograms) of hay daily. As early as 1826 some farmers who sold milk and butter in the city used as middlemen such captains on the Hudson River as Joel D. Hunter, who opened the firm of Hunter Walton. One enterprising farmer, Thomas W. Decker, used flatboats to transport milk from his farm in Fordham to markets on the East Side, where he had a thriving business; he later joined with other milkmen to form Sheffield Farms, which became one of the largest milk producers in the Northeast. By 1830 large-scale producers used horse-drawn carts for home delivery, and in the 1840s "hokey-pokey men" first sold homemade, hand-dipped ice cream from small wagons pulled by goats; after 1848 they used small freezers.

Milk was first shipped to the city regularly in special ice-cooled cars in 1842 by the New York and Erie Railroad, which by 1850 shipped 13,428,311 gallons (56,758,785 liters) a year. As demand rose, farms in Queens, Orange, and Westchester counties supplied milk to the city. Such improved cattle breeds as the Ayrshire, Holstein–Frisian, and Simmental were imported about this time. The New York and Harlem Railroad shipped four million gallons (17.1 million liters) in 1847 and double that quantity by 1852, when there were 25 milk companies in the city, with 1200 employees and nearly 800 horses. Even after they were connected to the city by rail, farms in outlying areas faced stiff competition from factories in the city; in the 1850s two-thirds of the city's milk was supplied by cows fed distillery grains. From 1842 the reformer Robert M. Hartley contended that New Yorkers' health was deteriorating because of swill milk, which had a bluish tint and uneven consistency that prompted retailers to add borax, chalk, starch, flour, sugar, calves' brains, or water, an especially dangerous additive because the city's supply was often impure. Other reformers joined Hartley in fighting horrendous conditions in swill milk factories in northern Manhattan and Brooklyn. In the 1850s Hartley's findings were published in *Frank Leslie's Illustrated Newspaper,* which with John Mullaly's pamphlet *The Milk Trade of New York and Vicinity* (1853) argued that swill milk caused the deaths of thousands of children in the city. Swill milk maintained its hold on the fluid market until legislation in 1862 reduced its market share; legislation in 1864 prohibited retailers from diluting milk with water.

Jacob Fussell, the first ice cream wholesaler, sold his product for 25 cents a quart in 1864 (confectioners charged $1.25). Butter from Goshen and other towns in Orange County, New York, dominated the city's market until 1873, when the Oleo–Margarine Manufacturing Company opened in Manhattan and produced oleomargarine that tasted like butter and cost less. Children continued to suffer from the effects of adulterated and spoiled milk. Harvey D. Thatcher developed the "Common Sense Milk Bottle" (patented in 1884), a glass bottle fitted with a rubber O-ring, as well as a complex system of packing, shipping, and reusing bottles that allowed milk to be delivered under more sanitary conditions. In 1889 Henry Koplik opened the first milk depot that pasteurized milk for poor infants. "Certified" milk, which was approved by physicians and supposedly sold only to children, was introduced by Henry L. Coit in the 1890s. Milk depots became popular after Nathan Straus's laboratory on the East Third Street Pier offered "sterilized milk" at four cents a quart. In 1912 Ernest J. Lederle, the health commissioner, made pasteurization mandatory for all milk for children despite opposition from dealers seeking to avoid the expense; nonetheless, 10 percent of the milk consumed in the city was still unpasteurized in 1920. Cottage cheese, cream cheese, and sour cream were made by the firm

of Breakstone Foods on the Lower East Side from 1882, and in 1900 the Constantinople-on-the-Pike, or Cornucopia (ice cream in a cone), was served in stores that flourished on Chatham Street. After the turn of the twentieth century parmesan and mozzarella cheese also became popular as restaurants increasingly catered to a diverse population.

After 1913 bowls of ice cream were offered for five cents at Horn and Hardart automats; Cho-Cho novelty bars, Cherio-bars, and Sidewalk Sundaes were introduced in the 1920s but were overshadowed by the Mel-O-Rol, a specialty at the World's Fair of 1939–40. Such local producers as the J. M. Horton Ice Cream Company in Manhattan and the Reid and Union Dairy and the Blue Ribbon Ice Cream Company in Brooklyn became unable to compete. By 1930 they were bought by the Pioneer Ice Cream Division of Borden Food Corporation, which in 1932 became the first ice cream plant in the metropolitan area to abandon metal cans for paper cartons. As the city grew, dairy producers could no longer offer personal service, and cooperative marketing associations were formed to run processing plants and sell dairy products in retail stores and along home delivery routes in the city. New Deal policies during the 1930s set strict government guidelines for quality control, and in 1933 New York State enacted milk control laws to stabilize prices and protect small, independent dealers, a practice that inspired similar efforts by other states and soon had the effect of restricting entry into the market. In 1942 Daniel Carasso and Joe Metzger began making Dannon yogurt in the Bronx, a product that became highly successful after the firm changed from whole milk to skim milk in the 1970s.

Dairying in New York City and its environs declined sharply during the following decades in the face of increasing urbanization, rising taxes and land costs, and improved technology for storing milk and transporting it over long distances. As late as 1940 the federal census of agriculture counted six farms with 328 cows in Brooklyn, nine farms with 563 cows in Queens, and nine farms with 127 cows in Staten Island. By 1978 only one farm in Queens and one in Staten Island remained. Local ice cream brands including Borden and Sealtest lost a large portion of the market during the 1970s and 1980s to "premium" and "super premium" brands. In an effort to balance the needs of producers, middlemen, and consumers, New York State continued to regulate the production and sale of milk; the Milk Control and Milk Producers Security Reform Act of 1987 effectively eliminated both intrastate and interstate competition.

Daitch–Shopwell. Chain of supermarkets formed in New York City in December 1955 from the merger of Daitch Crystal Dairies and Shopwell Foods. By 1962 it had grown to include 103 stores. It declined during the 1960s and 1970s. Most of the stores had been renamed Shopwell or Food Emporium by 1986, when the chain was acquired by the Great Atlantic and Pacific Tea Company.

Howard Kaplan

Dakota. Apartment building at 1 West 72nd Street at Central Park West in Manhattan. It was built between 1882 and 27 October 1884 by Henry J. Hardenbergh, later the designer of the Plaza Hotel, at the initiative of Edward Clark, president of the Singer Manufacturing Company. Despite its inconvenient location and a feeling on the part of many wealthy New Yorkers that apartments were no better than tenement housing, the building was fully rented by the time of its completion, without benefit of paid advertising. It had 85 apartments of 4 to 20 rooms each, with drawing rooms as large as 25 by 40 feet (8 by 12 meters), ceilings ranging in height from 15 feet (4.5 meters) on the second floor to 12 feet (3.6 meters) on the seventh floor, and interior walls paneled in fine woods. The roof was steeply gabled, and decorative patterns were etched on an exterior of yellow brick, rose marble, and dark brownstone (over time these darkened to various shades of brown). The tenants were served by a staff of 150. A 10-room apartment in the building cost $250 a month, an extravagant sum by the standards of the day. Over the years the Dakota became perhaps the most recognizable apartment building in the city. It was the setting for Roman Polanski's film *Rosemary's Baby* (1968) and the home of many figures in the arts and entertainment, including Leonard Bernstein, Boris Karloff, Judy Garland, Lauren Bacall, Mia Farrow, and Judy Holliday. One of the best-known residents, John Lennon, was fatally shot in front of the building in December 1980.

Dalton School. Private elementary and secondary school at 108 East 89th Street in Manhattan, opened in 1919 by Helen Parkhurst, who was active in the progressive education movement. Originally called the Children's University School and situated at West 74th Street, it moved in 1922 to another building on the same street and in 1929 to its current elementary school location on East 91st Street and its secondary school location on East 89th Street. As the school's headmistress, Parkhurst implemented the Laboratory Plan, which stressed cooperation between students and teachers to set individualized goals. The school used no tests or grades and virtually no discipline. It remained true to Parkhurst's principles after she retired in 1942 and continued operating into the twenty-first century. Its enrollment in 2010 was 1300, including students from kindergarten through the 12th grade.

Daly, (John) Augustin (*b* Plymouth, N.C., 20 July 1838; *d* Paris, 7 June 1899). Producer and playwright. As a young man he moved to New York City and worked as a theater critic for several newspapers, including the *Sunday Courier,* the *Sun,* and the *New York Times*. His plays *Under the Gaslight* (1867), *Horizon* (1871), and *Divorce* (1871) were well received, and in 1869 he formed his own company at the Fifth Avenue Theatre. After the theater was destroyed by fire in 1873 he leased another one and named it Daly's Fifth Avenue Theatre. He also ran the Grand Opera House, where his *Roughing It* was a tremendous success and where he presented adaptations of English and European works. By the end of his life Daly had written and adapted more than 90 plays and had been a producer for more than 30 years.

James E. Mooney

D'Amato, Cus [Constantine] (*b* Bronx, 17 Jan 1908; *d* Catskill, N.Y., 4 Nov 1985). Boxing trainer and manager. He grew up fighting on the streets of a tough Bronx Italian neighborhood before opening the Empire Sporting Club at Gramercy Gym on 14th Street in Manhattan. D'Amato trained many fighters before helping New Yorker Floyd Patterson win the heavyweight championship in 1956. Known for his psychological toughness and integrity, D'Amato refused to allow his fighters to take part in bouts promoted by the corrupt International Boxing Club. D'Amato later moved to upstate New York, where in 1980 he met and began training Brooklyn fighter Mike Tyson, then a 14-year-old reform school student. D'Amato adopted Tyson in 1984 and died in 1985, one year before Tyson won his first heavyweight title.

Ben Silk

Damrosch, Leopold (*b* Posen, Germany [now Poznań, Poland], 22 Oct 1832; *d* New York City, 15 Feb 1885). Violinist, conductor, and composer, father of Frank and Walter Damrosch. After taking a degree in medicine he became the first violinist in the ducal orchestra at Weimar and a friend of Franz Liszt's and Richard Wagner's. In 1871 he took his family to New York City, and until 1883 he led the Männergesangverein Arion. He founded the Oratorio Society of New York (1873) and the Symphony Society (1878), and he conducted the Metropolitan Opera; he remained associated with each institution until his death. Committed to the German repertory, he gave the American premiere of Brahms's Symphony no. 1, conducted at the first large-scale music festival in the city in 1881 (with an orchestra of 250 and a chorus of 1200), and in 1884–85 gave the American premieres of Wagner's *Der Ring des Nibelungen* and *Tristan und Isolde.* Damrosch and his sons determined the shape of opera in New York City. The outdoor musical amphitheater just south of the Metropolitan Opera House at Lincoln Center is named for his family.

Nancy Shear

Damrosch, Walter (Johannes) (*b* Breslau, Germany [now Wrocław, Poland], 30 Jan 1862; *d* New York City, 22 Dec 1950). Conductor and educator, son of Leopold Damrosch. He became a director of the Metropolitan Opera with Anton Seidl on the death of his father in 1885, and remained with the company until 1891. From 1885–98 he conducted the Oratorio Society of New York, and in 1894 he formed the Damrosch Opera Company, which introduced opera in many cities across the United States. Between 1885 and 1928 he periodically conducted the New York Philharmonic, and in 1899 he returned to the Metropolitan for two seasons of German opera. He produced a European tour by the New York Symphony Society in 1920, the first by an American orchestra, and in 1925 he conducted the first orchestral concert broadcast nationally on radio. Damrosch was the host of a weekly music appreciation program with the National Broadcasting Company (NBC) Symphony in 1928–42.

Nancy Shear

Dana, Charles A(nderson) (*b* Hinsdale, N.H., 8 Aug 1819; *d* Glen Cove, N.Y., 17 Oct 1897). Newspaper editor and publisher. After a sojourn at the utopian colony Brook Farm, he joined the *New York Tribune* in 1847, becoming Horace Greeley's assistant and arguably the first American journalist to hold the position of managing editor. During 1867–68

he bought and became the chief editor of the *Sun,* which under his direction became noted for its independence from both political parties and its opposition to civil service reform and the labor movement. Dana was among the most influential journalists of the century, and his emphasis on colorful human interest stories and eye-catching headlines prefigured the practices of yellow journalism.

dance. The first documented dance performance in New York City was "The Adventures of Harlequin and Scaramouch, or the Spaniard Trick'd," a pantomime performed by the English dancer Henry Holt in February 1739. From the eighteenth century to the early nineteenth century, acrobats (or "posture-makers"), harlequins, jugglers, hornpipe dancers, and rope dancers were common entertainers; some dances performed on stage were based on social dances such as the minuet. Dance until the early nineteenth century was usually part of variety programs that often included plays, operas, burlesques, pantomimes (harlequinades), short recitations, singing, and acrobatics, but there were also a few one-act ballets. By 1750 the Nassau Street Theatre offered regular seasons of variety programs in which dance was included. John Gay's *The Beggar's Opera* was presented for the benefit of the actor Thomas Kean on 15 January 1751, and the dance at the end of each act was performed by "a Gentleman lately from London," possibly Robert Upton. From the early 1750s performances were given by William Hulett, a dancing master and expert in hornpipes and harlequin dances. Lewis Hallam's American Company presented the pantomime "Harlequin Collector" at the John Street Theatre in April 1768; afterward a group of Cherokee chiefs and warriors in the audience performed a war dance on stage. One of the first known African American impersonations was a "Negro dance" performed at the John Street Theatre in 1767 by Mr. Tea. Performances of this sort eventually became a genre that formed the basis of minstrelsy in the nineteenth century.

At this time, audiences did not have a difficult time decoding the storybook ballets, usually based on fairy tales and fables. A resolution against public amusements was passed by the Continental Congress in 1774, and theaters closed during the American Revolution before reopening somewhat cautiously in the 1780s. New York City became part of a tour circuit that included Philadelphia and Charleston, South Carolina. Because of the prevailing sentiment that theater was too frivolous an amusement for a new nation emerging from war, some theater companies disguised their entertainments as edifying recitations. John Durang, the first well-known American dancer, performed the hornpipe and patriotic dances in the city from 1784 to 1796 with the Old American Company. In 1794 he performed in "Tammany; or, the Indian Chief," the first American production incorporating opera and ballet. During the early 1790s dance flourished in the city as many French dancers settled there after escaping the French Revolution. Among them was Alexandre Placide, an acrobat, mime, and dancer who sometimes performed on a tightrope; he moved to the city in 1792, and with his common-law wife, Suzanne Vaillande, produced 15 European ballets and pantomimes, many of which became popular. His ballets were also staged in the city by Durang, who presented his own dancers and worked with the Dutch dancer William Francis, the English ballet master James Byrne, and M. Francisquy, a dancer in the Paris opera who introduced pantomimes based on American themes. Durang was a partner of Mme Gardie, a talented Dominican-born dancer who performed in *Sophia of Brabant* (1794), the first classical ballet given in the city.

The 1820s saw an influx of European dancers who introduced classical French ballet technique, among them Claude Labasse, Francisque Hutin, M. and Mme Achille, and Charles and Marietta Ronzi Vestris. The more precise execution of ballet technique recaptured audiences. By the 1830s and 1840s romantic ballets were regularly presented by Europeans. In 1832 Philippe Taglioni first choreographed *La Sylphide,* which epitomizes the romantic era of ballet, with a revolutionary change in dance technicality and story premise. His daughter, legendary dancer Marie Taglioni, was known for her role in *La Sylphide.* The year 1839 marked the debut of Jean Petipa and his son Marius Petipa (later the choreographer of the Russian Imperial Ballet). With James Sylvain as her partner, the well-known Fanny Elssler of the Paris Opéra performed *La Tarentule, La Sylphide,* and several character dances in 1840 before embarking on a two-year national tour during which she trained local dancers to augment her casts; her performances inspired an American "balletomania." Several American-born ballet dancers became successful, among them Augusta Maywood, who in 1838 at age 13 made her debut in the city in *Le Dieu et la bayadère* (she moved to Europe in 1839), and Mary Ann Lee, who also made her debut in the city (at 16), studied with Jean Coralli in Paris, and returned to the United States to introduce such classics from the French repertory as *Giselle.* One of her regular partners was George Washington Smith, who also toured in Elssler's American company in 1840, studied with Sylvain, and was later the partner of Julia Turnbull, Giovanna Ciocca, Giuseppina Morlacchi, and Pepita Soto. He became the ballet master of the Bowery Theatre in 1847 and of the Lyceum Theatre in 1850; he also arranged dances for Lola Montez during her tour in 1851 and at times was her partner. Ballets and pantomimes were often performed at the Park Theatre and Vauxhall Gardens. Audiences were generally white and of mixed social class.

Competitive tap dancing, a blend of Irish clogging and African syncopated rhythms, was first performed in saloons and dance halls in the Five Points neighborhood. By the end of the nineteenth century black minstrel shows were performed in theaters, and there was also an African American vaudeville circuit. Some black entertainers, such as Bert Williams, performed in white vaudeville shows. The extravagant ballet *The Black Crook* opened in 1866 at Niblo's Garden on Broadway and soon became one of the most popular productions of its kind in the city. The production lasted nearly six hours and incorporated dazzling fairyland transformations, a troupe of child precision dancers, and female dancers with their legs bared below midthigh. It became a model for musical theater, vaudeville, music hall productions, and variety spectacles such as *America,* a lavish celebration of technological invention produced by Imre Kiralfy for the World's Columbian Exposition in Chicago in 1893 and performed in the same year at the Metropolitan Opera.

About this time modern dance was developed in the city by Loie Fuller, Isadora Duncan, Ruth St. Denis, and others, some of whom had studied with Italian ballet dancers. They were also influenced by vaudeville skirt dancing, the expressive techniques of François Delsarte, acting, and Hindu and Japanese dances presented by international expositions and amusement parks. In their work they explored the theme of rugged American individualism, recasting elements of popular entertainment and genteel parlor dances. Fuller and Duncan began their careers in New York City in the 1890s and then, after becoming well known in Europe, returned to the United States. Duncan became a sensation, commonly known as the "mother of modern dance." She is recognized for her unorthodox (for the time) dress code, which featured flowing dresses that discarded the traditions of tight, corseted costumes. St. Denis made New York City her headquarters after her debut there in 1906 and a subsequent successful European tour; she performed her mystical Orientalist dances on the national vaudeville circuit. She married Ted Shawn, and in 1915 the couple organized the Ruth St. Denis and Ted Shawn School of Dancing and Related Arts, known as Denishawn, in Los Angeles; it had branches in several cities, including New York City.

There was no American school of ballet until 1909, when the Metropolitan Opera engaged Malvina Cavallazzi as a teacher for its company. Interest in ballet was revived in the city by Anna Pavlova and Mikhail Mordkin,

former dancers in Sergei Diaghilev's Ballets Russes. In 1910 they danced in *Coppélia, Aziade,* and such divertissements as *The Dying Swan,* which was performed at the Metropolitan Opera for two years. In 1911 Theodore Kosloff danced with Gertrude Hoffman at the Winter Garden Theatre in works from the repertory of the Ballets Russes, of which he had been a member. The Ballets Russes made two tours of the country in 1916–17, reproducing ballets that had enjoyed tremendous success in Paris, including *Petrouchka, Schéhérazade, Les Sylphides,* and *Afternoon of a Faun.* During the second tour Vaslav Nijinsky presented his last ballet, *Till Eulenspiegel,* based on the story of the medieval Flemish trickster and set to music by Richard Strauss.

From the end of the nineteenth century until the 1940s, many of the ballets in New York City were offered by the Metropolitan Opera, which presented its own company and touring companies. Versions of Diaghilev's works were performed by the Ballets Russes and others. The engagement of Rosina Galli, a graduate of the La Scala school in Milan, as the lead dancer in 1914 and as the ballet master in 1919 gave luster to the opera's company, which until the Depression presented full-scale ballets as part of operas or on their own. Several small ballet companies performed elsewhere. Michel Fokine worked at the Hippodrome and performed in Florenz Ziegfeld's *Follies* during the 1920s, and in 1924 he organized a small company to perform his works. In 1926 Mordkin formed the Mordkin Ballet Company, which performed in the Greenwich *Follies* and toured briefly. Martha Graham, Doris Humphrey, Charles Weidman, and Louis Horst, the music director of St. Denis's company, left the Denishawn school during the 1920s for New York City. Dissatisfied with the fin de siècle decorativeness of her training, Graham worked to extrapolate a specifically American form of dance from the rhythms of city life, and deep, emotionally driven choreography. Horst became her mentor and an influential composition teacher to successive groups of modern dancers. Humphrey and Weidman formed their own school and company in 1928, basing their technique on Humphrey's principles of fall and recovery. Weidman's gift was for comedy; Humphrey combined principles of musical visualization that she had explored with St. Denis and embodiments of social utopias and social conflicts.

In the 1920s many African American entertainers found work in the Cotton Club and other nightclubs where the owners and the audiences were white. New York City became a hotspot for tap dancing, a truly American form of dance. The Hoofer's Club was where many of the great tappers and steps were born, providing a place where black tap dancers could get together and share technique and styles. African Americans first became concert dancers during the Harlem Renaissance, when they gained access to theaters, financing, and work as dancers, composers, musicians, and writers for the stage. A number of musicals intended for mixed audiences and produced entirely by African Americans were introduced, often based on racial stereotypes traditional in minstrel shows. Among these were *Shuffle Along* (1921, Flourney Miller and Aubrey Lyles; Noble Sissle and Eubie Blake), *Plantation Revue, From Dixie to Broadway, Runnin' Wild,* and *Chocolate Dandies.* Many performers found employment in these productions, and a number became internationally known, including Josephine Baker and Bill "Bojangles" Robinson. Initially presented in Harlem, the musicals eventually moved to Broadway and were performed for white audiences, after which the Charleston became a social dance and tap dancing was incorporated into many mainstream musical comedies. At the same time a number of black dancers sought to develop forms of concert dancing shaped by African American history. In 1931 Hemsley Winfield formed the Negro Art Theater Dance Group, which in its first concert presented dances based on African themes and set to black spirituals by Edna Guy, who had studied at the Denishawn school. As the witch doctor in *The Emperor Jones* in 1933, Winfield became the first black dancer to perform at the Metropolitan Opera. Asadata Dafora, a musician born in Sierra Leone and trained in Europe, moved to the city in 1929 and in 1934 produced *Kykunkor,* a program of African music and dance elegantly arranged for the theater and performed by a cast of Africans and black Americans; it met with success and became a model for others.

By the 1930s New York City had become the world's foremost center for dance, especially modern dance. Mary Wigman sent one of her pupils, Hanya Holm, to open a branch of her school of German modern dance there in 1931, and by the late 1930s it was the Hanya Holm Studio. Holm worked with Graham, Humphrey, and Weidman to help shape the modern dance movement. Her critique of capitalism through dance influenced many younger dancers, some of whom belonged to Graham's and Humphrey's companies, took part in the unionization movement, and were allied with cultural organizations of the Communist Party. With the support of the Workers' Dance League they formed political dance troupes like the Red Dancers, the New Duncan Dancers, the Modern Negro Dance Group, the New Dance Group, and the Theater Union Dance Group. They treated such themes as the Spanish Civil War, German fascism, and American racism. While the Popular Front was active, the league softened its treatment of class conflict and renamed itself the New Dance League, which celebrated American folk themes and invited less politically radical dancers to take part in its performances. Several modern dance groups included black dancers and choreographers by 1937, when an evening of the works of Guy, Dafora, Katherine Dunham, and Talley Beatty was presented at the 92nd Street Young Men's Hebrew Association, a central venue for modern dance. During the same year Eugene von Grona organized the American Negro Ballet, which after its debut at the Lafayette Theatre in Harlem received criticism that reflected long-standing prejudices about dance and race. Dunham moved to New York City in 1939 to direct the Labor Stage, for which she provided choreography for a production of *Pins and Needles* before embarking on a long career of synthesizing Caribbean, African, and European styles. Several of her pupils became well known, including Beatty, Janet Collins, Lavinia Williams, Jean-Léon Destine, and Charles Moore, and she remained an important influence in African American concert dances.

Regular ballet seasons were introduced in the city in the 1930s. Managed by Wassily de Basil, the Ballet Russe de Monte Carlo had several successful seasons from 1933 during which Léonide Massine was its ballet master; it presented Diaghilev's repertory as well as comedies and new symphonic ballets by Massine, including *Les Présages* and *Symphonie fantastique.* In 1938 Sergei Denham became its impresario and it presented *Gaïté parisienne,* a new character ballet by Massine that became one of the company's staples. The Original Ballet Russe was formed by de Basil in 1938, and the two companies became rivals. From 1935 Sol Hurok and other impresarios regularly sponsored visiting dance companies at the Metropolitan Opera before and after the resident company's season. On Galli's retirement the resident company became the American Ballet, led by George Balanchine (1935–38). Although the new director of the Metropolitan Opera, Edward Johnson, had promised artistic reforms, Balanchine's dances were considered too nontraditional and overpowering, and in 1938 Boris Romanov, a member of the Ballets Russes, became the resident choreographer, a position he held until 1941. The Mordkin Ballet was revived in 1937; several of its members formed the Ballet Theatre in 1939.

New York City became the international center of ballet during the 1940s. The Ballet Theatre committed itself to preserving traditional ballet and encouraging new work, and was soon one of the most important companies in the city. Its first choreographer was Jerome Robbins, who produced *Fancy Free* in 1944 and, with the English choreographer Antony Tudor, trained such dancers as Nora Kaye, Harold Lang, Michael Kidd, Alicia Alonso, and Hugh Laing. The Ballet Russe de Monte Carlo became the most popular touring company in the country during and after World War II. From 1938 it engaged such

renowned dancers as Alexandra Danilova, Alicia Markova, Mia Slavenska, Igor Youskevitch, Mary Ellen Moylan, Leon Danielian, and Maria Tallchief, and many of its dancers became influential teachers. In 1942 Massine left the company, which produced several ballets by Balanchine as well as Agnes de Mille's *Rodeo,* and in 1944 Frederick Franklin became the ballet master. At times the company competed for audiences with the Original Ballet Russe, and in 1950 it ceased to offer regular seasons in New York City; it was dissolved in 1962. For a few seasons a number of companies organized by Balanchine and Lincoln Kirstein joined forces as the Ballet Society, a subscription organization that performed at the New York City Center for Music and Dance. The group changed its name to the New York City Ballet when it became the resident company there in 1948 and was quickly embraced by the city's intelligentsia for incorporating classical values in abstract works set to music by modern composers like Stravinsky and Paul Hindemith. They have continually been an authority on Balanchine/Stravinsky ballets, from the oldest surviving work *Apollo,* choreographed in 1928 for Diaghilev's Ballet Russes, all the way through their final collaborative ballet, *Agon* (1957). In 1964 the New York City Ballet became the resident company of the New York State Theater in Lincoln Center, renamed the David H. Koch Theater in 2008. Still performing Balanchine's works in the early twenty-first century, the company is often regarded as a benchmark in neoclassical ballet, which Balanchine created.

After World War II, a new group of modern dancers emerged. Humphrey's humanist themes and balanced orchestration of weighted movements were adopted by one of her pupils, José Limón, in such works as *The Moor's Pavane* (1949). The political and mythical themes of the 1920s and 1930s were abandoned for an abstract approach by Alwin Nikolais, who had studied at the Hanya Holm Studio, and by Merce Cunningham, who danced with Graham and worked from the premise that music and dance are independent partners in time and space. Paul Taylor, who danced with both Graham and Cunningham, initially embraced minimalism in his choreography, but during the early 1960s he became more accessible and eclectic, often using symphonic music. Pearl Primus, born in Trinidad and trained as an anthropologist, studied at the New Dance Group and in 1943 made her debut in *African Ceremonial,* an "anthropological" modern dance. After a research trip to the South in 1944 she provided choreography for dances like *Strange Fruit* (about a lynching) and *Hard Times Blues* (about sharecropping). She specialized in African dances and in 1948 made the first of many trips to Africa, where she found material that inspired her later work. With such choreographers as Anna Sokolow, Jane Dudley, Sophie Maslow, William Bales, and Daniel Nagrin she took part in group concerts throughout the 1940s and early 1950s at the studio of the New Dance Group, which also sponsored a performing group and offered dance classes at rates affordable to working people (a policy that it continued to provide until it closed in 2009). Donald McKayle, a pupil of Primus who had also been trained in ballet, formed a company in 1951. Among his dances are *Games* (1951), about city children, *Rainbow 'round My Shoulder* (1959), about a chain gang, and *District Storyville* (1962), set to New Orleans jazz. In the 1960s he began providing choreography for Broadway productions, television, and films.

Choreographers for the Metropolitan Opera in these years included Tudor (1950–51, 1956–61) and Markova (1963–69). Several small troupes assembled by Robert Joffrey in the 1950s together formed the Joffrey Ballet in 1960, which became one of the major companies in the city. It was disbanded in 1964, but reorganized the following year when Gerald Arpino became its principal choreographer and was soon renowned for its youthfulness. Alvin Ailey formed a company in 1958 that presented dances set to black music and based on themes of the civil rights movement (including *Revelations,* 1960, set to spirituals). The company, under the direction of Judith Jameson, a former Ailey dancer, celebrated its 50th anniversary from 2008 to 2009.

In the early 1960s a number of choreographers called themselves postmodernists to distinguish themselves from others who became prominent in the years between the world wars. Influenced by visual art and "happenings," a genre of live art produced in the late 1950s and 1960s, many postmodernists were pupils of Cunningham. Robert Dunn, a composer and a pupil of John Cage, taught a choreography workshop from 1960 to 1962 that led to the formation of a cooperative group known as the Judson Dance Theater, which flourished from 1962 to 1964 and continued into the late 1960s. Among its choreographers were Yvonne Rainer, Steve Paxton, Trisha Brown, David Gordon, Judith Dunn, Deborah Hay, and Lucinda Childs; there were also composers, filmmakers, and visual artists such as Robert Rauschenberg and Robert Morris. Although the group was never aesthetically united, its members shared an interest in nontraditional physical techniques, chance juxtapositions, cooperative production, and the incorporation of untrained dancers into their works. Intimate performances were given at the Judson Memorial Church in Greenwich Village and in unconventional venues like lofts and the outdoors.

In the 1960s and 1970s some members of the Judson group formed companies and in their own work explored reductive structures such as repetition and mathematics; they often performed in silence and used uninflected phrasing. Some of their best-known works include *Trio A* by Rainer (1966), *Structured Pieces* by Brown (1973), and *Calico Mingling* by Childs (1973). Several choreographers formed the Grand Union, an improvisation group. Meredith Monk and Kenneth King experimented with theater that incorporated several media. Hay and Simone Forti explored natural movement and the meanings of non-Western physical disciplines like Tai Chi Chuan. Prejudices about dance and race lingered into the late 1960s, when the Dance Theatre of Harlem began operations (1969). In the 1970s a number of young black choreographers became prominent, among them Rod Rogers, Eleo Pomare, Garth Fagan, and Dianne McIntyre. In the 1970s the experimental dancer Twyla Tharp formed the Twyla Tharp Dance Company and joined the artistic mainstream. Her intellectually rigorous works, often set to popular music, blended elements of African American social dancing, jazz dancing, and ballet. Later, Tharp choreographed the hit musical *Movin' Out* on Broadway to the music of Billy Joel, which opened in 2002 and ran for a total of 1303 performances. Many touring ballet companies visited the city, and the Harkness and Feld ballets were formed.

Choreographers well known during the 1960s and 1970s collaborated on large-scale productions with visual artists and composers during the 1980s, often making use of refined movements and performing before large audiences. They and some younger dancers like Jim Self and Susan Marshall also received commissions to write ballets. Under the leadership of Mikhail Baryshnikov, the American Ballet Theatre encouraged adventurous new works, including some by Gordon, Karole Armitage, and Mark Morris, a major choreographer of the 1980s who directed the Mark Morris Dance Group and became known for his musicality and his experiments with gender roles. Venues for postmodern dance included the Dance Theater Workshop, the Kitchen, P.S. 122, and the Next Wave Festival at the Brooklyn Academy of Music. Many dancers prominent in the 1980s and early 1990s linked postmodern dance with contemporary movements in art and architecture. Works concerned with questions of identity were produced by Self, Bill T. Jones, Arnie Zane, Tim Miller, Ishmael Houston-Jones, Fred Holland, Viveca Vazquez, Dancenoise, and the Urban Bush Women, a group led by Jawole Willa Jo Zollar that drew on black culture in Africa and the United States to explore themes of black women's identity.

Relying on the movement and shapes that can be created by the body alone, companies like Pilobolus, first founded in 1971, and MOMIX, created in 1980, gained significant momentum in the early twenty-first century. Many companies have surfaced under the genre of contemporary ballet, including

Alonzo King's LINES Ballet, founded in 1982, and Complexions, created in 1994 by Ailey dancers Dwight Rhoden and Desmond Richardson. Creating a new ripple in ballet with his innovative works, Christopher Wheeldon, a dancer turned choreographer, became resident choreographer at New York City Ballet. In 2007 Wheeldon started Morphoses/The Wheeldon Company, using members of other renowned companies as a platform to present his critically acclaimed choreography.

An early attempt to establish a dance archive in the Museum of Modern Art ended in 1948, and most of the materials were eventually transferred to the New York Public Library. The museum nevertheless retained a collection of stage and costume designs to which it has continued to add, as well as materials on dance in its motion-picture archive. The New York Public Library for the Performing Arts at Lincoln Center contains the world's largest dance archive, which traces the early days of classical ballet in the United States and the development of modern dance. Documents in the archive include the papers of the American Ballet Theatre and of the Ballet Russe de Monte Carlo, photographic scrapbooks of St. Denis and Shawn, Duncan's correspondence with Gordon Craig, and the manuscripts of the choreography of Balanchine, donated by Kirstein. Also available are videotaped performances by such choreographers as Cunningham and Tharp, and videotapes from the Brooklyn Academy of Music, the Dance Theater Workshop, and the Dance Theatre of Harlem. There are also dance collections at the Asia Society, the Kitchen, the Paley Center for Media (formerly the Museum of Television and Radio), the Shubert Archives, and the Anthology Film Archives, as well as archives maintained by dance companies.

dance criticism. Dance writing in New York City began during the mid-nineteenth century, when it consisted mainly of short, descriptive pieces discussing dance as a social event or as a costume spectacle. Dance reviews were frequently placed on the society page of local newspapers, mixed in with other arts stories. With an increase in technique-based dance, as early as the 1800s and certainly in the 1900s, there was a need for journalists with a technical vocabulary, leading to the rise of the modern dance journalist. When Carl Van Vechten (1880–1964) began writing about dance for the *New York Times* (1906–13), dance reviews became a respected form of criticism. By explaining technical terms and defending innovative performances, he expanded public awareness of dance. While working for the *Times* and the *New York Press* (1913–14) he wrote about crucial events in the history of dance in New York City, including the debuts of Anna Pavlova, Mikhail Mordkin, Maud Allan, and Loie Fuller. In *Interpreters and Interpretations* (1917) and other books, he introduced the work of Isadora Duncan and Vaslav Nijinsky to a wider audience. Although he retired by 1920, his vivid accounts helped to establish dance as a recognized art form. In earlier dance writings, the dancer was often the primary focus, but as the role of the critic evolved, the spotlight was placed on the choreography.

The first full-time dance critic in the city was John Martin (1893–1985), hired in June 1927 by the *New York Times.* He was known for his controversial treatment of ballet, especially some of the neoclassical ballets choreographed by George Balanchine. His close association with Martha Graham, Doris Humphrey, and other pioneers of modern dance made him an influential dance writer in the United States until his retirement from the *Times* in 1962.

Walter Terry (1913–82), dance critic for the *New York Herald Tribune* from 1936 until 1966, was a trained dancer who reviewed performances more as a friend of dance than as an aesthetic judge. Edwin Denby (1903–83) wrote for the bimonthly magazine *Modern Music* (1936–43), for the *Herald Tribune* while Terry was fulfilling military service (1942–45), and for the periodicals *Dance* and *Center.* Arlene Croce (*b* 1934) founded the quarterly journal *Ballet Review* in 1965 and was its editor for 14 years. She became the dance critic for the *New Yorker* in 1973. Her detailed articles, many of which were collected in *Sight Lines* (1987), were sympathetic toward the works of Balanchine, Mark Morris, and David Gordon. Martin's successor at the *Times,* Allen Hughes (1921–2009), was in turn succeeded in 1965 by Clive Barnes (1927–2009), who from 1967 was also the newspaper's drama critic; shortly after he left the *Times* in 1977 he became a critic for the *New York Post.* He also wrote a monthly column for *Dance* magazine called "Attitudes," provided his perspectives on the WQXR radio station, and published many books. Anna Kisselgoff (*b* 1938) took over the post of chief dance critic at the *Times* in 1977 and, using her vast historical knowledge of dance and straightforward approach, became an influential force of the time. Other prominent dance critics include Deborah Jowitt (*b* 1943) of the *Village Voice,* who was recognized for her unaffected reviews and veneration for the art form and artist; Tobi Tobias (*b* 1938) of *New York;* Marcia Siegel (*b* 1932) of the *Hudson Review;* and Joan Acocella (*b* 1945), the dance critic for the *New Yorker* since 1998, whose works include *Mark Morris* (1993) and an edition of the diary of Nijinsky (1999). Jennifer Dunning (*b* 1942) of the *Times* has written books on dance topics, including *But First a School* (1985) and *Alvin Ailey: A Life in Dance* (1998). In April 2007 Alastair Macaulay became chief dance critic at the *Times,* following the retirement of John Rockwell (*b* 1940), critic since 2005. Macaulay was previously the chief theater critic for the *Financial Times* and chief dance critic for the *Times Literary Supplement,* both in London.

Meryl Cates, William C. MacKay

dance halls and discothèques. Dance halls for members of the working class were present in New York City by the middle of the nineteenth century and soon acquired an unsavory reputation. John Allen, known as the "wickedest man in New York," ran a dance hall during the 1860s at 304 Water Street that was also a bordello. Local residents commonly referred to Harry Hill's famous dance hall at 26 East Houston Street (1868–90) as the city's "most respectable disreputable house" and to the Black and Tan Concert Hall at 153 Bleecker Street as the "Chemise and Drawers." At the same time members of fashionable society danced waltzes, polkas, and the lancers in stylish dress and sumptuous surroundings. Allen Dodworth, a bandmaster and a violinist with the New York Philharmonic, opened a dancing school at 402 Broadway in 1842 and became so closely associated with the city's social elite that one of the studios he opened later, at 681 Fifth Avenue, was a temporary site for the Metropolitan Museum of Art. One of the nation's preeminent dancing masters, Dodworth published *Dancing, and Its Relation to Education and Social Life* in 1885 and retired in the following year, leaving control of the school to his nephew George, who bought a building at 12 East 49th Street where he taught the daughters of such prominent families as the Astors, the Gallatins, the Hones, the Belmonts, the Vanderbilts, and the Dwights. The Dodworths were more than simply dance teachers: they hoped to bring good manners to the dance floor and believed that proper dance technique and etiquette could help to refine society.

The growing influence of ragtime music and dance between 1890 and World War I complicated the Dodworths' mission. Rental halls that were the primary venues for dancing between 1890 and 1910 gained in popularity in neighborhoods inhabited by immigrants and the working class. By one estimate there were 130 dance halls in the city in 1895 (most on the Lower East Side) and 195 by 1910. Social dancing peaked between 1911 and 1915, and

venues ranging from cabarets in Times Square and elegant hotels to large, nondescript dance halls struggled to keep pace with a rapidly increasing demand. Two types of dance hall played the largest role. The first were dance palaces that accommodated from 500 to 3000 patrons and included Grand Central Palace, the city's first (opened in 1911 at 488 Lexington Avenue); the Manhattan Casino (2926 Eighth Avenue); and the Harlem Casino (100 West 116th Street). Such halls catered mostly to teenagers and featured professional musicians and promotional events. Other dance halls such as Tangoland on East 86th Street, known as "closed" or "taxi" dance halls, were situated above street level, had amateurish bands, and were sparsely decorated; patronized solely by single males (and therefore popularly associated with prostitution), they offered female dancing partners for hire at a fixed price for each dance, which the dancer split equally with the owner of the hall. This practice was commemorated in the song "Ten Cents a Dance" (1930) by Richard Rodgers and Lorenz Hart.

The proliferation of dance halls raised the ire of reformers. They joined such groups as the Committee of Fourteen (1905–32) and the Committee on Amusement Resources of Working Girls (1909–15), which prevailed on the state legislature to amend the city charter in 1910 to provide for the licensing of dance halls, and then helped to refine the state law by securing passage at the municipal level of the Dance Hall Law of 1911. To ensure propriety on the city's dance floors George Dodworth and other concerned dance teachers organized the New York Society of Teachers of Dancing in 1914. This group was less influential than Vernon and Irene Castle, whose refined versions of the latest dance steps met with huge success on the floors of cabarets and hotels. To counter the reformers many owners of dance halls renamed their establishments academies and schools, and some opened large dance spaces that offered refined surroundings, among them Roseland, opened by Louis J. Brecker on New Year's Eve 1919, and the Savoy Ballroom in Harlem, which opened in 1925. During the 1920s and 1930s Arthur Murray ran a chain of studios in the city to teach social dancing. In 1925 there were 786 licensed dance spaces in the five boroughs, of which 238 were in Manhattan. The Advisory Dance Hall Committee calculated that about 14 percent of the city's males and 10 percent of its females aged 17 to 40 frequented at least one dance hall a week.

Dance halls remained popular during the 1930s. At the Savoy Ballroom in Harlem a racially mixed crowd numbering as many as 5000 danced the Lindy hop to the accompaniment of the country's leading jazz bands. Fashionable hotels such as the Pennsylvania, the Lincoln, and the New Yorker opened ballrooms that featured swing and "sweet society" bands such as that of Eddy Duchin. Many dance palaces closed during the Depression, but taxi dance halls continued to draw customers and criticism. In 1936 the police raided 20 such establishments around Sands Street near the Brooklyn Navy Yard, and as late as 1964 Bernard J. O'Connell, the city's license commissioner, revoked the permits of six dance halls in Times Square for offending public decency. Developers razed the Savoy Ballroom to make way for a housing project in 1958, and eventually taxi dancing disappeared from New York City.

The decline of the dance hall coincided with the rise of the discothèque. The Peppermint Lounge, opened on West 45th Street in 1959, was associated from the following year with the dance called the twist and remained a popular venue for celebrities until it closed in December 1965. Other early discothèques that attracted a fashionable clientele included Ondine (308 East 59th Street), the private discothèques Le Club (416 East 55th Street) and L'Interdit (in the Gotham Hotel), and Arthur (154 East 54th Street, 1965–69), which was owned by several stage and film performers and was known for the bold dress of its patrons. Cheetah, opened at Broadway and 53rd Street in April 1966 and owned by Borden Stevenson (a son of the politician Adlai Stevenson), featured rock dancing and was frequented by teenagers. By the mid-1960s several large dance clubs were situated in the theater district and in Greenwich Village. The Electric Circus, at 23 St. Mark's Place, presented an opening gala on 27 June 1967 that attracted celebrities, hippies, and the curious, who were entertained by trapeze acts and performance artists as well as dizzying lights and a deafening sound system that required the laying of a special cable in St. Mark's Place by Consolidated Edison. Dom, directly downstairs from the Electric Circus, was the primary dance club for blacks in Greenwich Village during the late 1960s.

Those who patronized discothèques during the 1970s danced not to rock but to the four-square rhythms of disco. The most exclusive clubs admitted only the prominent and fashionably dressed and were written about relentlessly by gossip columnists. Lighting and sound systems were increasingly elaborate, and illegal drugs widely used. The best-known club of the period was Studio 54, owned by Stephen Rubell and Ian Schrager, which opened on 26 April 1977 at 254 West 54th Street in the shell of the abandoned Gallo Theater. Its chief competitor was Xenon, also in a former theater, at 124 West 43rd Street. Other discothèques catered to the working class, especially in the outer boroughs; a club of this sort is vividly depicted in the film *Saturday Night Fever* (1977). The decadent excesses of the more lavish clubs ended about 1980, when the owners of Studio 54 were sentenced to three and a half years in prison for tax evasion. At the same time other venues opened in disused warehouses in Chelsea, lower Manhattan, and the meatpacking district; at these clubs racially mixed crowds danced to rap, "house," and other forms of music on enormous dance floors. Among the few clubs of this kind to last more than a year or two were the Palladium at 126 East 14th Street (1984), an ultramodern club opened by Rubell and Schrager; the Limelight (1985), in a disused church at 47 West 20th Street; and Area at 157 Hudson Street (1983–87), which redesigned its interior every season and drew huge crowds. Other notable establishments included the Tunnel (a former railroad station at 12th Avenue and 28th Street) and Mars (a warehouse at 28 10th Avenue), both frequented by fashionable young people and residents of the suburbs; 12 West at 491 West Street, opened in 1975 by Michael Fesco as the city's first discothèque with an overtly homosexual clientele; the Mudd Club at 77 White Street (during the late 1970s and early 1980s); and Nell's, an intimate club at 246 West 14th Street (opened in 1986).

Ballroom dancing retained its appeal. By the time Murray retired from dance instruction in 1964 he oversaw an empire that included a thriving mail-order business and more than 300 franchised dance studios. In the same year there were at least 25 other ballroom dance schools and studios in Manhattan. Refined social dancing continued to be practiced at Roseland and at the Red Parrot (617 West 57th Street). Latin American dances and rhythms, which first gained popularity during the 1940s and 1950s, became more prevalent as the number of Spanish-speaking immigrants increased. At the Palladium (Broadway and 53rd Street) Frank "Killer Joe" Piro taught such Latin dances as the samba, the mambo, and the conga. The city's Spanish-speaking population also frequented unlicensed social clubs, a practice that was usually ignored by other residents of the city until it was brought to their attention by such tragic incidents as the Happy Land fire of 1990, in which 87 people died at 1959 Southern Boulevard in the Bronx. During the 1980s influential Latin dance clubs included the Corso (205 East 86th Street) and the Copacabana (10 East 60th Street). In the first decade of the twenty-first century the trendiest clubs tended to be on the West Side of Manhattan, especially the meatpacking district in Chelsea.

Marc Ferris

Dance Theater Workshop. Organization for contemporary choreographers and dancers. In 1965 it was founded to sponsor and support choreographers, especially those early in their careers. Hundreds of artists have worked with the organization, including Whoopi Goldberg, Mark Morris, David Gordon, Bill T. Jones, and Molissa Fenley. Under the directorship of David White (1975–2003), the

Dance Theater Workshop expanded greatly and introduced the New York Dance and Performance Awards, or Bessie Awards; the Suitcase Fund; the New York State DanceForce; and the National Performance Network, a program to support experimental dance outside the city. The organization also helps its members with publicity and other practical aspects of presentation. In 2002 the Dance Theater Workshop opened its Doris Duke Performance Center, which houses administrative offices, two large rehearsal studios, and the Bessie Schönberg Theater. Each year the Dance Theater Workshop presents more than 110 performances from about 45 different companies and artists.

Joan Acocella

Dance Theatre of Harlem. Dance company formed in New York City in 1969. Its artistic director, Arthur Mitchell (*b* New York City, 27 March 1934), had been the first full-time black member of the New York City Ballet (1955–68) and one of its most popular soloists, creating many roles in ballets by George Balanchine. Its ballet master was Karel Shook. The company made its debut at the Guggenheim Museum in 1971, gave successful performances in the United States and abroad, and became known for flouting racial stereotypes and what Mitchell called "the myth that ballet has something to do with race, creed, and class." It assembled a large, varied repertory that included nineteenth-century Russian classics, many ballets by Balanchine, and works by such contemporary choreographers as Glen Tetley and Garth Fagan. In the 1980s it revisited *Giselle* in a Creole setting. Among those who have been associated with the company are Ronald Perry, Mel Tomlinson, and Paul Russell. Its school at West 152nd Street in Manhattan continues to train hundreds of students.

Brenda Dixon Gottschild

Danes. Danish sailors were among the crew of Henry Hudson's ship the *Halve Maen,* which sailed into New York Harbor in 1609. Among the many Danish settlers who lived in New Amsterdam was Jonas Bronck, who moved there in 1629 and bought large tracts of land just north of Manhattan that became known as the Bronx (probably after him). At least 100 Danes lived in New York City by 1675, and in 1704 they joined with Norwegians to build a small Lutheran chapel near the intersection of Broadway and Rector Street. Immigration from Denmark reached a peak during a period of political unrest there between 1850 and 1900, and most Danes passed through the city on their way west; those who remained usually lived in the Scandinavian section of Bay Ridge in Brooklyn. Danish men were often mechanics, sailors, carpenters, and bricklayers. Many of them belonged to unions, and some were prominent musicians and professionals. Most Danish immigrants were Lutheran, but many married members of other ethnic and religious groups. Dania, a health insurance organization for Scandinavian immigrants, opened a branch in Brooklyn in 1886. A Danish-language paper, *Nordlyset* (The Northern Light), was published in the city from 1891 to 1953, and in 1903, 17 Danish organizations were listed within the paper, none with more than 100 members. By 1930 the Danish-born accounted for less than 1 percent of the population of New York City, but about 200,000 persons were of Danish descent. One of the best-known Danes in the city was Jacob A. Riis, a photographer, reformer, and writer whose book *How the Other Half Lives* (1890) exposed the destitution of the city's slums; he was called "New York's most useful citizen" by President Theodore Roosevelt, and his work led to many reforms in tenement regulations.

Chad Ludington

Danilova, Alexandra (*b* Peterhof, Russia, 20 Nov 1903; *d* Manhattan, 13 July 1997). Dancer. She trained in St. Petersburg and in 1924 left Russia with schoolmate and choreographer George Balanchine. The two traveled and worked together, sharing a lifelong professional and personal relationship. In the 1920s she danced with Sergei Diaghilev's Ballets Russes and during the peak of her career (1938–51) with the Ballet Russe de Monte Carlo, which became an American company at the beginning of World War II. An immensely versatile ballerina, she danced heroic, glamorous, and mischievous principal roles. Danilova was known for her commanding stage presence and beautiful legs and became one of the most popular ballerinas of her time. In 1958 she made her Broadway debut in *Oh, Captain!,* in which her only scene was a well-received dance sequence with Tony Randall. However, the show was a failure and closed. Balanchine then hired Danilova to work at his School of American Ballet, where she taught from 1964 to 1989. She and Balanchine staged the ballet "Coppélia" for the New York City Ballet in 1974. Through her dancing and teaching Danilova helped to incorporate the charm and glamour of late nineteenth-century Russian classical ballet into the sleek classical styles developed in the United States during the late twentieth century, especially by the New York City Ballet under Balanchine's direction. In 1986 she wrote *Choura: The Memoirs of Alexandra Danilova,* and after her retirement from teaching, she became a dance lecturer.

Frank Nestor

Dannon Yogurt. Firm of yogurt makers formed in 1942 in the Bronx by Daniel Carasso, the son of a Spanish yogurt maker, and Joe Metzger. It moved in the following year to Long Island City in Queens, and was acquired in 1959 by Beatrice Foods and in 1981 by the French firm BSN Groupe. It moved its main office to suburban White Plains, New York, in 1986. In the early twenty-first century it sold and produced over six million cups of yogurt a day, encompassing more than 100 flavors and styles, making Dannon the top-selling yogurt brand in the world.

Leslie Gourse

Danticat, Edwidge (*b* Port-au-Prince, Haiti, 19 Jan 1969). Novelist, memoirist, and short-story writer. After her parents immigrated to New York City to escape dictator Jean-Claude Duvalier's regime, Danticat remained in Haiti under the care of her aunt and uncle. In 1981 she and her younger brother reunited with their parents in Brooklyn. She received a BA from Barnard College and an MFA from Brown University. Channeling her personal experiences as an immigrant into her writing, Danticat became the predominant English-speaking voice of Haiti, and her books worked to diversify the American canon. She moved to Miami in 2002.

Clare Richfield

Da Ponte, Lorenzo [Conegliano, Emanuele] (*b* Ceneda [now Vittorio Veneto], Italy, 10 March 1749; *d* New York City, 17 Aug 1838). Librettist, bookseller, impresario, and teacher. After writing the librettos of many celebrated operas, notably Mozart's *Don Giovanni* and *Le Nozze di Figaro,* he moved to New York City in 1805 with the intention of spreading Italian culture. Soon after arriving he was befriended by Clement Clarke Moore, who helped him to establish a school where he taught students the language and literature of Italy, France, and Spain. After seven years in an unsuccessful foray into commerce in Sunbury, Pennsylvania, he returned to New York City and with his brother Carlo began importing Italian books to the United States. First operating out of his home on Broadway and later from a store, he wrote a widely read annotated catalogue for his customers that contained a history of Italian literature. From 1825 he taught Italian at Columbia College, to which he sold his library of Italian books. In November 1825 he helped to bring about productions by a visiting opera company of Rossini's *Il Barbiere di Siviglia* and of *Don Giovanni.* Convinced of the need for a full-fledged professional opera company in New York City, he pursued patrons and in 1833 proposed, commenced, and completed construction of the Italian Opera House. The neoclassical building was considered the most sumptuous theater in the United States and displaced the Park Theatre as the leading theater in the city. Da Ponte had succeeded in establishing opera as an art form in New York City by the time the theater was destroyed by fire in 1841.

Thomas M. Hilbink

D. Appleton. Firm of publishers formed by Daniel Appleton, the owner of a general store at 16 Exchange Place. Appleton published his first book, an inspirational volume of biblical texts, in 1831, and during the next few years became known for publishing devotional and theological books as well as reprints of British fiction. He made his son William Henry Appleton a partner in 1838, and together they produced Spanish-language and children's books, ventures that proved shrewd and profitable. After his father's death in 1849, William Henry Appleton took over the firm and engaged his brothers as partners; his association with editor and author Edward L. Youmans led to the publication of many important scientific works by such writers as Charles Darwin and Herbert Spencer. Known for its varied list, the firm also produced sentimental fiction, medical books, the novels of Edith Wharton, *Alice's Adventures in Wonderland,* General William T. Sherman's memoirs, and such reference works as the *New American Cyclopaedia,* a work in 16 volumes. D. Appleton remained in the Appleton family until a business failure in 1900. In 1933 it merged with the firm of Century to become Appleton–Century.

Alice Fahs

Darin, Bobby [Cassotto, Walden Robert] (*b* Bronx, 14 May 1936; *d* Los Angeles, Calif., 20 Dec 1973). Performer. After graduating from the Bronx High School of Science, he signed with Decca Records in 1956. After he recorded "Splish Splash" in 1958 with Atlantic Records, his career took off. In 1959 he recorded the ballad "Dream Lover," and a year later his album *Mack the Knife* won the Grammy Award for Record of the Year. In the 1960s he became involved in politics and worked on Robert F. Kennedy's campaign. Noted for his big-band sound, he continued recording and also acted in several films until his death. In 1990 he was posthumously inducted into the Rock and Roll Hall of Fame. The 2004 movie *Under the Sea* was a biopic of Darin's life.

Darley, F(elix) O(ctavius) C(arr) (*b* Philadelphia, 23 June 1822; *d* Claymont, Del., 27 March 1888). Illustrator. He moved to New York City in 1848 and became one of the most popular and influential illustrators of his time. During the late 1840s and 1850s he illustrated works by Washington Irving and James Fenimore Cooper and a collection of comic essays by William Evans Burton, *The Yankee among the Mermaids* (1854–58). His style was one of the first with a distinctively American point of view and brand of humor; he had a talent for satire and subtle overstatement, and his work encouraged other illustrators to develop their own styles rather than imitate English ones. He was best known for his engravings for *Rip Van Winkle* (1848) and *The Legend of Sleepy Hollow* (1849). Darley helped to form the American Society of Painters in Water Colors and also belonged to the Artists' Fund Society of New York and the National Academy of Design.

Michael Joseph

David Mannes Music School. Original name of the Mannes College of Music.

Davies, J. Clarence (*b* 1868; *d* 13 April 1934). Real estate developer. Educated at City College, he opened a real estate office in the Bronx in 1889 with funds borrowed from his family. He was one of the organizers of the Bronx Board of Trade, had important local political connections, and became known for his collection of historical memorabilia connected with New York City, including more than 15,000 items that he willed to the Museum of the City of New York. He was also a longtime trustee of the Association for the Improvement of the Education of the Deaf. Davies called himself the "king of the Bronx" because of his prominent role in the development of real estate in the area.

Stephen A. Stertz

Davis, Alexander Jackson (*b* New York City, 24 July 1803; *d* West Orange, N.J., 14 Jan 1892). Architect. With Ithiel Town he designed the U.S. Custom House on Wall Street (1833–42, now Federal Hall) in the Greek Revival style. In buildings such as the chapel of New York University (1835–37, formerly at Washington Square), designed in the Gothic Revival style, he introduced an irregular picturesque style that reached its height in the villas of Grace Hill in Prospect Park (1854–56,

commissioned by Edwin Litchfield) and Lyndhurst in Tarrytown, New York (1838–42, enlarged 1864–67). With the landscape architect Andrew Jackson Downing he promoted these as an ideal form of domestic architecture. A member of the short-lived American Institution of Architects (1836–37) and later of the American Institute of Architects, he actively took part in attempts to professionalize American architecture by forming organizations to promote standards of education and practice. Considered a leading architect of his time, Davis introduced many of the revival styles that became popular during the mid- to late nineteenth century. He is also known for his design of the nation's first planned suburb, Llewellyn Park in New Jersey, a model of picturesque design that he laid out in 1853.

Mary Beth Betts

Davis, Benjamin Jefferson (*b* Dawson, Ga., 8 Sept 1903; *d* New York City, 22 Aug 1964). Civil rights leader and editor of the *Negro Liberator,* as well as the *Daily Worker*. He was elected as a communist to the City Council from Harlem, replacing Adam Clayton Powell, Jr., after his election to the U.S. Congress in 1944. Davis was expelled from his office for alleged subversive activities before his second term ended. In 1959 he was elected to the National Committee of the Communist Party and served as its secretary.

Janet Frankston

Davis, John W(illiam) (*b* Clarksburg, W.Va., 13 April 1873; *d* Charleston, S.C., 24 March 1955). Lawyer, diplomat, and presidential candidate. He attended Washington and Lee University (BA 1892, LLB 1895) and was elected to the U.S. Congress as a Democrat in 1910 and 1912, later serving as solicitor general of the United States (from 1913) and ambassador to Great Britain (1918–21). After settling in New York City he formed the law firm that later became Davis Polk and Wardwell. At the Democratic National Convention in New York City in 1924, where the atmosphere was tense because of the high summer temperature and a controversial proposal to denounce the Ku Klux Klan by name, Davis received the presidential nomination on the 103rd ballot. But he campaigned ineffectively against Calvin Coolidge and lost the general election by a wide margin. He then resumed his legal career, during which he argued 141 cases before the U.S. Supreme Court.

Davis, Miles (Dewey, III) (*b* Alton, Ill., 26 May 1926; *d* Santa Monica, Calif., 28 Sept 1991). Jazz trumpeter and bandleader. The son of a dentist and a musician, he grew up in East St. Louis (Illinois) and at age 13 learned to play the trumpet from one of his father's patients, Elwood Buchanan, who taught him to play cleanly and without vibrato. He was taken to bars around St. Louis by his next teacher, Clark Terry. He soon joined a local rhythm-and-blues band, the Blue Devils, and became its music director. After graduating from high school, he moved to New York City to enroll at the Juilliard School in 1945, dropping out shortly thereafter, as he developed a reputation in jazz clubs as a first-rate bebopper. He made his recording debut the same year and was a sideman on many of Charlie Parker's seminal Savoy and Dial sides. After leaving Parker at the end of 1948, he made his first real recordings as a leader in 1949, with a nonet that included Johnny Carisi, the saxophonists Gerry Mulligan and Lee Konitz, and the pianist John Lewis, as well as arranger Gil Evans, in a lighter though bebop-derived sound that became known as the *Birth of the Cool* sessions. After several years of somewhat intermittent work because of a heroin addiction, he signed with Prestige in 1954 and organized his so-called first quintet, with John Coltrane, Red Garland, Philly Joe Jones, and Paul Chambers. The group stayed together through 1958, with Cannonball Adderly making it a sextet in 1957. Davis became known for rendering ballads with a unique emotional intensity; for his improvisations on such standards as "Bye, Bye Blackbird," "Surrey with the Fringe on Top," and "My Funny Valentine"; for his own compositions, such as "Four"; and for an aggressive, unembellished blues style on "Walkin'" and "Bags' Groove." In 1955 he signed a recording contract with Columbia Records, with whom he would record for the next three decades. His best-known albums of the period were *'Round about Midnight* (1956), *Milestones* (1958), and *Straight, No Chaser* (1958). With Gil Evans he also made a series of remarkable big band recordings, *Miles Ahead* (1957), *Porgy and Bess* (1958), and *Sketches of Spain* (1960). *Kind of Blue* (1959), probably his best-known album, with pianist Bill Evans on most tracks, was an exemplar of modal improvising. After several years of changing personnel and moving to a more forceful and impressionistic style, he formed his "second quartet" in 1964 with Ron Carter, Herbie Hancock, and Tony Williams, joined the following year by Wayne Shorter. The group played mostly original material and lasted until 1968, when Davis began to experiment with rhythm and blues, rock, and electronic instrumentation, which remained the basis of his improvisations for most of the remainder of his career. He produced *In a Silent Way* (1969), *Bitches Brew* (1969), and *Jack Johnson* (1970), playing with noted instrumentalists such as pianists Chick Corea and Joe Zawinul, the electric guitarist John McLaughlin, and others. By the early 1970s Davis was plagued by ill health, and he retired in 1974. He resumed playing in 1981, but his playing during his last decade generally was not as well-regarded as his earlier work. In all, he recorded about 35 albums. Throughout his career Davis made New York City his base, and he lived in a series of hotel rooms and apartments before purchasing a brownstone at 312 West 77th Street in 1961. Later, he moved to Fifth Avenue and 79th Street, where he lived until his death. He was buried in the Woodlawn Cemetery in the Bronx.

S. D. R. Cashman, Peter Eisenstadt, Marc Ferris

Davis, Ossie [Raiford Chatman] (*b* Cogdell, Ga., 18 Dec 1917; *d* Miami Beach, Fla., 4 Feb 2005). Actor. In 1939 he dropped out of Howard University to pursue his acting career with the Rose McClendon Players in Harlem. He later graduated from Columbia University. Although his acting career was interrupted by World War II, Davis returned to New York City and Broadway after his army service. In 1950 he made his film debut in *No Way Out,* and in 1970 he made his directorial debut with the film *Cotton Comes to Harlem.* Davis was also known for his involvement in the civil rights movement, and along with his wife, Ruby Dee, he helped organize the 1963 March on Washington. He was nominated for two Tony Awards, first in 1958 for Best Supporting Actor in a Musical for *Jamaica,* and in 1970 (as coauthor) for Best Book of a Musical for *Purlie.* Throughout his career he acted in movies, on Broadway, and directed several movies; he continued acting until his death.

Jessica Montesano

Davis, Reverend Gary (*b* Laurens, S.C., 30 April 1896; *d* Hammonton, N.J., 5 May 1972). Guitarist. Born partially blind, by his youth he had completely lost his vision. He began learning guitar at the age of six and went on to play both secular and religious songs. In 1940 he moved to New York City, playing "gospel blues" and preaching on the streets of Harlem. Later in his life he became more religious and was ordained at the Missionary Baptist Connection Church in Brooklyn. A master of the finger-picking style of guitar playing, his style influenced many famous musicians, such as Jerry Garcia and Ry Cooder. He recorded a few albums in the 1950s and 1960s, songs from which were rerecorded by the likes of Bob Dylan and Peter, Paul and Mary.

Jessica Montesano

Davis, Richard Harding (*b* Philadelphia, 18 April 1864; *d* Mount Kisco, N.Y., 11 April 1916). Journalist. He entered journalism in Philadelphia as a young man. After reporting on the Johnstown Flood in 1889 he joined the *New York Sun* and later became the editor of *Harper's Weekly*. As a war correspondent for several journals he covered the Greco–Turkish, Boer, Spanish–American, Russo–Japanese, and Balkan wars, and World War I, often using sensational prose. Davis also wrote and published fiction, plays, and a popular musical comedy.

Julian S. Rammelkamp

Davis, Stuart (*b* Philadelphia, 7 Dec 1892; *d* New York City, 24 June 1964). Painter. The son of two artists, he moved to New York City in 1909 to study with Robert Henri. His work was exhibited at the Armory Show in 1913, and in the same year he joined the staff of the independent socialist magazine the *Masses* as a protégé of the realist artist John Sloan; he left the magazine in 1916 over a dispute with the editors. Exhibitions of his work at the Newark Museum in New Jersey and at the Whitney Studio Club sponsored by Gertrude Vanderbilt Whitney encouraged his new interest in experimenting with formal problems. Seeking to create an unsentimental, uniquely American art and influenced by jazz, he developed a cubist style that used flat, overlapping, brightly colored shapes and motifs from everyday life, such as gasoline pumps, commercial logotypes, and billboard advertisements. Many consider his images, such as *Lucky Strike* (1921), prototypes for pop art. During the 1930s he sought to develop an art with social content through his abstract style. He also belonged to the Artists' Union and edited its publication, *Art Front,* and was the executive secretary of the American Artists' Congress (1936–40). Under the auspices of the Federal Art Project he painted murals for the Williamsburg Housing Project and for the radio station WNYC. In 1991 the Metropolitan Museum of Art held a major retrospective of his work.

Patricia Hills

Day, Benjamin (Henry) (*b* West Springfield, Mass., 10 April 1810; *d* New York City, 21 Dec 1889). Newspaper publisher and editor. After beginning his career as a printer he launched the *Sun* in September 1833, which under his direction attained the highest circulation of any daily newspaper in the United States. His innovations included using newsboys to sell newspapers in the streets, eschewing party journalism, and emphasizing crime reportage and sensational hoaxes. In 1838 Day sold the *Sun* to Moses Yale Beach, and in 1842 he assumed management of the illustrated literary periodical *Brother Jonathan.*

Steven H. Jaffe

Day, Dorothy (May) (*b* Brooklyn, 8 Nov 1897; *d* New York City, 29 Nov 1980). Social activist. She became interested in the socialist movement while attending the University of Illinois and on her return to New York City worked as a reporter for the *New York Call,* a socialist daily newspaper. During the 1920s she married and divorced, published a novel, and bore a daughter out of wedlock. After converting to Catholicism she founded the weekly newspaper the Catholic Worker in 1933 with the French religious mystic and social critic Peter Maurin. The paper sold for one cent and had a circulation that reached 185,000 in 1940; it explored pacifism, anarchist utopianism, and Catholic social thought through spiritual essays and radical reporting. In 1933 the newspaper inspired a social movement when Day and her followers opened a soup kitchen on the Lower East Side. By 1938 1200 people were fed there every day, and other "houses of hospitality" opened in dozens of other cities by the end of the decade. The *Catholic Worker* lost many supporters when its opposition to violence provoked hostility during World War II, but it influenced later generations of Catholic social activists. After Day's death St. Joseph House on East First Street and Maryhouse on East Third Street continued to operate. Among other books, she wrote *The Long Loneliness: The Autobiography of Dorothy Day* (1952). In 2000 Pope John Paul II granted the Archdiocese of New York permission to open a cause for Day's sainthood, thereby granting her the title of a "Servant of God" according to the Catholic Church.

DC Comics. Firm of comic book publishers formed in 1935 in New York City as National Allied Publications. In the year of its founding it introduced *New Fun Comics,* a comic book containing adventure stories. In 1936 the firm became Detective Comics, a name that it also used as the title for a comic book of crime and suspense published in the following year. It introduced Superman, its first "superhero," in *Action Comics* in 1938. Batman, who first appeared in *Detective Comics* in 1940, fought crime in Gotham City, a fictitious version of New York City. The company soon developed the Flash (1940), the Green Lantern (1941), and Wonder Woman (1942), who were early members of the Justice Society of America, the first superhero team. Although interest in superheroes declined after 1945, the firm revived its fortunes by revamping its characters in 1956. In 1977 it officially took the name DC Comics, after using it unofficially for years. DC Comics published a 12-issue series called *Crisis on Infinite Earth* in 1985 and an acclaimed "graphic novel" featuring Batman called *The Dark Knight Returns* in 1986. A division of Time Warner, DC moved to 1700 Broadway in the mid-1990s. In the twenty-first century DC published more than 80 titles each month and close to 1000 issues per year. It catered to a diverse readership through several imprints, including DC Universe, Vertigo, CMX, and Zuda.

DDB Needham Worldwide. Advertising agency formed in 1986 through a merger of Needham Harper Worldwide and the Doyle Dane Bernbach Group. Needham Harper was founded in 1925 in Chicago by Maurice H. Needham and opened its first office in New York City in 1939. Doyle Dane Bernbach was formed in 1949 in New York City by Ned Doyle, Maxwell Dane, and the well-known copywriter William Bernbach, who in the 1960s was the most influential figure in the "creative revolution" in advertising. In the twenty-first century the agency was known as DDB Worldwide and had its headquarters at 437 Madison Avenue.

Chauncey G. Olinger, Jr.

Dead End. Name sometimes applied in the early twentieth century to a small neighborhood in the East 50s along the East River, so named because of the extreme poverty of the area and because the streets "dead-ended"

there at the edge of the river. A play about the neighborhood, Sidney Kingsley's *Dead End,* was produced in 1935; it inspired several films in which the street gang the Dead End Kids appeared.

Irving Lewis Allen

Dead Man's Curve. Nickname for a sharp curve on Manhattan's Broadway cable car line at Union Square just north of 14th Street. The name came into use after 1891, when cable cars replaced the horse-drawn cars between South Ferry and Central Park. Gripmen knew that if they applied the brakes in the middle of the curve, the cars would become stranded, and as a result the cars were driven quickly around the curve with no concession for other vehicles or pedestrians, causing many accidents. The danger persisted until electric streetcars were introduced after the turn of the century.

Andrew Sparberg

Dead Rabbits. Irish gang in the sixth ward; the term *dead rabbit* was a slang term for a rowdy. The gang supported Mayor Fernando Wood and was apparently known as the Mulberry Street Boys until a riot with the rival nativist gang the Bowery Boys in the Five Points neighborhood on 4 July 1857, which was prompted by the formation of a new state police force and the enactment of liquor laws intended partly to undermine Wood's power. The Metropolitan Police were driven from the neighborhood by the Mulberry Street Boys and were then replaced by the Bowery Boys. The violence of the riot (12 people were killed) prompted the renaming of the Mulberry Street Boys by the press and the police. Although little is known about the gang apart from hearsay, later chroniclers considered the Dead Rabbits the most violent gang of the mid-nineteenth century. The gang was popularized in director Martin Scorsese's 2002 motion picture *Gangs of New York.*

Joshua Brown

Dead Man's Curve, ca *1900*

deafness. One of the first of several important institutions for deaf New Yorkers was the New York School for the Deaf, opened in 1818 in the city almshouse as the second institution of its kind in the United States. In 1829 a building was dedicated on 50th Street between Fourth and Fifth avenues. The school floundered until 1831, when Harvey Pringle Peet became the principal; he developed a vocational program that became standard in residential schools for deaf children (1831), replaced a weak staff with several of the school's finest graduates and college-educated hearing teachers (including F. A. P. Barnard, later president of Columbia University), and introduced home instruction of deaf children, who by law were not permitted to attend the school until the age of 12. Recognized as one of the finest schools of its kind in the country, it used the French method of instruction, which relied on sign language as the primary mode of communication. The school was the site of the first Convention of American Instructors of the Deaf in 1850 and in 1852 introduced a "high class" for its most promising students, who received three years of college preparatory work after completing the regular course. Their success led to the formation in 1864 of the world's first collegiate institution for deaf students in Washington, D.C., now known as Gallaudet University. In 1852 Thomas Gallaudet, the hearing son of a deaf woman, formed in New York City St. Ann's Church for Deaf-Mutes, the first church in the country designed for a deaf congregation. Afternoon services were signed, and morning services were spoken for the family and friends of deaf parishioners. The popularity of the church led to the introduction of deaf services nationwide and to the ordination of deaf ministers in the Episcopal Church and other denominations. In 1856 the New York School for the Deaf moved to a property in Washington Heights known as Fanwood, which became its popular name.

In 1867 the New York Institution for the Improved Instruction of Deaf-Mutes opened on Lexington Avenue between 67th and 68th streets as a private school for the deaf children of German-speaking immigrants; it later became known as the Lexington School. The director was Bernhard Engelsman, who had taught deaf children in Vienna according to the German tradition of teaching deaf students without sign language, relying instead on speech and speechreading. He was the first in the United States to make successful use of this method, which was also adopted by his successors. In 1870 Fanwood became the world's largest school of its kind with 616 pupils, and Lexington secured state support on the same basis as Fanwood, guaranteeing its survival. The Manhattan Literary Society for the Deaf was formed by the deaf artist and intellectual John Carlin. It was followed by the Deaf-Mutes' Union League, which was organized in 1887 by graduates of Lexington and united deaf professionals around common goals, especially philanthropic activities; the league was unusual in its acceptance of oral education. The country's most important publication during this period was the *Deaf-Mutes' Journal,* launched in Mexico, New York, by Henry Rider, a graduate of Fanwood. It eventually became affiliated with the school and under the direction of Edwin Hodgson during the 1890s and early twentieth century became a fierce advocate of educational, professional, and personal rights for deaf people. The success of the Lexington School lent strength to the growing popular support of the oral method. German-speakers established similar institutions in Milwaukee, Detroit, and Baltimore, and by 1920 the oral method was in virtually universal use in the United States. Fanwood moved to suburban White Plains, New York, in 1938; enrollment declined to about 300 by 1970.

The deaf community in New York City has had a number of prominent members, especially in the arts. Helen Keller lived in Forest Hills from 1917 to 1938. The poet James Nack lived in the city, as did the photographer Alexander Pach. In 1934 Emerson Romero, a

graduate of the Wright Oral School, set up a theater guild in the city for deaf actors unwelcome in Hollywood after the advent of "talkies." From 1937 to 1963 Ernest Marshall, a graduate of Fanwood, made motion pictures in sign language. Bernard Bragg, also a graduate of Fanwood, helped to form the National Theatre of the Deaf, which presented productions with deaf actors for hearing audiences. Such efforts were instrumental in the success that deaf actors began to achieve by the early 1990s.

St. Ann's ceased operations as a separate church in 1949 but as of 2007 remained a mission affiliated with the Episcopal Diocese of New York. Some of the most important political activists for the deaf were Hodgson and Thomas Fox, teachers at the New York School for the Deaf who later led the National Association of the Deaf, and Fred Schreiber, a graduate of Lexington and Fanwood who during the 1960s transformed the association into a powerful advocacy organization.

John Vickrey Van Cleve and Barry A. Crouch, *A Place of Their Own: Creating the Deaf Community in America* (Washington, D.C.: Gallaudet University Press, 1989)

John Vickrey Van Cleve

Dean, James (*b* Marion, Ind., 8 Feb 1931; *d* Cholame, Calif., 30 Sept 1955). Actor. After growing up in California, he moved in 1951 to New York City, appearing on several television shows and enrolling in the famed Actor's Studio under the instruction of Lee Strasberg. His first Broadway role was a small part in a production entitled *See the Jaguar,* which closed after only five performances. While in New York City, Dean lived at 19 West 68th Street from 1953 until his death. He also spent time at the Iroquois Hotel at 49 West 44th Street, and at the Young Men's Christian Association (YMCA) on West 63rd Street. Dean went on to star in three motion pictures: *East of Eden* (1955), *Rebel without a Cause* (1955), and *Giant* (1956). He died in a car wreck at age 24. He is the only actor to have received two posthumous Academy Award nominations.

Anne Epstein

Dean Witter Reynolds. Firm of securities brokers formed in 1978 by the merger of Dean Witter and Company (1924) and Reynolds Securities (1931). At the time the merger was the largest in the history of the securities business. In 1981 the firm was acquired by Sears, Roebuck and Company and became the nucleus of its financial services network. It launched the Discover credit card in 1986. In 1993 Sears spun the company off and it became an independent, publicly traded company called Dean Witter, Discover and Company. In 1997 it merged with Morgan Stanley Group, headquartered in Manhattan, and became Morgan Stanley Dean Witter for a brief period before the Dean Witter name was dropped entirely.

Chad Ludington

Dearie, Blossom (Margrete) (*b* East Durham, N.Y., 29 April 1926; *d* New York City, 7 Feb 2009). Jazz cabaret singer. Famous in the jazz and cabaret circuit for her clear, girlish voice, perfect diction, light piano style, and witty and sophisticated lyrics, she moved to New York City in the 1940s, where she absorbed the city's rich jazz scene and joined the Blue Flames, a vocal group connected with the Woody Herman Band. She spent a few years in Paris in the 1950s performing with the Blue Stars, but returned in the late 1950s to New York City, where she lived in Greenwich Village until her death. She recorded six Verve albums from 1956 to 1960, which are today regarded as classics; these include *Blossom Dearie, Once upon a Summertime,* and *My Gentleman Friend*. In the 1970s she founded her own label, Daffodil Records, which produced an album with all original lyrics and music, *Blossom Dearie Sings.* Until 2006 she regularly performed in Manhattan at Danny's Skylight Room and often traveled to London to perform at Ronnie Scott's Jazz Club. Known as a perfectionist who would not tolerate noisy patrons or cigarette smoke during her performances, Dearie attracted a loyal and cult-like circle of fans.

Lisa Keller

Death Avenue. Nickname given to several New York City avenues where the New York Central Railroad tracks ran at street level, resulting in high pedestrian fatalities and consistent public outcry. Between the mid-nineteenth century and 1913, when the train line was finally buried underground, 10th Avenue, Fourth Avenue, and 11th Avenue were all christened Death Avenue in turn.

Elizabeth L. Bradley

debtor's prison. The attic of the old city hall served as a debtor's prison in colonial New York City until the New Gaol, with three stories and a basement, was built on Chambers Street in 1755. Under colonial and early state law, debtors could often be imprisoned on a creditor's unproven suspicion that they were hiding assets. Once in prison, debtors were forced to rely on family, friends, and private charity for their upkeep. Most prisoners were desperately poor workers who fell victim to the panics of the time: in some years, half owed less than $10 and several owed less than $1. There were also some merchants, among them William Duer, the largest financial speculator of the 1790s. In later years, especially after 1810, debtors were often allowed to post bond and live on the "limits," an area that eventually extended south of 14th Street to the tip of Manhattan. In 1784 the state legislature permitted insolvent debtors to be freed from future obligations if consent was obtained from the creditors who represented three-fourths of their debt; the quota was changed to two-thirds in 1813. From 1801 to 1803 state insolvency law was superseded by federal bankruptcy law, which allowed for voluntary (debtor-initiated) declarations, but this was for merchants and traders only. Women with debts of less than $50 were exempted from prison in 1811; debtors who were not freeholders and had less than $25 in assets were exempted in 1817 (the amount was increased to $50 in 1824). Eventually, reformers like Joseph Fay helped to convince the public that in the credit-driven economy insolvency was a consequence of misfortune rather than moral failure, and that imprisoning nonfraudulent debtors was impractical and unjust. In 1831 New York became the second state (after Kentucky) to forbid imprisonment for insolvency.

Peter J. Coleman, *Debtors and Creditors in America: Insolvency, Imprisonment for Debt, and Bankruptcy, 1607–1900* (Madison: State Historical Society of Wisconsin, 1974); James Ciment, "In the Light of Failure: Bankruptcy, Insolvency and Financial Failure in New York City, 1790–1860" (diss., City University of New York, 1992)

James Ciment

de Burgos, Julia (*b* Carolina, Puerto Rico, 17 Feb 1914; *d* New York City, 6 July 1953). Poet, journalist, and activist. Known as the Poet Laureate of Puerto Rico, she was a passionate literary talent of mixed heritage whose poems were critically acclaimed and published in every Spanish-speaking country. She moved to New York City in 1940 and worked as a journalist, marrying poet Armando Marín. After her divorce in 1947 de Burgos became depressed; in 1953 she collapsed on the street in Spanish Harlem and died of pneumonia. Because she was not carrying identification she was buried at the Hart Island potter's field. Her remains were eventually returned to Puerto Rico, where she was given a proper burial. Her social activism, born of her concern for equality for women and people of African and Latino descent, was evident in her poetry and journalism, as well as in her participation in the Négritude literary movement. Collector and poet Jack Agueros has translated and published her known poems and discovered hundreds of lost works, but her full body of work is yet to be unearthed. In East Harlem, Fifth Avenue at East 106th Street was named Julia de Burgos Boulevard in 2007.

Sharon Wilkins

DeCarava, Roy (*b* New York City, 9 Dec 1919; *d* New York City, 27 Oct 2009). Photographer. The only child of Elfreda Ferguson, a Jamaican immigrant and amateur photogra-

pher, he studied at a high school for textile studies, at the Cooper Union School of Art, and finally at the Harlem Community Art Center on 125th Street. After serving in the U.S. Army in World War II, DeCarava returned to New York City and became a leader in the street photography world, where photographers showcase subjects in public situations in a natural and candid manner. After becoming the first black photographer to win a prestigious Guggenheim Fellowship, he began to take photographs in Harlem. Meanwhile, he was mentored by the famous photographer Edward Steichen, who used DeCarava's pictures in the famous *Family of Man* exhibition at the Museum of Modern Art in 1955. Later, DeCarava began to specialize in photographing jazz musicians, such as Count Basie, Duke Ellington, Louis Armstrong, and Billie Holiday. DeCarava's first solo museum exhibition was at the Studio Museum in Harlem in 1969. He lived in the last decades of his life in the Bedford–Stuyvesant neighborhood of Brooklyn and taught for many years at Hunter College. At his death, he was widely recognized as one of the most important photographers of his generation. In 2006 he received the National Medal of Arts for his work.

Kenneth T. Jackson

Deckertown. Obsolete name of Travis.

decorative arts. New York City became a center for the production of stylish silverware and household furnishings during the colonial era. Eighteenth-century craftspeople developed distinctive regional silver and furniture forms, including brandy-wine bowls and tankards; large, freestanding cupboards known as *kasten;* and serpentine-front, five-legged gaming tables. Émigré artisans continually brought new design concepts and patterns of workmanship to the city that complemented those of residents. As an international port and commercial center, the city had access to raw materials like mahogany and rosewood from the Caribbean and South America, Italian and native marbles, English and French furniture mounts and hardware, and English, European, and Asian textiles that gave local firms advantages over those of other regions well into the late nineteenth century. By the late eighteenth century the city's craftspeople were known nationally for the quality of their products. Prominent figures included cabinet- and chairmaker Thomas Burling (*fl* 1769–1802), whose clients included George Washington, and Robert Carter (*fl* 1783–1801), who led the cabinetmakers' contingent in the New York Federal Procession in 1788 to promote ratification of the Constitution.

In 1805 *Longworth's American Almanack* listed 66 cabinetmakers (including Duncan Phyfe, 1768–1854), 19 chairmakers, 15 carvers and gilders, 10 turners, and 23 upholsterers with shops in the city. Upholsterers traditionally performed services such as making curtains and draperies and hanging wall coverings, as well as providing fixed and removable furniture covers. The early nineteenth century saw an influx of French cabinetmakers led by Charles-Honoré Lannuier (*fl* 1803–19). According to the federal census of 1840, furniture manufacturers employed 793 workers in seven of the city's 17 wards; among these were the French-born cabinetmaker Alexander Roux (1813–86) and J. and J. W. Meeks (*fl* 1836–60). German-born craftspeople like John Henry Belter (1804–1863) entered the decorative trades in the middle decades of the nineteenth century.

Simultaneously, a new profession emerged: that of the interior decorator, who completed interiors after exterior construction was finished. Some architects, including Alexander Jackson Davis (1803–1892), designed furniture to complement specific commissions, such as his Gothic Revival designs for William Paulding's mansion, Lyndhurst, in Tarrytown, New York. One mid-century specialist was George Platt (1812–1873), who was praised by critic Andrew Jackson Downing. After the Civil War furniture manufacturers such as Pottier and Stymus, Leon Marcotte and Company, and Herter Brothers (*fl* 1864–1905) expanded their services and product lines to provide complete interiors. These firms were joined by others, including Sypher and Company, that also dealt in interiors, antiques, and decorative accessories, and the influential but short-lived firm of Associated Artists, formed by Louis Comfort Tiffany (1848–1933), needlework and textile designer Candace Wheeler (1827–1923), and two colleagues in 1879. These leading exponents of artful interiors gained patrons among the prominent and wealthy nationwide.

Two influential publications by New Yorkers further promoted interior design reform into the twentieth century. *The Decoration of Houses* (1897) by novelist Edith Wharton (1862–1937) and architect Ogden Codman (1863–1951) and *The House in Good Taste* by Elsie de Wolfe (Lady Mendl, 1865?–1950) called for simple, classical interiors, eschewing Victorian clutter. In the years surrounding World War I, recent émigré architects and designers such as Paul T. Frankl (1887–1958), Joseph Urban (1872–1933), and William Lescaze (1896–1969) introduced modern, functional European designs. The International style received its most concentrated publicity in an exhibition at the Museum of Modern Art in 1932. Industrial designers based in the city adapted streamlined functionalism to appliances and furnishings manufactured for national markets; among the best known were Raymond Loewy (1893–1986), Walter Dorwin Teague (1883–1960), and Russel Wright (1904–1976). Industrial and furniture designer Donald Deskey (1894–1989) employed the "art moderne" style in commissions for interiors such as those of Radio City Music Hall. Knoll International, organized by Hans Knoll in 1938, became a leading American and international manufacturer and distributor of furniture in modern and postmodern styles for the contract and residential markets with the contributions of Knoll's wife, Florence Knoll Bassett (*b* 1917).

The use of historic American styles paralleled the modern trend in twentieth-century interior design. The opening of the American Wing of the Metropolitan Museum of Art in 1924 stimulated the manufacture of reproductions of museum-quality antiques, as well as an interest in traditional interiors. Such interior designers and design firms as McMillen Inc. (founded by Eleanor McMillen Brown, 1890–1991), Mrs. Henry ("Sister") Parish II and Albert Hadley of Parish–Hadley Associates (*fl* 1962–94), and Mark Hampton (1940–1998) successfully applied updated traditional schemes to residential, civic, and commercial projects.

Modern traditionalism moved into the twenty-first century with designers including Alexa Hampton of Mark Hampton LLC, Mariette Himes Gomez, and Jamie Drake. For broader markets designer Ralph Lauren (*b* 1939) moved from clothing to environments for his customers, and entrepreneur and publisher Martha Stewart (*b* 1941) marketed lines of home furnishings based on her popular Martha Stewart Living franchise through discounters and department stores. The city's showrooms and custom workrooms continue to provide a broad spectrum of furnishings for metropolitan homes, while recent graduates of Pratt Institute, Parsons The New School for Design, and the New York School of Interior Design bring an artful New York sensibility to their arrangement.

Deborah Dependahl Waters

Deegan, William F. (*b* New York City, 29 Dec 1882; *d* New York City, 3 April 1932). Architect and political leader. He was educated at Cooper Union and served as a major in World War I. After the war he became active in the American Legion and in 1921 was named commander of New York State. A Democrat, he spent his political career in the Bronx. As an architect he worked for many important firms, including McKim, Mead and White; Post, Magnicke and Franke; and Starrett and Van Vieck. He was the president of the Bronx Chamber of Commerce, from which he resigned when the organization became critical of Mayor James J. Walker. Appointed commissioner of tenement housing in June 1928, he remained in office until his death. In 1930 Walker put him

in charge of the Mayor's Committee on Receptions to Distinguished Guests. The Major Deegan Expressway in the Bronx, completed in 1956, is named for him.

Andrew Sparberg

de Forest, Lee (*b* Council Bluffs, Iowa, 26 Aug 1873; *d* Los Angeles, 30 June 1961). Engineer and inventor. He received his PhD in physics from Yale University in 1899 and moved to New York City in 1902. In 1906 he invented the Audion, a three-element vacuum tube consisting of a diode with an added grid that not only controlled the flow of electrons and oscillated radio waves, but also amplified them. This invention enabled him to make some of the earliest radio broadcasts (from a transmitter at Coney Island). However, it was with an arc transmitter, a conventional device not based on his Audion, that he engineered the broadcast of a performance by Enrico Caruso from the Metropolitan Opera in 1910. De Forest remained in New York City until 1925, residing on the Upper West Side (97th Street and Riverside Drive) and in the Bronx (1391 Sedgwick Avenue). A prolific writer, he was pessimistic toward television, transistors, and space travel, but predicted the use of microwave cooking in the home. He self-published his autobiography, *Father of Radio* (1949).

Val Ginter

de Forest, Robert (Weeks) (*b* New York City, 25 April 1848; *d* New York City, 6 May 1931). Philanthropist and housing reformer. A graduate of Yale College and Columbia Law School, he built a successful law practice and for 50 years was general counsel for the Central Railroad of New Jersey, becoming one of the wealthiest men in the United States. In 1882 he helped to found the Charity Organization Society, and in 1900 Governor Theodore Roosevelt named him chairman of the New York State Tenement Housing Commission, which drafted and sponsored the important housing law of 1901. He was then appointed the first commissioner of the city's Tenement House Department by Mayor Seth Low. De Forest served as president of the Russell Sage Foundation, the Welfare Council of New York City, Survey Associates, the National Housing Association, and the Metropolitan Museum of Art, to which he donated the American Wing. He lived at 7 Washington Square in Greenwich Village.

Kenneth T. Jackson

de Kooning, Willem (*b* Rotterdam, Netherlands, 24 April 1904; *d* East Hampton, N.Y., 19 March 1997). Painter. He moved to New York City in 1927, settled into a studio in Manhattan, and became acquainted with the artists John Graham, David Smith, and Arshile Gorky and the art student Elaine Fried, whom he later married. From 1935 he worked briefly in the mural division of the Federal Art Project sponsored by the Works Progress Administration. He later received other mural commissions in the city, including one for the Hall of Pharmacy at the World's Fair of 1939–40. His early paintings depict male figures during the Depression in ambiguous surroundings. At his first solo show (at the Egan Gallery in 1948) his black-and-white abstractions, which swiftly reverse and intermix form and space, firmly established his reputation. A central figure among the abstract expressionists, de Kooning lived and worked in the city until 1963, when he moved to Springs, Long Island.

Thomas B. Hess, *Willem de Kooning* (New York: Museum of Modern Art, 1968); Paul Cummings, Jörn Merkert, and Claire Stoullig, *Willem de Kooning: Drawings, Paintings, Sculpture* (New York: Whitney Museum of American Art, 1983)

Mona Hadler

Delacorte, George (Thomas, Jr.) (*b* New York City, 20 June 1894; *d* New York City, 4 May 1991). Publisher and philanthropist. He graduated from Columbia (BA 1913) and formed Delacorte Press in 1921, which published popular magazines and comic books. In 1942 he introduced Dell Books, pocket-sized paperbacks selling for 25 cents; between seven and 11 million were sold a year, despite shortages of materials during World War II. By 1945 Delacorte owned more than 200 magazines. He remained the chairman of Dell until he sold it to Doubleday for $35 million in 1976. With some of the proceeds from the sale he set up the Delacorte Fund to maintain and build public monuments in New York City. He also built Delacorte Theater in Central Park and renovated City Hall Park.

James E. Mooney

de Lancey, Stephen [de Lancy, Étienne] (*b* France, 24 Oct 1663; *d* New York City, 18 Nov 1741). Merchant. The son of a wealthy family, he moved to New York City in 1685, after the Edict of Nantes was revoked. He set up a mercantile business there, which prospered in part because of his connection through marriage to the Van Cortlandt family. De Lancey was also an alderman and a member of the state senate; his house at the corner of Queen (now Pearl) Street and Canal (now Broad) Street later became well known as Fraunces Tavern.

James E. Mooney

Delancey [de Lancey] **Square.** One of the oldest and most prominent open areas in colonial New York City, it existed in the 1760s. Located at what is now the area of Eldridge, Essex, Hester, and Broome streets, and referred to at the time as the Bowery, the vast common area was carved out of the eighteenth-century farm of the Delancey (de Lancey) family. In 1784 the property of the pro-British family was confiscated and sold off over a two-year period, raising $250,000 in revenue. In 1803 streets were ordered to be opened in this area.

Lisa Keller

Delanoy, Abraham, Jr. (*b* New York City, 1742; *d* Westchester County, N.Y., 1795). Painter. After working for the painter Benjamin West in London he returned to New York City in 1767 to become a portrait painter; he was unsuccessful and during the 1780s found work painting signs. Toward the end of his life Delanoy received commissions for portraits in New Haven, Connecticut. A few of his paintings are held by the New-York Historical Society, including some of the Beekman family.

James E. Mooney

DeLeon, Daniel (*b* Curaçao, 14 Dec 1852; *d* New York City, 11 May 1914). Activist and political leader. He worked for Henry George's mayoral campaign in New York City in 1886 and in 1890 joined the Socialist Labor Party (SLP); he became the editor of the party's newspaper, the *People,* in the early 1890s and dominated the party from the mid-1890s until the end of his life. DeLeon joined the Industrial Workers of the World in 1905, but was expelled in 1908 because he refused to repudiate political action as a primary strategy for working-class action. His disputes with union leaders and fellow socialists caused a split within the branch of the SLP in the city and led to the formation of the Socialist Party of America.

Melvyn Dubofsky

delicatessens. Food stores that sell such specialties as cured meats, pickled vegetables, flavored sodas, and seeded breads. The first delicatessens in New York City opened during the mid-nineteenth century and offered ethnic selections from central Europe, especially Germany. By the early twentieth century many delicatessens specialized in eastern European Jewish cuisine, and more than 60 were opened on the Lower East Side alone. "Appetizing stores" provided fish delicacies, in many instances prepared according to kosher laws, including lox, pickled herring, and whitefish, as well as salads, cheeses, bagels, and bialys. Such well-known enterprises as

Katz's Delicatessen, 205 East Houston Street, 1991. In World War II advertisements for the deli read, "Send a salami to your boy in the Army."

Zabar's, Barney Greengrass ("the Sturgeon King"), and Russ and Daughters helped to make bagels and lox a favorite Sunday breakfast. In 1936 there were more than 400 appetizing stores in the city, including 36 on the Lower East Side. Delicatessens remained popular after World War II and attracted customers from many ethnic backgrounds. In the early twenty-first century there are about 6000 delicatessens in the city; among the best-known are Katz's Delicatessen on Houston Street, the Second Avenue Kosher Delicatessen, the Carnegie Delicatessen, and the Stage Deli.

Jenna Weissman Joselit

Delineator. Magazine launched in New York City in January 1873 by the firm of E. Butterick. It initially contained only dressmaking patterns but by the 1890s also included fiction, nonfiction articles, and homemaking advice. Under the editorial direction of Theodore Dreiser (1907–10), Honore Willsie Morrow (1914–20), and Marie Mattingly Meloney (1921–26) it crusaded for women's equality before the law and for poor children. The most successful of Butterick's publications, it was merged with another, the *Designer,* in 1928. In 1937 it merged with the *Pictorial Review,* put out by Hearst Publications until January 1939.

Mary Ellen Zuckerman

Dell, Floyd (*b* Barry, Ill., 28 June 1887; *d* Bethesda, Md., 23 July 1969). Journalist and radical intellectual. Starting as a reporter in Davenport, Iowa, he moved on to the *Chicago Evening Post.* Dell's distinctly American and midwestern style of writing emerged when he was an editor for the *Post*'s "Friday Literary Review." In 1914 Dell, like a number of other midwestern writers, joined the literary and political scene that was Greenwich Village and began to write for the radical intellectual journal *The Masses,* a monthly journal run as a literary cooperative. While at *The Masses,* he worked with such luminaries as Lincoln Steffens, Max Eastman, Walter Lippmann, Upton Sinclair, Bill Haywood, Sherwood Anderson, John Reed, and Louis Untermeyer. In 1917 the crusading reformer Anthony Comstock virtually shut *The Masses* down, attacking Dell's sympathetic coverage of birth control pioneer Margaret Sanger as immoral and illegal. The federal government pressed charges against Dell and others, citing the Espionage Act. After two trials and no convictions, *The Masses* was forced into bankruptcy. Dell, along with Eastman, went on to found *The Liberator,* which became the spiritual successor of *The Masses.*

In 1918 Dell was drafted into the army, but because of his indictment under the Espionage Act, he was removed from service. Dell's work *King Arthur's Socks* was the first play preformed by John Reed's Provincetown Players, an experimental theater company, after their move to New York City. In 1926 Dell wrote *Love in Greenwich Village,* in which he described what he called the "Seventh Village" of writers and intellectuals. As a major force in New York City and American literary circles, Dell moved to Washington, D.C., in 1930 to work for the Federal Writers' Project. He remained there until his death.

Nathan Morgante

Dell Publishing Company. Firm of book and magazine publishers formed in New York City in 1920 by George T. Delacorte, Jr. It published "pulp" magazines exclusively for two decades, and during the 1930s was the world's leading publisher of comic books. In 1942 it introduced Dell Books, a line of small paperbacks that sold for 25 cents. It eventually opened Dial Press and Delacorte Press to publish hardcover books. In 1976 Dell Publishing Company was bought by Doubleday, reportedly for $35 million.

Allen J. Share

Delmonico's. Restaurant. Originally opened in 1827 by the Swiss brothers Giovanni and Pietro Delmonico at 21 William Street as a confectioner, "Delmonico and Brother" served cakes, ices, and fine wines. In 1831 the small café expanded to 25 William Street to include a new restaurant specializing in Continental cuisine. Managed by their nephew Lorenzo, it became the best-known restaurant in the United States in the nineteenth century. In 1834 the Delmonicos opened a small hotel and a second restaurant at 76 Broad Street. After the William Street building was destroyed by the Great Fire of 1835, the Broad Street restaurant became the main location until a new, larger building was completed at 56 Beaver Street. Designed by James Brown Lord, the building, which became known as "The Citadel," cost $360,000 and featured two columns that supposedly were salvaged from the ruins of Pompeii. The Delmonicos opened restaurants in the financial district and at 23 Broadway, Fifth Avenue at 14th Street (the former Grinnell Mansion), 26th Street at Madison Square (in the Dodworth Studio Building), and Fifth Avenue and East 44th Street. The original Delmonico's closed in 1925, primarily as a result of Prohibition. In 1929 Oscar Tucci opened a restaurant called Oscar Delmonico's at the 56 Beaver Street location. In 1977 the Huber family opened another restaurant called Delmonico's at that location, which they operated until 1992. The building was left vacant until 1998, when the Bice Group opened another "Delmonico's," which continued to operate into the early twenty-first century.

The restaurant became famous for such culinary innovations as baked Alaska, eggs Benedict, chicken à la king, and lobster Newburg. Its private dining rooms were famous, and it was the first American restaurant to use tablecloths and to admit female diners. Patrons included Mark Twain, J. P. Morgan, Charles Dickens, Oscar Wilde, Henry Irving, Henry Ward Beecher, Theodore Roosevelt, and other presidents. One of the most popular and recognized restaurants in the city, Delmonico's was referenced in the works of Edith Wharton,

Delmonico's

Henry James, F. Scott Fitzgerald, and William Dean Howells.

Betty Kaplan Gubert, Anne Epstein

Deloitte Touche Tohmatsu. Accounting firm, formed in 1895 by Charles Haskins and Elijah Watt Sells. Its offices were at 2 Nassau Street and the firm was soon influential in setting professional standards for accountants in New York State. In its early years the firm was commissioned to reorganize the accounting system of the federal government. In 1978 Haskins and Sells merged with a British firm, Deloitte and Company, and 11 years later merged again with Touche Ross. In the early twenty-first century Deloitte was the largest accounting firm in New York City, with about 7500 professionals at its offices at 2 World Financial Center in Manhattan.

de Mille, Agnes (*b* New York City, 24 Sept 1909; *d* New York City, 7 Oct 1993). Dancer and choreographer. She began her performing career as a concert dancer in the 1930s; her dramatic solos and duets led to her work for the popular stage and for ballet companies. Her innovative choreography for the dream ballet in the musical *Oklahoma!* (1943) was highly influential. She later worked on more than a dozen other Broadway musicals, was the first woman to direct on Broadway (*110 in the Shade,* 1963), and was the first American woman to lead a labor union (the Society of Stage Directors and Choreographers, 1965). De Mille's work reflects her belief that movement is as important as music and dialogue to the development of plot.

Barbara Barker

de Miranda, Francisco (*b* Caracas, 28 March 1750; *d* Cádiz, Spain, 14 July 1816). Revolutionary. During the American Revolution he fought as a captain with the Spanish forces against the British, whom he helped to defeat at Fort Pensacola, Louisiana, on 9 May 1781 and in the Caribbean. Inspired to seek freedom for South America from Spanish rule, in January 1784 he moved to New York City, where he met with Thomas Paine and several statesmen, including Governor George Clinton of New York, Robert Livingston, and Alexander Hamilton, to discuss plans for a revolt in Venezuela. He moved in July 1784 to Europe, where he spent the next 20 years in exile. He left London in October 1805 and returned in November to New York City, where he called on several friends, among them Rufus King, whom he had known in London; he also visited Philadelphia and Washington, D.C., where he met with Aaron Burr, James Madison, and Thomas Jefferson. After winning the tacit approval of the British and American governments for an expedition to Caracas, he returned to New York City on 23 December 1805, assembled a motley crew of 200 men, and set sail on the *Leander* on 2 February 1806 to meet other ships off Hispaniola. Their attacks on Venezuela were easily repulsed, and de Miranda soon returned to exile in Europe. While leading a rebellion in Venezuela in 1812 he was captured by the Spanish and taken to Spain, where he died in prison. He was the only man to take part in the American Revolution, the French Revolution, and the liberation of South America from Spanish rule.

Joseph F. Thorning, *Miranda: World Citizen* (Gainesville: University of Florida Press, 1952)

Kevin Kenny

Democratic Party. Political party formed in the early nineteenth century. After the first party system ended with the disintegration of the Federalist Party and the triumph of the Jeffersonian Republicans, a second national party system emerged in the 1820s and 1830s. Profiting from the political skills of Martin Van Buren, the Democratic Party in New York City and New York State became an important component of the second party system. It was challenged by the Workingmen's Party in the 1820s and 1830s and by the Whig Party after 1834. The most influential Democratic organization in the city was Tammany Hall, which predated the party itself (it was formed in the 1780s). The Democratic Party was challenged by a faction known as the Locofocos in 1835, leading to a re-formation of the party in 1837. As the city grew, the party became powerful by encouraging immigrants to become members. In the years before the Civil War its candidates lost several elections to the Whigs, who were often supported by nativists; a few Democratic leaders embraced nativism, but in general the Democratic Party remained sympathetic to immigrants, and its base of support among workers eventually allowed it to win most elections. During the

1850s and 1860s Fernando Wood was elected mayor of New York City with the support of Mozart Hall, an influential organization that he led. Differences of ethnicity, class, and religion led factions to develop within the party, among them Hunkers, Barnburners, Softs, Hards, and Swallowtails. The Democratic National Convention of 1868 was held at the new Tammany Hall on 14th Street near Third Avenue. Bitter battles erupted over Reconstruction and economic policy, and it was only after considerable debate that Governor Horatio Seymour of New York was nominated for the presidency; Seymour garnered many votes in the general election but lost to Ulysses S. Grant. Between 1872 and 1886 the mayoralty was controlled by the Swallowtails. The party survived a serious division in 1886, when the radical economist Henry George gained wide support in his mayoral campaign.

The consolidation of the five boroughs into one enormous city in 1898 brought a number of new Democratic organizations into metropolitan politics, in particular the political "machines" of Hugh McLaughlin in Brooklyn, Patrick J. Gleason in Long Island City, and John Y. McKane in Gravesend. From the 1920s the Pondiac Club, led by Edward J. Flynn, dominated in the Bronx, and in Queens during the interwar years Maurice Connolly controlled a powerful political machine that was riddled with scandal. The most important Democratic organization in the city remained Tammany Hall, which extended its reach to the outer boroughs under the astute guidance of Charles F. Murphy, its leader from 1902 until his death in 1924. Democratic politics during these years was almost exclusively dominated by the Irish. In the early twentieth century Tammany Hall gradually embraced reforms and sponsored such nationally known progressives as Alfred E. Smith and Robert F. Wagner (i), but corruption remained widespread, and the investigations led by Judge Samuel Seabury that ended the administration of Mayor James J. Walker sent Tammany into a decline that was never really reversed.

The Democrats in the 1930s were on the defensive, largely because of the success of Fiorello H. La Guardia. His election in 1933 to the first of three mayoral terms as a Republican with strong backing from Jews and Italians signaled a decline in the strength of the Irish, the most strongly Democratic ethnic group in the city. In 1949 Carmine DeSapio became the first non-Irish leader of Tammany Hall since William M. "Boss" Tweed, and La Guardia's supporters initiated civil service reforms that diminished the Democrats' powers of patronage. The indifference of Tammany Hall toward the New Deal enabled La Guardia and other Democratic organizations in the city, notably that of Flynn, to garner the largest share of federal support and largesse. Despite these difficulties the Democrats returned to power in 1945 and controlled the mayor's office for the next 20 years. Black democrats such as Adam Clayton Powell, Jr., Hulan E. Jack, and J. Raymond Jones became powerful figures in the party.

Tammany Hall was dealt a severe blow when Mayor Robert F. Wagner sided with a reform movement that forced DeSapio from office in 1961. Political machines further declined as the spread of television both helped immigrants assimilate into the American mainstream and allowed political candidates to more directly reach a large and diverse audience. This shift became evident during the mayoral campaign of 1965, in which Republican John V. Lindsay defeated Democratic candidate Abe Beame. The Democratic machine nevertheless retained considerable power in the outer boroughs, where in the 1970s strong organizations were developed by Meade Esposito in Brooklyn, Donald Manes in Queens, and Stanley Friedman in the Bronx. The most prominent Democrat in New York City in the 1980s was Mayor Edward I. Koch, who began his career as a reformer opposed to DeSapio. After his election in 1977, Koch became more conservative and reached an accommodation with the city's political machines, one result of which was a scandal that engulfed the Parking Violations Bureau during his third term. Many of his strongest critics were black Democrats; among them was David N. Dinkins, a liberal long associated with the Democratic organization in Manhattan, who defeated Koch in the Democratic mayoral primary in 1989.

The election of 1993, in which Rudolph W. Giuliani defeated Dinkins, marked the beginning of the longest period without a Democratic mayor in New York City—the longest such period since the rise of the Democratic Party. During this period, only Mark J. Green in 2001, who polled 47 percent to winner Michael Bloomberg's 50 percent, turned in a creditable showing among Democratic mayoral candidates. In 1997 Democratic candidate Ruth Messinger gained a mere 41 percent of the votes against the victorious incumbent, Giuliani, and in 2005 Republican incumbent Bloomberg had an easy victory against Democratic rival Fernando "Freddy" Ferrer, who obtained a mere 39 percent of the votes.

Despite the poor showing in mayoral contests, the Democratic Party in New York City remained otherwise strong in the early twenty-first century, holding almost all other important city positions and controlling the City Council; Democratic presidential candidates continued to amass overwhelming majorities in New York City, with New York City residents giving 75 percent of their votes to Al Gore in 2000, and 74 percent to John Kerry in 2004. In 2008 Barack Obama amassed landslide victories over John McCain in New York City, gaining 82.2 percent of the votes in city counties. In 2006 a New York City Democrat, Eliot Spitzer, regained the governor's office for his party for the first time in 12 years, but a sex scandal made his tenure in Albany a brief one. In 2008 U.S. Senator Hillary Clinton made the strongest bid for the presidential nomination by a New York Democrat since Franklin D. Roosevelt in 1944. But the continuing loss of mayoral races was an indication that New York City Democrats, riven by ethnic and racial divisions and the mixed success of their traditional liberal appeals, had somewhat lost their way in local politics. In 2007 there were 2,917,517 registered Democrats in New York City, representing 66 percent of all registered voters.

Democratic Republicans. New York State political coalition that formed in opposition to the ideals of Alexander Hamilton. It found its early support in the political organization of the former governor George Clinton, the wealthy landowner Robert Livingston, and upstate farmers. Although in the presidential election of 1789 the party won only 373 votes to the Federalists' 2342 in New York City, it gained a strong majority of the city's voters in the next decade, largely by appealing to artisans. Party leaders invited aspiring tradespeople to seek office as candidates and effectively advocated egalitarianism, tariff assistance to needy crafts, support of the French Revolution, and assistance to immigrants and the poor. The plurality that the Democratic Republicans won in the city in the presidential election of 1800 helped to elect Thomas Jefferson, and in the following years the party eclipsed the Federalists, who lost their majority on the Common Council. The Democratic Republicans then splintered: Aaron Burr, an important ally of Clinton and Livingston in 1800, formed his own ticket for the governorship in 1804; infighting occurred after the Embargo of 1808 between followers of DeWitt Clinton and of James Madison, whose headquarters were at Tammany Hall; and Clinton waged an independent campaign for the presidency in 1812 but continued to support the party. By the 1820s most members of the party were divided into two camps, one led by Andrew Jackson (who attracted supporters of Clinton), the other by John Quincy Adams (who attracted supporters of Madison).

demonstrations. See Public order.

Demorest, Madame [née Curtis, Ellen Louise] (*b* Schuylerville, N.Y., 15 Nov 1824; *d* New York City, 10 Aug 1898). Businesswoman and philanthropist. She worked as a milliner and with her husband, William Jennings Demorest, built a fashion empire in New York City that included Madame Demorest's Fashion Emporium, Demorest's paper patterns, and the publications *Demorest's Illustrated Monthly Magazine* and *Mme. Demorest's Mirror of Fashions.* From 1860 to 1887 she operated an emporium successively at 473 Broadway, 838 Broadway, and 17 East 14th Street; it housed a dressmaking firm and from 1872 a pattern factory. Demorest turned her attention to philanthropy after 1876. She was a founding member of Sorosis, the first women's club in the nation. By the time of her retirement in 1883, Demorest's patterns had been largely supplanted by those of E. Butterick and Company.

Dempsey, Jack [William Harrison] (*b* Manassa, Colo., 24 June 1895; *d* New York City, 31 May 1983). Boxer. He first boxed in New York City in 1916. In 1919 he won the world heavyweight championship, which he twice defended in the city. On 14 December 1920 he knocked out Bill Brennan at Madison Square Garden in the 12th round, when he was well behind in scoring; and on 24 September 1923 he knocked out Luis Firpo at the Polo Grounds in the second round, after having been knocked out of the ring in the first. After losing the heavyweight title to Gene Tunney in 1926, he earned a rematch by knocking out Jack Sharkey at Yankee Stadium on 21 July 1927. After his retirement from the ring, he operated a well-known restaurant at Broadway and 49th Street. In 1934–35 he lived at the Ritz–Carlton at 112 Central Park South, and for a number of years he had an apartment at 145–46 Central Park West.

Steven A. Riess

De Niro, Robert (*b* New York City, 17 Aug 1943). Actor, director, and producer. Born to two artists in Greenwich Village, De Niro grew up in the Little Italy neighborhood of lower Manhattan. He attended the Little Red School House and Fiorello H. La Guardia High School on the Upper West Side before dropping out at age 13. Five years later, he began training with Stella Adler at the Actors Studio. He first appeared in the film *Greetings* (1968). The following year *The Wedding Party,* his first collaboration with director Brian de Palma, was released. De Niro's first mainstream recognition came with his critically acclaimed performance in *Bang the Drum Slowly* (1973). That same year he appeared in *Mean Streets,* the actor's first collaboration with director Martin Scorsese. The two worked together on several films set in New York City, including *Taxi Driver* (1976) and *Raging Bull* (1980). The first film he directed, *A Bronx Tale* (1993), was set on Arthur Avenue in the Belmont neighborhood. In 1988 De Niro formed Tribeca Productions to produce films in New York City both independently and for major studios. He opened the Tribeca Film Center in a former coffee factory at 375 Greenwich Street. Following the terrorist attacks of 11 September 2001, De Niro helped found the Tribeca Film Festival to revitalize New York City as a filmmaking center.

Anne Epstein

Dennett, Mary Ware (*b* Worcester, Mass., 4 Apr 1872; *d* Valatie, N.Y., 25 July 1947). Women's rights crusader and peace activist. She is best known for her advocacy of birth control and sex education. Her marriage to William Hartley Dennett ended in a sensational divorce trial in 1913, when he insisted that he continued to love both his wife and his mistress. During World War I, she worked for the American Union Against Militarism (the predecessor to the American Civil Liberties Union [ACLU]) in New York City. In 1915 she helped found the National Birth Control League, also in New York City, and led the organization until its collapse; she then formed the Voluntary Parenthood League in 1919. Dennett fought for an "open" birth control law, in contrast to Margaret Sanger's "doctor only" bill, which would likely have limited birth control access to wealthy women. Dennett's emphasis on constitutional rights rather than physicians' discretion made her a more radical figure than Sanger. In 1915 Dennett wrote the pamphlet "The Sex Side of Life" for her teenage sons. This was widely used by Young Men's Christian Associations and other social service organizations, even though the U.S. Post Office declared it obscene in 1922. "The Sex Side of Life" became the target of an obscenity prosecution in Brooklyn in 1929. The ACLU provided Dennett with free representation; she was convicted. After her conviction, the ACLU created the Mary Dennett Defense Committee, which created a rally at Town Hall on 21 May 1929. Dennett was vindicated by the U.S. Court of Appeals for the Second Circuit in 1930. The reversal of Dennett's conviction was an important step in undoing the censorship of artistic and educational works through obscenity law. The Court of Appeals wrote that if every publication that "might stimulate sex impulses" were to be considered criminally obscene, then "much chaste poetry and fiction, as well as many useful medical works" would be suppressed.

Marjorie Heins

Denyse Wharf. Site of a ferry between Long Island and Staten Island established in 1742 by the Denyse family near the present-day Brooklyn tower of the Verrazano–Narrows Bridge. British forces assembled on Staten Island were shuttled here on 22 August 1776, the eve of the Revolutionary War Battle of Brooklyn.

Joseph Ditta

department stores. New York City became a mercantile center during the colonial period, and by the mid-nineteenth century the city was the largest market in the nation: it was the major seaport and financial center, had the largest population, and was the center of the needle trades and garment industry. Merchants and wholesalers from out of town came to New York City to purchase dry goods for distribution across the country, and women went there to shop. Whether of home manufacture or imported from Europe, consumer goods made the city a hub of retailing. A tourist guide informed prospective visitors in 1892 that "all America goes to New York for its shopping."

The forerunner of the department store was the dry-goods emporium, which sold fabrics and sheeting and a modest assortment of notions and ready-made items for women and children. In the decades after the Civil War merchants such as Rowland Macy and A. T. Stewart in New York, John Wanamaker in Philadelphia, and Marshall Field in Chicago took advantage of the new speed and regularity of railroad transport and telegraphic communication and transformed the dry-goods emporium. By facilitating production and distribution, they created the modern urban establishments known as department stores. Initially little more than enlarged, departmentalized dry-goods stores offering a limited assortment of merchandise, these establishments evolved into large mercantile palaces designed expressly for retailing. The department stores became mass-market distributors of goods ranging from furniture, jewelry, and glassware to books, toys, shoes, foodstuffs, and especially clothing for the whole family;

they also became the late-nineteenth-century symbol of every aspiring city.

The first generation of prominent American merchants (Macy, Stewart, and Wanamaker) was succeeded by one that included many German Jews; such entrepreneurs as Adam Gimbel, Herbert Marcus, Morris Rich, Abraham Abraham, Samuel and Jacob Lit, Isidor and Nathan Straus, and Fred and Ralph Lazarus moved the department store onto its modern foundations. Many of these stores continued to bear the names of their founders more than a century later.

With minor variations, dry-goods merchants in the late nineteenth century adopted similar business strategies to keep pace with the feverish growth of the department stores. In moving from a form of entrepreneurial capitalism, in which owners personally managed their stores, to an elaborate administrative structure modeled after that of large corporations, merchants were at the forefront of a new business culture that reorganized work along more efficient and bureaucratic lines. They sought to maintain a high volume of sales and rapid turnover of stock by keeping both prices and profit margins low. A one-price policy that prevented bargaining became a standard feature, as did a money-back guarantee. The heart of the store was the shopgirl: like the male clerk in the traditional dry-goods store, the female salesclerk became the typical employee of the modern department store. By the 1890s the largest stores in New York City, such as R. H. Macy and Siegel–Cooper, employed thousands of young, single, primarily working-class women. Mature women achieved a modicum of prestige as skilled sales personnel and were visible in management as buyers, floorwalkers, and cashiers.

The story of retail trade in New York City is one of constant geographical change. As the center of the population moved uptown, shopkeepers followed. During the eighteenth and early nineteenth centuries the city's many small specialty shops and general merchandise stores were clustered in the port area around Hanover Square, Exchange Place, and Pearl Street. By the mid-nineteenth century a burgeoning population had outgrown lower Manhattan, and the important commercial houses were centered at Broome, Grand, and Canal streets and near City Hall Park, just south of what was the finest residential section of the city. Broadway, which had an array of stores, hotels, restaurants, and theaters, became the principal thoroughfare for fashionable shopping and display. Rowland Macy, a newcomer to New York City, unwittingly brought about the next round of moves in 1858 when he opened a small dry-goods store on Sixth Avenue between 13th and 14th streets, well uptown from convenient shopping. In 1862 A. T. Stewart, the well-known merchant and proprietor of a uniquely successful dry-goods establishment on Broadway and Rector Street, followed Macy to the area above Washington Square and built a store covering an entire block front on Broadway between Ninth and 10th streets. Stewart's gleaming white, cast-iron palace, built expressly for retailing, was a spectacle in itself. Standing five stories tall, it had large display windows of French plate glass, a gas-lit interior, and a vast assortment of domestic and imported goods. Stewart's and the streets around it were reportedly filled with throngs of carriages and fashionable women taking part in a new, exciting consumer culture. For a short time A. T. Stewart was the largest, most innovative, and best-known dry-goods store in the United States.

By the late 1880s, as the population moved relentlessly uptown, virtually all the stores that made New York City the nation's shopping and fashion capital moved to the former residential area bounded by Broadway and Sixth Avenue between 10th and 23rd streets. The best-known included Arnold Constable; B. Altman; the Adams Company; Best and Company; Bonwit Teller; Brooks Brothers; Ehrich Brothers; Greenhut; Herns; Lord and Taylor; James McCreery; McCutcheon; R. H. Macy and Company; Hugh O'Neill's; Simpson, Crawford and Simpson; Stern Brothers; Tiffany and Company; and W. and J. Sloane. At the end of the century Siegel–Cooper (a Chicago emporium) rounded out this series of moves when it opened the largest and most flamboyant retail store in New York City on the block front between 18th and 19th streets on Sixth Avenue. The avenue between 14th and 23rd streets, known as the Ladies' Mile by 1900, with its spectacular architecture and extravagant mercantile displays, became the central location for retail trade for a generation of New Yorkers. Huge crowds were attracted to the big stores. At the opening in 1895 of James McCreery and Company, on the southwest corner of 23rd Street and Sixth Avenue, the owners boasted that 10,000 people could move comfortably within the store at one time. The following year Siegel–Cooper, which called itself the Big Store, attracted a crowd on opening day estimated at 150,000. The heyday of the large American department store was at hand and reflected a permanent change in American consumer habits. Shopping became a pastime that needed no justification: it provided the context for diverse forms of public and even cultural life and dwarfed all other activities, particularly for women. The department stores were for and about women, and merchants catered to them with service, magnificent displays, and low prices. Wealthy women mingled with the working class as almost everyone seemed to pour into the stores, if not to buy, then at least to look.

The supremacy of the Ladies' Mile as a shopping district was short-lived. R. H. Macy, the first store to move uptown just before the Civil War, was the first to move farther uptown in the early twentieth century. Pushed northward by changes on 14th Street and pulled by the developing subway and commuter rail service at 34th Street, it moved to its present location at Herald Square in 1904. In 1909 Gimbel Brothers, a firm that began in Philadelphia, followed Macy and opened a large retail establishment on Broadway between 32nd and 33rd streets. Over the years, however, Fifth Avenue came to be the principal thoroughfare for department stores and elegant shopping: in the years after Macy's move to Herald Square every major department store and specialty shop moved from Sixth Avenue, most of them to Fifth Avenue between 34th and 57th streets. By 1915 Lord and Taylor, B. Altman, and Arnold Constable had opened major stores on the avenue and anchored the new shopping district.

Not all the major department stores followed the movement of population up Manhattan Island; other retail districts took shape throughout the city. Bloomingdale's opened at 59th Street and Third Avenue in 1887, expanded the store west to Lexington Avenue, and has thrived at this original location. In Harlem, 116th and 125th streets became and have remained major shopping thoroughfares. And in Brooklyn, Abraham and Straus on Fulton Street was the retail flagship of the borough; for many residents the store was second in importance only to the Dodgers. In the Bronx, local shopping was centered at Fordham Road (the site of Loehmann's and Alexander's) and in the area commonly known as the Hub (around 149th Street and Third Avenue). And in Queens, retail districts took form along Jamaica Avenue by the 1920s and on Queens Boulevard during the 1960s, where both Macy's and Abraham and Straus opened stores.

Many of the best-known retail institutions in New York City went out of business during the 1970s, and the future of Fifth Avenue as the nation's premier and prestigious shopping street became unclear. Pressed on one hand by the arrival of high-end boutiques and European flagship emporiums on Madison Avenue between 57th and 72nd streets and on the other hand by the proliferation of discount chains and suburban shopping malls, Fifth Avenue had to reorient itself to a changing retail economy. Part of this change meant that surviving individual department stores became part of large conglomerates and often retained little individuality or luster. Among the more promising signs for Fifth Avenue were the expansion of both Bergdorf Goodman and Saks Fifth Avenue and the move in the spring of 1991 of Henri Bendel from 57th Street to Fifth Avenue. In the twenty-first century, the avenue remains a preeminent location for department store shopping in the world and a favored location for parades.

Elaine S. Abelson

De Peyster, Abraham (baptized New Amsterdam, 8 July 1657; *d* New York City, 3 Aug 1728). Colonial mayor. The son of a mercantile family from Amsterdam, he went to the Netherlands in 1675 to work in his family's firm, then returned to New Amsterdam in 1684 and was appointed to the city's Board of Aldermen the following year. A supporter of Jacob Leisler in 1689, he later joined the anti-Leislerians and was widely respected for his moderation in the bitter factional disputes of the day. Appointed mayor in 1691 by Governor Henry Sloughter, he remained in office until 1693, was appointed in 1696 to the council of Governor Richard Coote, the earl of Bellomont, and served briefly as acting governor in 1700. At the end of his life, De Peyster was one of the city's wealthiest merchants.

David William Voorhees

Deren [Derenkowsky], **Maya (Eleanora)** (*b* Kiev, Ukraine, 1917; *d* New York City, 13 Oct 1961). Filmmaker and writer. After immigrating to the United States in 1922, she lived in Syracuse, New York, and took an interest in union organizing and political writing. She settled in Manhattan in 1935. In 1940 she moved to Los Angeles with the Katherine Dunham Dance Company as a literary collaborator and assistant. She returned to New York City in 1943. The first film that she made by herself was *Witch's Cradle* (unfinished), shot during late summer with Marcel Duchamp in the surrealist gallery Art of This Century. Her studio on Morton Street became a magnet for the burgeoning intellectual and artistic life of New York City, which became an integral element in her subjective films *At Land* (1944), *A Study in Choreography for the Camera: Pas de Deux* (1945), and *Ritual in Transfigured Time* (1946). Deren focused public interest on personal, independent cinema through her writings, including *An Anagram of Ideas on Art, Form and Film* (1946), and popularized alternative exhibitions by renting the Provincetown Playhouse to screen films. She was awarded the first Guggenheim grant for creative work in motion pictures in 1946, and in 1947 began traveling to Haiti, where she continued her avant-garde film work with poetic experience, form, and ritual.

VeVe A. Clark, Millicent Hodson, and Catrina Neiman, *The Legend of Maya Deren: A Documentary Biography and Collected Works*, vol. 1, part 1, *Signatures (1917–1942)* (New York: Anthology Film Archives/Film Culture, 1984); Lauren Rabinovitz, *Points of Resistance: Women, Power and Politics in the New York Avant-garde Cinema, 1943–1971* (Urbana: University of Illinois Press, 1991)

Grai St. Clair Rice

de Salignac, Eugene (*b* Boston, 1861; *d* 1 Nov 1943, New York City). Photographer. Born to a French father and American mother, in 1900 he moved to Manhattan. By the age of 42 he was divorced and living in the West 20s, having begun a new career as a photographer for the city's Department of Bridges. From 1906 to 1934 he shot over 20,000 images of New York City and documented the creation of the city's modern infrastructure. One of his most iconic images was taken in 1914 of painters on the cables of the Brooklyn Bridge. Many of his images are held by the Museum of the City of New York.

Jessica Montesano

DeSapio, Carmine (Gerard) (*b* New York City, 10 Dec 1908; *d* New York City, 27 July 2004). Tammany Hall leader. Born in Greenwich Village, he became the first Italian and the youngest person to be named the head of the Democratic organization of New York County in 1949. He played a critical role in the elections of Mayor Robert F. Wagner (1953) and Governor W. Averill Harriman (1954) and tried to run the Democratic Party more openly than Tammany Hall traditionally had done. His success brought him national prominence and a reputation as an enlightened political boss. After his candidates for governor, state attorney general, and the U.S. Senate lost elections in 1958, a reform movement led by Herbert H. Lehman, Eleanor Roosevelt, and Wagner forced his removal from office in 1961. DeSapio's efforts to return to politics failed when he was defeated by Edward I. Koch in primary elections for Democratic district leaderships in 1963 and 1965.

Chris McNickle

detective agencies. About the middle of the nineteenth century private detective agencies arose in New York City, where rapid growth was accompanied by an increase in criminal activity. The first agency in the United States was opened by George Relyea and two partners at 48 Centre Street; in the *National Police Gazette* (16 October 1845) the firm offered to conduct "both Criminal and Civil business [to find] all kinds of property . . . obtained by False Pretenses, Forgery, Burglary, or by any other dishonest means," with assurance that its agents were "always ready, at a moment's warning, to travel to any part of the United States." Relyea's offer to apprehend criminals in other cities and the frontier reflected a limitation of public law enforcement; although New York was one of the few cities with a police force, the jurisdiction of the force ended at the city limits, and criminals from other cities who fled there were not generally pursued. From the beginning, some of the real and rumored activities of detective agencies were met with widespread distrust; it was believed that detectives colluded with thieves to retrieve stolen property, a dim view was taken of their investigations on behalf of wealthy families into the backgrounds of suitors, and some critics blamed marital investigations for an epidemic of "sudden explosions in domestic life."

A branch of the Pinkerton National Detective Agency was formed in New York City in 1865. It distinguished itself and reassured its customers by refusing to work for rewards and by seeking the arrest and prosecution of those whom it apprehended; soon it was the leading agency in the nation. Private detectives were held in low repute, especially as agencies began to conduct espionage in the workplace (for example, using "spotters" on streetcars to catch conductors who kept, or "knocked down," the nickel fare). Employers regularly used private detectives to investigate the private lives of their workers, and it was reported that detectives sometimes rose to positions of leadership within unions to facilitate strike breaking. Detectives were also criticized for operating spurious voluntary societies such as the Association for the Suppression of Gambling (1851) and the Society for the Prevention of Crime (1880), which observed places of criminal activity, gathered the names of customers, and in some cases reported these names to employers. Pinkerton detectives sometimes assisted district attorneys and the police and at other times competed with them. In 1880 Inspector Thomas F. Byrnes opened a branch of the Police Department's detective bureau on Wall Street and announced in a letter to the business leaders of the financial district that he intended to offer services similar to those of Pinkerton. By the 1880s the word *Pinkerton* became a generic term for a private detective. Notable successes of Pinkertons included a raid led by Robert Pinkerton in 1882 on the office in New York City of the Kentucky State Lottery (recounted in the *New York Times* under the headline "The Police Not Needed"), the apprehending of Marm Mandelbaum in 1884, and the unexpected arrest in 1904 of the gang leader Monk Eastman, who tried to rob a drunken, wealthy young man being guarded by Pinkerton agents.

With the development of federal and state law enforcement agencies in the early decades of the twentieth century, the role of the private detective in crime investigation decreased. Pinkerton and its competitors were replaced in strike-breaking work in New York City by the agencies of Pearl L. Bergoff and others, which were nominally private detective agencies but seem to have done nothing but organize squadrons of thugs. After the New Deal curtailed this sort of activity, detective agencies increasingly focused on marital investigations; as early as 1912 the tracing of children hidden during custody disputes was mentioned as customary work. Private detectives remained active in business espionage. They also worked on corporate takeovers, often looking for incriminating information about a business or principal, seeking hints

that a firm was willing to negotiate or back down, and sometimes simply investigating the real worth of a business. Landlords in New York City used private detectives to determine whether rent-controlled apartments were in fact their tenants' principal domiciles.

Frank Morn, *"The Eye That Never Sleeps": A History of the Pinkerton National Detective Agency* (Bloomington: Indiana University Press, 1982); William Parkhurst, *True Detectives: The Inside Stories of Today's Top Private Investigators* (New York: Jove, 1989; repr. with suppls., 1993)

Deutschlandle. Alternative name of KLEINDEUTSCHLAND.

de Valera, Eamon [Edward] (*b* New York City, 14 Oct 1882; *d* Dublin, 29 Aug 1975). Irish political activist. The son of an Irish mother and a Spanish father, he was born on East 43rd Street and christened at St. Agnes's Roman Catholic Church. He lived for two years in the city before moving to Ireland, where during the insurrection of 1916 he led Irish forces and was saved from execution only because he held both British and American citizenship. After escaping from a British prison in 1919, he traveled as a stowaway from Liverpool to New York City, where he began a tour of the United States to raise support for Irish independence. Dissatisfied with the terms of the Anglo–Irish Treaty, he led forces against those of the Irish parliament in the Irish Civil War (1922–23). Between 1932 and 1937 he led the Irish government. After drafting the constitution in 1937, de Valera served three terms as *taoiseach* (prime minister) and two as president of the Irish Republic.

Kevin Kenny

Devery, William S. "Big Bill" (*b* New York City, *ca* 1855; *d* Queens, 20 June 1919). Chief of police. He worked as a bartender on the Bowery and then paid a bribe to Tammany Hall to become a policeman in 1878. Promoted to sergeant in 1884 and to captain in 1891, he soon obtained one of the most lucrative police jobs in the city, running the Eldridge Street Station in a well-known red-light district. Reportedly he told his men during his inaugural address: "If there's any gratin' to be done, I'll do it. Leave it to me!" Shamelessly corrupt, he had his aides approach saloon owners just before an election, promising protection if the ticket backed by Tammany Hall were elected. In addition to getting rich, he became chief of police in 1898. Although frequently exposed by Lincoln Steffens and other reformers, Devery was resilient. He never fined a policeman for breach of duty, only for getting caught. He lost his position when Seth Low defeated Mayor Robert A. Van Wyck in 1901, but he was still a rich man, dividing his time between a mansion on West End Avenue and a profitable real estate operation in Rockaway.

Kenneth T. Jackson

Devine, Edward T(homas) (*b* Union, Iowa, 6 May 1867; *d* Oak Park, Ill., 27 Feb 1948). Reformer, educator, and writer. In 1896 he became general secretary of the New York Charity Organization Society, a position he held until 1917. He also launched *Charities* (later called the *Survey*), a leading journal of social work. Under his guidance the society formed committees for tenement house reform and the prevention of tuberculosis and opened the New York Summer School of Philanthropy (1898, later the Columbia University School of Social Work). Devine directed the school from 1904 to 1907 and again from 1912 to 1917, and taught at Columbia University from 1905 to 1919. His published writings include *When Social Work Was Young* (1939). He lived at 542 West 112th Street.

Sarah Henry Lederman

De Vinne, Theodore Low (*b* Stamford, Conn., 25 Dec 1828; *d* New York City, 16 Feb 1914). Typographer and publisher of fine editions. He moved to New York City in 1848 and in 1850 became an apprentice to the printer Francis Hart, who engaged him as a partner in Francis Hart and Company in 1858. Under their direction the firm began printing *St. Nicholas Magazine* in 1872 and *Scribner's Monthly* in 1876. After Hart's death in 1877 De Vinne bought his share of the firm in 1883 and renamed the press after himself. An aesthetic conservative among Victorian printers, he argued for the simplification of title pages and condemned such fussy details as deckled edges. During a lecture at the Yale Club of New York he said, "I have given the best part of my life to the making of books that have been sold and read, and not rated as pieces of typographic bric-a-brac." De Vinne wrote many books on printing, including *The Invention of Printing* (1876), *Historic Printing Types* (1886), *The Practice of Typography* (1901–4; 4 vols., among them *A Treatise on Title-Pages*), and *Notable Printers of Italy in the Fifteenth Century* (1910).

Melissa M. Merritt

Devoe and Raynolds. Firm of chemical manufacturers. Its origins date to 1754, when William Post began mixing, grinding, and importing pigments in a shop at his residence on Fletcher Street. Offices remained on the site for 100 years, and in 1798 the firm of Post and Sons was formed. It grew rapidly under two former clerks, F. W. Devoe and Charles T. Raynolds, and was reorganized several times during the 1850s. The offices moved in 1855 to 106 and 108 Fulton Street, a factory was built on Horatio Street, and other retail shops opened on Fulton, William, and Ann streets. For several decades the firm was the leading producer of paint in the United States, and by 1917 it had undergone a series of mergers. The factory on Horatio Street moved to Brooklyn in the 1920s, and the firm's headquarters moved to 44th Street and First Avenue in the 1930s. The firm made five major acquisitions by 1948, and in 1976 it was acquired by Grow Chemical (later the Grow Group), also based in New York City. Devoe paints remained popular in the metropolitan area.

David B. Sicilia

Devoy, John (*b* Kill, County Kildare, Ireland, 3 Sept 1842; *d* Atlantic City, N.J., 29 Sept 1928). Irish nationalist. He was arrested and imprisoned for his revolutionary activities in Dublin in 1866. On his release in 1871 he emigrated to the United States and settled in New York City where he became one of the principal leaders of Clan na Gael, a secret Irish American society dedicated to the militant republican cause in Ireland. He later launched two weekly newspapers in New York City, the *Irish Nation* (1881–85) and the influential *Gaelic-American* (1903–28): its headquarters at 165 William Street served as a rendezvous site for revolutionary exiles. It was largely through his fund raising and organizational efforts in the United States that the militant nationalists were able to carry out the Easter Monday Rebellion (1916) in Ireland. Devoy wrote *Recollections of an Irish Rebel* (1929).

John T. Ridge

Dewey, John (*b* Burlington, Vt., 20 Oct 1859; *d* New York City, 1 June 1952). Philosopher. He grew up in Burlington and after graduating from the University of Vermont earned a doctorate from Johns Hopkins University in 1884. After teaching philosophy and psychology at the University of Michigan he moved to the University of Chicago to become the head of the department of philosophy, psychology, and pedagogy. In 1904 he accepted a position at Columbia University and lived in New York City for the rest of his life, moving to 2880 Broadway in 1913, 125 East 62nd Street in 1927, 1 West 89th Street in 1939, and 1158

Fifth Avenue in 1945. One of his most important contributions was his theory of instrumentalism, which posited that the worth of any idea or moral value should be determined by its practical consequences rather than by reference to any transcendental source or standard. In keeping with these ideas he took active interest in many educational, social, and political issues throughout his career: he helped to form the New York Teachers' Union in 1916, the New School for Social Research in 1919, and the American Civil Liberties Union in 1920; took also part in the woman suffrage movement, worked with the Henry Street Settlement, and continued to develop his ideas about progressive democratic education. Criticized in some quarters for condoning the infringement of dissenters' civil rights during World War I, he supported many liberal causes over the next 40 years. In such books as *The Public and Its Problems* (1927) and *Liberalism and Social Action* (1935) he provided a model of social policy for educators, bureaucrats, reformers, and social workers. Dewey denounced the New Deal for being too conservative and called for a third party, but he opposed communism and all forms of political extremism. He retired in 1939 but remained intellectually active to the end of his life. On his 90th birthday 1500 dignitaries, colleagues, and friends gathered for a celebration at the Commodore Hotel. Among his most important works are *The Influence of Darwin on Philosophy* (1910), *Democracy and Education* (1916), and *Experience and Nature* (1925).

Kevin Kenny

Dewey, Melvil(le Louis Kossuth) (*b* Adams Center, N.Y., 10 Dec 1851; *d* Lake Placid, Fla., 26 Dec 1931). Originator of the Dewey Decimal System in libraries. After attending Amherst College he worked as a librarian there and in Boston, at the same time devising the decimal system of library classification that bears his name. He moved to New York City to become the librarian of Columbia College in 1883, and in 1887 he established at Columbia the School of Library Economy (later the School of Library Service), the first of its kind in the United States and the first at the university to admit women. He became the director in 1888 of the New York State Library in Albany. An advocate of simplified spelling, Dewey altered the spelling of his own first name.

Mary B. Bowling

Dewey, Thomas E(dmund) (*b* Owosso, Mich., 24 March 1902; *d* Miami, 16 March 1971). Prosecutor, governor of New York, and presidential candidate. After receiving his law degree from Columbia University he spent a few years in private practice before joining the U.S. attorney's office in 1931. Although a Republican, he was appointed special prosecutor in charge of the Investigation of Organized Crime in New York City by Governor Herbert H. Lehman, a Democrat. He earned national renown for successfully prosecuting the notorious crime syndicate MURDER INCORPORATED and many racketeers; his work and his colorful image inspired such films as *The Racket Busters*. He was elected district attorney of New York County in 1937 and, on the strength of his national reputation as a prosecutor, sought the Republican presidential nomination in 1940. This effort was unsuccessful, but in 1942 he was elected governor of New York State, an office he held for three consecutive terms. He received the Republican presidential nomination in 1944 but lost the election to Franklin D. Roosevelt; he received the nomination again in 1948 but lost to Harry S. Truman. After his third term as governor he resumed private law practice in 1955, becoming a partner of a venerable law firm on Wall Street that changed its name to Dewey, Ballantine, Bushby, Palmer, and Wood. Dewey lived from 1955 until the end of his life at 141 East 72nd Street.

Dewey Arch [Dewey Triumphal Arch and Colonnade]. Temporary monument commemorating the victory of Commodore George Dewey (1837–1917) at Manila Bay during the Spanish–American War. Built of wood and staff (a mixture of straw and plaster), the 100-foot-tall (30.5-meter-tall) arch was erected in 1899 in Madison Square, where Broadway crosses Fifth Avenue, with colonnades stretching from 23rd to 25th streets. Designed by architect Charles R. Lamb (1860–1942) and sculptor Frederic W. Ruckstall (1853–1942), it was modeled on the Arch of Titus in Rome and featured sculptures by Daniel Chester French (1850–1931) and Karl Bitter (1867–1915). During his victory parade on 30 September 1899, Dewey did not actually pass under the triumphal arch. Many residents called for a permanent arch to be built at 59th Street and Fifth Avenue, or on Riverside Drive, because the existing arch location obstructed traffic. The city preserved it for one year, but Dewey failed to clinch the Democratic presidential nomination in 1900, and it became impossible to raise funds for a permanent arch. It was torn down in December 1900.

Kate Lauber

Dewhurst, Colleen (*b* Montreal, Canada, 3 June 1924; *d* South Salem, N.Y., 22 Aug 1991). Actress. She moved to New York City in 1946 to study acting at the American Academy of Dramatic Arts, and in 1952 made her debut on Broadway as a dancer in a revival of the Eugene O'Neill play *Desire Under the Elms.* In 1954 she met Joseph Papp while he was organizing the New York Shakespeare Festival, and they often collaborated, beginning with her portrayal of Katherine in his produc-

Dewey Arch, 1899, with Madison Square Garden in the background

tion of *The Taming of the Shrew* in Central Park in 1956. She also worked with the director José Quintero in a number of O'Neill's plays, earning critical acclaim for her portrayals of his powerful, tragic female characters. Dewhurst was the president of the Actors' Equity Association for two terms (from 1985). She was active in the unsuccessful fight to preserve the Morosco and Helen Hayes theaters on Broadway from being torn down to make way for the Marriott Marquis Hotel. She won two Tony Awards, four Emmy Awards, and two Obie Awards. She was married twice to actor and director George C. Scott.

DeWitt Clinton High School. Opened in 1897 as Boys' High School at 60 West 13th Street, it was the first public high school for boys in Manhattan. In 1900 it took its current name, and in 1929 it moved to Mosholu Parkway and 205th Street in the Bronx. The last public high school in the city to admit only boys, it became coeducational in 1983. In 2010 DeWitt Clinton High School had 4100 students. Well-known alumni of the school include the writers Lionel Trilling and James Baldwin, the actor Burt Lancaster, the playwright Neil Simon, and the politician Charles B. Rangel.

Erica Judge

de Wolfe, Elsie [Ella Anderson] (*b* New York City, 20 Dec 1865; *d* Versailles, France, 12 July 1950). Actress and decorator. She spent her childhood in the British Isles and was presented at the English royal court. In 1884 she returned to New York City and took up acting. A professional actress by 1890, she left the stage in 1905 to become a decorator, her reputation assured by her imaginative interior design at the Colony Club. Her book *The House in Good Taste* in 1913 helped her to become nationally known. From about this time she lived mostly in France, where she restored the Villa Trianon at Versailles and was widely considered one of the most influential arbiters of design.

James E. Mooney

Dewson, Molly [Mary Williams] (*b* Quincy, Mass., 18 Feb 1874; *d* Castine, Maine, 21 Oct 1962). Reformer. As the research secretary of the National Consumers' League from 1919 to 1924, she focused her efforts on the minimum wage. While serving as the civic secretary of the Women's City Club in 1924–25 she met Eleanor Roosevelt, who inspired her to take part in women's Democratic politics, first in the presidential campaign of Alfred E. Smith in 1928 and then in that of Franklin D. Roosevelt in 1932. From 1927 to 1932 she was the president of the New York Consumers' League, where she fought for better labor standards for women workers. From 1933 to 1937 she ran the Women's Division of the Democratic National Committee out of headquarters in New York City. Dewson remained active in political circles in the city until 1952, when she retired to Maine.

Dial. Literary journal launched in 1880 and inspired by a transcendentalist journal of the same name published in Boston. Considered among the finest publications of its kind in the country, in 1898 it absorbed the *Chap-book,* a literary review based in Chicago. During the 1920s it published work by such members of the "lost generation" as Ezra Pound, Edna St. Vincent Millay, E. E. Cummings, and John Dos Passos, as well as by John Dewey, Jean Cocteau, and Bertrand Russell. Marianne Moore edited the *Dial* from 1925 until 1929, when it ceased publication.

David A. Balcom

Diallo, Amadou (*b* Sinoe, Liberia, 2 Sept 1975; *d* New York City, 5 Feb 1999). Police shooting victim. He was a West African immigrant living at 1157 Wheeler Avenue in the Bronx. On the night of 5 February 1999 four plain-clothes police officers from the Street Crimes Unit of the New York Police Department (NYPD) spotted Diallo and believed him to be the suspect in a series of rapes. When Diallo reached for his wallet, police assumed he was reaching for a gun, but Diallo was unarmed. They fired 41 shots, hitting him 19 times. The officers were indicted on several charges but were exonerated by a jury in Albany, New York, in early 2000. Diallo's shooting and the acquittal of the officers heightened racial tensions in New York City and led to several protests against the NYPD.

Nathan Morgante

Diamond District. Section of midtown Manhattan, near 47th Street between Fifth and Sixth avenues, that is the center of the retail and wholesale diamond trade in New York City. Dealers moved north to this area from two other locations, one near Canal Street and the Bowery that took shape in the 1920s, and the other surrounding the intersection of Nassau and Fulton streets, which was the first site of the Diamond Dealers Club (formed in 1931). The district grew in importance after Hitler's armies invaded the Low Countries: thousands of Jews fleeing the diamond centers of Antwerp (Belgium) and Amsterdam settled in New York City, and soon the diamond trade there was dominated by Orthodox Jews. The Diamond Dealers Club moved to 47th Street in 1941. Disputes between dealers are settled by the Diamond Dealers Club, which handles 80 percent of all the

"Diamond and Jewelry Way," 47th Street between Fifth and Sixth avenues, 1991

diamonds entering the United States. In the early twenty-first century the Diamond District maintained retail stores, jewelry exchanges, offices, and workshops where diamonds and other stones were cut, set, and prepared for sale.

Dickens, Charles (John Huffam) (*b* Portsmouth, England, 7 Feb 1812; *d* Kent, England, 9 June 1870). Novelist. He made the first of his two visits to New York City in 1842 to give lectures, raise support for copyright laws, and record his impressions of the growing nation. He toured the city for a month, during which time he delivered impassioned readings and met with literary luminaries such as Washington Irving and William Cullen Bryant. On 14 February the Boz Ball (named after his pseudonym) was held in his honor at the Park Theatre and attended by 3000 members of the city's elite. Among the sites he visited were the Five Points, Wall Street, the Bowery, and the Tombs. He also marveled at the tirelessness of the city's fire brigade. On his return to England he wrote *American Notes* (1842) and *Martin Chuzzlewit* (1844), which criticized the city's dirty streets, cultural crudeness, and materialistic ideals. Part of this antagonism stemmed from his indignation over the lack of copyright laws and the pirating of his books in the United States. His description of New York City as a place where "a vast amount of good and evil is intermixed and jumbled up together" alienated many of his American readers. He returned to New York City in 1867 and read to large audiences at Steinway Hall on Broadway (on 22 occasions between 9 December and 20 April) and Plymouth Congregational Church in Brooklyn (four times between 16 and 21 January 1868). Commenting on the changes that had occurred in the city since his last visit, he declared: "Everything in it looks as if the order of nature were reversed, and everything grew newer every day, instead of older." At a banquet at Delmonico's on 18 April he promised that he would never again denounce America. Five days later he boarded a ship in New York Harbor and slipped out of the country, barely escaping capture by federal tax agents seeking a share of the proceeds from his lecture tour.

Dietrich, Marlene [Marie Magdalene] (*b* Berlin, 27 Dec 1901; *d* Paris, 6 May 1992). Actress. Brought up in an upper-middle-class Prussian home, she shortened her name and embarked on an acting career at age 18. She became an international star after the director Josef von Sternberg chose her for the lead role in *The Blue Angel* (1930), in which she played a seductive cabaret singer named Lola Lola. During the 1930s she cultivated her image as a sultry, sophisticated femme fatale, known for her smoky voice and given to wearing men's clothing. She became an American citizen in 1939 and during World War II entertained Allied troops across Europe and North Africa. In 1951 she moved into an apartment at 933 Park Avenue. In 1967 she made her debut on Broadway, appearing in sold-out one-woman shows at the Lunt-Fontanne and Mark Hellinger theaters. In 1972 she moved to Paris and retired from the public eye. Dietrich made 37 films.

Robert Sanger Steel

Dillon, Read. Firm of investment bankers formed in New York City in 1832 as a partnership called Carpenter and Vermilye; it became Vermilye and Company in the 1860s. The sale of Civil War bonds established the reputation of the firm, which in 1905 was renamed after its principal partner, William A. Read. It had offices in four American cities and London and was known for underwriting bonds issued by New York City, as well as stocks and bonds of railroads and other industries. Clarence Dillon became the leading partner after World War I; in 1921 the firm took its current name. The firm gained an international reputation through its reorganization of the Goodyear Tire and Rubber Company (1921), its acquisition and refinancing of Dodge Brothers, and its underwriting of foreign bonds. From the 1930s the financing of petroleum and gas pipelines accounted for a large part of its business, as did the underwriting of state and municipal bonds (including those to finance the Triborough Bridge in 1937). The firm was a subsidiary of the Travelers Corporation from 1986 to 1991, when the Travelers sold its interest to Baring Brothers and Company, of London. The company's headquarters were at 535 Madison Avenue until 1997 when the company was bought by Swiss Bank Corporation (SBC), and later SBC was bought by UBS. From 2000 to 2007 UBS's international hedge fund division was Dillon Read Capital Management.

Mary E. Curry

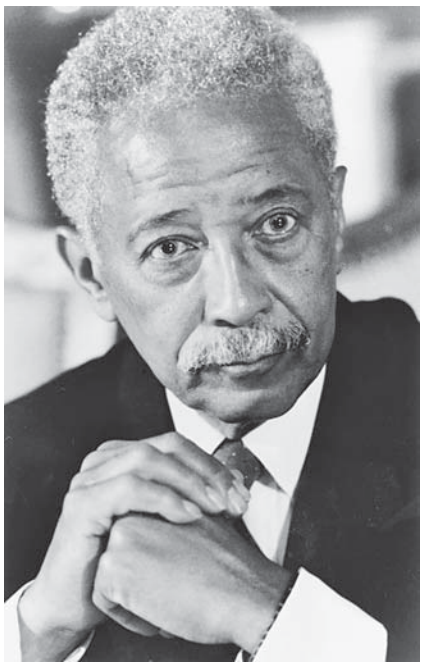
DiMaggio, (Giuseppe Paolo) Joseph, Jr. (*b* Martinez, Calif., 25 Nov 1914, *d* Hollywood, Fla., 8 March 1999). Hall of Fame baseball player. The son of a fisherman, DiMaggio became a legend during his years with the New York Yankees and an American folk hero after his baseball career ended. (He is mentioned in Simon and Garfunkel's song "Mrs. Robinson," Madonna's song "Vogue," and Ernest Hemingway's novel *The Old Man and the Sea*.) When he had a 56-game hitting streak in 1941—a record that still stands—a hit song, "Joltin' Joe DiMaggio," was a popular recording of the day and a tribute to DiMaggio's achievement. Baseball player Ted Williams called DiMaggio "the greatest all-around player I ever saw." The Yankee Clipper, as DiMaggio was called, played his entire career (13 years) with the Yankees. He had a lifetime batting average of .325, hit .300 or better in 11 seasons, won two batting titles, and knocked in more than 100 runs nine times. He was voted American League Most Valuable Player three times and played on nine World Championship teams. He was named Greatest Living Player in a 1969 poll to celebrate baseball's 100th anniversary. In 1977 he was the first athlete to be awarded the Presidential Medal of Freedom, the nation's highest civilian award. Two of his brothers became major leaguers: Dom with the Boston Red Sox and Vince with the Pittsburgh Pirates. His marriage to Marilyn Monroe in 1954 created a media frenzy; they divorced within a year.

Frank Dyer

Dime Savings Bank. Savings bank formed in 1859 as the Dime Savings Bank of Brooklyn. It focused on small, individual depositors rather than large depositors and businesses. It changed its name to the Dime Savings Bank of New York in 1970, converted from a state to a federal charter in 1983, and became publicly owned in August 1986. Its headquarters were at 589 Fifth Avenue in 1994, when Dime purchased Anchor Savings Bank in one of the largest savings and loan mergers in history, executed under the leadership of Brooklyn native Richard D. Parsons, who later became the CEO of Time Warner. In 2002 Dime merged into Washington Mutual, a Seattle-based financial services company.

Leslie Gourse

Dine, Jim (*b* Cincinnati, Ohio, 16 June 1935). Artist associated with the pop art and neo-dada movements. Dine arrived in New York City at the age of 23 after graduating from Ohio State University. As a part of the avant-garde art scene, Dine's visual and performance works were first shown in New York City during "happenings" at the Judson Gallery at the Judson Memorial Church in Greenwich Village in 1959. His painting style blends found objects, collage, and vigorous brushstrokes reminiscent of abstract expressionism. In the early twenty-first century Dine continued to maintain a studio in New York City. A retrospective of his first 10 years in New York City, entitled *Walking Life: 1959–1969,* was presented in 1999 at the Guggenheim Museum.



Anne Epstein

Dinizulu, Nana (Yao Opare) (*b* Augusta, Ga., 20 Nov 1930; *d* Camden, N.J., 10 Feb 1991). Musician, dancer, and Akan priest. During the 1940s he formed Dinizulu and His African Dancers, Drummers and Singers, a troupe devoted to the music and dance of western and southern Africa. The group performed at the World's Fair of 1964–65 and annually at Cooper Union. In 1967 Dinizulu established Bosum-Dzemawodzi, a traditional African religious organization based on the Akan tradition, and in the following year in Jamaica, Queens, he opened Aims of Modzawe, an African cultural center, which later became the Dinizulu Center for African Culture and Research. Dinizulu was the chief priest of the traditional Akan religion in the United States.

Sule Greg C. Wilson

Dinkins, David N(orman) (*b* Trenton, N.J., 10 Oct 1927). Mayor. A graduate of Howard University and Brooklyn Law School, he served with the U.S. Marine Corps in Korea and entered private law practice on his return to the United States. He was a founding member in 1963 of the organization 100 Black Men and was elected to the New York State Assembly from Harlem in 1966. Dinkins was appointed chair of the Board of Elections (1972–73) and city clerk (1975–85). In 1985 he was elected borough president of Manhattan. In 1989 he defeated Mayor Edward I. Koch in the Democratic mayoral primary, and in the general election, with substantial backing from racial minorities and liberal whites, narrowly defeated Rudolph W. Giuliani to become the city's first black mayor. During the campaign Dinkins had supported wage increases for municipal employees and aid to the homeless, but in the early years of his administration he was forced by fiscal constraints to modify some of his proposals. In 1991 he implemented a crime reduction program called Safe Streets, Safe City: Cops and Kids that expanded the city's police force. His term was also marked by racial and ethnic tension: the boycott of a Korean grocer by blacks in Flatbush, tensions between Hasidim and blacks in Crown Heights, tensions between Dominicans and the police in Washington Heights, and a racially charged protest by the police in Manhattan in 1992. In 1993 he was defeated by Giuliani in his attempt to win a second term. The next year Dinkins became a professor in the practice of public affairs at Columbia University, and he continued to teach there in the early twenty-first century. In 2002 the Oral History Research Office and the Rare Book and Manuscript Library at Columbia launched the David N. Dinkins Archives and Oral History Project.

Martin Shefter

David N. Dinkins, 1990

Dion and the Belmonts. Popular vocal group from the 1950s. The group was named for its lead singer, Dion DiMucci, and the Belmonts, a Bronx trio composed of Carlo Mastrangelo, Freddie Milano, and Angelo D'Aleo that was named after the singers' neighborhood street, Belmont Avenue. Formed in 1957, the quartet achieved fame with the hits "I Wonder Why," "A Teenager in Love," and "Where or When." In 1960 Dion and the Belmonts split amicably; DiMucci opted to do solo records, and the Belmonts reverted to a trio. The group reunited briefly for a 1972 Madison Square Garden concert.

Andrew Sparberg

DiPalo's Fine Foods. Italian gourmet food store. Located at 200 Grand Street, it opened in 1925 at 206 Grand Street in lower Manhattan. The store sells cheeses, meats, olive oils, and other gourmet foods, many imported directly from Italy. It makes its own mozzarella and ricotta cheeses on site. As of 2010 Lou (Luigi) DiPalo, fifth-generation co-owner, continued to operate the neighborhood institution.

Jessica Montesano

diphtheria. Epidemics of diphtheria, typically a disease of childhood once called throat distemper, were reported in New York City as early as 1745. Because diphtheria blocks the upper airway with pseudomembranous tissue resulting from the body's inflammatory process, victims frequently suffocated until methods of intubation were developed in the late 1880s. More vexing to physicians was the ability of diphtheria to create a toxin that circulates throughout the body, worsens the inflammation in the throat, blocks normal heart function, and often causes death four to six weeks after the initial attack. The discovery of the diphtheria anti-toxin in 1890 provided an antidote to the long-term deadly effects of diphtheria bacilli. The New York City Department of Health was instrumental in developing municipal public health laboratories that both produced reliable, standardized quantities of anti-toxin and performed culture diagnoses for physicians in the city beginning in 1893. This work was largely the result of the famed bacteriologist and public health official Hermann M. Biggs and his assistant William H. Park. The incidence of diphtheria among schoolchildren in New York City began to fall with these and other public health efforts that continued into the 1930s, but the development of the diphtheria vaccine in 1936, and its subsequent widespread and safe use among children, led to the rapid demise of the disease. This dreaded disease is now completely avoided by children in the city who are properly immunized against it.

directories. For a discussion of residential and business directories in New York City see CITY DIRECTORIES.

Disciples of Christ. The first congregation of the Disciples of Christ in New York City was formed after members of the First Baptist Church and the Ebenezer Baptist Church merged in 1810; they became affiliated with the Disciples of Christ after its formation in 1832 by members of the Christian Churches (1804) and the Churches of Christ (1809), who favored a return to primitive, apostolic Christianity. After merging with another congregation of Disciples of Christ, the congregation in the city was renamed the Central Christian Church. It occupied a building at 142 West 81st Street from 1910 until 1945, when it moved to a neo-Gothic church (erected 1909) at 1010 Park Avenue near 85th Street and changed its name to Park Avenue Christian Church; in the early twenty-first century it was the oldest continuous Disciples of Christ congregation in the city.

discothèques. See DANCE HALLS AND DISCOTHÈQUES.

distilling. The history of distilling in New York City is discussed in the entry BREWING AND DISTILLING.

district attorneys. Officials responsible for prosecuting crimes and ensuring legal procedure in New York City according to state laws. Each of the city's five counties has one district attorney and a large staff of appointed assistant district attorneys, who present evidence and prosecute on behalf of the state. Cases include street, white-collar, and organized crime; district attorneys conduct investigations that lead to prosecution and also handle appeals.

During colonial times the prosecution of crimes was chiefly the responsibility of appointed lawyers; there was also a grand jury modeled after an English institution intended to check the tenacity of lawyers engaged as prosecutors by the king. The prosecutorial power of the state was limited in 1735 when a jury in the colony of New York refused to indict John Peter Zenger on charges of seditious libel. During the nineteenth century a state penal code was developed that provided a framework for prosecution. A lavish courthouse built as a public project by William M. "Boss" Tweed became known for expenditures far beyond its budget and for cases argued there in the late nineteenth century by such figures as William Travers Jerome. Until the 1930s the district attorney's office was mainly the preserve of a few politicians and their patrons: district attorneys were elected with the support of local political machines, and they chose assistants not so much for their legal skills as for their political loyalties. Women worked as "confidential secretaries," or "C-girls," who were valued for their ability to "file and forget"; the highest position open to women law graduates was that of paralegal.

The current office of district attorney, which exists for each of the boroughs, came into existence in 1935, when Governor Herbert Lehman named Thomas E. Dewey deputy assistant district attorney in New York County. He prosecuted rackets cases and investigated extortion rings, prostitution, gambling, and corruption in organized labor and government. He was formally elected to the office in 1937. Among the cases he prosecuted were those connected to crime boss "Lucky" Luciano and Tammany Hall boss Jimmy Hines. Public fascination with the activities of the office reached a peak in the late 1930s: Dewey's dramatic encounters with organized-crime figures inspired such films as *The Racket Busters* and *Smashing the Rackets* (both 1938). Frank S. Hogan succeeded Dewey in 1941, and he served for 32 years, until his resignation in 1974. Under his direction the Criminal Courts Building opened at 100 Centre Street in 1941. Its design was widely seen as a reflection of the rational and ordered approach to law enforcement of the late 1940s: covering two blocks, the building was designed by Harvey Wiley Corbett to house the courts, the city jail, and the offices of the district attorney; its soundproof walls and many entrances and office suites were intended to prevent unethical dealings. Women were employed as prosecutors from the late 1960s, and in 1981 Elizabeth Holtzman became the first woman in the city to be elected district attorney (in Kings County).

Robert Morgenthau became district attorney in 1974 and stayed until his retirement in 2009. He reorganized the office, including starting early screening of felony cases by assistant district attorneys. He created numerous special units, including a trial division, a sex crimes unit, a family violence and child abuse bureau, an investigation division, a labor racketeering unit, an official corruption unit, a witness aid and services unit, a community affairs unit, and other areas dealing with gangs, identity theft, and firearms. New York City's conviction rate rose from 73 percent in 1974 to about 90 percent in the early twenty-first century. In the early twenty-first century, more than 450 prosecutors worked for the district attorney of New York County.

Emery E. Adoradio, Meghan Lalonde

Ditmars/Steinway. Neighborhood in northwestern Queens of about 200,000 people, lying within Astoria and bounded to the north by Bowery Bay, to the east by La Guardia Airport, to the south by 23rd Avenue, and to the west by the East River. Older residents refer to the neighborhood as Steinway, after the piano maker Steinway and Sons, which bought a tract of 400 acres (160 hectares) along the northwestern shore of Queens between 1870 and 1873 and during the next decade built a spacious factory and a town with a church, library, kindergarten, and public trolley line. Unlike other factory towns, Steinway was not exclusively for workers; the firm treated it as a real estate investment, selling land and houses to the highest bidder, and eventually employees counted for less than one-third of the inhabitants. Nevertheless, the town set its clocks by the factory whistle. After the Interborough Rapid Transit line was extended to Ditmars Avenue in 1917, the area attracted many people who worked in Manhattan, as well as newlyweds (mostly Italians and Greeks) seeking their own apartments. Much of the main street, Astoria Boulevard, was destroyed to make way for the Grand Central Parkway, which provided approach to the Triborough Bridge (1936). Many Greeks moved to the area after World War II, and by the 1980s they made up the largest Greek community in the world outside Greece. According to the 2000 census, Greeks and Italians are still the largest demographic groups in the area; and into the twenty-first century, people from Colombia and Bangladesh are the third and fourth largest demographic groups in Steinway.

Ditmas Park. Section of Flatbush, Brooklyn, known for its freestanding Victorian homes. Although many areas of Victorian Flatbush are commonly referred to as Ditmas Park, the historic boundaries are Dorchester Road to the north, Newkirk Avenue to the south, Ocean Avenue to the west, and East 16th Street to the east. The area was rural until the

Argyle Road in Ditmas Park

late nineteenth and early twentieth centuries when the creation of Prospect Park, the completion of the Brooklyn Bridge, and improvements in transportation led to construction in the vicinity. Developer Lewis Pounds purchased a portion of the farm owned by the Van Ditmarsen family and developed it into a residential community. In a short time he built a large number of Colonial Revival–style, Tudor Revival–style, and bungalow homes. Pounds monitored the quality and character of the houses, which were quickly inhabited by prestigious families. By the 1920s, however, many of the area's wealthy residents had moved to more distant suburbs, and some Ditmas Park homes became boardinghouses or multi-family homes. Residents sought protection for the structures, and Ditmas Park was designated a New York City historic district in 1981. In the twenty-first century Ditmas Park attracts many young people and artists, and it is well known for its popular restaurants.

Maurita Baldock

Dock, Lavinia Lloyd (*b* Harrisburg, Pa., 26 Feb 1858; *d* Chambersburg, Pa., 17 April 1956). Nurse. She moved to New York City to attend the Bellevue Hospital School of Nursing in 1884 and in 1896 took up residence at the Henry Street Settlement on New York City's Lower East Side. She remained there for 20 years, and while in residence at the settlement she helped shape the profession of nursing through the establishment of standards, licensure, regulations, and the creation of several important nursing professional organizations. She was also a cofounder and secretary of the International Council of Nurses. Dock was a determined crusader against venereal disease and an outspoken suffragist, feminist, and social reformer. A vocal supporter of the labor movement, she was an early member of the New York Women's Trade Union League. Dock wrote the first textbook of pharmacology for nurses, *Materia Medica for Nurses* (1890), as well as *Hygiene and Morality* (1910). She also authored (with others) the four volume *A History of Nursing* (1907–12) and *The History of the American Red Cross* (1922). She returned to Pennsylvania in 1922.

Karen Buhler-Wilkerson

Doctorow, E(dgar) L(aurence) (*b* New York City, 6 Jan 1931). Novelist. He grew up near the Grand Concourse, attended the Bronx High School of Science and Kenyon College (BA 1952), and worked as an editor for the New American Library and Dial Press (editor-in-chief 1964–69). His early writings include the satirical science fiction novel *Big as Life* (1966), in which two gigantic naked figures cause pandemonium in Manhattan as they loom over the Pan Am Building. He achieved greater recognition for his novels *The Book of Daniel* (1971), based on the trial of Julius and Ethel Rosenberg, and especially *Ragtime* (1975), which is set in New York City in the early twentieth century and includes fictional as well as historical characters. One of the characters in his novel *Billy Bathgate* (1989) is the organized-crime figure Dutch Schultz. Among Doctorow's other works set in New York City are the play *Drinks before Dinner* (1978) and the novel *World's Fair* (1985). The composer and lyricist team of Stephen Flaherty and Lynn Ahrens later adapted *Ragtime* into a musical, which opened on Broadway in 1998 and was nominated for 12 Tony Awards; it won Tonys for Best Featured Actress (Audra McDonald), Original Score, Book, and Orchestration.

Doctors' Riot. A violent disturbance from 13 to 14 April 1788 in which 5000 rioters ransacked New York Hospital because they believed that medical students were stealing cadavers from cemeteries. See Riots.

documentary filmmaking. New York City became the hub of documentary filmmaking in the United States during the late nineteenth century. After the Edison Manufacturing Company shot the film *Herald Square* with its new portable camera in May 1896, single-shot films—called actualities—of the city's street life were taken frequently by Edison, the American Mutoscope Company, and the American Vitagraph Company. During 1896–97 Alexander Black and Henry Evans Northrop of the Brooklyn Institute of Arts and Sciences began to integrate short films into their lantern-slide lectures. By 1903 George Kleine was selling a standardized illustrated lecture, "Lights and Shadows of a Great City, New York," which included 61 lantern slides and nine films. Such programs routinely contained a reformist message about the dangers of city living. There were also numerous short travelogues of the city; *Around New York in 15 Minutes* was released early in 1905 by the firm of Paley and Steiner and showed views of Manhattan and Brooklyn. Although most fiction film production moved to Los Angeles during the second decade of the twentieth century, New York City remained the principal center for documentary filmmaking. Paul Strand and Charles Sheeler, young artist-photographers associated with Alfred Stieglitz and his gallery, completed *Manhatta* in 1921. In this eight-minute documentary with intertitles drawn from Walt Whitman's poetry, the filmmakers went beyond the simple depiction of the city and sought to convey the dynamism and grandeur of metropolitan living. Through distribution abroad the film helped to initiate a cycle of "city symphony" films, including Walther Ruttmann's *Berlin: Symphony of a Great City* (1927) and several short subjects about New York City, including Jay Leyda's *A Bronx Morning* (1930) and Irving Browning's *City of Contrasts* (1931).

With the onset of the Depression in the 1930s documentary filmmakers became increasingly concerned about urban social issues, and a group sympathetic to the political left soon gathered around the local branch of the Film and Photo League, making newsreels and short documentaries such as *May Day in New York, 1931* (1931), *New York Hoovervilles* (1932), and *Workers Struggle in New York* (1932–33). Most of these filmmakers were associated with Frontier Films, which produced *Heart of Spain* (1937), *People of the Cumberland* (1938), and *Native Land* (1942). Pare Lorentz, a film critic and advocate of the New Deal based in the city, made his classic documentaries *The Plow That Broke the Plains* (1936) and *The River* (1937) from offices and editing rooms in Manhattan. *The City* (1939), directed by Steiner and Willard Van Dyke with a commentary written by Lewis Mumford, was shown at the World's Fair of 1939–40 to rave reviews. During World War II the Army Signal Corps took over the Kaufman Astoria Studio (formerly Paramount Pictures) and used it to produce training and propaganda films. Some films of the Office of War Information were meant to portray ordinary Americans; *Window Cleaner* (Jules Bucher, 1945), for instance, follows the activities of a man who cleans the windows of the Empire State Building. After the war the city's documentary filmmakers survived by producing films for industry and nonprofit organizations, making films about the urban experience when possible. James Agee, Helen Levitt, and Janice Loeb made *The Quiet One* (1949) and *In the Street* (1952) about youths struggling to find their way in the city. For *On the Bowery* (1956) Lionel Rogosin had local alcoholics convey the despair of their daily lives. Stan Brakhage's *The Wonder Ring* (1956), Shirley Clarke's *Bridges Go Round* (1958), and D. A. Pennebaker's *Day Break Express* (1958) were more experimental and more celebratory of the city.

The postwar rise of television led to new documentaries made for broadcast by the news divisions of the Columbia Broadcasting System (CBS) and the National Broadcasting Company (NBC). Television stations needed portable 16-millimeter equipment that could shoot news footage with sound synchronized to image, and the resulting technology helped to inaugurate the cinema verité revolution in documentary of the early 1960s, yielding several unusual documentaries, including Clarke's *The Connection* (1960) and Jonas Mekas's *The Brig* (1964), which captured performances by the Living Theater. In New York City as elsewhere, documentary was the

virtually exclusive province of whites and men until the late 1960s when the influence of the New York State Council on the Arts and the National Endowment for the Arts helped with its diversification. William Greaves, a black actor and filmmaker, made *Still a Brother: Inside the Negro Middle Class* (1968) in New York City for National Educational Television, exploring the changing consciousness and increasing militancy of black Americans. He became the executive producer of *Black Journal* (1968–70), a monthly news and public affairs program on public television that gave opportunities to a generation of young black documentary filmmakers such as Charles Hobson and St. Claire Bourne. A similar program called *Realidades,* launched in 1972 on WNET and aimed at the city's Latino community, was overseen by the documentary filmmaker Jose Garcia (*The Ox-Cart,* 1972).

Newsreel, a filmmaking group loosely affiliated with Students for a Democratic Society, was formed in 1967 by politically committed leftists. Its New York City branch made documentaries such as *Columbia Revolt* (1968), about the student strike at Columbia University, and *Community Control* (1968), about efforts to decentralize the city school system in Ocean Hill and Brownsville. Newsreel's focus shifted to minority filmmakers and subjects in 1972; the renamed Third World Newsreel, under the leadership of Christine Choy, made a series of films including *From Strikes to Spindles* (1975), about the city's Chinese community, and *Who Killed Vincent Chin?* (1989), with Rene Tajima. Other minority filmmakers made films about the communities in which they lived, including Bill Miles (*I Remember Harlem,* 1981), Warrington Hudlin (*Street Corner Stories,* 1977), Carlos DeJesus (*The Devil Is a Condition,* 1972), and Bienvenida Matias (*In the Heart of Loisida,* 1979, with Marci Reaven). At the same time female New Yorkers made films reflecting feminist concerns, including Barbara Kopple (*Harlan County, U.S.A.,* 1975), Mirra Bank (*Yudie,* 1974), Deborah Shaffer (*Chris and Bernie,* 1974, with Bonnie Freedman), Claudia Weil (*Joyce at 34,* 1973, with Joyce Copra), and Mira Nair (*So Far from India,* 1982).

The work of Brooklyn-born brothers Ken Burns (*Brooklyn Bridge,* 1982, and *The Statue of Liberty,* 1985) and Ric Burns, director of the exhaustive *New York: A Documentary Film* (1999–2003), an eight-part, 17½-hour series about the city's history, contributed to New York City's documentation on film. *9/11* (2002), a film by Jules and Gedeon Naudet, inadvertently documented the terrorist attacks of 11 September 2001; the brothers were working on a film about probationary firefighters when the attacks occurred, and they shot one of the few video recordings of the first plane hitting the North Tower.

documentary photography. Some of the first documentary photographs from New York City were produced between 1885 and 1902 by the newspaper reporter Jacob A. Riis, who photographed dark alleys and rear tenement interiors on the Lower East Side to supplement his report on the problems of the poor and win support for his efforts to improve urban housing, education, health, and recreation. Lewis Hine soon used photography to examine many of the same issues. His studies of child labor led to nationwide reform, and his poignant portraits of immigrants at Ellis Island helped to erode cultural prejudices. In the 1920s the documentary film *New York the Magnificent* (1921; later known as *Manhatta*) was made by the photographers Paul Strand and Charles Sheeler. Documentary photography developed more fully during the 1930s when many photographers were employed by the Federal Art Project and other agencies of the Works Progress Administration to document social displacement across the nation. Under the auspices of the project Berenice Abbott in 1935 began the series "Changing New York" to document the character of the city; she adopted a straightforward, unsentimental approach to recording urban contrasts. Other photographers engaged to document buildings and inhabitants of the city included Ben Shahn (1935–38) and Walker Evans (summer 1938). From 1936 to 1951 the Photo League offered classes and lectures by masters in the techniques of documentary photography, including Hine and Abbott. Some members, including Sid Grossman (1913–55), Sol Libsohn (*b* 1914), Dan Weiner (1919–59), and Ruth Orkin (1921–85), made detailed studies of Harlem, Chelsea, and Park Avenue north and south.

During the 1960s and 1970s the role of photojournalism in social documentary expanded. Some photojournalists, including Bruce Davidson (*b* 1931) and Danny Lyon (*b* 1942), tried to understand their subjects thoroughly before photographing them. Davidson's photographic essay "East 100th Street" (1970) depicted the difficulty and isolation of life in Spanish Harlem. Others used their work less to influence social reform than to promote self-examination. Through seemingly careless, fragmentary images of daily life, Garry Winogrand (1928–84) and Lee Friedlander (*b* 1934) encouraged viewers to interpret for themselves the needs of urban residents. Diane Arbus's portraits of people usually considered abnormal lacked the compassion traditionally expected of a social documentary and introduced a nonhumanistic approach to documentary photography. During the 1980s and early 1990s Larry Clark (*b* 1943) and Nan Goldin (*b* 1953) exulted in the banality of contemporary urban life and also examined sexual and psychological relationships.

The terrorist attacks of 11 September 2001 on the World Trade Center provided material for contemporary documentary photographers: Joel Meyerowitz (*b* 1938) was granted unfettered access to Ground Zero within days after the attacks, resulting in an exhibition and a book, *Aftermath: The World Trade Center Archive.* Hunter College professor Reiner Leist's (*b* 1964) "Window" project captured the changes Leist observed through the window of his apartment on Eighth Avenue between 1995 and 2001; taken with a nineteenth-century full-plate camera, Leist's photographs show the hole in the city's skyline after the Twin Towers fell. In 2008 Magnum photographer Christopher Anderson documented the economic downturn on Wall Street, while others have focused on the ever-changing city. In a 2008 exhibit at the New York Public Library titled *Eminent Domain,* Zoe Leonard (*b* 1961) documented the gentrification of the Lower East Side, while Thomas Holton focused on contemporary family life in Chinatown by photographing the Lams, a family of five living in a two-room apartment on Ludlow Street.

Dale L. Neighbors

Dodd, Mead and Company. Book publisher founded in 1839 as Taylor and Dodd, after John S. Taylor and Moses Woodruff Dodd. In 1870 the firm became Dodd and Mead when Edward S. Mead and Dodd's son Frank gained control of the business. It was located at 506 Broadway from 1856 until it moved to 762 Broadway in 1870. In 1876 Bleeker Van Wagener became a partner and the firm took its final name. In its early years, the firm published British and religious titles, but it later expanded to popular fiction, poetry, essays, juvenile literature, and trade books. In 1895 it launched the *Bookman,* a renowned literary journal of its day. The firm published works by Leo Tolstoy, Joseph Conrad, H. G. Wells, Jerome K. Jerome, Max

Beerbohm, Agatha Christie, Maurice Maeterlinck, Anthony Trollope, and G. K. Chesterton. It also helped launch the careers of African American poet Paul Lawrence Dunbar and literary Nobel Prize winner Anatole France (née Jacques Anatole François Thibault). From 1902 to 1904 it published the *New International Encyclopedia,* a 17-volume work that was constantly reviewed and updated until 1931. From 1910 to 1941 the firm had offices at 449 Fourth Avenue. In 1930 it began publication of Allan Nevins's *American Political Leaders* series and in 1956 published Winston Churchill's *History of the English-Speaking Peoples.* The firm expanded through acquisition in 1934 and in 1941 moved to 432 Fourth Avenue. From the 1950s to the 1970s, the firm published anthologies of African American poetry, essays, and stories and made its final move in 1967 to offices at 79 Madison Avenue. The firm was purchased in 1981 by Thomas Nelson Publishers of Nashville, and in 1986 the Gamut Publishing Company acquired a majority interest in the company. In 1988 Dodd, Mead and Company was liquidated, and it ceased its publications in 1990.

Stephanie Miller

Dodge, David Low (*b* Brooklyn, Conn., 14 June 1774; *d* New York City, 23 April 1852). Businessman and founder of the New York Peace Society. His early childhood memories were of the violence and horror of the American Revolution, which he later described as "the confused noise of the warriors more ferocious than the beasts that prowl the forest." He grew up and started a successful dry-goods business and later became manager of Connecticut's first cotton mill in Norwich. He seemed to make money at everything he undertook, and this continued after 1802 when he moved to New York. There, he began his second career as a peace activist. According to his autobiography, this attitudinal shift came after a rash of highway holdups drove him to travel with a loaded pistol. One night he nearly shot an innocent innkeeper by mistake. Although he had served in a militia, he now began to question the contradiction between calling himself a Christian and carrying a weapon. In 1809 Dodge published a pamphlet that declared that no war, not even defensive war, was acceptable to a true Christian and that states that engaged in warfare were at best pagan and possibly even satanic. He supported his arguments with passages from the Gospels. The pamphlet sold out its 1000-copy press run in two weeks and developed a following out of which he formed the New York Peace Society, the first nonsectarian peace organization in U.S. history. The group remained silent about its opposition to the War of 1812 to avoid being accused of disloyalty, but once that conflict ended in 1815 the group became visible again. That year Dodge published his antiwar tract *War Inconsistent with the Religion of Jesus Christ,* a cogent and all-encompassing argument against war that included not only the moral and political perspective but considerable detail about the damage to business and economic interests caused by warfare. In 1827 at the age of 53, the self-made entrepreneur retired from business to devote himself full time to the cause of peace. He died in 1852. His son, William Earl Dodge (1805–83), also combined successful business activities with peace activism and is honored with a statue at the intersection of Broadway and Sixth Avenue.

Mark Kurlansky

Dodge, Grace H(oadley) (*b* New York City, 21 May 1856; *d* Bronx, 27 Dec 1914). Reformer. Born into a prominent family, she was educated primarily at home and attended finishing school in Connecticut. After returning to New York City she became active in several charities, including the industrial schools of the Children's Aid Society, and began working to make social reform more systematic and efficient. Her friend Louisa Lee Schuyler, who influenced many of her later efforts, encouraged her to join the State Charities Aid Association. In 1881 she formed a club for young women that by 1885 grew into the Association of Working Girls' Societies. She also helped to organize the Industrial Education Association in 1884 and was appointed by Mayor William R. Grace in 1886 as one of the first two women on the Board of Education. Instrumental in founding Teachers College in 1889, she served as its treasurer from 1892 to 1911.

Dodge was also active in the Young Women's Christian Association (YWCA). A unifying figure at a time when the organization was torn by competing factions, she was active in 1906 in re-forming it as the YWCA of the USA, and she was the first president of the national board, which was based in New York City. She took an interest in moral education and helped to form the New York Travelers Aid Society (1907) and the American Social Hygiene Association (1912).

Nancy Marie Robertson

Dodge [née Mapes]**, Mary (Elizabeth)** (*b* New York City, 26 Jan 1830; *d* Onteora Park, near Tannersville, N.Y., 21 Aug 1905). Writer and editor. Influenced by her father, James J. Mapes, who emphasized literature during her childhood, she was friends with William Cullen Bryant and Horace Greeley, whose home in lower Manhattan was often the site of informal literary gatherings. In 1864 *Irvington Stories* (a collection of her short stories) was published. Her children's book *Hans Brinker; or, the Silver Skates* (1866) became one of her best-known works and has gone through many editions. In 1962 it was made into a movie, which was released on DVD in 2004. In the late 1860s Dodge worked as an associate editor of *Hearth and Home* alongside Harriet Beecher Stowe. As the editor of *St. Nicholas: Scribner's Illustrated Magazine for Girls and Boys* (a title she suggested) from 1873 until the end of her life, she influenced American juvenile literature. Her stories from *St. Nicholas* are compiled in two books, *Baby Days* (1876) and *Baby World* (1884). During her tenure the magazine published important work by Rudyard Kipling, Louisa May Alcott, and Mark Twain and became the most popular magazine of its kind in the country. Dodge also published her poetry and verse collections *Rhymes and Jingles* (1874) and *Poems and Verses* (1904).

Dodgewood. A section of northwestern Bronx bounded to the north by West 245th Street, to the east by Arlington Avenue, to the south by West 243rd Street, and to the west by Palisades Avenue. The land was once owned by William E. Dodge, whose holdings extended as far north as Westchester County and as far west as the Hudson River. Two mansions owned by his family still stand. Many of the area's large estates were sold to institutions and developers during the 1920s and 1930s. The neighborhood is an exclusive area of winding lanes and fine homes.

Doe Fund. Organization working with homeless people in New York City to provide opportunities for self-sufficiency. Headquartered at 232 East 84th Street, it was established by George T. McDonald in 1990. Their "Ready, Willing & Able" program was the first residential paid work and training program for homeless people. In the early twenty-first century the program has had continuing success with many of its members in the workforce.

Jessica Montesano

Dollar Dry Dock Savings Bank. Savings bank formed on 5 February 1983 by the merger of Dry Dock Savings Bank and Dollar Savings Bank. Dry Dock Savings Institution was

formed in 1848 by leading shipbuilders for their workers, at the corner of Fourth Street and Avenue C. It attracted mostly local, working-class customers until 1932, when it merged with U.S. Savings Bank and opened branches throughout the city, changing its name in 1949 to Dry Dock Savings Bank. It merged with New York Federal Savings and Loan Association in 1976. Dollar Savings Bank opened in 1890 at 2771 Third Avenue in Mott Haven. It merged with Fordham Savings Bank in 1932 and expanded throughout the Bronx in the 1930s and 1940s, opening branches in Fordham and Parkchester. In 1951 it erected a 10-story building for its headquarters on the Grand Concourse at Fordham Road. Among the many projects that it funded was Co-op City. The Dry Dock Savings Bank and Dollar Savings Bank merger created the fifth-largest mutual savings bank in the country and one of the most successful in the metropolitan area. It moved its headquarters from the city in 1983, and was bought by Emigrant Savings Bank in 1992 and liquidated in 1995.

James Bradley

Dolphy, Eric (*b* Los Angeles, 20 June 1928; *d* Berlin, 29 June 1964). Saxophonist, flutist, and bass clarinetist. After moving to New York City in 1959 he played avant-garde jazz as a sideman with Ornette Coleman, John Coltrane, and Charles Mingus. He played piercing, angular solos on three instruments with equal facility and became known for an uncompromising, complex style characterized by the use of quarter-tones and other devices not usually associated with jazz. His recordings include *Out to Lunch* (1964) and *Last Date* (1964).

domestic pigeon. See Rock Pigeon.

domestic servants. Most servants in New Amsterdam were household slaves allowed to live independently in exchange for work and a fee. Conditions changed after the American Revolution when workers from the country and free blacks moved to the city and sought employment in domestic service. Between 1790 and 1810 most free black women in the city were servants; a third of free black men, presumably servants as well, lived in white households. A shortage of domestic help also led free blacks to move to the city during the 1820s, and servants' quarters became a regular feature of residences about this time. Women worked as ladies' maids, parlormaids, kitchen maids, cooks, laundresses, and governesses and men as chauffeurs, gardeners, butlers, and valets; days began with lighting the fires and preparing breakfast and ended with shutting the house for the night, usually after the employers had gone to bed. The work was undesirable owing to the long hours, low wages, and isolation associated with it, and many servants eventually left their households. Employers considered satisfactory servants difficult to find, and in 1825 a group of wealthy women established the New York Society for the Encouragement of Faithful Domestic Servants. Young women were often sexually abused by their employers and then dismissed if the abuse came to light; former servants accounted for a quarter of the city's prostitutes in 1839 and almost half in 1859. Irish immigrants competed increasingly with blacks for domestic work after 1845. In 1855 about 40 percent of blacks in the city, 26 percent of Irish immigrants, and 9 percent of all other immigrant groups worked as servants, who numbered 34,302 in Manhattan (including laundry workers) and 4,441 in Brooklyn. Women found factory work a more appealing alternative; in 1860 it paid $2 to $6 a week, compared with $3 to $4 a month for domestic service. In 1870 servants (including laundry workers) accounted for 55,044 workers in the city, or 16 percent of the working population, and for more than half of working women. The children of immigrants who worked as servants often found other kinds of employment; children of black servants had fewer opportunities and often became servants themselves.

In 1920 there were by some estimates about 115,000 servants in the city (excluding laundry workers), or 6 percent of the working population. The number may have been twice that, since many failed to report their incomes and occupations. As electric appliances were introduced during the 1920s, housework became easier. The number of servants from southern and eastern Europe declined after the National Origins Act of 1924 imposed strict immigration quotas. As wages plummeted during the Depression, the demand for domestic help grew, and the number of servants rose to 262,469 in 1930. Maids stood waiting for work on more than 200 street corners in the city to be engaged for the day and paid by the hour at cruelly low wages. The writers Ella Baker and Marvel Cooke posed as maids and published an exposé called "The Bronx Slave Market" for the *Crisis* in November 1935. In 1937 the Domestic Workers' Union became Local 149 of the Congress of Industrial Organizations; it had few members and little effect on wages and working conditions, and ceased operations in 1968. At the beginning of World War II, blacks from the South sought domestic work in the city and retained the custom of living apart from their employers; this arrangement became so common that apartment buildings ceased to include maids' quarters in the 1950s. When other kinds of work became abundant during the war, the number of domestic workers decreased, especially among men. In 1940 there were about 140,000; more than 90 percent were women and most were black. The number fell in 1950 to 79,533, or slightly more than 2 percent of the workforce. Employment agencies arranged for maids from Great Britain and the South to work in the city, and the Amsterdam Employment Agency (1947–84) at Amsterdam Avenue and 149th Street found employment for blacks. As daily and hourly work became more popular, employers and employees began to negotiate with each other.

After the Immigration and Nationality Act of 1965 (Hart–Celler Act) took effect in 1968, women from the Caribbean and Latin America accounted for most domestic workers in the city. They often obtained visas through employers and domestic service agencies but increasingly worked in the city illegally, resulting in artificially low estimates of the number of domestic workers. In 1980 only 25,500 people, mostly women and more than 70 percent nonwhite, reported themselves as private household workers. The demand for domestic workers was high during the following decades, owing in part to the number of women working outside the home. Wealthy families had live-in help; many middle-class families engaged part-time housecleaners. Employment agencies that provided foreign workers flourished, among them the Finnish Agency (opened in 1933); the Asian–American Placement Agency, which arranged employment for Filipinos; and several Polish agencies. West Indian and Hispanic immigrants made up the bulk of workers, including a large proportion of illegal immigrants. In the twenty-first century child-care workers, home attendants, and nurses' aides accounted for most full-time household employees. They had still not procured legal protection from abuse; as of early 2010 a state domestic worker bill of rights had not yet been passed.

Alana Erickson Coble

Domingo, W(ilfred) A(dolphus) (*b* Kingston, Jamaica, 1889; *d* New York City, 14 Feb 1968). Writer and political reformer. He moved to New York City in 1913. From 1917 to the early 1920s he wrote articles for the radical black publications the *Messenger,* the *Crusader,* the *Emancipator,* and the *Negro World* (which was aligned with Marcus Garvey), and

he maintained close ties to such radical groups as the Socialist Party, the Universal Negro Improvement Association, and the African Blood Brotherhood. After returning to Jamaica at the onset of World War II, he was arrested by the colonial regime and accused of being an agent provocateur. On his release from prison in 1943 he returned to New York City, where he promoted Jamaican and Caribbean independence.

Calvin B. Holder

Dominican Academy. Catholic college preparatory school for girls at 44 East 68th Street. The building, a five-story mansion, was donated by Colonel Michael Friedsam, former president of the department store B. Altman and Company. The school was established in 1897. In 2010 the school's enrollment was 220.

Jessica Montesano

Dominicans. Before 1961 the number of Dominicans immigrating to the United States was relatively small, owing in large part to severe restrictions imposed from 1930 by the repressive regime of Rafael Trujillo. Between 1950 and 1960 some 10,000 Dominicans immigrated to the United States. The assassination of Trujillo in 1961 and the subsequent removal of restrictions led to a surge of immigration, as did the defeat of a popular revolt in 1965 and the ensuing occupation of the Dominican Republic by the United States. Economic and political uncertainty after the mid-1960s prompted a large number of Dominicans to flee. The number of Dominicans immigrating to the United States each year increased from 14,000 in the 1970s to more than 22,000 in the 1980s; undocumented immigration increased as well.

By the mid-1980s Dominicans had become more active in the political life of New York City and began to run for elective office, notably in Washington Heights. A new leadership arose out of community efforts to promote economic development, to work with government agencies, and to combat discrimination. At the same time Dominican culture began to exert a presence in New York City after years of near-invisibility. The music and dance of the meringue and bachata came to rival salsa in popularity, and some merengue groups based in the city reached a wide audience in the Dominican Republic.

In the early twenty-first century Dominicans were the largest foreign-born immigrant group in New York City. Over 18 percent of Dominicans who were then in the United States lived in the Bronx and Manhattan. They were among the city's most residentially concentrated immigrant groups. The neighborhoods with the largest numbers of Dominicans were Washington Heights, Hamilton Heights, Inwood, Highbridge, University Heights, Kingsbridge, Corona, Morris Heights, and Tremont. Famous Dominicans living in the city included baseball player Alex Rodriguez, actor Manny Perez, and musician Johnny Pacheco. The garment industry employed a large number of Dominicans. Other areas of employment included hotels, restaurants, and hospitals. Many Dominicans also owned and operated bodegas, garment shops, and nonmedallion, or "gypsy," taxicabs that served immigrant neighborhoods.

The Dominican Day Parade, begun in 1981, is held each August in conjunction with Dominican Restoration Day, which commemorates the restoration of the republic after its reannexation by Spain. Modeled on its Puerto Rican counterpart, the parade was first staged in Washington Heights and later moved to Manhattan.

Domino Sugar Plant. Industrial sugar-refining complex on the Brooklyn shore of the East River immediately north of the Williamsburg Bridge at 292-314 Kent Avenue. It was designed by Theodore A. Havemeyer in the Romanesque Revival style for Havemeyers and Elder, a sugar-refining company founded by the German immigrant cousins William and Frederick Christian Havemeyer in lower Manhattan in 1807. Constructed from 1881–84, part of the brick refinery was destroyed by fire in 1882. The largest and most iconic structures are three separate buildings encompassing the Filter, Pan, and Finishing House, which rise 155 feet (47 meters), not including a very prominent chimney. Upon completion it was the largest sugar refinery in the world and one of five located on the waterfront of Brooklyn. The Domino brand name was introduced in 1901, although the company was called the American Sugar Refining Company (also known as the Sugar Trust) for most of the twentieth century; it was renamed the Domino Sugar Corporation in 1991. Raw sugar was delivered to the plant by ship until 1999, when the first stage of converting sugar to liquid was transferred to a Baltimore refinery. After that the liquid sugar was delivered to the plant by barge until its closing in 2004. The Community Preservation Corporation bought the refinery, which in the early twenty-first century was part of a $1.2 billion redevelopment plan by Rafael Viñoly Architects that included apartments and a park. The combined Filter, Pan, and Finishing House structures were designated a New York City Landmark in September 2007 and incorporated into the plan; the rest of the plant's buildings were not protected, including the iconic yellow Domino Sugar sign.

Norman J. Brouwer, Kate Lauber

Donaldson, Lufkin and Jenrette. Firm of investment bankers formed in New York City in 1959 by William Donaldson, Dan Lufkin, and Richard Jenrette. It was devoted to researching small growth companies before entering investment banking, merchant banking, institutional trading and research, investment management, and brokerage. The firm was bought by the Equitable Life Assurance Society for $440 million in January 1985, and revenues continued to increase after the

Domino Sugar Plant, 2009

stock market crash of October 1987. In 2000 Donaldson, Lufkin and Jenrette had its headquarters at 277 Park Avenue and employed about 11,000 people. It was acquired later that year by Credit Suisse for $11.5 billion. In the early twenty-first century Credit Suisse used the DLJ brand for its private equity operations.

Mary E. Curry

Dongan, Thomas (*b* Castletown, Ireland, 1634; *d* London, 14 Dec 1715). Colonial governor. He served in the French and English military forces before his appointment as governor of New York by James, duke of York, in 1682. During his tenure he encouraged religious toleration, sought to set up postal services between Nova Scotia and the Carolinas, and assessed the strength of the French in Iroquois country. He also approved the "Charter of Liberties" establishing representative government in the colony; this was nullified by James, and in 1688 Dongan was replaced as governor by Sir Edmund Andros. Despite anti-Catholic feelings after the English revolution of 1689, Dongan remained in New York until 1691, when he returned to England. He later became the second earl of Limerick.

James E. Mooney

Dongan Hills. Neighborhood in east central Staten Island (2009 pop. *ca* 15,000). It is one of the largest neighborhoods in the city in area, extending as far as Todt Hill to the north, Grasmere and South Beach to the east, Ocean Breeze and the South Beach Psychiatric Center to the south, and the Richmond County Country Club to the west. It is named for Thomas Dongan, an Irish aristocrat who was appointed governor of the province of New York in 1682 by the duke of York. As part of the appointment he was granted 5100 acres (2064 hectares) on the northern shore of the island, which he eventually enlarged to 25,000 acres (10,100 hectares), including all of the present neighborhood. The well-known architect Ernest Flagg moved to the area in 1889, purchased 12 acres (5 hectares) of land, and built a summer retreat called Stone Court that became St. Charles Seminary after his death in 1947. He built many structures on Staten Island, often using the serpentine stone common to its hills. The housing stock of the neighborhood is varied. The Billiou–Stillwell–Perrine House (1661) at 1476 Richmond Road is the third-oldest building in the entire city. In the early twenty-first century Dongan Hills included old and new mansions, blocks of one-family and multi-family houses, a city housing project called Berry House, and townhouses and condominiums. The principal commercial thoroughfares were Richmond Road and Hylan Boulevard. Dongan Hills is a station of Staten Island Rapid Transit.

John-Paul Richiuso

Donovan, William J(oseph) (*b* Buffalo, 1 Jan 1883; *d* Washington, D.C., 8 Feb 1959). Lawyer and government official. He graduated from Columbia Law School (LLB 1907), practiced law in Buffalo and New York City, and served in World War I, where he organized and led the 69th New York Volunteers (the "fighting 69th"). He was awarded the Medal of Honor, the Distinguished Service Cross, the Distinguished Service Medal, the National Security Medal, and three purple hearts. He is the only American ever to win the four highest medals that the U.S. Army awards. In 1922 he became an assistant attorney general of New York State. From 1921 to 1927 he served as a trustee of Columbia University. From 1924 to 1929 he was an assistant district attorney for the Justice Department, during which time he enforced Prohibition zealously. He mounted an unsuccessful campaign for the lieutenant governorship of the state as a Republican in 1932 and was a senior partner of the law firm Donovan, Leisure, Newton and Irvine. In 1941 President Franklin D. Roosevelt appointed him the Coordinator of Information (COI). In this position, he coordinated the intelligence efforts of the various branches of the military and civilian law enforcement agencies, including the army, navy, and Federal Bureau of Investigation. His headquarters were in New York City in room 3603 of Rockefeller Center. He is best known for having led the Office of Strategic Services (OSS) from 1942 to 1945, an outgrowth of his work as the COI. The OSS later became the Central Intelligence Agency. He also served as an assistant to Telford Taylor at the Nuremberg war crimes tribunal. In 1946 he became a member of the advisory committee to the New York City Cancer Committee, and in 1952 he became the director of the New York Cancer Committee. Later he resumed his law practice in Manhattan, and from 1952 to 1954 he was the American ambassador to Thailand. He was often known by the nickname "Wild Bill" Donovan.

Martin Ebon

Dorflinger, Christian (*b* Rosteig, Alsace [now France], 16 March 1828; *d* White Mills, Pa., 11 Aug 1915). Glassmaker. After receiving his training in Alsace, he opened a small operation known as the Concord Street Flint Glass Works (later the Long Island Flint Glass Works) in Brooklyn in 1850, where initially he made chimneys for oil lamps and bottles for druggists. He introduced cutting operations by 1854 and changed his specialty to fine-cut tableware. He opened a large factory on Plymouth Street (1858) and the Greenpoint Flint Glass Works (1860) before retiring in January 1863 because of ill health. Dorflinger later built a factory in White Mills, Pennsylvania, where he became known for producing some of the country's finest brilliant cut glass.

Alice Cooney Frelinghuysen

Dorsey, Tommy [Thomas] (*b* Shenandoah, Pa., 19 Nov 1905; *d* Greenwich, Conn., 26 Nov 1956). Bandleader. He played the trombone and in 1924 moved to New York City with his brother Jimmy (*b* Shenandoah, 29 Feb 1904; *d* New York City, 12 June 1957), a saxophonist; the brothers took part in many recording sessions with Bix Beiderbecke, Adrian Rollini, and Red Nichols, played with the orchestras of Jean Goldkette and Paul Whiteman, and formed a band in 1934 that achieved some success. In the following year their public quarrels led them to pursue separate careers. The Tommy Dorsey Orchestra, formed with 12 members of the Joe Haymes Orchestra, became one of the most popular bands of its time; it engaged such well-known soloists as the trumpeter Bunny Berigan and the drummer Buddy Rich, but is perhaps best remembered for its performances with Frank Sinatra between 1940 and 1942. The Jimmy Dorsey Orchestra also enjoyed widespread popularity and had sidemen such as Ray McKinley, Lee Castle, and Bobby Byrne. The brothers reunited as the Fabulous Dorseys in September 1953 and played together until Tommy's death. The Dorseys are best known for having popularized a brand of dance music that was influenced by jazz.

Loren Schoenberg

Dos Passos, John (Roderigo) (*b* Chicago, 14 Jan 1896; *d* Baltimore, 28 Sept 1970). Novelist. He rented a studio apartment at 14A Washington Mews in 1922 and in 1924 lived briefly at 106–10 Columbia Heights and in Brooklyn Heights. A figure in bohemian literary circles, Dos Passos wrote the novel *Manhattan Transfer* (1925), which linked the chaos of the city with the aimlessness and confusion of modern life. In 1932 he lived at 214 Riverside Drive. He became increasingly disillusioned with communism after the Spanish Civil War and turned to patriotism and conservatism; some of his later writings were published in the *National Review.* His autobiography, *The Best of Times: An Informal Memoir,* was published in 1966. Dos Passos was also an artist, and in 2001, the Queens library

featured a retrospective exhibition titled *The Art of John Dos Passos.*

Lawson Bowling

Douai, (Karl Daniel) Adolf (*b* Saxe-Altenburg, Germany, 22 Feb 1819; *d* Brooklyn, 21 Jan 1888). Political activist and writer. He fled Germany for Texas after the revolution of 1848, but was driven out of the state for abolitionist agitation and made his way to New York City, where he organized a school, became the editor of the *New Yorker Demokrat,* and was an early leader of the kindergarten movement in the United States. In 1858 his work *Fata Morgana* won a prize as the best German American novel and he became a leader of the German Freethinkers' League. After taking over the German labor newspaper the *Arbeiter Union* (1868) he helped to launch the *Volks-Zeitung* (1878), a leading socialist newspaper that he also edited. He wrote a memoir, *Better Times* (1877).

Stanley Nadel

Doubleday. Firm of book publishers formed in 1897 as Doubleday and McClure by the magazine publisher S. S. McClure and Frank Nelson Doubleday, a vice president of his firm. Initially it operated from McClure's headquarters at 142 East 25th Street. In 1900 Doubleday formed a partnership with Walter Hines Page that became known as the firm of Doubleday, Page, with offices at 34 Union Square East. Pennsylvania Station was the site of the firm's first bookstore (1910), and within 20 years the firm had more than 25 stores and was one of the largest retail book operations in the country. After a merger with the firm of George H. Doran in 1927, the name was changed to Doubleday, Doran, and offices were moved to the Doran Building at 244 Madison Avenue. In 1938 the administrative, editorial, and sales departments were consolidated and moved to offices at 14 West 49th Street in Rockefeller Center. During the next few years the firm concentrated on inexpensive books for a wide audience. When it was renamed Doubleday and Company in 1946, it was the largest book publisher in the United States. By the mid-1970s the firm operated more than 15 book clubs, including the highly successful Literary Guild, and in 1980 it bought the New York Mets. From 1978 until 1994 former first lady Jacqueline Kennedy Onassis worked as an editor for Doubleday. In 1986 Doubleday was bought by the Bertelsmann Publishing Group for $475 million. In 1988 it formed the Bantam Doubleday Dell Publishing Group, which in 1998 became a division of Random House Inc. In the early twenty-first century Doubleday published the following imprints as Doubleday Broadway: Broadway Books, Harlem Moon, Currency, Doubleday, Doubleday Image, Doubleday Religious Publishing, Main Street Books, Morgan Road Books, Nan A. Talese, and Spiegel & Grau. The firm's offices are at 1745 Broadway.

Allen J. Share

Douglas, Aaron (*b* Topeka, Kans., 26 May 1899; *d* Nashville, Tenn., 2 Feb 1979). Painter. After studying at the University of Nebraska he moved to New York City in 1924 at the urging of Charles Johnson (editor of the magazine *Opportunity: A Journal of Negro Life*). He fell under the influence of the German painter Winold Reiss, emulating the simplified black-and-white designs and flat patterns in his work, and became associated with the artists of the Harlem Renaissance. In 1924 he was the only black visual artist to attend the conference in New York City of publishers, editors, and black intellectuals that resulted in the publication of *Harlem: Mecca of the New Negro.* His illustrations appeared in Alain Locke's *The New Negro* (1925), Eugene O'Neill's *The Emperor Jones* (1926), and James Weldon Johnson's *God's Trombones: Seven Negro Sermons in Verse* (1927), and on the covers of *Opportunity,* the *Crisis,* and the radical arts journal *Fire!!: A Quarterly Devoted to the Younger Negro Artists* (1926). He also painted *Aspects of Negro Life* (1934) for the Countee Cullen branch of the New York Public Library (now the Schomburg Center for Research in Black Culture), a modernistic mural with several panels that was intended to symbolize the strength of the "New Negro." Douglas later studied at Columbia University and the Académie Scandinave in Paris and settled in Nashville, where he was the chairman of the art department at Fisk University until his retirement.

Edmund Gaither

Douglass, David Bates (*b* Pompton, N.J., 21 March 1790; *d* Geneva, N.Y., 21 Oct 1849). Engineer, architect. A graduate of Yale College (1813), U.S. Army engineer during the War of 1812, and West Point professor and government engineer and surveyor (1815–31), Douglass moved to Brooklyn (1831) to pursue civilian assignments. He designed the first building of the University of the City of New York (now New York University). Completed in 1835 on Washington Square, the massive Gothic structure was considered among the city's finest buildings; its spire was the highest point in Manhattan. Douglass conducted the first surveys for the Croton Aqueduct, planned its route, and designed many of its hydraulic features (1833–36); differences with Stephen Allen, head of the commission overseeing the project, resulted in Douglass's replacement as chief engineer before construction began. Douglass designed and oversaw development of Green-Wood Cemetery in Brooklyn (1838–41); his progressive design inspired the naturalistic landscaping of numerous other cemeteries and of Central Park.

Gerard Koeppel

Douglass, Frederick [Bailey, Frederick Augustus Washington] (*b* Maryland, 14 Feb 1818; *d* Washington, D.C., 20 Feb 1895). Abolitionist. Douglass escaped from slavery disguised as a sailor; he took a train from Maryland and on 4 September 1838 arrived in New York City a free man, before traveling on to Massachusetts. He grew to national stature as an ardent advocate for equality and social justice. Steadfast in his support for abolitionist causes, Douglass spoke frequently on the topic and also edited and published a series of antislavery papers. Both his speeches and written commentary remain relevant to contemporary social issues. Later in his career he became a diplomat, securing his place in history as a statesman and reformer. In 2008 the newly renovated Frederick Douglass Circle at the northwest corner of Central Park surrounded a statue of Douglass by Gabriel Koren and marked the gateway of Frederick Douglass Boulevard (Eighth Avenue at 110th Street). The monument is engraved with Douglass's own words: "The types of mankind are various. They differ like the waves, but they are one like the sea."

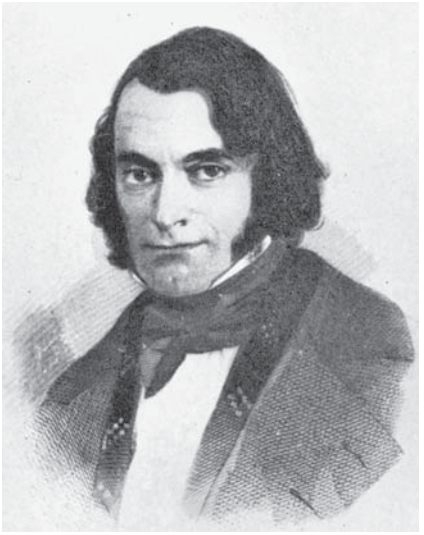
Diane Jones Randall

Douglaston. Neighborhood in northeastern Queens (2009 pop. *ca* 25,000), near the border with Nassau County. It was settled in 1656 by Thomas Hicks on a peninsula first called Little Madman's Neck. In 1796 Hicks's estate passed to Thomas Wickes, and later to Wynant Van Zandt, who in 1819 built an imposing white mansion (now the Douglaston Yacht Club). Much of the land was bought in 1835 by George Douglas, a Scot, whose son William P. Douglas, a vice commodore of the New York Yacht Club, donated a right-of-way in 1866 to the railroad, which named the station for him. The Douglas Manor Company promoted part of the area as residential from 1906. Among the well-known residents of the neighborhood were Ginger Rogers, Richard Dix, and Clifton Webb in the mid-1920s, and later the tennis player John McEnroe (who learned to play at the Douglaston Club) and the Chilean pianist Claudio Arrau. Although all of Douglaston is desirable and the neighborhood as a whole is the wealthiest community in Queens, the windy, hilly streets of Douglas Manor are particularly attractive. In 1997 the Landmarks Preservation Commission designated Douglas Manor as the Douglaston Historic District. With excellent schools,

abundant shopping, and a parklike setting, Douglaston continued to thrive in the early twenty-first century.

Lester Leake Riley, *The Chronicle of Little Neck and Douglaston* (New York: Ledger Printing, 1936)

Vincent Seyfried



Dover. Name briefly applied to Old Town by the British.

Dow Jones and Company. Firm of financial publishers known colloquially as Dow Jones. Its origins go back to the 1882 launch in New York City of a stock bulletin by Charles Dow, Edward Jones, and Charles Bergstresser. In 1884 they published an index of 11 major stocks that eventually evolved into the Dow Jones Industrial Average and in 1889 began publishing the *Wall Street Journal*. In 1899 Jones sold his interest in the firm, and in 1902 the two remaining partners sold the firm to Clarence Barron, who launched *Barron's Weekly* in 1921. The firm underwent rapid expansion after World War II: the circulation of the *Wall Street Journal* increased sharply, other newspapers were acquired, and the *Journal* established an award-winning reputation for its investigative journalism, winning 33 Pulitzer Prizes by 2007. During the 1980s and 1990s the firm expanded into electronic retrieval services and online news services. The *Wall Street Journal* remains one of the country's most respected newspapers, but the company missed numerous opportunities to expand into television, cable, and other media. In 2007, with the newspaper industry in sharp decline, Rupert Murdoch's News Corporation made a $5 billion bid for the company. A bitter takeover battle ended 105 years of family control.

Jerry Martin Rosenberg, *Inside the* Wall Street Journal: *The History and the Power of Dow Jones and Company and America's Most Influential Newspaper* (New York: Macmillan, 1982); Lloyd Wendt, *The* Wall Street Journal: *The Story of Dow Jones and the Nation's Business Newspaper* (Chicago: Rand McNally, 1982)

George Winslow

Downing, Andrew Jackson (*b* Newburgh, N.Y., 31 Oct 1815; *d* southern Westchester County, 28 July 1852). Nurseryman, landscape gardener, and writer. His work *A Treatise on the Theory and Practice of Landscape Gardening* (1841) established him as an authority in the field. In the *Horticulturist* in August 1851 he outlined the advantages of a large, centrally situated park in New York City. His partner on several projects was Calvert Vaux. Downing's only known work in New York City was his design for the Cemetery of the Evergreens on the border between Brooklyn and Queens, a collaboration with the architect Alexander Jackson Davis. He also prepared an unexecuted design for the New York Crystal Palace.

Andrew Jackson Downing

He died when the steamboat *Henry Clay* burned on the Hudson River.

David Schuyler, *Apostle of Taste: Andrew Jackson Downing, 1815–1852* (Baltimore: Johns Hopkins University Press, 1996)

David Schuyler

Downing, Thomas (*b* Chincoteague, Va., Jan 1791; *d* New York City, 10 April 1866). Restaurateur. Born free in a slaveholding state, he arrived in New York City in 1819 and began to sell oysters. At the time, eating oysters was one of the city's most popular pastimes, and the business was conducted primarily by free black men. By 1830 Downing's Oyster House at the corner of Broad and Wall streets was well known for its famous patrons, including Charles Dickens and leading politicians of the day. Downing sent "very choice" oysters to Queen Victoria, who in return sent him a gold chronometer. In 1848 he became a founding trustee of the New York Society for the Promotion of Education among Colored Children. He campaigned for black suffrage in New York State, sponsored rallies against the Fugitive Slave Law, and protested the custom of segregation in public transit. He was also a friend and occasional traveling companion of Frederick Douglass. After Downing's retirement his son George took over the restaurant and continued the business until at least 1871, but by then the heyday of the oyster house in the city was already passing. Downing is buried in the St. Philip's Church section of Cypress Hills Cemetery in Brooklyn.

John H. Hewitt, "Mr. Downing and His Oyster House: The Life and Good Works of an African-American Entrepreneur," *New York History* (July 1993), 229–52

Kenneth T. Jackson

Downing Stadium. Open-air municipal sports stadium across the East River from Manhattan's 125th Street on Randalls Island from 1936 to 2003. It was known as Randalls Island Stadium from 1936 to 1938 and as Triborough Stadium from 1938 to 1955, before being renamed in honor of former Park Department recreational director John J. Downing. A project of the Works Progress Administration and Park Commissioner Robert Moses, construction of the 21,000-seat stadium was completed just in time for the July 1936 U.S. Olympic track and field trials, held to select the American team for the Berlin Olympics later that summer. Capacity crowds filled the stadium for the two-day event at which the African American sprinter and jumper Jesse Owens qualified for four Olympic events, paving the way for his memorable performance later that summer, when his success in winning four gold medals at the Berlin Olympics famously clashed with the political and racial intolerance in Nazi Germany. The stadium hosted numerous operas, concerts, track and field meets, international rugby, cricket, and soccer matches, Negro League baseball games, college and professional football competitions, as well as several political gatherings from the 1930s up until its demolition in 2003, when it was replaced by Icahn Stadium.

David White

Downtown Athletic Club. Private club organized on 10 September 1926 in New York City. On 1 October 1930 it moved into a 35-story building at 19 West Street. The club was perhaps best known as the body that awarded the Heisman Trophy each year to the most outstanding college football player in the United States. First given in 1935, the trophy was named for John W. Heisman, the club's first athletic director. The club peaked at 4500 members in the 1960s and began admitting women as members in 1978. After sustaining damage from the 11 September 2001 attacks, the club never reopened and declared bankruptcy in 2002. The building at 19 West Street was converted into a residential tower and reopened in 2005 as the Downtown Club.

Jessica Montesano

downtown Brooklyn. Neighborhood in northwestern Brooklyn, encompassing the Fulton Mall, Borough Hall and the civic center, Brooklyn Heights, and the area around Fulton Ferry and bounded to the north by the Brooklyn–Queens Expressway, to the east by Flatbush Avenue and the Flatbush Avenue Extension, to the south by Atlantic Avenue, and to the west by Cadman Plaza. The first European settlers in the area were Dutch farmers and tradespeople who occupied land near the East River in the seventeenth century and soon formed a village called Breuckelen near

Fulton Ferry. The introduction of reliable steam ferry service between Brooklyn and Manhattan in the second decade of the nineteenth century spurred the construction of mansions and blocks of row houses and apartment buildings. City Hall was designed in the Classical Revival style and completed in 1849 (it was renamed Brooklyn Borough Hall in 1898). By mid-century several private academies had opened in the area, including the Brooklyn Female Academy (1844), which was succeeded by the Packer Collegiate Institute (170 Joralemon Street). Later schools included the Brooklyn Collegiate and Polytechnic Institute (now in Bay Ridge); the Polytechnic Institute of New York (Jay Street); St. Francis College, which first offered classes in 1859 and later moved to Remsen Street; Brooklyn Law School (1901); Long Island University; and New York City Technical College (Jay Street). The building at 311 Bridge Street, formerly the First Free Congregational Church, became the home of the Bridge Street African Methodist Episcopal Church in 1854. The oldest black congregation in the borough, it remained on Bridge Street for 84 years before moving to Bedford–Stuyvesant. When the Brooklyn Bridge opened in 1883, traffic was rerouted to the area around Brooklyn City Hall, and hotels, theaters, businesses, and newspaper offices opened nearby; department stores and other businesses moved to Fulton Street, which became a prosperous commercial center. Office towers were built on Court Street during the 1920s. Public buildings, including headquarters for the Board of Education (Livingston Street) and for the Transit Authority, accounted for most construction in the years surrounding World War II. Retail suffered during the 1950s and 1960s. In 1977 ground was broken for the Fulton Mall, which became the site of more than 100 retail stores (including a branch of Abraham and Straus at 420 Fulton Street) and one of the largest urban shopping districts in the United States. An office tower was erected at Pierrepont and Court streets in the 1980s for the investment banking firm Morgan Stanley. In the early 1990s downtown Brooklyn became attractive to businesses seeking larger quarters and lower rents than those found in Manhattan. Construction began on MetroTech Center, an office park for research and technology bounded by Johnson Street, Flatbush Avenue, and Willoughby and Jay streets. By 2008 MetroTech had brought more than 6000 jobs to the area. Several local businesses were well known: Junior's (near the mall, at 386 Flatbush Extension on the corner of De Kalb Street) is famous for its cheesecake, and Gage and Tollner's (372 Fulton Street; building 1870, interior 1892) became the only restaurant in Brooklyn with an interior designated as a landmark. Unfortunately, the restaurant did not survive into the twenty-first century. The area around Borough Hall remains a bustling center of transportation and government offices. Stores along the Fulton Mall, Atlantic Avenue, and Court, Livingston, and Montague streets attract many shoppers.

Ellen Marie Snyder-Grenier

draft riots. Civil disturbance during the Civil War from 13 to 16 July 1863 in New York City, sparked by the first federal draft and a $300 exemption fee, almost a year's salary for the average worker. Democrats, including former mayor Fernando Wood, warned that Abraham Lincoln's Emancipation Proclamation of 1 January 1863, combined with the new conscription law, would let the rich stay home while white workingmen died on the front lines to free blacks who would come north and take their jobs. In a city with slums, inadequate sanitation, high infant mortality, and falling real wages, poor whites vented their rage by attacking government offices, Republican officials, and the city's 12,500 African Americans. The 200,000 Irish Americans and Irish immigrants in the city, a quarter of the population, included a majority of the working class. Many were influenced by Catholic archbishop John Hughes: the United States had given asylum to Irish refugees fleeing British oppression, and they would fight to preserve the Union, he said, but not to free the slaves. Irishmen had volunteered in large numbers early in the war and had suffered high casualties; Irish newspapers saw betrayal in Lincoln's shift to a radical Republican agenda of abolition and racial equality. Nonetheless, most of the Irish remained Unionists, including Colonel Robert Nugent of the 69th regiment, the assistant provost marshal general who supervised New York's draft lottery, and the city's numerous Irish police officers who helped quell the riots. Officials blundered by holding the first draft lottery on a Saturday, 11 July, giving workers Sunday, their one day of the week off, to examine the list of draftees in the newspapers, work up their anger, stockpile bricks, cobblestones, and other weapons, and organize a protest for the next drawing of names on Monday, 13 July. Early on Monday columns of laborers, including many women and children, streamed northward from lower Manhattan to Central Park, regrouped, and proceeded to the draft office at 46th Street and Third Avenue, which they burned to the ground, along with the entire block. After beating the police superintendent unconscious, the mob mauled and scattered contingents of soldiers and police as it barreled downtown in search of stockpiles of guns and ammunition. In addition to armories, stores, and the homes of the wealthy Republicans like Mayor George Opdyke, the rioters attacked black churches, homes, and individuals. Black men were lynched from lampposts and chased into the rivers, while the Colored Orphan Asylum on Fifth Avenue and 44th Street was burned to the ground. Abolitionists, including *Tribune* editor Horace Greeley and black clergyman Henry Highland Garnet, were particular targets. Democratic leaders and Catholic priests ventured into the streets to calm the mobs, and militia and federal troops fired into the crowds. Suspecting a Copperhead conspiracy to foment the riots as a fire-in-the-rear during Robert E. Lee's invasion of Pennsylvania, prominent Republicans called for martial law and a federal investigation. Order was gradually restored by 16 July, after five regiments of soldiers arrived from the battle at Gettysburg, which had been fought only two weeks earlier. After four days of looting, arson, and lynching, 5000 blacks

Lynching on Clarkson Street during the draft riots of 1863

had fled Manhattan, many to free black settlements like Weeksville in Brooklyn. The official death toll of 105 makes these riots the most lethal in American history, and the true figure is probably closer to 500. Instead of martial law and executions for treason, Lincoln chose to compromise with the city's Democratic machine. The draft resumed peacefully in August after Tammany Hall boss William M. Tweed created a $2 million public fund to pay the $300 fee for any draftee who claimed hardship. The draft riots represent the largest working-class rebellion in American history.

Barnet Schecter

Drake, Joseph Rodman (*b* New York City, 7 Aug 1795; *d* New York City, 21 Sept 1820). Poet and physician. A descendant of an established New England family, he lived in Hunts Point as a child. While studying medicine in New York City he met Fitz-Greene Halleck, with whom he published in the *New York Post* from March to July 1819 the "Croaker Papers," which lampooned prominent local figures and constituted his only work published during his lifetime. Although he practiced medicine in New York City, he is better known for his poems, especially "The Culprit Fay" (an extended romantic fable set in the Hudson Highlands) and "The American Flag," both included in the collection *The Culprit Fay and Other Poems,* published by his daughter in 1835. His poem "Bronx" (1835), a paean to his childhood home, includes the following lines: "Yet I will look upon thy face again, / My own romantic Bronx, and it will be / A face more pleasant than the face of men." Drake's early death from tuberculosis inspired Halleck's elegy "Green be the turf above thee." The cemetery on Hunts Point Avenue in South Bronx where he was buried was taken over by the City of New York in 1910; declared a public park, it was dedicated as Joseph Rodman Drake Park in 1915.

Frank Lester Pleadwell, *The Life and Works of Joseph Rodman Drake* (Boston: Merrymount, 1935)

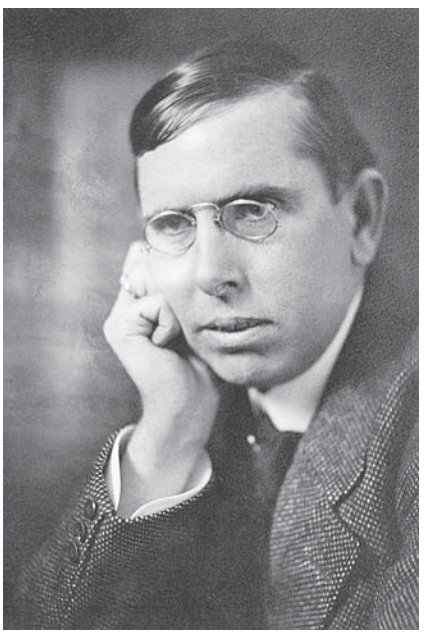
James Bradley, Ormonde de Kay

Dr. Brown's Soda. Soda company. Founded in 1869, its first flavor was Dr. Brown's Cel-Ray Tonic, a mixture of seltzer, celery seed extract, and sugar. A uniquely kosher soda (cola did not become kosher until the 1930s), Dr. Brown's could be found at Jewish delis throughout New York City. The labels on the soda cans were developed in the 1970s by Herb Lubalin and taken from old prints of New York City icons to emphasize the brand's origins. The original soda can images showed the Brooklyn Bridge (Cel-Ray), the Statue of Liberty (cream soda), Grand Central Terminal (orange soda), an ice cream parlor (root beer), the Astor Hotel (ginger ale), and the Third Avenue elevated train, which was later changed to the Central Park Carousel (black cherry). In the twenty-first century Dr. Brown's is a brand owned by PepsiCo and continues to be sold.

Jessica Montesano

Dreier, Ethel Eyre Valentine (*b* Brooklyn, 21 Aug 1874; *d* Fort Salonga, N.Y., 15 Dec 1958). Reformer, sister of Katherine Dreier and Mary E. Dreier. Shortly after graduating from the Packer Collegiate Institute she became president of the Asacog Club (later the United Neighborhood Guild), one of the first settlement houses in Brooklyn. A local leader of the suffrage movement, she led the Women's Suffrage Party of Brooklyn from 1913 to 1917. She also was president of the New York Women's City Club (1924–30, 1932–36), actively promoted low-cost housing, and helped to organize the Brooklyn Garden Apartments. Her wide-ranging reform interests extended to good government movements and education. Dreier lived in Brooklyn until 1941, when she moved to Long Island.

Eileen K. Cheng



Dreier, Katherine (Sophie) (*b* Brooklyn, 10 Sept 1877; *d* Milford, Conn., 29 March 1952). Reformer and arts patron, sister of Ethel Eyre Valentine Dreier and Mary E. Dreier. She helped to establish the Little Italy Neighborhood House in Brooklyn and the Manhattan Trade School for Girls in 1903. In 1920 she formed the Société Anonyme to provide an exhibition space for work by dadaists and other modern artists, which she also promoted through lectures and writings. She wrote *Western Art and the New Era* (1923).

Linda Elsroad

Dreier, Mary E(lizabeth) (*b* New York City, 26 Sept 1875; *d* Bar Harbor, Maine, 15 Aug 1963). Labor activist, sister of Ethel Eyre Valentine Dreier and Katherine Dreier. Born to a middle-class German family, she was drawn into the New York Women's Trade Union League in 1899 by Leonora O'Reilly, one of its most influential members, and in 1906 was elected its president. During her tenure she was arrested for drawing public attention to police brutality against striking women workers in New York City. Although she built a reputation as one of the few middle-class reformers trusted by the working women in the league, she resigned in 1914 because of her belief that the league should be led by a worker. From 1911 to 1915 she served with Robert F. Wagner (i) and Alfred E. Smith on the New York State Factory Investigating Commission, formed after the Triangle Shirtwaist factory fire of 1911 to investigate conditions in factories and to frame laws regulating occupational safety and health. Dreier also led the city's Woman Suffrage Party during the second decade of the twentieth century.

Annelise Orleck

Dreiser, Theodore (Herman Albert) (*b* Terre Haute, Ind., 27 Aug 1871; *d* Hollywood, Calif., 27 Dec 1945). Novelist. The 12th of 13 children born to a poverty-stricken family, he spent a year at Indiana University (1889–90) and became a newspaper reporter in Chicago in 1892. In 1894 Dreiser read the philosophy of Herbert Spencer and came to believe that human beings are the helpless victims of instinct and social forces, a theme that underlies his writing. He moved to New York City in the same year and stayed at the Mills Hotel (now the Atrium) at 160 Bleecker Street, but financial limitations forced him to move to East End Avenue and then to 6 West 102nd Street in 1913. His first novel, *Sister Carrie* (1900), about a kept woman who becomes a successful actress, caused public controversy and was suppressed by its publisher, Frank Doubleday, which led Dreiser to suffer a nervous collapse. During the nine years after his recovery in a sanitarium, he became financially successful as the editor of several women's magazines, which enabled him to write his second novel, *Jennie Gerhardt* (1911). He followed this critical success with *The Financier* (1912) and *The Titan* (1914), two parts of a trilogy based on the life of the financier Charles T. Yerkes; *The Genius* (1915), a semi-autobiographical novel; *The Color of a Great City* (1923), a rhapsodic tribute to New York City; and *An American Tragedy* (1925), the story

Theodore Dreiser

of a man driven by his social ambitions and passion to commit murder, which became his most critically and commercially successful work. During this period he lived at 439 West 123rd Street (1906–14), 165 West 10th Street (1914–20), 16 St. Luke's Place (1922–23), 118 West 11th Street (1923), and 1799 Bedford Avenue in Bedford–Stuyvesant (1925). In January 1925 he rented an office at 201 Park Avenue South to finish writing *An American Tragedy,* the success of which allowed him to move to 200 West 57th Street. After a trip to Soviet Russia in 1927 he became a social reformer, writing pro-communist works such as *Tragic America* (1932). He lived in Suite 1454 of the Ansonia Hotel at 2101–19 Broadway from 1931 to 1935 and moved to Los Angeles in 1938, where he joined the Communist Party in the following year. Dreiser was the leading figure in the American Naturalist movement, known for his powerfully realistic descriptions of daily life and his exploration of social problems.

Anthony Gronowicz

Drew, Daniel (*b* Carmel, N.Y., 29 July 1797; *d* New York City, 18 Sept 1879). Industrialist. Born in Putnam County and son of an upstate farmer, he first worked as a drover. In 1829 he moved to New York City, where he ran a successful cattle business. In 1834 he entered the steamboat industry, and in 1844 he formed Drew, Robinson and Company, a banking and brokerage house on Wall Street. He began an association in 1853 with the Erie Railroad, of which he was named a director in 1857. As the railroad's treasurer and controlling agent, he proceeded to manipulate its stock, and with his confederates Jay Gould and Jim Fisk he engaged Cornelius Vanderbilt in the notorious Erie War between 1866 and 1868. In 1867 he founded the Drew Theological Seminary in Madison, New Jersey. In 1870 Gould and Fisk turned on him, and Drew lost the remainder of his fortune after the Panic of 1873. He filed for bankruptcy in 1876 and spent his declining years at 3 East 42nd Street.

Allen J. Share

Drexel Burnham Lambert. Investment bank formed in Philadelphia in 1940, composed of partners from the earlier firm started by Francis M. Drexel; its customers included some of the city's largest industrial firms. The name changed to Drexel Harriman Ripley in 1966, when the firm moved to New York City; to Drexel Firestone in 1970; to Drexel Burnham in 1973, after a merger with the firm of Burnham (a brokerage firm formed in 1935 by I. W. Burnham); and to its present form in 1976, after a merger with the Compagnie Bruxelles Lambert. During the 1970s and 1980s, Drexel's star trader, Michael Milken, pioneered the creation of "junk bonds," or high-yield bonds. Drexel became the leading firm in the junk bond market, fueling the buy-out mania and financing the high-profile hostile takeovers of the 1980s, all of which made it the most profitable firm on Wall Street at that time. After the stock market crash of 1987, the firm dismissed Milken for his role in an insider-trading scheme, and in 1990 it filed for bankruptcy protection after pleading guilty to mail and securities fraud and was charged $650 million in fines.

Connie Bruck, *The Predators' Ball: The Junk Bond Raiders and the Man Who Staked Them* (New York: Simon and Schuster, 1988)

Mary E. Curry

Dreyfus Corporation. Financial services company established in 1951. Headquartered at 200 Park Avenue, in 1957 it was the first mutual company to launch a retail advertising campaign. In 1994 the firm became a subsidiary of Bank of New York Mellon Asset Management. As of 2009 it managed about $280 billion in mutual funds and accounts.

Driscoll, Clara (*b* Tallmadge, Ohio, 15 Dec 1861; *d* Florida, 6 Nov 1944). Designer. After attending design school in Cleveland, she moved to a boardinghouse at 32 South Oxford Street in Fort Greene, Brooklyn, while she studied at the recently founded Metropolitan Museum Art School. By June 1888 she was employed at the Tiffany Glass Company. She left the following year to marry fellow boarder Francis Driscoll. As was then typical, Tiffany employed only unmarried women, so she ceased working there after her marriage. Upon her husband's death in 1892, she returned and was asked to manage the six female employees of Tiffany's newly established women's glass-cutting department. Within two years, she had 35 young women (the so-called Tiffany Girls) working under her. Over the next decade and a half, Driscoll supervised the execution of numerous Tiffany windows and mosaics; she was also the unacknowledged designer of most of Tiffany's lamps. For much of this time, she lived in a boardinghouse at 44 Irving Place in Manhattan, a short walk from her workplace. She left Tiffany in 1908 or 1909 to remarry. Although highly regarded by Tiffany, which in 1907 took Driscoll and another employee on a three-month sketching tour of Brittany, she was never publicly credited for her designs. Consequently, her contributions remained largely unrecognized until the early twenty-first century, when scholars discovered her letters.

Martin Eidelberg, Nina Gray, and Margaret K. Hofer, *A New Light on Tiffany: Clara Driscoll and the Tiffany Girls* (London: New-York Historical Society, in association with D. Giles, 2007)

Susan Kriete

Dr. Seuss [Geisel, Theodor Seuss] (*b* Springfield, Mass., 2 Mar 1904; *d* La Jolla, Calif., 24 Sept 1991). Illustrator and children's book author. After settling in New York City in the late 1920s Geisel worked for the humor magazine *Judge* as a writer and illustrator, taking the professional name Dr. Seuss. In 1928 Standard Oil hired him to draw advertising cartoons for an insecticide called Flit and Essolube 5-Star motor oil; his motor oil campaign featured characters named Karbo-Nockus and Moto-Raspus. He later wrote his first children's book, *And to Think That I Saw It on Mulberry Street* (1937), about a boy's walk down a New York City street. During World War II Geisel drew cartoons for *PM* magazine and then moved to Hollywood where he produced military training films and newsreels with Frank Capra. He remained in California, later publishing many books, including *The Cat in the Hat* (1957), and becoming arguably the most famous children's book author of the twentieth century.

Kate Lauber

Drug, Hospital and Health Care Employees Union. Labor union. An affiliate was formed in New York City in 1932 as Local 1199.

drug abuse. Efforts to prohibit the sale and use of drugs in New York City began in the late nineteenth century, when the state enacted laws prohibiting the sale of opium and morphine without a physician's prescription. Small quantities could nevertheless still be included in patent medicines, which were not controlled by law, and opium and morphine, as well as heroin and cocaine, could also be obtained from out-of-state mail-order houses until the federal government passed the Pure Food and Drug Act (1906). Early attempts to control the use of cocaine were more successful than efforts to control opiates. Introduced in the United States during the mid-1880s, cocaine was a popular tonic often taken in a wine solution: it was also eaten, injected, sniffed in powder form, and sprayed into the nostrils. Some deaths and a much larger number of chronic users resulting from the uncontrolled, legal use of cocaine eventually gave it a reputation as a deadly, habit-forming drug. In 1907 a state law sponsored by Assemblyman Alfred E. Smith made cocaine obtainable only through a physician, marking the beginning of an attempt at control that culminated in the federal Harrison Act (1914). Gradually cocaine use declined to the degree that the Mayor's Committee on Drug Addiction reported in 1930 that cocaine addiction was no longer a serious problem in the city.

Drug treatment programs were developed partly in response to the growing use of heroin, which became popular among opiate users before World War I and by 1915 was responsible for more admissions to Bellevue Hospital than morphine was. The best-known treatment program in the city was administered at the Towns Hospital, opened by Charles B. Towns, an insurance salesman from the South who moved to New York City in 1907; the hospital treated addiction by administering powerful doses of drugs over three to four days, purging the body and thereby supposedly detoxifying and ending drug craving. In the second decade of the century, the work of Ernest Bishop led to a form of treatment in which heroin addicts were given long-term, stable doses of opium. This treatment proved controversial because of an increasing sentiment that drugs should not be used for any purpose; this debate culminated in a decision by the U.S. Supreme Court in 1919 that prohibited treatment programs relying on indefinite drug maintenance. Despite the disfavor in which drug maintenance was held, New York State had established a network of morphine-maintenance clinics in 1918. One such clinic opened in New York City, but the city's Health Department opposed maintenance and also concluded that these drug treatment programs were ineffective. The goal of drug abstinence remained the standard until after World War II, when Vincent Dole and Marie Nyswander of Rockefeller University persuasively argued that some opiate addicts require indefinite, stable doses of drugs: in their studies a number of habitual addicts were successfully treated with methadone, a synthetic opiate.

As drug use became more widespread during the 1960s, residential drug treatment programs within the city operated by Daytop, Odyssey House, and Phoenix House relied on drug-free techniques, among them intensive group therapy and efforts to instill individual responsibility; like methadone maintenance, this approach suffered from a sharp fall-off in the number of participants in the early stages of treatment. During the 1970s the first attempts were made to end the sale and use of drugs through law enforcement. Laws introduced by Governor Nelson A. Rockefeller and enacted in 1973 mandated minimum prison terms for offenses that earlier had been punishable only by probation. The law increased the number of drug offenders in prison but did not diminish the use of drugs. After cocaine regained popularity during the 1970s, its possession and sale became among the most frequently prosecuted offenses. Eventually cocaine came again to be perceived not as a recreational drug but as a dangerous one linked to violence, paranoia, and dependency, especially when a smokable form of cocaine known as "crack" surfaced in the mid-1980s. Crack had a much stronger effect on the body than cocaine ingested by sniffing and was available at lower cost. Fear of the effects of crack led to an increased emphasis on law enforcement that filled the courts and prisons with drug offenders. Attention shifted to intravenous drug users in the 1980s, when it became clear that AIDS was being spread rapidly by shared hypodermic needles. The casual use of drugs declined in the early 1990s, although the number of habitual users remained high: in the mid-1990s it was estimated that there were 500,000 drug addicts in New York City, including 200,000 heroin addicts.

In 1997 Mayor Rudolph W. Giuliani's administration ordered a crackdown on drug abuse in public spaces and specific problem neighborhoods, such as Washington Square Park, Times Square, northern Manhattan, the South Bronx, and southeast Queens. He supported increased education in public schools through the Drug Abuse Resistance Education (DARE) program. More funding enabled the criminal justice system to implement further drug rehabilitation programs for addicted inmates. Experts estimated that marijuana use during the late twentieth century far surpassed all other illegal drugs in numbers of users. During the early twenty-first century, New York City laws were tightened against marijuana use, possession, and trafficking in order to discourage the use of more harmful drugs like cocaine or heroin. Between 1997 and 2007 the New York Police Department sharply increased the number of marijuana-related arrests and received much criticism, particularly because minorities appeared to be targeted in the crackdown.

In the early twenty-first century, Mayor Michael Bloomberg's office increased funding for programs such as LIFENET, a hotline that connects citizens to thousands of resources for recovery. The Take Care New York campaign further educated the public about the dangers of drug abuse. Business improvement districts, which became widespread in the early twenty-first century, allocated money for campaigns to discourage and curtail drug use in public. In many cases these campaigns were very effective: Bryant Park, for example, had once been notorious for open drug abuse and dealing, but it was completely revitalized by a business improvement district.

David F. Musto, Penelope Gelwicks

Drumgoole, John Christopher (*b* Granard, Ireland, 15 Aug 1816; *d* New York City, 28 March 1888). Priest. He moved to New York City as a child and was apprenticed to a cobbler. He later taught Sunday school, became a sexton, and helped to run a small bookstore. When he was nearly 50 he began studying for the priesthood at St. Francis Xavier College and St. John's College in Fordham, and after his ordination in 1869 he was assigned to St. Mary's Church, where he had been a sexton. He soon focused on helping homeless boys, building the Mission of the Immaculate Virgin to provide a home for 2000 youngsters at a cost of about $1 million, which he raised in charitable contributions.

Katherine Kurz Burton, *Children's Shepherd: The Story of John Christopher Drumgoole* (New York: P. J. Kenedy and Sons, 1954)

James E. Mooney

dry dock district. Former neighborhood in lower Manhattan, bounded to the north by 12th Street, to the east by the East River, to the south by Houston Street, and to the west by Avenue B. The area was the site of many ship fitters and iron works during the mid-nineteenth century; in 1855 the Novelty Iron Works, the Secor Iron Works, Young and Cutter, and Cornelius H. Delameter (builder of the *Monitor*) were among the largest of these firms and employed more than 2000 workers among them. In 1848 the Dry Dock Savings Bank opened at 619 Fourth Street to serve dockworkers, mariners, and mechanics; it was liquidated in 1992. The district is now the location of the northern third of the East River Park and of the Jacob Riis Houses, public housing built in 1949.

Kenneth A. Scherzer

Duane, James (*b* New York City, 6 Feb 1733; *d* Schenectady, N.Y., 1 Feb 1797). Mayor. The son of an Irish-born merchant, he was a clerk in the law office of James Alexander before gaining admission to the New York bar in 1754. He was named attorney general of New York in 1767 and was a member of the De Lancey political faction until his marriage to Maria Livingston in 1759, when he joined the Livingston faction. Despite his reservations about independence, he served in the Continental Congress from 1774 to 1784. A staunch Federalist, he was appointed mayor by Governor George Clinton in 1784, becoming the first to hold the office after the British evacuation. During his tenure, which lasted until 1789, he was instrumental in the city's rapid recovery from the war but was unsuccessful in his efforts to keep the national capital in the city. From 1789 to 1794 Duane was the U.S. district judge for New York State. A street in lower Manhattan is named for him.

Edward P. Alexander, *A Revolutionary Conservative: James Duane of New York* (New York: Columbia University Press, 1938)

David William Voorhees

Duane Reade. New York City drugstore chain. It was named for the location of its first facility, which opened in 1960 on Broadway between Duane and Reade streets. Going public in 1998 it expanded exponentially, often willing to move into less than ideal, and thus cheaper, locations. In 2010 it was purchased

by Walgreens, a national pharmacy chain, for $618 million. At that time it had 150 stores in Manhattan and 229 overall in the city.

Margaret Latimer

Dubinsky, David (*b* Brest-Litovsk, Poland [now Brest, Belarus], 22 Feb 1892; *d* New York City, 17 Sept 1982). Labor leader. He immigrated to the United States in 1911 and began working as a garment cutter. In 1921 he became the general manager of the Amalgamated Cutters' Union, Local 10 of the International Ladies' Garment Workers' Union (ILGWU). After being elected vice president of the union in 1922 he helped it to avoid bankruptcy and defeat a strong communist bid for control. When he became president in 1932, the union had more than $1 million in liabilities and fewer than 40,000 members; with loans and frugal management, supported by the National Industrial Relations Act, he improved the union's finances and increased its membership. He secured many benefits for members, including a 35-hour workweek, expanded union health centers, retirement pensions, death benefits, and two large cooperative housing developments. Dubinsky later organized the Jewish Labor Committee, in 1934 became vice president of the American Federation of Labor (AFL), in the following year formed the Committee for Industrial Organization (CIO; later the Congress of Industrial Organizations) within the AFL, and raised funds for antifascists during the Spanish Civil War.

Dubinsky resigned from the executive council of the AFL in 1936, when it denounced the CIO as illicit and suspended its member unions, including the ILGWU. He kept the ILGWU independent of both federations until 1940, when it rejoined the AFL. With other union leaders in New York City he formed the American Labor Party to give Franklin D. Roosevelt an additional ballot line in the presidential election of 1936. In 1944 he abandoned the party, which he believed had become too leftist, and organized the Liberal Party. During World War II he foresaw a communist threat to labor unions in western Europe and formed the Free Trade Union Committee within the AFL. His long campaign against labor racketeering achieved success in 1957 when the AFL–CIO established a code of ethics. With Alex Rose of the United Hatters, Cap and Millinery Workers International Union he guided Liberals and helped to elect John V. Lindsay mayor of New York City (1965). Dubinsky retired in 1966. With A. H. Raskin he wrote *David Dubinsky: A Life with Labor* (1977).

Robert D. Parmet

DuBois, John (*b* Paris, 24 Aug 1764; *d* New York City, 20 Dec 1842). Bishop. After being educated in Paris he was ordained on 22 September 1787. During the French Revolution he became a refugee, and in August 1791 he moved to Norfolk, Virginia. In 1794 he opened the first Catholic church in Frederick, Maryland. Near Emmitsburg, Maryland, he built a chapel in November 1805 where he eventually opened Mount St. Mary's Seminary, and he was made the director of Elizabeth Ann Seton's first convent when it opened in Emmitsburg in June 1809. He also rode circuit from Pennsylvania to Virginia and was affiliated with the Society of St. Sulpice from 1808 to 1826. His appointment as bishop on 29 October 1826 was soon contested by parishioners, who asserted that he had obtained it through undue influence, and he was forced to refute their charges in 1827. With contributions that he collected in Europe (1829–31) he built a seminary; this was uninsured and in 1834 was destroyed by fire. During the same year, lay trustees at St. Patrick's Cathedral on Mott Street refused to pay a priest whom he had appointed, and eventually they refused to pay him as well. In February 1838 he suffered a stroke that left him unable to continue the administration of the diocese. DuBois is buried beneath the doorstep of St. Patrick's Old Cathedral on Mott Street, apparently at his request, so that people might walk on him in death as they had wished to do in life.

Mary Elizabeth Brown

Du Bois, W(illiam) E(dward) B(urghardt) (*b* Great Barrington, Mass., 23 Feb 1868; *d* Accra, Ghana, 27 Aug 1963). Writer, poet, and civil rights leader. After teaching at Wilberforce and Atlanta universities he formed the Niagara Movement with other black activists in 1905 to protest racial oppression. The movement failed to win either a large following or adequate funds and was superseded in 1909 by the National Association for the Advancement of Colored People (NAACP), which appointed him its director of publicity and research in New York City and the editor of its monthly publication the *Crisis*. Du Bois organized the first Pan-African Congress in 1919 and three subsequent meetings to foster African development and self-determination. His advocacy of "voluntary segregation" as a means of achieving economic development for blacks during the Depression was widely opposed within the NAACP and led to his resignation in 1934. He then returned to Atlanta University but rejoined the association in 1944 to study the global black population. In the following year he was elected international president of the fifth Pan-African Congress (organized by George Padmore). A dispute with Walter White, executive secretary of the NAACP, led to his permanent resignation from the organization in 1948. He became vice chairman of the Council on African Affairs, led by Paul Robeson, and chairman of

W. E. B. Du Bois

the Peace Information Center in 1949 and in 1950 unsuccessfully ran for the U.S. Senate as the candidate of the American Labor Party from New York. During the campaign he was indicted along with other officers of the Peace Information Center for his failure to register as an agent of a foreign government (the center was circulating an appeal to ban nuclear weapons, which the U.S. Department of State considered Soviet propaganda); he was later tried and acquitted. In 1961 he joined the American Communist Party and moved to Ghana. Du Bois published 19 books (including five novels), edited almost two dozen works, and wrote poetry and plays as well as hundreds of articles. His residences in New York City included 650 Greene Avenue (before 1920), the Paul Lawrence Dunbar Apartments at 2594 Seventh Avenue (until 1934), 409 Edgecomb Avenue (1944–51), and 31 Grace Court in Brooklyn Heights (until 1962).

R. L. Harris, Jr.

Dubos, René (Jules) (*b* St. Brice, France, 20 Feb 1901; *d* New York City, 20 Feb 1982). Microbiologist and environmentalist. From 1927 to the end of his life he worked at the Rockefeller Institute for Medical Research (later known as Rockefeller University) where his discovery in 1939 of the soil-borne antibiotic polypeptide gramicidin paved the way for the commercial development of antibiotics. He also examined the effect of pollutants on the environment and successfully led an effort to clean up Jamaica Bay, dedicated in 1987 as the René Dubos Wildlife Preserve. His published writings include *So Human an Animal* (1968), winner of the Pulitzer Prize.

Renee D. Mastrocco

Duchamp, Marcel (*b* Blainville, France, 28 July 1887; *d* Neuilly-sur-Seine, France, 2 Oct 1968). Painter and sculptor. After his painting *Nude Descending a Staircase* (1912) provoked a controversy at the Armory Show (1913) in Manhattan, he moved in June 1915 to New York City where he was associated with the collectors Louise and Walter Arensberg, with whom he lived for several months at 33 West 67th Street, and took part in the dada movement; he remained in the city until 1918. Duchamp soon abandoned conventional painting and created sculpture from diverse found objects: a bicycle wheel, a snow shovel, a urinal. Between 1915 and 1923 he completed his most important work, *The Bride Stripped Bare by Her Bachelors, Even,* also known as *The Large Glass.* He returned permanently to New York City in 1942 and helped to mount the exhibition *First Papers of Surrealism.* Duchamp is regarded as the founder of conceptual art. The Museum of Modern Art owns examples of his work.

Judith Zilczer

Duchin, Eddy [Edwin Frank] (*b* Cambridge, Mass., 1 April 1909; *d* New York City, 9 Feb 1951). Bandleader and pianist. He moved to New York City in 1928 to play with Leo Reisman's group at the Waldorf=Astoria. After three years he left to form his own orchestra, which performed regularly for members of fashionable society at the Central Park Casino. His radio program *Hour of Charm* was broadcast locally, and he played at many hotels. Duchin was known for his elegant image and sophisticated piano improvisations. His son Peter later organized a similar band in the 1960s.

Marc Ferris

Dudley, Edward R. (*b* South Boston, Va., 11 March 1911; *d* New York City, 8 Feb 2005). Attorney and public official. After serving as legal counsel to the governor of the U.S. Virgin Islands, he became in 1948 the first African American ambassador to Liberia. He was later a judge in the domestic relations court and the New York State Supreme Court and an administrative judge of the New York Criminal Court. From 1961 to 1964, Dudley was Manhattan Borough President.

Kathleen Benson

Duer, William (*b* Devonshire, England, 18 March 1747; *d* New York City, 7 May 1799). Financier and statesman. After settling in New York City in 1768, he set up a lumber firm north of Saratoga, New York. A delegate to the Provincial Congress in 1775 and the Continental Congress in 1777, on which he served on the Board of War, he was deputy adjutant general of Continental troops from New York and signed the Articles of Confederation. During the American Revolution he won supply contracts for both American and French soldiers from the army that allowed him to become wealthy. In 1776 he was appointed to the colony's Committee of Safety and the Committee for Detecting Conspiracies. Duer helped to form the Bank of New York in 1784, was an assistant secretary of the U.S. Treasury, and speculated in land and stocks. In 1786 he served in the state assembly. In 1792 he and Alexander Macomb tried to profit off of information he gained through his experience as assistant secretary to the Treasury by buying up stock of the Bank of New York in anticipation of its buyout by the Bank of the United States. This plan was sabotaged by the Livingston family of New York, who withdrew their massive savings from the Bank of New York, forcing interest rates to soar and Duer into debt. His imprisonment for debt in 1792 set off the first financial panic in New York City, which Alexander Hamilton, as the secretary of the Treasury, calmed by having the Treasury buy several hundred thousand dollars of securities to restore investor confidence. Duer was sent back to prison as a debtor and died there seven years later.

James E. Mooney, Henry Cooper

Duffy, Francis P(atrick) (*b* Ontario, 2 May 1871; *d* New York City, 26 June 1932). Priest. After receiving his education in Ontario, he was ordained on 6 September 1896 and became an American citizen on 7 June 1902. He taught at St. Joseph's Seminary from 1898 to 1912, edited the *New York Review* (1905–7), and moved to New York City to form the Church of Our Savior in the Bronx (1912–16). Appointed chaplain of the 69th Regiment in 1914, he served at the Mexican border (1916–17) and in France (1917–18). From 1920 to 1932 he was the pastor of Holy Cross, near which a statue of him was built in Times Square. Duffy is best known for his military assignments during World War I.

Mary Elizabeth Brown

Dulles, John Foster (*b* Washington, D.C., 25 Feb 1888; *d* Washington, D.C., 24 May 1959). Statesman. The son of a distinguished Presbyterian pastor, he graduated from Princeton University in 1908 and attended the Sorbonne and later George Washington University. In 1911 he joined the law firm of Sullivan and Cromwell in Manhattan. Paid only $50 a week at the outset because he lacked a law degree, by 1920 he was a partner in the firm. He became its chief operating partner in 1927 and eventually was reported to be the highest-paid lawyer in New York City. From the 1920s he lived at 72 East 91st Street. A specialist in international finance, he settled bondholders' claims against the Kreuger match empire. He also was an adviser to the American delegation at the conference in San Francisco regarding the establishment of the United Nations, advised Thomas E. Dewey on foreign policy, and was the main architect of the peace treaty with Japan after World War II. As secretary of state under President Dwight D. Eisenhower, Dulles pursued policies of brinkmanship and massive retaliation that intensified tension during the cold war.

George J. Lankevich

dumbbell tenements. The predominant tenements erected for workers between 1879 and 1901, named for their shape and based on a design by James E. Ware calling for two

tenements connected one behind the other by a hallway. Ware's design won a competition in 1878 (sponsored by the journal *Plumber and Sanitary Engineer*) to design a tenement for a lot measuring 25 by 100 feet (8 by 30 meters); it was widely adopted after New York State passed the Tenement House Law of 1879 requiring a window in every residential bedroom. Dumbbell tenements were usually five to seven stories tall and had 14 rooms on each floor, seven on each side from front to back, divided into two four-room apartments in front and two three-room apartments in back. The four apartments shared two toilets, and the windows in 10 of the 14 rooms opened onto an air shaft less than 5 feet (1.5 meters) wide formed by the indented hallway sections of abutting tenements. Enclosure on all sides made the shaft dark and airless, and it often became a garbage dump and a fire hazard. From the start the design was criticized for sacrificing the interests of tenants to those of landlords, builders, and real estate agents. Dumbbell tenements housed about two-thirds of the city's population, or 2.3 million people, by the time their construction was outlawed by the Tenement House Law of 1901. Existing dumbbell tenements continued to house tens of thousands of New Yorkers into the twenty-first century.

DUMBO. Brooklyn neighborhood (2000 pop. 2500) bounded to the north by the East River, to the east by Bridge Street, to the south by the Brooklyn–Queens Expressway, and to the west by Main Street. The arc of the Manhattan Bridge is the spine above the area, hence the acronym DUMBO, for Down Under the Manhattan Bridge Overpass. Before the American Revolution, the Loyalist John Rapalje owned the land. In 1784 Comfort and Joshua Sands purchased it, and by 1787 they subdivided the tract into building lots for a village called Olympia. The horse-powered New Ferry began service from Main Street to Manhattan in 1795. The same proximity to Manhattan and the river that made Olympia an eighteenth-century summer retreat helped transform it into a nineteenth- and twentieth-century industrial center. Homes gave way to warehouses and factories that made boxes; tin cans for food, kerosene, and paint; paper packaging for coffee and sugar; and metal kitchenware, pasta, shoes, paint, and soap. Eliphalet W. Bliss made a machine that rolled metal into tin cans; here his company also built metal-molding machinery for others. Robert Gair, who invented a machine for making paper boxes, erected at least 10 factories in the area and pioneered the use of reinforced concrete in factory building after 1904. Gair also built a pier, a powerhouse, and a stable and connected his works by rails, tunnels, and bridges. The western part of the neighborhood was nicknamed Gairville. In the 1930s and 1940s industry began to leave. Houses and shops were demolished when the anchorage and support piers of the Manhattan Bridge were built (1909). Completion of the Brooklyn–Queens Expressway further isolated the area. In the 1970s artists rediscovered the neighborhood's stone-paved streets and factory lofts, some of which continued to house workshops. In 1981 developer David C. Walentas purchased the Gair complex. His plans for a shopping mall and hotel aroused opposition, but since the late 1990s he and other developers have carved housing out of old factories and built new apartment buildings. In 2001 the city and state began developing the waterfront as Brooklyn Bridge Park. DUMBO has been designated a state historic district; development and rising rents remain contentious issues among its artists, small manufacturers, newcomers, and developers.

Dun and Bradstreet. Financial rating service. Its precursor was formed in 1841 by Lewis Tappan to provide the credit ratings of retailers to wholesale merchants in New York City. In 1849 Tappan sold his interest in the agency to his brother Arthur Tappan and to Benjamin Douglass, who in 1854 purchased Tappan's interest, changed the name of the firm to B. Douglass and Company, and expanded it to a national scale. In 1855 John M. Bradstreet, the agency's strongest competitor, moved his headquarters from Cincinnati to New York City and began publishing credit ratings in a book that he made available by subscription. The service proved popular and was easily imitated by, among others, Robert Graham Dun, who purchased Douglass's business in 1858 and in the same year began publishing the *Mercantile Agency's Reference Book.* In 1930 Dun's firm absorbed the National Credit Office, and in 1933 it merged with Bradstreet's firm. In the 1990s Dun and Bradstreet restructured and spun off several of its companies, and since 2000 it has split into two companies, launched a new corporate brand called D&B, and moved its headquarters to suburban Short Hills, New Jersey.

Dunbar, Paul Lawrence (*b* Dayton, Ohio, 27 June 1872; *d* Dayton, 9 Feb 1906). Poet and novelist. He first visited New York City in 1896 to give a series of poetry readings and lived briefly at 131 West Third Street in May and June 1899. His earliest works were poems, some in Afro-American dialect and others in standard English. He also wrote four novels, of which the first three dealt with white characters and the last with black characters and themes, like most of his short stories. Although Dunbar lived most of his adult life in Washington, D.C., he used New York City in such works as his short stories "Finding of Zach," "One Christmas at Shiloh," and "The Trustfulness of Polly," and the novel *The Strength of Gideon* (1900). Episodes from the novel *The Sport of the Gods* (1902) are set in the Banner Cafe in the Tenderloin. Central themes of his work were the false ideals of blacks and the adversities of northward migration and adaptation to the urban environment. Dunbar also wrote lyrics to the musicals of Will Marion Cook, including *In Dahomey* (1902). He was the first black writer to achieve national fame and a major influence on the writers of the Harlem Renaissance.

George A. Thompson, Jr.

Dunbar Apartments. Cooperative apartment complex in Manhattan, financed by John D. Rockefeller, Jr., designed by Andrew J. Thomas, and consisting of six garden apartment buildings arranged in the shape of a horseshoe around a courtyard; it was built between 1926 and 1928 on a site bounded by 150th Street, Adam Clayton Powell Jr. Boulevard, 149th Street, and Frederick Douglass Boulevard. Named for the poet Paul Lawrence Dunbar, it was the first development of its kind built for blacks. Units of four, five, and six rooms were offered for a down payment of $150 and $50 a room. Among the amenities were a nursery and kindergarten, a playground, a club room for older boys, an athletic field, men's and women's clubs, vocational guidance for tenants, stores, and the Dunbar National Bank, the first large bank in Harlem to have a black manager and staff. Many tenants defaulted on mortgage and maintenance payments during the Depression, forcing Rockefeller to foreclose on the mortgage in 1936; he returned the equity to the tenants, who were allowed to remain as renters. Well-known residents included the poet Countee Cullen, the writer W. E. B. Du Bois, the actor Paul Robeson, the tap dancer Bill "Bojangles" Robinson, the labor leader

A. Philip Randolph, and the explorer Matthew A. Henson. The Dunbar Apartments were designated a city landmark in 1970.

Eric Wm. Allison

Duncan, Isadora (*b* San Francisco, Calif., 27 May 1878; *d* Nice, France, 14 Sept 1927). Dancer and choreographer. At the age of 10 she left school to conduct her own dance classes, and in 1896 she moved to New York City with her mother to pursue a stage career. She left for London in 1900 and developed an infatuation with Europe that lasted throughout her life. Inspired by Greek antiquity, she rejected ballet and introduced a distinctive style characterized by flowing movements and the use of translucent gowns. During 1914–15 she lived at 303 Fourth Avenue where she also ran a studio. Duncan became widely known during World War I for her sexually provocative dancing, her publicly noted liaisons, and her frequent criticism of conventional marriage. She lived at 118 West 57th Street during 1922–23. Her autobiography, *My Life,* was published in 1927.

Peter M. Rutkoff, William B. Scott

Duncan, John H(emenway) (*b* New Orleans, 1854; *d* Highland Beach, N.J., 18 Oct 1929). Architect. He grew up in Binghamton, New York, and in 1879 moved to New York City to begin his practice. He gained prominence by winning competitions for the Brooklyn Soldiers' and Sailors' Memorial Arch (1892) and for Grant's Tomb (1897), and later designed the Knox Building at 452 Fifth Avenue (1902), private houses at 7 West 54th Street (1900) and 16 East 67th Street (1905), and the twin structures at 16 and 18 East 71st Street (1911). Duncan's adherence to principles of classical architecture put him at odds with the styles prevailing after World War I.

Elliott B. Nixon

Dunham, Katherine (*b* Chicago, 22 June 1909; *d* New York City, 21 May 2006). Dancer, choreographer, and artistic director. She studied modern dance and ballet, attended the University of Chicago (MA, anthropology), and undertook fieldwork in Haiti and Jamaica. In New York City she formed a dance company in 1939 for which she did her own choreography, effecting an innovative fusion of Afro-Caribbean and European forms. The company was acclaimed worldwide and trained several hundred dancers. During the 1940s and 1950s she worked on Broadway and in Hollywood, and from 1945 to the mid-1950s she taught at the Dunham School of Dance in New York City. After her company disbanded in 1967, Dunham moved to East St. Louis, Illinois, where she opened the Performing Arts Training Center

Katherine Dunham performing in a theatrical production of Tropical Revue

(now called the Katherine Dunham Centers for Arts and Humanities). In 1977 she opened the Katherine Dunham Museum and Children's Workshop there. She was the recipient of a Kennedy Center Honor's Award (1983) and the Samuel H. Scripps American Dance Festival Award (1987); in 1987 she was inducted into the Hall of Fame of the National Museum of Dance in Saratoga Springs, New York. In New York City Dunham directed a program of her works called "The Magic of Katherine Dunham" for the 1987–88 season of the Alvin Ailey American Dance Theater. Gaining international attention in 1992, she began a 47-day fast in her home in response to Haiti's political turmoil; she was 82 at the time. Dunham remained active and attended events through her final months until she died in her Manhattan home at the age of 96.

Meryl Cates, Brenda Dixon Gottschild

Dunlap, William (*b* Perth Amboy, N.J., 19 Feb 1766; *d* New York City, 28 Sept 1839). Painter and playwright. In 1784 he went abroad to study with painter Benjamin West. Captivated by theater in London, he returned to Manhattan to write plays, many of which were later produced. From 1796 to 1805 he managed the Old American Company, a position that gave him virtual control of theater in New York City but after several years left him bankrupt and fatigued. Although he remained a prolific writer, he derived most of his income after about 1810 from painting miniatures, portraits, and religious pictures such as *Christ Rejected* (1822) and *Death on the Pale Horse* (1824). An active member of the American Academy of the Fine Arts, he joined with Samuel F. B. Morse to found the National Academy of Design in 1826. Dunlap wrote *History of the American Theatre* (1832) and *History of the Rise and Progress of the Arts of Design in the United States* (1834).

Carrie Rebora Barratt

Dunne, Finley Peter (*b* Chicago, 19 July 1867; *d* New York City, 24 April 1936). Satirist. After working as an editor in Chicago he wrote commentaries in Irish dialect from 1893 as the reformist "Mr. Dooley." He moved to New York City in 1901 where his column appeared in the *New York Times,* the *American Magazine,* and *Collier's,* which he also edited. In perhaps his best-known piece he had Mr. Dooley describe his friend "Prisidint Tiddy Rosenfelt" and coined the line: "no matther whether th' constitution follows th' flag or not, th' Supreme Court follows th' iliction returns."

Elmer Ellis, *Mr. Dooley's America: A Life of Finley Peter Dunne* (New York: Alfred A. Knopf, 1941)

Michael Green

Dunton. Name formerly applied to a section of north central Queens south of the Long Island Rail Road between 127th Street and the Van Wyck Expressway. It was developed from 1889 as West Jamaica on the land of several farms acquired by Frederick W. Dunton, a nephew of Austin Corbin who was active in real estate. The name Dunton was adopted in 1890 by a vote of local residents, soon after which Dunton Park opened between Liberty and 109th avenues. Eventually the area became a model community of one-family houses. The population was predominantly German, Irish, and Italian, many of whom were Jewish. After World War I it was absorbed into Jamaica.

Vincent Seyfried

Durand, Asher B(rown) (*b* Jefferson Village [now Maplewood], N.J., 21 Aug 1796; *d* Jefferson Village, 17 Sept 1886). Painter. He was apprenticed to the engraver Peter Maverick in 1812 near Newark, New Jersey, and in

Asher B. Durand

1817 became Maverick's partner and moved to New York City. His reputation was secured by an engraving (1820–23) after John Trumbull's painting *The Declaration of Independence.* A member of the New-York Historical Society (1821) and the Bread and Cheese Club (1825), he helped to form the New-York Drawing Association (1825), the National Academy of Design (1826), of which he was the second president (1845–61), the Sketch Club (1827), and the Century Association (1847). After receiving a commission for a series of presidential portraits from Luman Reed in 1835, he was able to devote himself entirely to painting. A trip with Thomas Cole to the Adirondack Mountains in 1837 led him to turn to landscape painting; scenes of New York State and New England were his preferred subjects. He traveled to Europe (1840–41) and after Cole's death became the acknowledged leader of the Hudson River School. Inspired by writings of the English critic John Ruskin, he modified his picturesque style in the early 1850s with elements derived from studies of nature. In his "Letters on Landscape Painting" (1855), nine essays published in the periodical the *Crayon* that stated the theories of the Hudson River School, he argued that the faithful depiction of nature could reveal the presence of God. Durand retired to the village of his birth in 1869.

Timothy Anglin Burgard

Durant, Will (*b* North Adams, Mass., 5 Nov 1885; *d* Los Angeles, 7 Nov 1981). Writer, philosopher, and historian. Raised in a religious family, Durant turned away from Christianity in 1905 and soon after became a reporter for the *New York Evening Journal.* He became a socialist and taught at New York City's experimental Ferrer Modern School, where he met his wife, Ariel. He received his PhD in philosophy from Columbia University in 1917 and went on to write a book of essays on thinkers from Plato to John Dewey called *The Story of Philosophy* (1926). The book sold over two million copies in three years. He and Ariel spent the next 50 years writing *The Story of Civilization*, an 11-volume history in which they attempted to encapsulate all of Western political, social, and intellectual history. The 11 books were widely read, and in 1968 Durant won the Pulitzer Prize. Durant divided his time between New York City and Los Angeles.

Nicholas Kelly

Durocher, Leo (*b* West Springfield, Mass., 27 July 1905; *d* Palm Springs, Calif., 7 Oct 1991). Baseball player and manager. He played second base and shortstop in the major leagues from 1925 to 1945, including stints with the Yankees (1925–29) and the Brooklyn Dodgers (1938–45). Durocher became the Dodgers' manager in 1939 and proved instantly successful, leading them to their first winning season in six years and to the National League title in 1941. An outspoken manager known for his fiery disposition, combative style, and the quotation "Nice Guys Finish Last," he feuded with the Brooklyn ownership and was fired mid-season in 1948. The New York Giants then hired him, and Durocher led them in 1951 to the National League title (after a one-game playoff against Brooklyn) and in 1954 to a World Series victory over the Cleveland Indians.

Ben Silk

Durst, Seymour B. (*b* New York City, 1913; *d* New York City, 19 May 1995). Real estate investor and developer. Born in Washington Heights, he attended Horace Mann School in Riverdale, the Bronx, and the University of Southern California (BA, accounting, 1935). In 1940 he joined his family's real estate firm, the Durst Organization, and became president in 1974 when his father died. The Durst Organization mainly developed the midtown area, both east and west; from 1965 to 1975 he owned or held options on about 10 acres (4 hectares) of midtown land. He was known for his criticism of government intervention in real estate. During the 1970s he founded, with the financier Irving Kahn, the New York City Job and Career Center to teach job skills to high school students. In the twenty-first century it was still performing these services. He had a passion for New York City history and collected books, maps, prints, and signs that eventually became the Old York Library, now at the Graduate Center of the City University of New York. He was featured among the Forbes 400 richest Americans in the years 1985 and 1991. In 1989 he established the National Debt Clock—a billboard-sized, constantly updating sign that shows a running total of the gross national debt—in Times Square at 43rd Street and Sixth Avenue (it was moved to Bryant Park in 2004). He lived in a townhouse on East 61st Street until his death.

Jessica Montesano

Duryea House. Historic house in Brooklyn. It was built about 1740 as a gabled, Dutch colonial farm cottage in the village of New Lots (now the neighborhood of East New York) soon after its site of 100 acres (40 hectares) was acquired by Christian Duryea, a Huguenot. Duryea's descendants retained ownership of the house until 1886. The last owner of the house, Frederick Eversley, died in 1982. At the time there were only about a dozen eighteenth-century farmhouses remaining in the city, and preservationists hoped to maintain the Duryea House by moving it to a public park nearby. However, before its transfer to the city could be negotiated, the house was destroyed by fire in November 1989.

Jonathan Kuhn

Dutch. The Dutch first came to what is now New York City in 1609 during an expedition commissioned by the Dutch East India Company and led by the English explorer Henry Hudson. He sailed into the harbor on 3 September and explored the river that would be named for him after the English took control of the region in 1664. A colony called New Netherland was formed in 1614 in the area between the Delaware and Connecticut rivers. Commercial activity was initially centered at Fort Orange (near what is now Albany). In 1621 the Dutch West India Company (WIC) was created by the States General of the Netherlands; its charter provided for 19 directors, minimal supervisions by the States General, and a monopoly on Dutch trade in a large area extending as far east as West Africa and as far north as Newfoundland. Because its domain was so vast the company virtually ignored New Netherland until 1624, when it sent about 30 families and some single men, mostly Protestant Walloons from the Spanish Netherlands, to set up farms. While most of the colonists were settled at Fort Orange, a few were settled near the mouth of the Delaware River and on Nutten Island (now Governors Island), and some of these were moved in 1625 to Manhattan Island, where they were joined in the following year by settlers fleeing attacks by Indians at Fort Orange. In 1626 Peter Minuit, the company's leading official, bought Manhattan from local Indians for blankets, cloth, metal goods, and trinkets then worth 60 guilders. The colonists near the Delaware were moved to Manhattan in June 1627.

Manhattan's harbor and strategic location soon made it the colony's main settlement. A temporary stockade at its southern tip was replaced by a permanent one of earth and stone that was named Fort Amsterdam by the company, and the settlement became known as New Amsterdam. Makeshift houses around the fort were gradually replaced by more substantial ones. Many were tall and narrow and designed in a traditional Dutch style with stepped gables, and some were built of brick that had been carried to the colony as ballast. The main streets included Tuyn Straet (Garden Street) and Hoogh Straet (High Street). Two canals were built at what are now Beaver and Broad streets, and swampland was drained, filled, and converted into farmland. The main occupations were farming, producing ships' stores, lumbering, and fur trading. A *ziekentrooster* (comforter of the sick) was sent to the colony in 1624 as a lay preacher, followed by another in 1626 and the ordained

minister Jonas Michaelius in 1628, who organized the Reformed Church there, a forerunner of the Collegiate Church. Religious services were initially on the second story of an old mill until a crude wooden church was built; this was replaced in 1642 by a stone church that stood inside the fort and was named St. Nicholas Church after the patron saint of the Netherlands. Children were educated by the church until 1638, when the schoolmaster Adam Roelantsen was sent to the colony and opened a school that eventually became the Collegiate School. There were 200 colonists and about 30 houses by the end of 1626, and 270 colonists by 1628.

During the 1630s colonists built settlements on land that eventually became part of Staten Island, Brooklyn, Queens, and the Bronx. A temporary settlement in Staten Island took form as early as the 1630s. By the mid-1630s a few settlers lived in Breuckelen (the forerunner of Brooklyn, named after a village in the Netherlands); informal ferry service soon connected the settlement with New Amsterdam, and as farmland became available for settlement a number of villages were built, including Midwout (Flatbush) and Amersfoort (Flatlands). In 1639 land north of the Harlem River was settled by the Danish captain Jonas Bronck. Land in Queens was bought from Indians during the same year and later became the site of an English settlement called Flushing, after the port city of Vlissingen in the Netherlands. The colonial governors, later called directors-general, were appointed by the WIC and ruled solely according to its wishes. The governors' oppressive policies toward the Indians promoted discontent in the colony. This was especially true of the policies of Willem Kieft (1637–47), which led to several bloody encounters between Indians and settlers. Occasionally the colonists became sufficiently disgruntled that remonstrances and delegations were sent to the company's directors, and the States General requested that the basis of the colonial government be broadened. Such measures were largely ignored in New Amsterdam until the administration of Petrus Stuyvesant (1647–64) as governor general. In April 1652 he was instructed to form a municipal government modeled on those in the Netherlands. Early in the following year appointments were made for five *schepens* (aldermen), a *schout* (sheriff and city attorney), and two *burgomasters;* these officials met weekly, and objections to their decisions could be raised with the company's directors. Despite additional reforms the government was never truly representative: director-general Stuyvesant continued to exercise broad powers and chose his associates from among the heads of elite families.

New Amsterdam attracted few settlers. In 1653 a fortified wall was built between the Hudson and East rivers along the northern end of the town; a wagon road running alongside it later became known as Wall Street. A census taken in 1656 showed that the town had only 120 houses and about 1000 inhabitants. To increase the population, orphans and children from poorhouses were sent from the Netherlands in 1655 and 1659, and indentured servants were also sought. In addition to the Dutch there were Germans, English, Scandinavians, Walloons, French Huguenots, and African slaves. Among the religious groups in the town were Lutherans, Quakers, English Independents, Anabaptists, Catholics, and Jews. The official denomination was the Calvinism of the Reformed church, but the company urged tolerance for fear that bigotry might threaten trade and discourage immigration; religious toleration was almost a necessity. Sephardim fleeing persecution in Brazil first moved to the colony in 1654. Permission was given on 4 March 1658 to form a village called Nieue Haarlem north of New Amsterdam. The first permanent settlement on Staten Island, Oude Dorp (Old Town), was formed in 1661. The English soon considered New Netherland an impediment to English settlements to the north and south, and conflicts with the Dutch over boundaries and trade, especially on Long Island and in what is now Connecticut, led King Charles II to grant the colony to his brother James, the duke of York, in March 1664. Colonel Richard Nicolls was then sent to seize the colony, accompanied by four warships and hundreds of soldiers. On 28 August his force sailed into New Amsterdam and set up a blockade. The city was virtually defenseless: the walls of the fort were never intended to withstand attack by a fleet and lay in disrepair, less than one-third of the supply of gunpowder was usable, and enthusiasm for fighting was so low that only about 150 soldiers could be deployed. Although Stuyvesant was determined to resist, cooler heads prevailed and New Amsterdam formally surrendered on 8 September without a shot fired. The rest of New Netherland soon did the same. Fort Amsterdam and New Amsterdam were respectively renamed Fort James and New York City, and the English conquest was recognized by the Treaty of Breda (July 1667), which ended the Second Anglo–Dutch War.

Life changed little for the Dutch under English rule. By the terms of surrender they were given the same rights as English citizens. Dutch and English members of the upper class shared almost equally in the city's administration, and Dutch culture and institutions remained dominant. As there were few unmarried English women, intermarriage between the English and Dutch became common. Families often attended the Reformed church, which continued to conduct services in the Dutch language. Dutch families learned English, and merchants and traders began to adopt English customs. English rule was interrupted briefly in August 1673, when a Dutch naval force commanded by Cornelis Evertsen de Jonge and Jacob Benckes entered the harbor and forced the English garrison to surrender within a few days; the victors renamed the city New Orange, after the Dutch royal family, and soon recaptured other former Dutch settlements. The colony reverted to England by the treaty of Westminster (February 1674), ending the Third Anglo–Dutch War, and the name New York City was restored. The relationship between the Dutch and the English in the colony remained complex. The ascension of William of Orange to the English throne in February 1689 fostered greater cooperation between them, but divisions surfaced later that year, when the Dutch masses, resentful of English rule, supported Leisler's Rebellion, which was opposed by virtually all the English (as well as by Dutch merchants, officials, and clergymen). The rebellion was put down in 1691 but remained a divisive political issue in the city for years afterward.

In 1749 the Swedish botanist Peter Kalm wrote that the Dutch remained the largest segment of the population in both the city and the colony. The clergy of the Reformed church supported the patriots of the American Revolution, whom families such as the Van Cortlandts, the Frelinghuysens, the Rutgers, and the Schuylers aided. (George Washington referred to New York and New Jersey as his "loyal Dutch belt.") The first federal census (1790) showed that 80,000 Dutch immigrants and descendants of Dutch settlers lived within 50 miles (80 kilometers) of the city. But the number of Dutch immigrants decreased steadily after 1673 until the mid-nineteenth century, and the importance of Dutch culture gradually eroded as the city became more heterogeneous. The Dutch language was nonetheless common in the city until the end of the nineteenth century, and during legislative debates about a new state constitution in 1846 it was suggested that literacy in both English and Dutch be a requirement to vote. A number of Dutch families became members of the city's political and mercantile elite: the Van Cortlandts, Stuyvesants, Vanderbilts, and Van Rensselaers, and later the Roosevelts and Van Wycks. Between 1945 and 1965 about 80,000 Dutch immigrants moved to the United States, and many settled in New York City. More than 20,000 people in the city reported to be of Dutch ancestry in 2007.

No Dutch residential quarter was ever formed in the city, but Dutch customs were preserved in the work of such writers as James Fenimore Cooper, Harold Frederic, Charles Fenno Hoffman, David Murdoch, James Kirke Paulding, and Washington

Irving, whose 1809 mock epic *A History of New York* was supposedly written by Diedrich Knickerbocker, an eccentric antiquarian whose name was adopted by a school of writers, a hospital in Manhattan, a magazine, a hotel, a baseball team and a basketball team, and a brand of beer. The St. Nicholas Society was formed in 1835 and the Holland Society in 1885, which from 1922 published a historical quarterly, *De Halve Maen* (The Half Moon). From 1903 the Netherland Club of New York was a private association for professionals and executives, and the Queen Wilhelmina Chair in the history, language, and literature of the Netherlands was inaugurated in 1913 at Columbia University. In the early twenty-first century New York City had a number of well-preserved examples of Dutch colonial architecture, including Dyckman House in Inwood (the only farmhouse of its kind remaining in Manhattan), Voorlezer House (at Richmondtown Restoration), the Lefferts Homestead in Flatbush, the Wyckoff House in Sheepshead Bay, the Lent Farmhouse in Steinway, and the Cornelius Van Wyck House in Douglaston Manor.

Thomas E. Bird, Gerald F. De Jong, Charles Gehring

Dutch Farms. Name used until about 1845 by Concord.

Dutch Hill. A shantytown on the East Side of Manhattan in the mid-nineteenth century, near the intersection of 39th Street and First Avenue. Like most squatter settlements of the time it was situated north of the built-up area of the city. The inhabitants were predominantly German and Irish immigrants. Many worked at the nearby Voorhis and Mott quarries. By the end of the Civil War the growth and northward movement of population made real estate in the area valuable, and the squatters were displaced.

Kenneth T. Jackson

Dutch Kills. Neighborhood in northwestern Queens, lying within Long Island City and largely occupied by Queens Plaza at the western end of the Queensboro Bridge. The area was an important road junction in the American Revolution, and the British set up camps there during their occupation of the city from 1776 to 1783. There were scattered farms during the nineteenth century. The hamlet joined Hunter's Point, Ravenswood, Astoria, and Steinway to form Long Island City in 1870. The name is still used locally, and there is a Dutch Kills Community Association.

Vincent Seyfried

Dutch Reformed Church. Original name of the Reformed Church in America.

Dutchtown (i). Alternative name of Kleindeutschland.

Dutchtown (ii). Former neighborhood in northwestern Brooklyn, lying east of Williamsburg and mostly along Scholes Avenue, Meserole Street, and Montrose Avenue. It was settled in the early 1840s by German immigrants who were unwelcome in Williamsburgh, which was mostly Irish and English. The German Savings Bank opened in 1866 on Montrose Avenue, and St. John the Evangelist Lutheran Church was formed on Ten Eyck Street. There was also a local newspaper, the *Triangel.* Germans were eventually accepted in Williamsburgh and by the end of the nineteenth century were its dominant ethnic group.

James Bradley

Duyckinck, Evert A(ugustus) (*b* New York City, 23 Nov 1816; *d* New York City, 13 Aug 1878). Writer and editor. He was the son of a successful publisher and bookseller on Water Street in Manhattan who was in turn a descendant of Everett Duÿckinck, a painter and glazier who sailed to America from the Netherlands with the Dutch West India Company. In 1835 Duyckinck graduated from Columbia College; he studied law and was admitted to the bar, but never practiced. He belonged to the group known as "Young America," which espoused literary nationalism and campaigned for fairness in international copyright laws. He was acquainted with many of the great writers of the nineteenth century, including Herman Melville, Edgar Allan Poe, Washington Irving, and James Fenimore Cooper. Duyckinck also published works by Nathaniel Hawthorne and William G. Simms as the editor of the Library of American Books (1845–47) and by Charles Dickens, Thomas Carlyle, and Johann Wolfgang von Goethe as the editor of the Library of Choice Reading.

Mary B. Bowling

Dvořák, Antonín (Leopold) (*b* Nelahozeves, near Kralupy, Bohemia, 8 Sept 1841; *d* Prague, Czechoslovakia, 1 May 1904). Composer. In June 1891 he was invited to assume the directorship of the National Conservatory of Music in New York City by its founder Jeannette Thurber, and after accepting a two-year appointment he arrived in the city in September 1892. He lived with his family in a four-story building at 327 East 17th Street. In addition to teaching at the conservatory he composed several works while living in the city, including his symphony *From the New World* (also known as the *New World Symphony;* given its premiere at Carnegie Hall on 16 December 1893) and his Cello Concerto in B Minor (November 1894 to February 1895). He returned to Prague in 1895.

Dyckman House. Historic house in Manhattan, at 204th Street and Broadway in Inwood. It was built about 1785 by William Dyckman, a grandson of the Westphalian immigrant Jan Dyckman, who settled the area in 1661. The house was sold in 1868 but reacquired by the family in 1915, restored, and given to the city. It is made of fieldstone, brick, and white clapboard and has a typically Dutch gambrel roof. The summer kitchen at the south end may predate the rest of the house; the front and back porches were added in 1825. There are period rooms, including parlors and a colonial kitchen, as well as exhibits of artifacts from the area. Dyckman House is the last remaining farmhouse in Manhattan.

Jonathan Kuhn

dyes. The manufacture of dyes is discussed in the entry Paints, dyes, and varnishes.

Dyker Heights. Neighborhood in southwestern Brooklyn, bounded to the north by Eighth Avenue and 62nd Street, to the east by New Utrecht and 18th avenues, to the south by Gravesend Bay and Fort Hamilton, and to the west by Eighth Avenue and Fort Hamilton Parkway; it encompasses Dyker Beach Park on Gravesend Bay and the huge Dyker Beach Golf Course to its north. Once part of the town of New Utrecht, the area is often considered a section of Bay Ridge. It may have been named for two Van Dykes who helped to divide the land in 1719 or for the dikes used to drain and reclaim marshland that once covered most of the area. It remained largely rural into the early twentieth century when developers built a number of one- and two-family houses. Mansions along 11th Avenue afforded magnificent views of the Narrows and Gravesend Bay. A business district developed along 13th Avenue. In the twenty-first century the neighborhood is chiefly residential. Most of the housing consists of one-family detached houses, and the population

is predominantly Italian; many families have lived there for four or five generations and put up elaborate, brightly lit lawn displays at Christmastime.

Ellen Marie Snyder-Grenier

Dylan, Bob [Zimmerman, Robert Allen] (*b* Duluth, Minn., 24 May 1941). Singer, songwriter, and one of the most influential figures in the history of rock music. While growing up in Minnesota, he taught himself the guitar and harmonica and played in rock bands as a teenager. In January 1961 he moved to Greenwich Village where he began performing at nightclubs and coffeehouses under his new surname, taken in honor of poet Dylan Thomas. His performances of traditional folk songs and original compositions, his unique "talkin' blues" singing style, and his witty monologues earned him a devoted following and contributed to the rise of Greenwich Village as a center of popular culture. In April 1961 he was the opening act for John Lee Hooker at Gerde's Folk City on MacDougal Street. A favorable review in the *New York Times* by Robert Shelton soon led to a contract with Columbia Records, for which Dylan recorded such influential protest songs as "Blowin' in the Wind," "A Hard Rain's A-Gonna Fall," and "Like a Rolling Stone." During his 12 years living in New York City (1961–73), his music evolved from acoustic folk to a more electric sound, inspiring such classic rock musicians as the Beatles and Jimi Hendrix and contributing to the rise of rock music as social and political commentary. An active supporter of human rights, he performed at the 1963 March on Washington for Jobs and Freedom and the Live Aid concert in 1985. In 2004 he wrote an autobiography of his time in New York titled *Chronicles: Volume One.* Also in 2004 *Rolling Stone* magazine ranked him the second greatest rock artist of all time, after the Beatles. In 2005 PBS showed the documentary film *No Direction Home: Bob Dylan,* a two-part miniseries directed by Martin Scorcese.

Robert Sanger Steel

E

Eagle Insurance Company. Firm of fire insurers. It was the first fire insurer in New York City organized as a stock company. Incorporated on 4 April 1806 with capital stock of $500,000, it assumed the fire insurance portfolio of the Union Insurance Company of New Jersey in 1813. (This was the first known reinsurance agreement in the United States.) Later in the century the firm was acquired by the Norwich Union Fire Insurance Society of Britain. In 1962 it became a subsidiary of Continental Insurance Companies, which acquired all the American business of Norwich Union; the firm was renamed the National Reinsurance Company to reflect its focus on property and casualty reinsurance.

Robert J. Gibbons

earthquakes and faults. Many geological faults transect the New York metropolitan region, and in New York City the faults tend to run from northwest to southeast. The major faults in New York City are distinctive because the fault zones are characterized by shattered rock that has weathered, disintegrated, and been washed away by water, leaving valleys where the faults are. In northern Manhattan the Dyckman Street fault valley is apparent where it transects the Fort Washington Ridge. There is another distinctive fault valley paralleling 155th Street. One of the most conspicuous fault valleys in the area is paralleled by 125th Street. Where this fault zone bisects the Manhattan Ridge, erosion has created the Manhattanville Valley, which has a depth of about 200 feet (60 meters) below sea level but is filled with glacial deposits to just slightly above sea level. There is also a fault zone running southeast from about 110th Street and Fifth Avenue to about 96th Street and the East River. The present course of the Bronx River appears to be partly controlled by a fault in the northern Bronx. This is particularly apparent in the New York Botanical Garden, where the river cuts through soft, highly metamorphosed mica schist of the Manhattan formation to create a beautiful gorge.

The ground beneath metropolitan New York City could be a major shear zone where landmasses slide past one another at the rate of about half an inch (13 millimeters) a year, with a strain similar to that along the San Andreas fault in California (although California is positioned on the boundary between two tectonic plates, whereas New York City rests near the middle of one plate). Records of the U.S. Geological Survey show that there is considerable seismic activity in western Long Island, Westchester County, and southwestern Connecticut. Most earthquakes in New York City have been barely perceptible (although the three most severe, in 1737, in 1783, and on 10 August 1884, are retrospectively estimated to have measured 5.0 on the Richter scale), but the strain that builds up along the shear zone is likely to be relieved by a stronger earthquake at some point.

Steven D. Garber

Eastchester. Neighborhood in the northeastern Bronx, bounded to the north by the city of Mount Vernon, to the east by Co-op City, to the south by Edenwald, and to the west by Wakefield. Anne Hutchinson built a house there in 1642 after fleeing Puritans in New England and was killed in the same year by Wiechquaesgeck Indians (the Hutchinson River is named for her). Thomas Pell claimed the area in 1654 as part of a purchase from the Siwanoy Indians and in 1665 sold a large part of it to 10 farmers of English stock. This area was called at first the Ten Farms and then the town of Eastchester, the center of which was just across the current city limit in what is now Mount Vernon. Colonial farmers raised livestock and then grew wheat; a miller, blacksmith, cobbler, and tailor also worked in the area, and boats delivered goods to and from Manhattan by way of the Hutchinson River once a week. During most of the American Revolution the area was occupied by British and Hessian forces and subjected to raids by irregular American troops. In 1797, when the Boston Road connected the town directly to the Harlem Bridge (now the Third Avenue Bridge), President John Adams temporarily governed the nation from the farmhouse of his daughter and son-in-law when an epidemic of yellow fever prevented him from traveling to a meeting of the Congress in Philadelphia.

Farmers in the nineteenth century provided fruit, vegetables, and dairy products for the local market. By the middle of the century the grandchildren of Elizabeth Ann Seton purchased an estate of 51 acres (21 hectares), part of which later became Seton Falls Park. In 1877 the town built on Dyre Avenue the Village of Eastchester School, later known as the Little Red Schoolhouse (now a city landmark). The 1890s saw the incorporation of Wakefield as a village. The incorporation of Mount Vernon as a city bisected the town: the need for a modern sewer system led residents of the southern part to favor annexation by New York City, which was accomplished in 1895. In 1912 the New York, Westchester and Boston Railway built a high-speed commuter line with a station at Dyre Avenue, and in 1937 the city purchased the right of way south of the border with Westchester County for the Dyre Avenue line of Interborough Rapid Transit. This and the construction in the 1950s of the New England Thruway and Bruckner Expressway drew people and businesses to the area. In the early twenty-first century the neighborhood remained industrial, with one- and two-family houses predominating. The population is ethnically diverse, with blacks, Italians, and Germans in the majority.

Stephen Jenkins, *The Story of the Bronx* (New York: G. P. Putnam's Sons, 1912); Lloyd Ultan, *The Beautiful Bronx, 1920–1950* (New Rochelle, N.Y.: Arlington House, 1979); John McNamara, *History in Asphalt: The Origin of Bronx Street and Place Names* (New York: Bronx County Historical Society, 1984)

Lloyd Ultan

East Concourse. Neighborhood in the west central Bronx, bounded to the north by Tremont Avenue, to the east by Webster Avenue, to the south by East 149th Street, and to the west by the Grand Concourse. Its name dates to the formation in 1969 of the East Concourse Neighborhood Action Committee and was later adopted by the City Planning Commission. The development of the area coincided with the construction of railroads in the late nineteenth century; much of the housing stock consists of apartment buildings erected at the time the subways were built between the world wars. The population in the early twenty-first century was predominantly Latino and African American.

Stephen A. Stertz

East Elmhurst. Neighborhood in north central Queens, bounded to the north by La Guardia Airport, to the east by Flushing Bay, to the south by Northern Boulevard, and to the west by 85th Street. It was developed in 1905 as a neighborhood of frame houses on lots measuring 40 by 100 feet (12 by 30 meters); those on the bluff overlooking the bay had private beaches. Before World War II the area was wholly residential, but proximity to the airport brought commercial development to Ditmars Boulevard. Early in the twenty-first century, the Bulova Watch Company and British Airways maintained offices in East Elmhurst.

Vincent Seyfried

Eastern Orthodox. New York City has many Eastern Orthodox churches, where people from eastern Europe, the Balkans, and the Middle East worship in different languages according to the customs of their homelands. These various Orthodox groups belong to one undivided Eastern Orthodox Church: all acknowledge the primacy of the Ecumenical Patriarch of Constantinople and adhere to the canons defined by the seven ecumenical councils under the Byzantine empire (330–1453). Their differences in the United States are jurisdictional and derive from historical circumstances. The two largest Eastern Orthodox groups in the United States are the Greek Orthodox Archdiocese of North and South America, which on its formation in 1921

established headquarters in New York City and continues to maintain them there, and the Orthodox Church of America, which had its headquarters in the city until the 1970s. Other Orthodox jurisdictions with national headquarters in New York City include the Bulgarian Eastern Orthodox Church Diocese of New York, the Patriarchal Parishes of the Russian Orthodox Church in the United States and Canada, and the Ukrainian Orthodox Church of America and Canada. Major Orthodox groups with churches in the city include the Serbian Orthodox Church, the Antiochian Orthodox Christian Archdiocese of North America, the Ukrainian Orthodox Church of the USA, the Romanian Orthodox Episcopate of America, the American Carpatho-Russian Orthodox Greek Catholic Diocese of the USA, and the Albanian Orthodox Archdiocese of America.

Eastern Orthodoxy was established in New York City by immigrants from eastern and southern Europe. Nicholas Bjerring began holding services in English in his home at 951 Second Avenue in Manhattan, where he set up a chapel with a sign above the entrance reading "Greek–Russian Church." The chapel was used by Russians, Greeks, Serbs, and Syrians until 1883, when the Russian government withdrew its financial support and the chapel was forced to close. During the next 10 years Greek immigrants in the city formed their own churches outside the Russian Orthodox hierarchy in the United States.

With the encouragement of Prince George of Greece, who visited the city in 1891, about 500 Greek immigrants later in the year formed the Hellenic Brotherhood of Athena to collect donations for a Greek church. Archimandrite Paisios Pherentinos was sent to New York City by the Holy Synod of Greece to celebrate the first divine liturgy of the Church of the Holy Trinity in January 1892. Regular church services were held in a Protestant church on West 53rd Street near Eighth Avenue in Manhattan; Pherentinos also performed services for Greek families residing in Coney Island and other parts of Brooklyn. In 1904 the church purchased its own building at 151–53 East 72nd Street. Disagreement within the church led to the establishment in 1893 of the Annunciation Church. The church purchased a building at 310 West 50th Street in 1915.

St. Nicholas Chapel, a Russian church formed in the early 1890s, flourished from 1896 under the leadership of Alexander Hotovitsky. In 1902 he succeeded in obtaining financial support from Russia for the establishment of St. Nicholas Cathedral at 15 East 97th Street, which became the center of the Russian Mission Diocese for North America. The Syro-Arabian Mission was formed by the Russian Orthodox Church in 1892 for Arabic-speaking Orthodox Christians in the city, and in 1895 a group of Syrian immigrants formed the Syrian Orthodox Benevolent Society; in the following year Archimandrite Raphael Hawaweeny formed the first Syrian Orthodox parish in the United States at 77 Washington Street in lower Manhattan, the center of the Syrian immigrant community. By 1900 about 3000 Syrian immigrants had settled in Brooklyn, and in 1902 Hawaweeny purchased a building at Pacific Street in Brooklyn and formed St. Nicholas Cathedral, now considered the mother parish of the United States Antiochian Archdiocese.

The headquarters of the Russian Church in the Americas were transferred from San Francisco to New York City in 1903. In the following year its bishop, Tikhon, attempted unsuccessfully to assert Russian ecclesiastic authority over the Greek Orthodox churches in New York City. The city's Arabic-speaking Orthodox Christians continued to acknowledge Russian jurisdiction, and there was a Serbian mission within the Russian Church. In 1904 Tikhon received permission from the Russian Holy Synod to raise Hawaweeny to the rank of bishop of Brooklyn, and in the following year he himself became the first Eastern Orthodox archbishop in the United States. The Greeks did not recognize the jurisdiction of the Russian hierarchy in New York City and remained without a bishop of their own until 1918.

The number of members of Greek and other Orthodox congregations in the city was estimated at 3500 by a Greek newspaper in 1895 (and at more than 1000 by the *New York Times* in January of the following year). These numbers increased markedly during the first decades of the twentieth century, as more immigrants from Russia, the Balkans, and the Middle East settled in New York City. A census in 1916 reported that the Greeks alone had four parishes and 22,000 communicants. World War I led to an increase in the number of Eastern Orthodox immigrants who settled in New York City and caused jurisdictional divisions that persisted into the 1990s. In Russia the Bolshevik Revolution led the Russian Church in the United States (the Metropolia) to declare itself autonomous in 1918. In the following year Ukrainian refugees also established an autonomous church in the United States. Although the successor to the Metropolia, the autonomous Orthodox Church of America, was recognized by Moscow in 1970, jurisdictional divisions persisted among other Russian Orthodox groups in the United States over relations with the patriarchate in Moscow. Similar jurisdictional divisions occurred within the Serbian, Bulgarian, Albanian, and Romanian churches after World War II, when the Soviet Union occupied most of Eastern Europe. These divisions were further complicated with the breakup of the Soviet bloc in the late 1980s and realignment of the Balkans and Eastern Europe in the subsequent decade.

The Greek Orthodox Church also went through a major transition in the late 1990s with the retirement of Archbishop Iakovos, who had led the church for 37 years. The jurisdiction of the American Church was dramatically reduced when in July 1996 the Ecumenical Patriarchate established three new metropolitantes in Canada, South America, and Mexico. Iakovos's successors have struggled to keep the remaining U.S. jurisdictions united during the transitions and new challenges of the twenty-first century. In 2003 the Direct Archdiocesan District was established to serve Eastern Orthodox parishes in the Greater New York area, upstate New York, Long Island, the western half of Connecticut, and Washington, D.C.; that year the district included 67 parishes served by 69 priests.

Eastern Parkway. Grand boulevard and scenic landmark in Brooklyn, designed in 1866 by Frederick Law Olmsted and Calvert Vaux. Stretching from Grand Army Plaza through Crown Heights to Ralph Avenue, it was the first six-lane parkway in the world. The broad median strips were built as promenades and equestrian paths, the side lanes as service roads for carriages. Some of the most spectacular nineteenth-century houses in Brooklyn, many on what has long been known as "Doctors' Row," line the thoroughfare. A large Tudor building at 770 Eastern Parkway is the world headquarters of the Lubavitch movement.

Kenneth T. Jackson

Easter parade. Informal procession held on Fifth Avenue on Easter. Begun after the Civil War as a fashion promenade, it was an extension of the weekly "church parade" and drew on European traditions of displaying new clothes, symbolic of new life, during an Easter Sunday walk, one of few activities considered acceptable under strict Sabbath laws. It took its current form in the 1880s. The parade began when the elite stepped out of such grand churches as St. Thomas Episcopal Church, the Fifth Avenue Presbyterian Church, and St. Patrick's Cathedral after the Easter Sunday service and strolled along "millionaire row" (Fifth Avenue in the fifties blocks) before visiting friends and having lunch at lavish hotels nearby. Milliners and dressmakers from all over the country, especially the Lower East Side, flocked to watch and make sketches of the participants' outfits; department stores

produced copies for sale within weeks. At the turn of the century extravagant hats for women became the focus of the parade. Smaller Easter parades were held in other parts of the city, including Grand Street in Harlem, but the one on Fifth Avenue was the best known and became the subject of songs by George M. Cohan ("The Great Easter Sunday Parade," 1927) and Irving Berlin ("Easter Parade," 1933). In later years it attracted demonstrators promoting peace, church attendance, and animal rights; protesting unemployment and the commercialization of Holy Week; and appealing for amnesty for refugees and political prisoners. In the twenty-first century the Easter parade was known for exuberant bonnets covered with Easter eggs, bunnies, flowers, and other emblems of spring. A popular tourist event, it extends along Fifth Avenue from Rockefeller Center to Central Park.

Barbara Kirshenblatt-Gimblett

East Flatbush. Neighborhood in northeastern Brooklyn (2009 pop. *ca* 95,000), bounded to the north by East New York Avenue, to the east and south by Kings Highway, and to the west by Nostrand Avenue; it was once called Rugby. Development began in the 1920s after Interborough Rapid Transit extended its subway to Utica Avenue and to Flatbush Avenue along Nostrand Avenue. Modest one- and two-family attached brick houses were built, and most of the residents were middle-class Jews and Italians. During the late 1960s white families were replaced by African Americans and immigrants from the Caribbean. East Flatbush in the 1980s drew immigrants from Jamaica, Haiti, Guyana, Trinidad and Tobago, Grenada, Barbados, St. Vincent and the Grenadines, and Panama. A medical complex stands on Clarkson Avenue that includes the Kings County Hospital (1831), Brooklyn State Hospital (1895), and the New York Downstate Medical Center (1950). In 2006 a portion of Church Avenue was renamed Bob Marley Boulevard. In the early twenty-first century the neighborhood remained predominantly West Indian.

Stephen Weinstein

East Harlem. Neighborhood in northern Manhattan. The boundaries are imprecise but correspond roughly to East 142nd Street, the East River, East 96th Street, and Park Avenue. The area was rural for much of the nineteenth century. By the 1860s a residential settlement developed north and east of 110th Street and Third Avenue. The extension of elevated railways to the area in 1879 and 1880 and the construction of the Lexington Avenue subway in 1919 transformed the neighborhood. By the mid-1880s most streets were lined with tenements, which initially housed poor German, Irish, and Jewish immigrants. Around 1917 the Jewish population was about 90,000, a community that, along with that of central Harlem (80,000), constituted the second-largest Jewish community in the United States, after the Lower East Side. From the 1880s there was an influx of Italians, who numbered 80,000 by 1930, and who lived in an enclave bounded by East 119th Street, the East River, East 99th Street, and Third Avenue. They sponsored local religious festivals such as that of Our Lady of Mount Carmel. By the 1930s Puerto Ricans began to move into the neighborhood.

Well-known residents in East Harlem included Mayor Fiorello H. La Guardia, who represented the area in the U.S. Congress from 1923 to 1933, calling Lexington Avenue and 116th Street his "lucky corner" and always holding rallies there on the eve of an election; Leonard Covello, a principal of Benjamin Franklin High School, known for his openness and his skill at resolving conflicts; and Vito Marcantonio, a radical who lived in the neighborhood all his life and achieved success by maintaining close relations with Italian and Puerto Rican constituents.

During the 1940s and 1950s, as many Italians moved away, Puerto Ricans became the dominant ethnic group, numbering 63,000 in 1950 after an influx during the late 1940s. They opened bodegas and botánicas (stores selling herbs and other items used in religious ceremonies), some of which stood in an area known as La Marqueta, an enclosed street market beneath the elevated railroad on Park Avenue between 111th and 116th streets. Many religious institutions were formed, ranging from Catholic to revivalist Protestant churches in storefronts. Musical traditions were preserved by small record companies and dance halls that provided a source of social cohesion. Although many Puerto Ricans moved to other parts of the city in the second half of the twentieth century, they maintained ties to the neighborhood, which continued to be known as El Barrio. Many public housing projects went up in the 1950s.

By the early twenty-first century, East Harlem was a racially diverse neighborhood in which more than one-third of the population was Puerto Rican and the rest included African Americans, Italians, and other groups. Poverty and unemployment rates remained high, but there were concerted efforts to improve the housing stock through public-private partnerships. The Museo del Barrio, which exhibits the art of Puerto Rican and other Latin American artists, is an important cultural center.

Michael Lapp

East Jamaica. Former name of Hillside.

Eastman, Crystal (*b* Marlborough, N.Y., 25 June 1881; *d* New York City, 8 July 1928). Reformer, sister of Max Eastman. A graduate of New York University Law School (1907), she drafted the first workers' compensation law in New York State in 1910. As the secretary of the American Union against Militarism she campaigned against the entry of the United States into World War I. To defend conscientious objectors, she formed the Civil Liberties Bureau with Roger Baldwin in April 1917; this eventually became the American Civil Liberties Union.

Blanche Wiesen Cook, ed., *Crystal Eastman on Women and Revolution* (New York: Oxford University Press, 1978)

Samuel Walker

Eastman, Max (Forrester) (*b* Canandaigua, N.Y., 4 Jan 1883; *d* Bridgetown, Barbados, 25 March 1969). Writer and editor, brother of Crystal Eastman. A pupil of John Dewey's at Columbia University, in 1912 he took over the periodical *The Masses,* which he transformed into the most important radical magazine of the age by recruiting the writers John Reed, Sherwood Anderson, and Carl Sandburg and the artists John Sloan and Art Young, whose political cartoons helped make the magazine widely known. After *The Masses* was suppressed by the federal government because of its opposition to World War I, he joined with his sister in 1918 to launch *The Liberator,* which was more overtly supportive of the Soviet Union. During a visit there in 1922 he allied himself with Leon Trotsky, and he became Trotsky's leading American sponsor after returning to the United States in 1927; this made him a pariah among the American left. Over the years he expressed growing disenchantment with the Soviet Union, to the point where he had mixed feelings about supporting it during World War II. His writings appeared in increasingly conservative publications (including *Reader's Digest* and, after the war, the *National Review*), and he defended Senator Joseph R. McCarthy. He remained a contributing editor of *Reader's Digest* to the end of his life. Eastman's residences in New York City included 118 Waverly Place (from 1909 to 1911 and again from 1916), 27 West 11th Street (from 1912), 12 East Eighth Street (from 1917), and 8 West 13th Street (for the last 25 years of his life).

Alexander Bloom

Eastman, Monk [Delaney, William; Osterman, Edward] (*b* Brooklyn, 1873; *d*

New York City, 26 Dec 1920). Career criminal. He first worked as a "bouncer" at New Irving Hall, a dance hall, and later became powerful in gambling and prostitution. From the late nineteenth century to the early twentieth he led the Eastmans, a predominantly Jewish gang based at Chrystie Street; his greatest rival was the Five Points Gang, a predominantly Italian gang led by Paul Kelly. Though he worked as a henchman for Tammany Hall, his violence forced them to disassociate themselves from him after a particularly bloody riot on the Lower East Side. He served 10 years in Sing Sing prison. After being freed he joined the military at age 44 and fought in World War I. Eastman was shot dead at 14th Street and Fourth Avenue by a Prohibition agent with whom he had engaged in bootlegging and drug dealing.

Robert W. Snyder

East New York. Neighborhood lying east of Brownsville and Canarsie on the eastern edge of central Brooklyn, bounded to the north by Atlantic Avenue, to the east by South Conduit Boulevard, to the south by Linden Boulevard, and to the west by Pennsylvania Avenue; it overlaps New Lots and is sometimes said to include the neighborhoods of Highland Park, Cypress Hills, Spring Creek, and City Line. Once part of the town of New Lots, the area remained largely rural until 1835 when a merchant from Connecticut named John Pitkin bought up land north of what is now New Lots Avenue; he named the area to suggest that it was the eastern end of New York City and built a shoe factory at Williams Street and Pitkin Avenue, but the panic of 1837 forestalled his plans for development. There was an influx of German immigrants at midcentury, and the Deutsche Evangelische St. Johannes Kirche (now Grace Baptist Church) was built in 1885 at 223 New Jersey Avenue. Growth accelerated after the opening of the Williamsburg Bridge in 1903 and the completion of a subway line to New Lots by Interborough Rapid Transit in 1922. By 1940 the northern section was densely populated with German, Italian, Russian, Polish, and Lithuanian immigrants. Urban renewal in Brownsville during the 1950s and 1960s led a large number of blacks to settle in East New York. Many whites left; decay set in as buildings were abandoned and absentee landlords neglected their properties. Unemployment increased and the area deteriorated. One of the first revitalization projects was the East Brooklyn Industrial Park (1980). Private houses were built under the auspices of the Council of East Brooklyn Churches, including Nehemiah Plan Homes, one-family row houses of two stories that became common along Blake Avenue. Other housing includes two-story detached and semidetached houses, a few apartment buildings, and multistory public housing. In the 1980s East New York attracted immigrants from the Dominican Republic (accounting for a quarter of the total), Jamaica (accounting for somewhat fewer), Guyana, Haiti, Honduras, Ecuador, Trinidad and Tobago, and Panama. The neighborhood in the early twenty-first century was mostly black and Latin American, with a small but growing number of Asians. The main commercial thoroughfares are Pitkin Avenue, New Lots Avenue, and Pennsylvania Avenue. Many residents consider New Lots and Spring Creek Towers part of their neighborhood.

Ellen Marie Snyder-Grenier

East River. Saltwater estuary, or tidal strait, that separates Manhattan Island and the Bronx from the western end of Long Island (Brooklyn and Queens) and connects Upper New York Bay on the south with Long Island Sound on the north. It is joined by the Harlem River about 8.5 miles (14 kilometers) north of the Battery. One of its tributaries is a short commercial waterway called Newtown Creek, which forms the natural boundary between Brooklyn and Queens. Although the river is navigable for its entire length of 16 miles (26 kilometers), its varying depth and narrowness subject it to strong tidal fluctuations.

The river is spanned by 10 bridges, of which the most notable is the Brooklyn Bridge (1883), the first bridge linking Long Island with Manhattan. Among the more picturesque bridges is the Hell Gate Bridge (1917), or New York Connecting Railroad Bridge, with its sweeping classic arch. Thirteen tunnels pass beneath the river. Where the strait narrows between Queens and the Bronx is Hell Gate, a formerly turbulent and formidable rocky channel that wrought havoc with shipping until it was cleared in 1876 by the Army Corps of Engineers. The name is a corruption of the Dutch *hellegat*, "passage to hell," named by Dutch explorer Adriaen Block in 1614. The piers along the East River on South Street in lower Manhattan were the city's major center of shipping until the beginning of the twentieth century. Along the East River are seven islands (from south to north): U Thant (Belmont), Roosevelt (with its burgeoning high-rise residential community and historic landmarks), Mill Rock, Wards and Randalls (connected by landfill), Rikers (with its notorious city prison), and South Brother and North Brother.

The river is also remembered as the site of the tragic burning and sinking of the excursion steamboat *General Slocum* in 1904, when the vessel, carrying passengers on a Lutheran church outing, caught fire in midstream and ultimately was beached on North Brother Island, with the loss of more than 1000 lives, mostly women and children. In the early twenty-first century plans were under way to install a field of hydropower turbines on the floor of the East River to harness the renewable energy generated by the tidal strait.

Gerard R. Wolfe

East Village. Neighborhood in lower Manhattan, bounded to the north by 14th Street, to the east by Avenue D, to the south by Houston Street, and to the west by the Bowery and Third Avenue. Principal thoroughfares include St. Mark's Place (Eighth Street), Second Avenue, and Avenue A; the heart of the neighborhood is Tompkins Square Park. Well-known landmarks include St. Mark's Church in the Bowery and Cooper Union (1859), a free institution of higher learning that contains the oldest auditorium in New York City.

The East Village was considered a part of the Lower East Side until the early 1960s, when many intellectuals, artists, musicians, and writers seeking cheap housing moved to the area from Greenwich Village. Radicalism in politics and art flourished, and the area became known for its poetry houses and bookshops (the Nuyorican Café, the Peace Eye Bookstore), saloons and bars (Phoebe's, Stanley's), theaters (the Fillmore East), jazz clubs (Slug's, the Five Spot), and restaurants

"Breaking Up on the Ice at New York: A View from the East River," Harper's Weekly, *8 February 1862*

(Paradox Macrobiotics, Orchidia Ukrainian Pizza). The neighborhood was also the home of the Annex Tavern, the Negro Ensemble Company, and several newspapers, including the *East Village Other* and *Rat.* The neighborhood declined in the 1970s, but important figures in punk rock, jazz, painting, and poetry nevertheless continued to live in the area, as did a large community of Ukrainians, who after a period of immigration in the 1970s grew in number to about 20,000. Conditions improved during the 1980s, when many art galleries exhibited the work of young artists like Keith Haring and Jean-Michel Basquiat, and the eastern part of the neighborhood (Avenues A to D) attracted recent immigrants from the Dominican Republic, China, the Philippines, the United Kingdom, Poland, and Japan. As gentrification led to an increase in rents, squatters occupied and renovated abandoned buildings; a squatters' movement emerged and riots occurred toward the end of the 1980s. In 1990 the police responded to complaints about drug dealing and filthy conditions in Tompkins Square Park by evicting the homeless and closing the park, which was met by marches and riots. The park reopened in 1992.

Since the 1990s rising real estate prices, a weak dollar attracting international purchasers, and low vacancy rates have changed the once-gritty neighborhood into a middle-class haven for professionals, students at New York University and Cooper Union, and tourists. New high-rise apartment buildings and dormitories have transformed the landscape. Notable closures have included CBGB, the home of punk rock, on the Bowery, and the Rapture Café on Avenue A. The Second Avenue Deli relocated from Ninth Street to 33rd Street. Much of the art gallery scene of the 1980s has relocated to Williamsburg in Brooklyn. Despite this, the neighborhood retains a lower middle-class character due to the hundreds of older tenements and public housing. Each year, the Howl Festival celebrates the life and art of Allen Ginsberg and other neighborhood artists, intellectuals, and musicians. St. Mark's Place has made a surprising transition from hipster center to the nightly destination of thousands of Asian students and young professionals who flock to its sushi, Chinese, and fusion restaurants.

Graham Hodges

East Village Other. "Underground" newspaper launched in October 1965 by Allen Katzman and others. Published at first monthly, then semimonthly, then (from 1968) weekly, the newspaper chronicled the counterculture of the 1960s, which in New York City was largely centered at St. Mark's Place. Its reporters, who made no pretense of objectivity, wrote extensively about the drug culture and about radical groups such as the Weathermen. Among those who were the subject of stories and interviews were the poet Allen Ginsberg, the artist Andy Warhol, and the comedian Dick Gregory. The newspaper was also known for running sexually explicit personal advertisements long before they became a feature of mainstream journalism. The *Other* ceased publication in February 1972.

Thomas M. Hilbink

East Williamsburgh. Obsolete name for a part of west central Queens lying south of Metropolitan Avenue and west of Fresh Pond Road, within Ridgewood and abutting Brooklyn. The area was farmland for most of the nineteenth century; development followed the opening of an important trolley depot in 1881 and of the terminus of the Myrtle Avenue elevated line in 1888. The name fell into disuse during World War I.

Vincent Seyfried

Ebbets Field. Ballpark in central Brooklyn that housed the Brooklyn Dodgers from 9 April 1913 to 24 September 1957. It was lined by Montgomery Street, McKeever Place, Sullivan Place, and Bedford Avenue. The ballpark was named for Charles Ebbets, who, as the Dodgers' owner, purchased the land in small parcels for roughly $100,000 beginning in 1905. By 1912 he had acquired enough to erect a concrete and steel facility seating 18,000 people. The capacity was later expanded to 31,497; its largest crowd was 41,209 for a doubleheader against the New York Giants in 1934. Night baseball was first held there on 15 June 1938. Known for its short foul lines (348 feet [106 meters] to left field and 297 feet [91 meters] to right), Ebbets Field hosted eight World Series, including the Dodgers' only title in Brooklyn in 1955. But by the late 1940s, the stadium had become structurally unsound. It was also constrained by its low capacity and narrow aisles. After disagreements with Robert Moses on where to build a new stadium, Dodgers owner Walter O'Malley threatened to move the Giants and Dodgers to California. In 1958 the team became the Los Angeles Dodgers. The ballpark was torn down in February 1960 and replaced by a housing development, the Ebbets Field Apartments. Only a plaque remains.

Joshua Robinson

Ebenezer Gospel Tabernacle. Church located at 225 Lenox Avenue at 121st Street and designed by architect Charles Atwood in the Gothic Revival style (1889–91). Originally Unitarian, it moved north from midtown Manhattan and was sold to Orthodox Jews when membership had dwindled by 1919, becoming Temple Chebra Ukadisha B'nai Israel Mikalwarie. By 1942 dwindling attendance led to another sale, and it became Ebenezer Gospel Tabernacle. In the twenty-first century the congregation was largely African Ameri-

can. The building was designated a landmark in 1971.

Sharon Wilkins

Echo z Polski. Weekly newspaper launched in New York City in 1863 as the first Polish-language periodical in the United States. A political organ of immigrants, it supported the Polish insurrection against Russia that began in January 1863. It ceased publication in 1865.

James S. Pula

Ecker, Frederick H(udson) (*b* Phoenicia, N.Y., 30 Aug 1867; *d* New York City, 20 March 1964). Real estate developer. During the first half of the twentieth century, he led the Metropolitan Life Insurance Company in expanding into real estate development. Under his direction the company in 1924 built Sunnyside, a residential development in Long Island City consisting of 2125 apartment units in 54 low-rise buildings; the development was exempt from property taxes for 10 years. Appointed the company's president in 1929 and its chairman in 1936, Ecker in 1940 oversaw the construction of Parkchester, a complex of more than 12,000 apartments for 35,000 residents in the northern Bronx. Completed in 1941, it was the largest development of its kind and served as a prototype for similar projects in San Francisco, Los Angeles, and Arlington, Virginia. He also promoted urban redevelopment in the 1940s with two major projects on the East Side of Manhattan—Stuyvesant Town and Peter Cooper Village—and with Riverton in Harlem.

economy. Settled as a trading post by the Dutch, New York City evolved into the nation's major center of maritime trade and later of manufacturing. As manufacturing declined after World War II, the city's economy became dominated by financial and other producer services.

1. Colonial Period

The original settlement that was to become New York City was founded by the Dutch West India Company. In the early seventeenth century the company acquired the Hudson Valley and established a trading post, New Amsterdam, at the southern end of Manhattan Island, which had an excellent port accessible to the Atlantic Ocean as well as to a deep hinterland free of waterfalls and replete with furs. Stockholders were granted land with 16 miles (26 kilometers) of frontage on the Hudson River if they arranged for the passage and settlement of 50 people. Under this policy Dutch fiefdoms were soon established on both sides of the river up to the smaller Dutch settlement of Fort Orange (now Albany). One of the largest estates was that of the Rensselaer family, which lay along both sides of the river and covered more than 1100 square miles (2816 square kilometers). The Dutch West India Company was interested primarily in commerce, not settlement, and established a policy of tolerance that benefited a number of groups, including Jewish refugees from Brazil. The company also brought African slaves to the colony.

In 1653 a municipal charter made New Amsterdam officially a city. The city's charter was modeled after the charter of its namesake, with political power conferred upon burghers, rich merchants, and to a lesser extent craftsmen and small proprietors. The company-appointed governor, Peter Stuyvesant, considered himself the ruler of what to him was a company town. The burghers, however, thought otherwise, leading to friction and acrimony. The period after the charter saw rapid development of New Amsterdam. Cobblestone streets replaced dirt, brick houses replaced wooden, and tile roofs replaced thatched. New Amsterdam was a substantial, tidy, Dutch town by 1660.

During the early seventeenth century many farmers and craftsmen in New Netherland were lured by the abundant resources of the Hudson Valley into the fur trade. As private traders they competed with the Dutch West India Company, which held a monopoly over the trade until 1638. At that time the fur trade became concentrated in the hands of a few exporters in the colony and four large firms in Amsterdam that set high export duties. Those who identified their occupation as peltry exporting during the mid-seventeenth century were the wealthiest men in New Amsterdam. Increasing competition from the French and English in the fur trade weakened the position of New Amsterdam. The English further disrupted the Dutch trade by passing the Act of Trade and Navigation of 1651, an attempt to tie colonial trade to England. Competition for a diminishing supply of peltry caused the Dutch to reduce their investments in the fur trade in New Amsterdam. By the time of the English takeover in 1664, the Dutch had begun to redirect the colony's export trade from peltry to grain and to expand the reach of their market from Amsterdam and New England to the West Indies and southern Europe.

In 1664, faced by a superior English invading fleet, Stuyvesant surrendered New Amsterdam and all of New Netherland. The town was renamed New York, and a new charter was imposed on the population of about 1500. In the following years English, Huguenot, and German communities took root in the port and the number of black slaves increased. Trade, primarily with the Caribbean islands, remained the principal economic activity, and competition from other colonial settlements was stiff: the volume of the city's trade was less than half that of Charleston, South Carolina.

Trade with Amsterdam nevertheless remained lucrative for a few English and Dutch merchants. By the 1680s firm connections were also forged with London by English immigrant merchants, who vied with the Dutch merchants for control of the agricultural hinterlands of New Jersey, Connecticut,

and the Hudson Valley. Smuggling was widespread in New York City and its surrounding ports. Merchants actively smuggled in the West Indies, and many traded with forbidden areas or evaded payment of duties. During this period dry-goods wholesalers who traded primarily with English firms for manufactured goods consistently prospered. Grain exporters who traded with Lisbon and Madeira dealt with an unstable market that brought either great fortune or great loss. Traders in the West Indies were subject both to the volatility of Caribbean sugar, molasses, and bills of exchange and to the difficulty of predicting the size of exportable surpluses in grain, flour, and timber. The West Indies were the fastest-growing market for New York City.

By the eve of the American Revolution the population had reached 25,000 and the volume of trade in New York City had increased markedly, although it was not yet as large as that of Charleston, Boston, or Philadelphia. The port of Charleston handled tobacco, rice, and indigo, the most important colonial exports. Flour, dried fish, and wheat, the secondary exports, were shipped from ports in New England and the Middle Atlantic, including New York, Baltimore, and Philadelphia.

2. 1776 to 1865

British occupation during the American Revolution halted the early manufactures and disrupted commerce and retailing. Many of the wealthiest merchants were Loyalists, and the greater number of them left the city during the war, thereby providing opportunities for rising lesser merchants and for new immigrants. New Yorkers in the countryside, mostly patriots, developed economic liaisons with these merchants during the war. The two groups benefited from their alliance during the postwar reconstruction of the city, but the old antagonism between farmer and merchant arose in the debates over ratification of the Constitution and economic quarrels about prices, embargoes, and paper money.

The Port of New York grew in importance during the American Revolution. Although trade ceased in most other cities, it thrived in New York City owing largely to the British occupation. Further disruptions in trade during the War of 1812 left the city as the country's dominant port.

The first census of 1790 showed that after Philadelphia, New York was the second largest city in the nation, with 33,000 people. In that heyday of the sailing ship, 10 of the 11 largest cities in the United States lay on the East Coast. The only exception, Albany, had access to the Atlantic by means of the Hudson River. The early nineteenth century marked the rise of interior waterways as the cheapest means for transporting goods to market. New Orleans emerged as a rival to New York City

after the Louisiana Purchase and the rapid settlement of Ohio, Indiana, and Illinois. The links of New Orleans to those areas along rivers helped to make its volume of foreign trade second only to that of New York City. That challenge to New York City's dominance of national export trade was countered by the state of New York, which financed and built the Erie Canal. Opened in 1825 the canal linked the Hudson River to Lake Erie, providing a route between the entire Great Lakes region and the city, which by 1830 handled 40 percent of the country's foreign trade. New York City's dominance was assured during these years by its ready access to markets and the interior and its concentration of mercantile and financial institutions. These features made it the only one of the nation's five largest cities suited for handling both imports and exports, and it soon determined the flow of imports, exports, and credit to and from the interior. During the two decades before the Civil War the use of interior waterways declined as railroads were built, leading to shifts within the hierarchy of American cities. Cincinnati, St. Louis, Pittsburgh, Louisville, and Buffalo grew rapidly and by 1850 were among the country's 12 largest cities. Chicago, which had a population of less than 5000 in the 1840s, was connected to New York City by rail in 1850, and by 1860 its population reached 100,000. The railroads were extended to the western plains, and a link built to New Orleans in 1859 threatened again to draw bulk exports from the West and Midwest away from New York City to the South. This was forestalled by the Civil War, which suspended trade between Chicago and New Orleans.

3. 1866 to 1969

Shortly before the Civil War, manufactured goods accounted for only 10 percent of the country's exports, with foodstuffs and raw materials accounting for most of the rest. The period after the Civil War saw the rise of manufacturing based primarily on coal and steel. Buffalo, Pittsburgh, Cleveland, Detroit, and Milwaukee served as transport points between the coal fields in Appalachia and the iron ore mines at the western end of Lake Superior. Accumulations of capital and labor and proximity to markets, port facilities, and rail links helped older cities to become manufacturing centers as well, among them New York City, Chicago, Philadelphia, and Baltimore. Unlike the new manufacturing centers, the older East Coast cities focused on goods tied to mass markets rather than sources of raw materials. In Manhattan, manufacturers specialized in finished and semifinished nondurable consumer goods such as apparel, refined sugar, printed materials, leather goods, and tobacco products rather than durable producer goods such as primary metals, machinery, and transportation equipment. The expansion of low-wage factory work led to a rise in immigration. The city's population rose rapidly from 0.8 million in 1860 to 3.4 million in 1900, and in that year more than one of three city residents were foreign born. Factory workers in the city accounted for 11 percent of the national total. After World War I foreign immigration was restricted, but expanding employment in manufacturing drew workers from the rural South and Puerto Rico. For many years New York City had far more manufacturing jobs than any other city in the world.

The city nevertheless remained more economically diversified than others. Factory work consistently accounted for a smaller share of the employment there than in Cleveland, Chicago, Pittsburgh, Detroit, and Buffalo. As the country's leading port and center of commerce, finance, and business services during the century after the Civil War, it also was attractive as a headquarters location for major corporations. Of the nation's 500 largest industrial corporations, 144 of them had their headquarters in New York City in 1957, little changed from the estimated total of 150 headquarters in 1917. Chicago, in second place as a headquarters center, was far

Compiled by James Bradley and Lisa Keller

below New York City, with 54 headquarters in 1957.

By the middle of the twentieth century the city's population was nearly eight million, a peak it surpassed by 2000. It continued to be by far the largest city in the United States, but its attractiveness as a manufacturing site was diminished by its congestion, aging physical plants, and rising costs of land and labor. Furthermore, as the real costs of transporting goods declined, manufacturers became able to supply the city's large market without being based there. New York City's manufacturing employment hovered around one million during the 1950s and then began to decline. The number of corporate headquarters located in the city also declined beginning in the 1950s.

4. 1970 to 1977

New York City experienced a severe economic decline during the early 1970s. Employment there fell continuously from a 1969 peak of 3.8 million to 3.2 million. This job loss was coupled with population loss. Manufacturing jobs declined precipitously by 35 percent from 1970 through 1977. The decline had some national causes, including two recessions and the decline of manufacturing from New England through the Midwest, and some local causes, including the flight of manufacturing from old cities and the shift of port activity to New Jersey as containerized shipping made New York City's port facilities obsolete. The number of corporate headquarters in the city dropped from 128 in 1965 to 90 in 1975. These declines brought on a fiscal crisis in the city's government in 1975. Through the efforts of New York State, municipal labor unions, and the financial community, however, the federal government lent the city government what it needed to avoid bankruptcy. Severe belt tightening and a shedding of city functions led to the emergence of a fiscally sound city government by 1978. But more important was the return of a strong city economy after 1977.

5. 1978 to 2010

After 1977 New York City became a postindustrial city, with fewer blue-collar jobs and more professional, technical, and managerial jobs. At the nadir of the city's economy in 1977 there were still 500,000 manufacturing jobs, 17 percent of all employment in the city. But by 2006 manufacturing jobs were down to 106,000, only 3 percent of all employment. Employment expansion came in the producer service industries of information (publishing, broadcasting, and film production); finance and insurance; and professional, scientific, and technical services (law, accounting, advertising, business consulting, computer software, engineering, and architecture); and also in the advanced consumer service industries of education, health, arts, entertainment, and recreation. Such a postindustrial economy required a high proportion of workers with college or postgraduate education. In 2000 total employment in the city was 3.7 million, much recovered from the low in 1977. The shift in the composition of employment also partly explains the upscaling of retail and the march of gentrification well beyond Manhattan.

The population loss of the 1970s was recovered by 2000, and the city continued to be the largest in the nation. But some former economic strengths did not rebound. Los Angeles surpassed New York City as both the country's leading manufacturing center and its leading ocean port. Furthermore, television production moved from New York City to Los Angeles. Foreign immigration to New York City soared after 1965, and the 2000 census reported that one of three city residents was born abroad, the same ratio as in 1900. Unlike 100 years ago, however, most of the new immigrants were from the Caribbean, elsewhere in Latin America, and Asia.

Total employment in the city peaked in August 2008 at 3.8 million (although some official estimates put the number at 3.4 million) before the national recession hit. By January 2010, however, for every 50 city jobs in the private sector, two had been lost, and city unemployment stood at 10.4 percent. Nonetheless, New York City fared better than the nation as a whole during the economic downturn in the first decade of the twenty-first century.

Matthew P. Drennan

Ecuadorians. Ecuadorian immigration to New York City started in the early 1960s. By 2000 Ecuadorians were the sixth-largest foreign-born group in the city, and close to two-thirds of the city's Ecuadorian population lived in Queens. Ecuadorians in New York City in the early twenty-first century lived largely in Corona, Jackson Heights, Astoria, Woodside, Elmhurst, Bushwick, Sunset Park, Washington Heights, Soundview, and Melrose. Ecuadorian restaurants, clubs, and civic associations are concentrated in Jackson Heights, where the Comité Cívico Ecuatoriano, a nonpolitical association of humanitarian, athletic, and cultural groups, also has its headquarters. Many Ecuadorians, especially those from Guayaquil and other coastal areas, belong to groups affiliated with their hometowns and provinces in Ecuador. Each year about 100,000 Ecuadorians take part in the Semana Ecuatoriana, a weeklong festival in August at Flushing Meadow Park.

Graciela M. Castex

Edenwald. Neighborhood in the north central Bronx, bounded to the east by Seton Falls Park. It is named for an estate owned from 1900 to 1913 by John H. Eden near Boston Road, Light Street, and Connor Street. The land was the site of the Hebrew Orphan Asylum until it was acquired by New York City after World War II for a public housing project of 2039 units called the Edenwald Houses, centered at 229th Street and Laconia Avenue. In the early twenty-first century the population of the project and of the surrounding one-family houses was predominantly African American.

Lloyd Ultan

Ederle, Gertrude (Caroline) (*b* New York City, 23 Oct 1906; *d* Wyckoff, N.J., 30 Nov 2003). Swimmer. At age 12 she broke the world record for the women's 880-yard freestyle event; she broke many others during the early 1920s, including some held by men. A member of the New York Women's Swimming Association, in 1926 she became the first woman to swim across the English Channel, cutting nearly two hours from the previous record. When she returned to New York City, a ticker-tape parade was held in her honor. Born and raised on Amsterdam Avenue in Manhattan, she is also closely associated with Queens, where she appeared in the Aquacade show during the 1939 World's Fair; in 1978 the Aquacade pool (now demolished) was dedicated to her and renamed the Ederle Amphitheater. She lived in Flushing, Queens, for most of her adult life and taught deaf children to swim until her death. She is buried in Woodlawn Cemetery in the Bronx.

James E. Mooney

Edgemere. Neighborhood in southwestern Queens on the Rockaway Peninsula, lying roughly between Beach 32nd and Beach 56th streets. It was acquired in 1892 by Frederick J. Lancaster, who formed the Sea Beach Improvement Company in 1894 to sell beach and meadow property. The area was first called New Venice; the current name means "edge of the sea" in Anglo-Saxon. Lancaster built the Hotel Edgemere in 1895, which he operated until 1919, as well as several cottages. Edgemere declined in the 1960s and 1970s and became part of the Arverne Urban Renewal area. In the 1990s and first decade of the twenty-first century, the city announced repeated plans for new middle-class and luxury developments, but the pace of change slowed because of the recession that began in 2008.

Vincent Seyfried

Edgewater. Neighborhood in the eastern Bronx, lying on the northern shore of the Throgs Neck Peninsula and bounded to the north by Weir Creek, to the east by Eastchester Bay, and to the south and west by the Throgs Neck Expressway. Before European settlement the area was the site of a Siwanoy fishing village. By 1792 it was part of the property of Edward Stephenson, whose farm and woodlands accounted for most of Throgs Neck; in 1851 it was bought and developed as an estate by George Adee and named by his wife. The family sold the land in 1910 to Richard Shaw, who operated a stock farm and rented out parcels as campgrounds. Eventually the tents were replaced with year-round homes, in the 1930s still on rented land. In 1986 Edgewater made the transition from a summer community to a cooperative community, giving residents a chance to buy a stake in the neighborhood itself. The neighborhood in the early twenty-first century is sometimes known as the Park of Edgewater and has about 700 small houses along its narrow lanes. There are almost no businesses, and only one street leads into the neighborhood.

Gary D. Hermalyn

Edison, Thomas (Alva) (*b* Milan, Ohio, 11 Feb 1847; *d* West Orange, N.J., 18 Oct 1931). Inventor. In April 1869 he left his position as a telegraph operator in Boston for the Western Union Telegraph Company to pursue a career

as an inventor in New York City. He lived in nearby Newark, New Jersey, and invented products under contract for a number of telegraph companies in New York City, including Western Union and the Gold and Stock Telegraph Company. Among his contributions to telegraphy were improvements to stock tickers and methods of sending multiple messages over a single wire. Early in 1876 he used the wealth he had acquired in telegraphy to build an independent laboratory in suburban Menlo Park, New Jersey, where he moved at the end of March 1876 with many of the men who had assisted him earlier. In his five years there he invented the phonograph, which was manufactured by the Edison Phonograph Company and made him internationally known; the carbon-button telephone transmitter, for which Western Union controlled patents that allowed it to compete with the Bell Telephone Company; and the first incandescent electric light and power system. He formed the Edison Machine Works to manufacture generators and Bergmann and Company to produce lamp fixtures and other components; lamps were made at the Edison Lamp Company in Harrison, New Jersey. The Edison Company for Isolated Lighting marketed small power plants for individual buildings, and the Edison Illuminating Company of New York City operated the first permanent commercial incandescent light and power station, which began operation around Wall Street in September 1882. The Edison Electric Light Company, formed by several investors in Western Union, including J. P. Morgan, was the parent company that supported Edison's inventive work. From the summer of 1881 Edison lived for two years at 24 Gramercy Park South in Manhattan, and he later purchased a large house in suburban West Orange, where he worked to the end of his life. In 1892 his electric and power companies were merged with the General Electric Company. Among his later inventions were storage batteries, improvements to the phonograph, motion pictures, and technology for the milling of ore and the production of cement.

Paul Israel

Edison Manufacturing Company. First indoor motion-picture studio in the United States. It opened in February 1901 at 41 East 21st Street. It was a glass-enclosed structure that relied on sunlight for filming but allowed for year-round production. From its convenient location at the edge of the city's entertainment district, the studio manager Edwin S. Porter made such films as *How They Do Things on the Bowery* (1902) and *The Miller's Daughter* (1905). Actors often worked in films during the day and on stage at night. The company began preparations in 1905 for a larger production facility at 2826 Decatur Avenue (near Bronx Park), which began operation in 1907 and was itself enlarged in 1909 to give Edison four production units in continuous operation. Films made in the Bronx include Porter's *Rescued from an Eagle's Nest* (1908), with D. W. Griffith, and *Vanity Fair* (1915), with Minnie Maddern Fiske. When Edison ceased film production in 1918, the studios were sold to the Lincoln and Parker Film Company; later they were operated by a number of small, short-lived companies. Converted to sound in 1930, the facility was occasionally used to make animated films, industrial films, and short subjects into the 1960s, when it was demolished.

Charles Musser

Ed Sullivan Theater. Theater on Broadway and 53rd Street in Manhattan, built by Arthur Hammerstein and opened in 1927 as Hammerstein's. The theater experienced financial hardship in its early years and in 1934 was converted into a casino and nightclub named the Billy Rose Music Hall. In 1949 the Columbia Broadcasting System (CBS) converted the building into a television studio, and as the set for the immensely popular *Ed Sullivan Show* it became the site of performances by Elvis Presley, the Beatles, and other musicians. In 1967 the theater took its current name. After Sullivan's program ended, the theater remained idle for many years until 1993, when it was renovated by CBS and became the venue for the *Late Show with David Letterman.*

James Bradley

education. See Adult education, Bilingual education, Catholic schools, Colleges and universities, Independent schools, Law schools, Medical schools, Progressive education, and Public schools, as well as entries on individual institutions and educators.

Educational Alliance. Settlement formed in 1889 at 197 East Broadway, funded and led by German Jews in New York City with the aim of educating eastern European Jewish immigrants on the Lower East Side and helping them to adapt to life in the United States. It operated a kindergarten and offered vocational and religious training as well as classes in theater, art, music, English, and citizenship. Many of the foreign-born students enrolled at the settlement later became prominent in the city, among them the broadcasting executive David Sarnoff, the philosopher Morris Raphael Cohen, the municipal official Anna M. Kross, the comedian Eddie Cantor, and the sculptor Chaim Gross. One of the leading members of the board of trustees was Julia Richman (1855–1912), the first woman and the first Jew to be appointed a district superintendent in the city school system. The public schools eventually adopted many of the programs of the settlement, notably its classes in English for foreigners and its "Peoples University," a series of free evening lectures presided over by a trustee of the alliance, Henry Leipziger (1854–1917), who also founded the Hebrew Technical Institute. The Educational

Educational Alliance, 2009

Alliance later expanded its facilities and programs to include a senior citizens' apartment building, two camps in upstate New York, a day-care center, a program for handicapped students at Public School 35 in Manhattan, and a branch on the West Side of Manhattan. In the early twenty-first century the organization served as many as 30,000 New Yorkers through more than 40 programs.

Selma Berrol

Egan, Edward (Michael) Cardinal (*b* Oak Park, Ill., 2 April 1932). Roman Catholic cardinal. After ordination in Rome (1957) he moved from Chicago's ecclesiastical administration back to Rome to obtain a doctorate in canon law (1964). He pursued further service in Chicago and then was appointed a judge of the Sacred Roman Rota (1971–85); auxiliary bishop of the Archdiocese of New York (1985) and vicar for education; bishop of Bridgeport, Connecticut (1988); archbishop of New York (2000); and cardinal (2001). He was in New York City during the terrorist attacks of 11 September 2001 and was called to Rome shortly thereafter. As archbishop he established clerical child sex abuse policies, "realigned" underutilized parish plants, promoted vocations, and founded the John Cardinal O'Connor residence for retired priests in the Riverdale section of the Bronx. He is a member of the Board of Trustees at the Catholic University of America and the Board of Governors at the Ave Maria School of Law. In 2005 Egan was one of the cardinal electors who participated in the papal conclave that selected Pope Benedict XVI. His resignation at age 75 as archbishop of New York took effect in 2009.

Mary Elizabeth Brown

Egbertville. Neighborhood in central Staten Island near the junction of Rockland Avenue and Richmond Road and surrounded by the Greenbelt. The area was called Morgan's Corner in 1838, and because of its predominantly Irish population it was later known as Tipperary Corners, New Dublin, and Young Ireland. It is now named for the Egberts, a family that farmed the area in the eighteenth century. The neighborhood attracted many Italian families during the 1930s and 1940s. A bucolic village of detached single-family houses, Egbertville witnessed the building of large single-family homes on its few remaining lots in the early twenty-first century. The Jacques Marchais Museum of Tibetan Art is in Egbertville.

John-Paul Richiuso

egg cream. Confection made with chocolate syrup, milk, and seltzer water (but neither eggs nor cream), originally served in candy stores on the Lower East Side in the 1920s. According to one account the Yiddish actor Boris Thomashevsky originated it after sampling *chocolat et crème* during a tour of Paris. According to another the drink was first sold by Louis Auster (*d* 1955) in his candy stores at 92 Cannon Street and on East Third Street and Avenue D; he was said to have sold more than 3000 egg creams a day before his stores closed in the 1950s.

Rachel Sawyer

Egyptians. Egyptian immigration to the Americas began in the nineteenth century, when Egypt still belonged to the Ottoman Empire. Immigration increased markedly in the 1960s with President Gamal Abdel Nasser's policy of forced nationalization and his encouragement of emigration as a means of controlling overpopulation; it was also encouraged by a change in U.S. laws in 1965 that eased the immigration of educated professionals. Most of the new immigrants were young, unmarried men with university degrees (often earned in the United States or Europe). In 1970 there were 7642 Egyptians in New York City, of whom 5587 were foreign born. From 1982 to 1987, 3004 immigrants from Egypt settled in the city, more than from any other Arab nation. The number of foreign-born Egyptians in New York City in 2000 exceeded 15,000, making it the 36th-largest group of its kind in the city. Most worked as craftspeople, petty traders, and laborers; almost all were men, and many would eventually return to Egypt.

Over time the Egyptian population has dispersed throughout the city, with concentrations in Bay Ridge and Astoria. New York City has two Coptic Christian churches: St. Mary and St. Antonios Coptic Orthodox Church at 606 Woodward Avenue in Ridgewood, and St. George's Coptic Church at 108 St. Edward Street in Fort Greene. The Islamic Anjumar Mosque at 36–07 30th Street in Long Island City was built with the support of about 300 Egyptian New Yorkers.

Erica Judge, John Lowe

Eidlitz, Leopold (*b* Prague, 29 March 1823; *d* New York City, 22 March 1908). Architect, brother of Marc Eidlitz, and father of Cyrus L. W. Eidlitz. He settled in New York City in 1843 and designed St. George's Church in Stuyvesant Square (1846–48, with Otto Blesch) and the southern wing of the Tweed Courthouse (1876–78). His religious and commercial work as well as his theoretical writings strongly influenced his contemporaries. Eidlitz wrote *The Nature and Function of Art, More Especially of Architecture* (1881).

Marjorie Pearson

Eidlitz, Marc (*b* Prague, 31 Jan 1826; *d* New York City, 15 April 1892). Building contractor, brother of Leopold Eidlitz. He moved to New York City in 1847, where he soon became the city's most prominent building contractor. His commissions, most of which were from the "400," the city's wealthiest residents, included the Metropolitan Opera House; the Broadway Tabernacle; the Eden Musée; a portion of the Astor Library; Steinway Hall; the mansions of J. P. Morgan, Otto Goelet, and Robert L. Stuart; and St. Vincent's, St. Francis, and Presbyterian hospitals.

Andrew Wiese

Eight, The. Stylistically diverse group of artists formed in New York City in 1907; its members were the urban realists Robert Henri, John Sloan, George Luks, William Glackens, and Everett Shinn; the romantic symbolist Arthur B. Davies; the impressionist Ernest Lawson; and the post-impressionist Maurice Prendergast. The group was formed after the hanging committee of the National Academy of Design rejected paintings by Shinn, Glackens, and Luks; Henri then resigned his membership in the academy and announced that he and seven other artists would hold an exhibition of their own in protest. The group was named The Eight by James Gibbons Huneker, a sympathetic critic; others less sympathetic called them "the revolutionary black gang" and "the apostles of ugliness." The Eight exhibited only once: 63 works were on view at the Macbeth Galleries (450 Fifth Avenue) from 3 to 15 February 1908 and were then sent on a tour of nine cities. Although only seven paintings were sold, The Eight surpassed their initial goal of deflating the National Academy by broadening the opportunities for other artists to exhibit their work: their success led to the 1910 Exhibition of Independent Artists and the Armory Show of 1913.

Bennard B. Perlman, *The Immortal Eight: American Painting from Eakins to the Armory Show, 1870–1913* (Westport, Conn.: North Light, 1979)

Avis Berman

Eighth Street Bookshop. Bookstore opened in 1947 by the brothers Elias and Ted Wilentz. It became well known during the 1950s and 1960s as a literary gathering place in Greenwich Village and had close ties to the beat writers and artists. In 1965 the shop moved from 32 West Eighth Street to larger quarters at 17 West Eighth Street, where under Elias Wilentz it became one of the nation's foremost bookstores. It closed in 1979 after Wilentz's retirement.

Sean Wilentz

Eighth Street Playhouse. Single-screen movie theater located at 52 West Eighth Street. Formerly the Film Guild Cinema, in 1930 Marin C. Ansorge bought the lease to have it become one of the first theaters to feature television programs. Most famous for its Friday and Saturday midnight screenings of *The Rocky Horror Picture Show,* a 15-year tradition that began in the 1970s, the theater also played independent films in the 1970s, hosted 3-D

festivals in the 1980s, and featured various other themed festivals such as the Sleaze Film Festival. When the owner died in the mid-1980s, the theater was taken over by City Cinemas and eventually United Artists, both of which featured first-run movies. For a period it was an empty storefront and, in the early twenty-first century, a movie rental store, until it closed in 2007.

Jessica Montesano

Eisenhower, Dwight D(avid) (*b* Denison, Tex., 14 Oct 1890; *d* Washington, D.C., 28 March 1969). Thirty-fourth president of the United States. He graduated in 1915 from the U.S. Military Academy at West Point. After commanding the Allied forces in Europe during World War II, he returned to the United States in 1945 and was honored on 19 June with a ticker-tape parade along Broadway in lower Manhattan. In 1948 he declined offers from both the Democrats and the Republicans to seek the presidency of the United States in favor of one to become the president of Columbia University. He lived in the presidential mansion at 60 Morningside Drive during his tenure and retained his title after becoming the first supreme commander of the North Atlantic Treaty Organization (NATO) in 1950. During his time at Columbia, he founded the Institute of War and Peace Studies, which was renamed the Saltzman Institute of War and Peace Studies in 2003. In 1952 he attended a rally in his honor at Madison Square Garden, and after much prodding from friends and Republican officials became a candidate for the presidency; after his election he left Columbia in 1953.

Stephen E. Ambrose, *Eisenhower* (New York: Simon and Schuster, 1983–84)

Edward T. O'Donnell

Eisenstaedt, Alfred (*b* Dirschau, Germany [now Tczew, Poland], 6 Dec 1898; *d* New York City, 24 Aug 1995). Photojournalist. He studied in Berlin and in 1935 moved to the United States. In the following year the new magazine *Life* published the first of his photographs, beginning an association that lasted until 1972, when he continued to work at his studio in Rockefeller Center. Eisenstaedt's candid, naturalistic style is typified by his best-known photograph "Total Surrender," of a sailor and nurse embracing in Times Square on V-J Day in 1945. His work has been published in several collections, among them *Eisenstaedt: Remembrances* (1990). He was a longtime resident of Jackson Heights in Queens. Since 1999 Columbia University's School of Journalism has given an annual award for magazine photography in his name.

Lisa Gitelman

E. J. Korvette. Firm of retailers formed in 1948 by Eugene Ferkauf (*b* 1920). Its name was derived from the first initials of Ferkauf and his associate, Joseph Zwillenberg, and from the name of a Canadian submarine chaser known as the Corvette used during World War II. The firm began operations when Ferkauf opened a luggage shop with backing from his father on the second story of a building on East 46th Street in Manhattan. He sold his goods at a markup of 20 percent (half of what was customary) and later added to his inventory household appliances and jewelry, also sold at low prices. Loss leaders (products sold at a reduced price to attract customers), sold at a discount of 35 percent, drew crowds and lawsuits from competitors, which Ferkauf viewed as free advertising. Under his direction the firm achieved great success and helped to launch a revolution in discount retailing in the 1950s and 1960s; it registered $20 million in annual sales by 1952 from five stores, and over the next 12 years $622 million in total sales from eight stores. Efforts by other retailers to pressure manufacturers into refraining from doing business with Korvette were successfully countered by means of middlemen. After opening a new store on Fifth Avenue and another in Herald Square, the firm experienced organizational problems that probably stemmed from its rapid, enormous growth. In 1966 Ferkauf merged it with Spartan Industries, an apparel manufacturer, to increase sales and profits. He severed all ties with his stores in 1968 and left the firm entirely in the control of Charles Bassine, the chairman of Spartan. The new managers sought to change the emphasis of Korvette by selling goods of higher quality at higher prices, but a confused marketing strategy failed and the firm began selling its stores in 1980, filed for bankruptcy the next year, and soon discontinued its operations.

Isadore Barmash, *More Than They Bargained For: The Rise and Fall of Korvettes* (New York: Lebhar–Friedman, 1981)

Leslie Gourse, Kenneth T. Jackson

Elaine's. Restaurant on the Upper East Side at 1703 Second Avenue that became famous after the 1960s as a locus for the media elite to mingle. In the twenty-first century, hostess and owner Elaine Kaufman ran this neighborhood Italian establishment.

Jessica Montesano

El Barrio. Neighborhood on the East Side of Manhattan, also known as East Harlem and Spanish Harlem, bounded to the north by 125th Street, to the east by Franklin D. Roosevelt Drive, to the south by 96th Street, and to the west by Fifth Avenue. The population of the area was predominantly Italian until Puerto Ricans began moving there during the 1920s; after World War II it became a largely Puerto Rican enclave. During the early twenty-first century the Puerto Rican identity diminished as Latin Americans from other countries, primarily Mexico and the Dominican Republic, settled in the neighborhood. There are many churches, bodegas, substandard tenements, and large public housing projects in El Barrio. Several community organizations and settlement houses are active in local affairs, as are the Protestant, Evangelical, and Roman Catholic denominations; their activities include organizing demonstrations and influencing legislation to bring about social reform. In the twenty-first century gentrification is evident in upgraded housing, including renovated town houses, new condominium

Teatro Latino in El Barrio, 110th Street and Fifth Avenue, 1938

complexes, and middle-class cooperative apartments that have attracted an economically and ethnically diverse population. The main shopping thoroughfare is 116th Street; the East River Plaza shopping center at FDR Drive, anchored by several major retailers, opened in 2008. The Museo del Barrio on Fifth Avenue and 104th Street is a center of Latin American culture.

Donald Stewart, *A Short History of East Harlem* (New York: Museum of the City of New York, 1972)

Joyce Mendelsohn

elderly. Most elderly people in colonial New York City were cared for at home. Public care was first offered by the "deacons house" in New Amsterdam. The city's first almshouse, built in 1736 under English rule, had a number of elderly inmates. When a new almshouse was built in 1796 more than half of its 622 inmates were placed there because they were old, and the same was true of an almshouse opened in larger quarters in 1816 at Bellevue (26th Street and the East River). The first private institutions for the elderly included the Association for the Relief of Respectable Aged Indigent Females, which was organized in 1815 to prepare its residents for death; the association built a home on 20th Street in 1839. At mid-century the elderly population increased, leading many to believe that it was inappropriate to house the elderly with children, vagrants, the insane, and the retarded. In 1849 the city moved its public charities to Blackwell's Island (later Welfare Island, now Roosevelt Island); near its center elderly public charges lived in two stone buildings, one for men and the other for women, and worked at tailoring, broom making, and shoemaking if they were able. By 1855 people older than 60 accounted for almost 3 percent of the city's population. Almshouses opened in Brooklyn by 1870 and in Staten Island and Queens; the last one, completed in 1888 in Queens, had 49 elderly people among its 56 inmates. Paupers received public care at the lowest possible cost: they lived in dormitories with little privacy; were fed a bland diet of rice, oatmeal, beef, potatoes, cabbage, and turnips; and were punished for breaking rules. Residents of such private homes as the Presbyterian Home (1869), the Baptist Home of Brooklyn (1875), and the nonsectarian Isabella Heimath Home (1875) had slightly more privacy but could still be treated indifferently. By 1890 the Association for the Relief of Respectable Aged Indigent Females moved to 104th Street and concentrated on making the lives of its residents more pleasant.

Increasingly considered a public burden, the elderly poor were suspected of improvidence by such reformers as Josephine Shaw Lowell, director of the Charity Organization Society, who believed that the responsibility for care should fall on relatives and friends. Her views set off a debate about the relative merits of indoor relief (provided in an institution) and outdoor relief (provided in the home) that continued to the end of the century. Most residents of almshouses were foreign born, and in 1904 Charles C. Weisz of the city's Department of Charities sought to restrict immigration for those older than 50, arguing that they would become public charges. Between 1910 and 1920 public attitudes softened. More private institutions opened and the belief strengthened that the state should provide special care for the elderly. When the New York State Old Age Security Act was passed in 1930, the city had more than 300,000 elderly residents, accounting for 5.5 percent of its population. In 1938 the almshouse department was renamed the Department of Welfare, and the hospitals department took control of the facility on Welfare Island and another in Dongan Hills. The Bureau for the Aged of the Welfare Council of New York City reported in 1940 that these facilities and 88 private homes provided residential care for 12,000 people, were filled to capacity, and had waiting lists and that the Department of Welfare provided financial aid to about 55,000 people. The Department of Welfare was renamed the Department of Social Services in 1967; its Office of Aging became independent in 1975. In 1968 the city stopped operating a home for the elderly and instead provided referrals to private homes.

After an aging trend during the 1970s and 1980s the proportion of elderly in New York City declined slightly in the 1990s. In 2000 those 65 years old and older accounted for 12 percent of the total population citywide (12.7 percent in Queens, 12.2 percent in Manhattan, 11.5 percent in Brooklyn, 10.1 percent in the Bronx, and 11.6 percent in Staten Island). In the same year about 18 percent of the city's elderly had incomes below the poverty line.

Alana Erickson Coble

Eldridge, Roy [Little Jazz] (*b* Pittsburgh, 30 Jan 1911; *d* New York City, 26 Feb 1989). Trumpeter. He moved in 1930 to New York City, where he soon developed an innovative style influenced by saxophonists and characterized by rapid playing, long phrases, a wide range, and exuberance. From 1941 to 1943 he played with the Gene Krupa Orchestra, becoming one of the first African American trumpeters to play with a white band. The preeminent trumpeter of the swing era, he had long engagements at the Arcadia Ballroom, Kelly's Stables, Birdland, the Metropole, and Jimmy Ryan's. Eldridge lived in Hollis, in the borough of Queens, from 1956 until the end of his life.

Ira Berger

Eldridge Street Synagogue. Orthodox synagogue, occupying the first large-scale building constructed by eastern Europeans. It opened on the Lower East Side as Kahal Adas Jeshurun Anshe Lubz. Designed in 1887 by the firm of Herter Brothers, it became known for its rich woodwork, dozens of stained-glass windows, and the bright frescoes on its walls, contrasting sharply with the unornamented tenements of the surrounding neighborhood. In the years before World War I, the congregation had 800 members, including the banker Sender Jarmulowsky and the city's foremost distributor for delicatessens, Isaac Gellis. As the neighborhood changed, the congregation fell on hard times and the building decayed. The synagogue was designated a city landmark in the 1980s. In the early twenty-first century it was restored by the Eldridge Street Project.

Electchester. Limited-dividend nonprofit housing cooperative in Fresh Meadows, Queens, established in 1949 and built on the 103-acre (41.7-hectare) site of a former golf course. A favored project of the head of the International Brotherhood of Electrical Workers (IBEW), Harry Van Arsdale, Jr., it was one of the first postwar union-sponsored limited-equity cooperatives. It was developed by Local 3 of the IBEW and the Joint Industry Board of the Electrical Industry; its 2405 units were built over a period of years. First Housing (382 units) opened in 1951, followed by Second Housing (688 units) in 1955, Third Housing (181 units) in 1953, Fourth Housing (382 units) in 1954, and Fifth Housing (182 units) in 1966, which consisted of two 23-story high-rise apartment towers. Members of the IBEW had preference in obtaining apartments, and as recently as the mid-1980s about 90 percent of the residents had IBEW connections. In the early twenty-first century the cooperative was more diverse racially than it had been in its earlier years (about 55 percent white, 25 percent African American, and 15 percent Latino), and the percentage of its more than 5500 residents with IBEW connections was down to about 50 percent.

Peter Eisenstadt

Electric Bond and Share. Electric utility holding company formed by the General Electric Company in 1905 under the leadership of Sidney Z. Mitchell. Situated at 2 Rector Street, the firm became the largest in the United States during the mid-1920s, generating 14 percent of the country's electricity in 1929. Its subsidiaries eventually operated in more than half the states and several Latin American countries. Dismantled under the Public Utility Holding Company Act of 1935, it became a diversified investment firm and merged with Boise Cascade in 1969. Ebasco Services, the service division and a leading utility consulting firm, became a subsidiary of Enserch in 1976.

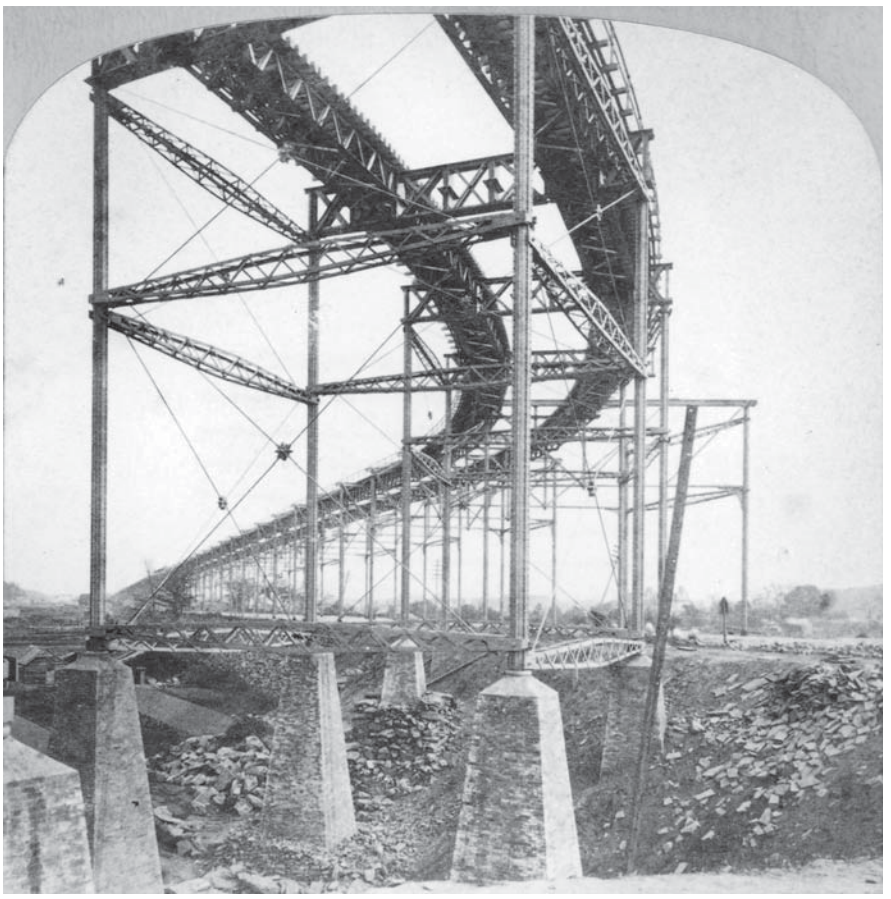
John L. Neufeld

Electric Circus. Nightclub in Greenwich Village in the 1960s. It was the most elaborate of the various clubs located at 23 St. Marks Place. The Electric Circus was upstairs from the nightclub the Dom and replaced the Balloon Farm, where Andy Warhol had staged the mixed-media *Exploding Plastic Inevitable* events featuring the rock band Velvet Underground. When it opened in 1967 the Electric Circus secured the reputation of St. Mark's Place as the psychedelic capital of New York. The club's large dance floor and series of smaller rooms featured elaborate lighting effects, multimedia performances, circus acts, experimental theater, and early electronic music shows. The club closed in 1971.

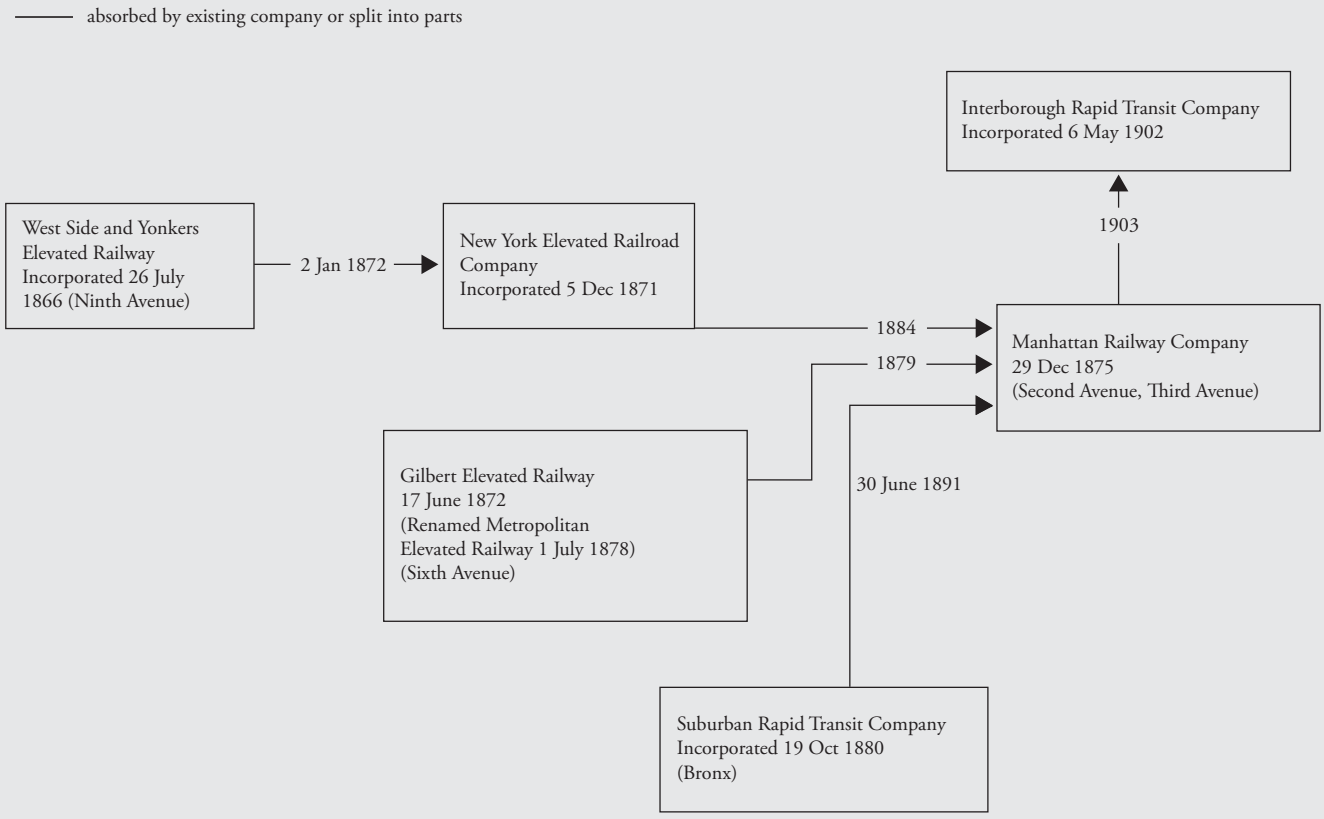
Melissa Baldock



electricity. See Light and power for a discussion of the electrification of New York City.

Elephantine Colossus. Elephant-shaped hotel on Coney Island (James V. Lafferty, Jr., architect). Completed in 1884 and destroyed by fire on 27 September 1896, it was the largest of three such tin-skinned, wooden elephants in the United States (only *Lucy* survives at Margate, New Jersey; *The Light of Asia* at South Cape May was demolished in 1900). Though popular with tourists, it was never successful as a hotel and later housed souvenir and tobacco shops. It stood on a seamy stretch of Surf Avenue near West 12th Street, where illicit pleasures traded under the euphemism of "seeing the elephant."

Joseph Ditta

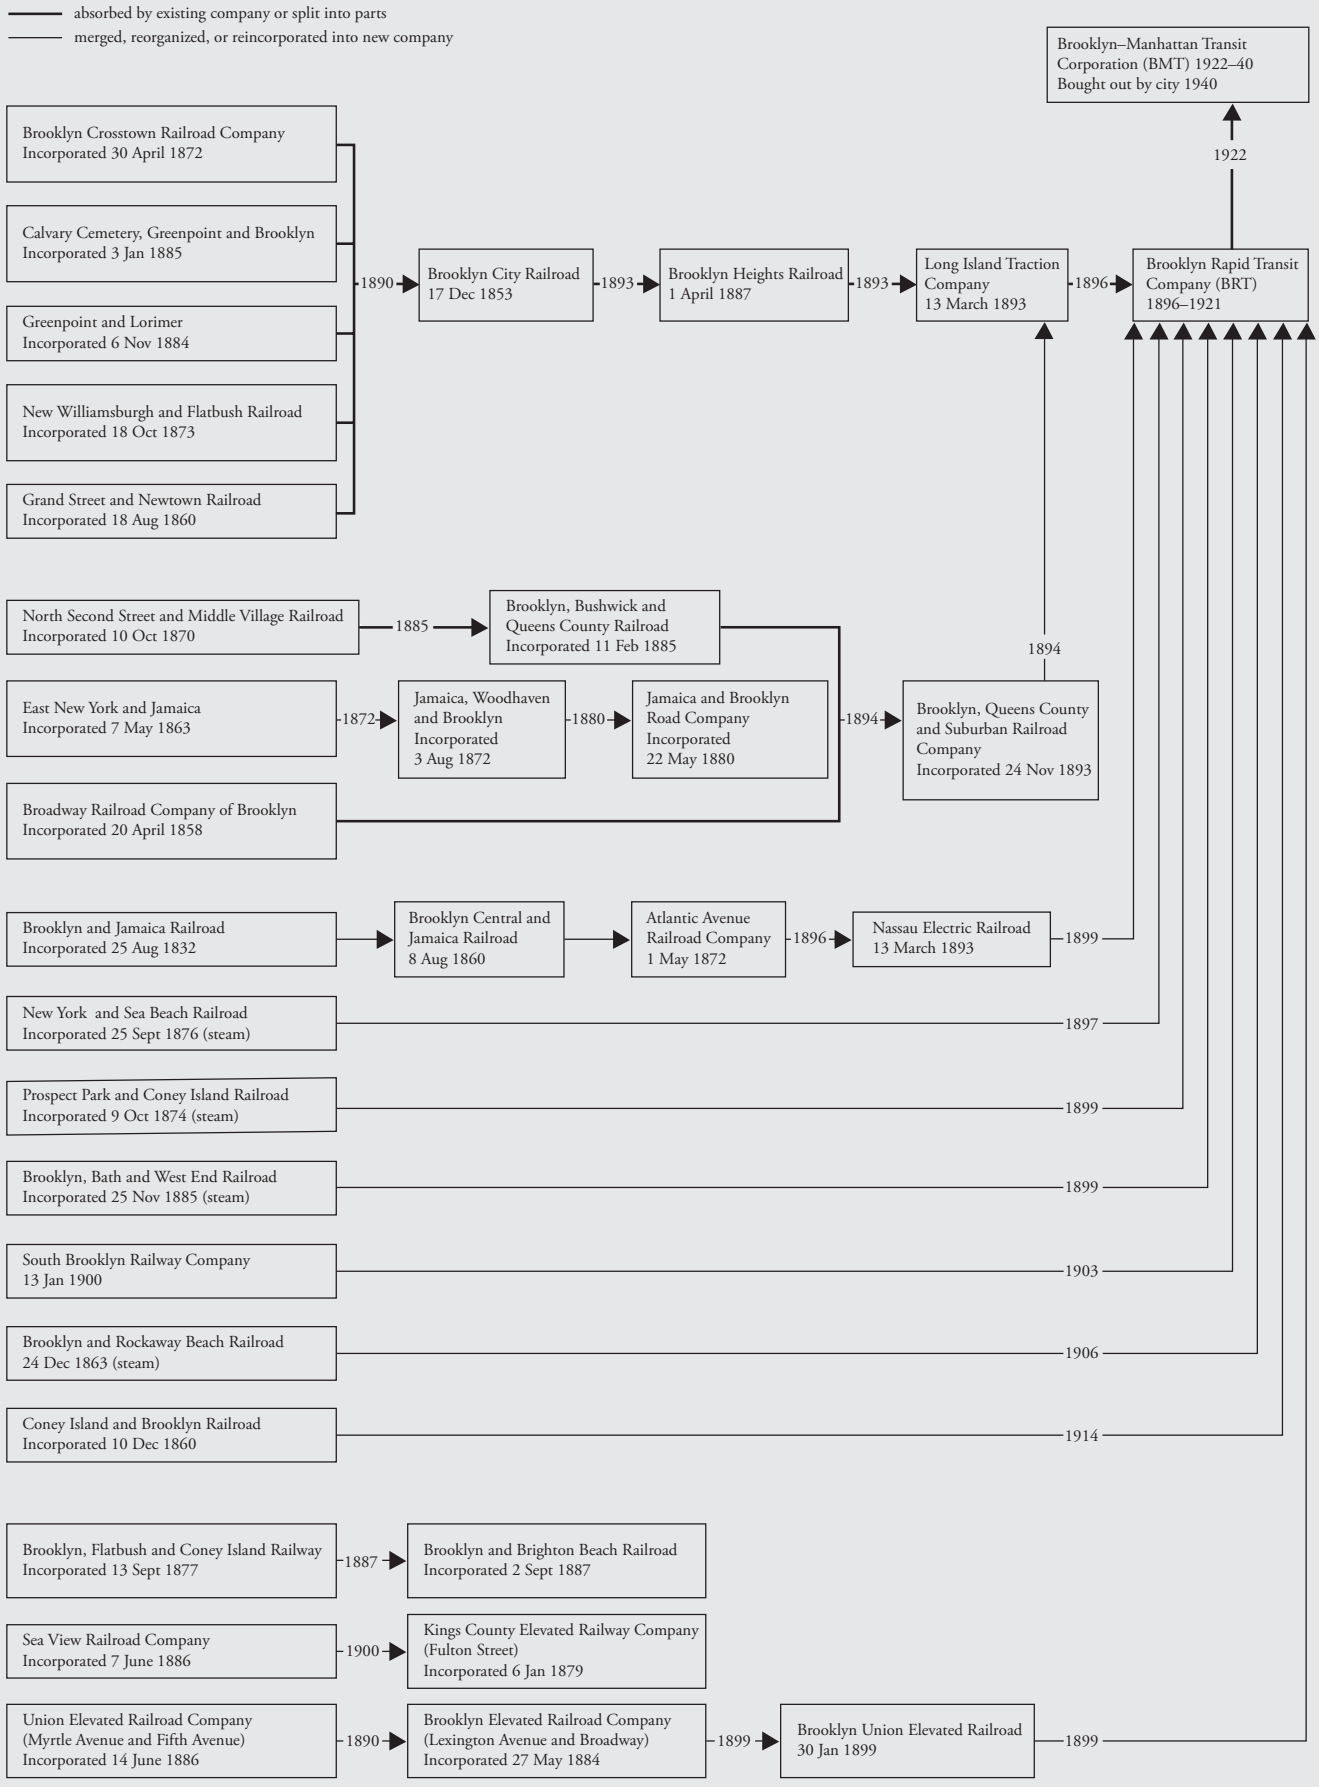


elevated railways [els]. The earliest form of rapid transit in the United States, developed in New York City in the second half of the nineteenth century. The need to move large numbers of people between southern Manhattan and the northern reaches of the city encouraged a search for a faster alternative to the streetcar. The first elevated line was constructed in 1867–70 by Charles Harvey and his West Side and Yonkers Patent Railway company along Greenwich Street and Ninth Avenue between Dey and 29th streets. Tracks were laid atop iron (and later steel) superstructures about 30 feet (9 meters) above the ground, and cars were pulled by a cable connected to a steam-powered generator at the terminus. Cables often broke, requiring passengers to descend from the tracks by ladder. Such problems kept ridership low, and in 1871 the effort failed. In the following year the firm was reorganized as the New York Elevated Railroad Company, and a number of productive innovations were introduced: steam locomotives (or "dummies") were employed to haul the wooden cars, stations were added, and the line was extended south to South Ferry and north to Ninth Street and then 30th Street; by 1878 the line ran up Ninth Avenue to 61st Street.

The success of the line encouraged the development of new lines. The Gilbert Elevated Railway, reorganized as the Metropolitan Elevated Railway, opened a line on Trinity Place, Church Street, West Broadway, and Sixth Avenue between Rector Place and Central Park in June 1878. The New York Elevated Railroad Company built a line on Third Avenue that opened in August 1878, and by the end of the year it had track running from South Ferry to 129th Street. In 1879 the Man-

Elevated railroad at Ninth Avenue and 100th Street. Stereograph by E. and H. T. Anthony and Company

Elevated Railways of Manhattan



Compiled by Vincent Seyfried with the assistance of Laura Lewison

hattan Railway Company gained control of all the elevated lines in Manhattan and completed construction of the Second Avenue line, and on 1 March 1880 it opened the Second Avenue line between Chatham Square and 65th Street (extending it to 129th Street by 16 August). By 1880 the Third Avenue line was connected to Grand Central Depot and to the ferry terminal of the Long Island Rail Road on the East River at 34th Street. By 1881 the original Ninth Avenue line had been almost entirely rebuilt as a double-track line, extended north to 155th Street, and connected to the Sixth Avenue line by a track along 53rd Street and by another at Battery Place. The final phase of construction of elevated lines in Manhattan connected the Second Avenue and Third Avenue lines at Chatham Square (1882) and 129th Street (1891). The elevated trains were noisy and responsible for falling ash, oil, and cinder.

All further construction of elevated lines took place in the Bronx and Brooklyn, where most of the city's expansion around the turn of the century took place. Several steam-powered elevated lines went to northern Brooklyn, beginning with the Lexington Avenue line (1885). This fanned out from downtown and from the waterfront, where passengers could connect with ferries to Manhattan. The Suburban Rapid Transit Company was formed in March 1880, and between 1886 and 1902 it constructed a route that connected Manhattan (129th Street and Third Avenue) with the Bronx at Bronx Park, just north of Fordham Road. This line crossed the Harlem River on an iron drawbridge, ran on private right-of-way to 145th Street, and followed Third Avenue northward. Separate fares were required for passengers traveling between Manhattan and the Bronx. In 1891 the Manhattan Railway Company acquired control of Suburban and took over its operation. Through-service between the Bronx and Manhattan began in 1896 with a single five-cent fare, using the Suburban route north of 129th Street and the Second and Third Avenue lines south of it. Transfers between all four els in Manhattan were possible at South Ferry, and by using through-routing one could travel between lower Manhattan and the Bronx for five cents.

In Brooklyn by 1893 there were elevated lines along Myrtle Avenue, Lexington Avenue, Fulton Street, Broadway, and Fifth Avenue. From 1883 the New York and Brooklyn Bridge Railway operated cable-powered trains from Park Row in Manhattan to Sands Street in Brooklyn. By 1898 the various elevated companies in Brooklyn acquired trackage rights over the bridge and began through-service between boroughs. Large terminals were constructed at Park Row and Sands Street. In the suburban, semirural, and resort communities south of the city of Brooklyn, steam railroads originally built in the 1860s were incorporated into the elevated system in 1893–1900; these lines continued to run on the surface using trolley wire and were the precursors of the Brighton, Culver, Sea Beach, and West End lines. In 1899–1906 the Brooklyn Rapid Transit Company (BRT), which already ran streetcars, unified the various elevated companies of Brooklyn within a single network and replaced steam trains with multiple-unit electric trains (which used Frank J. Sprague's innovative system of electrification). Between 1900 and 1904 the Manhattan Railway instituted a number of changes: steam engines were retired in 1902–3, the Third Avenue line was extended to Fordham Road by 1901, and all lines were electrified. The Interborough Rapid Transit Company (IRT) constructed the first subway system from 1900 to 1904; in 1903 it acquired the Manhattan Railway Company to coordinate service on both systems. The first coordinated service between elevated railway and subway began in 1904, when the Westchester Avenue elevated from 149th Street to Bronx Park (180th Street) was constructed; both the Second Avenue elevated and the IRT subway used this route. In 1908 the BRT opened a

Trolley and Elevated Lines in Brooklyn (slightly simplified)

Compiled by Vincent Seyfried

line over the Williamsburg Bridge as an alternative to the Brooklyn Bridge crossing.

Under the "dual contracts" project of 1913, the IRT and the BRT agreed to equip and operate new rapid transit lines built by the city and to rebuild many of the original elevated lines. In the Bronx, Brooklyn, and Queens many new lines were elevated in still-undeveloped outlying areas, saving costs and construction time compared to subway construction. The majority of these routes are still in everyday use in the early twenty-first century but are not elevated lines in the historical context; all are considered part of the subway system. Within the IRT elevated system, the Second Avenue, Third Avenue, and Ninth Avenue lines were equipped with center express tracks and many "hump" stations with two levels, one for local trains and the other for express trains. Two new drawbridges over the Harlem River connected these lines to the Bronx lines and enabled trains to reach Woodlawn (via Jerome Avenue, 1918) and Gun Hill Road and White Plains Road (via Webster Avenue, 1920). Tracks were also constructed over the Queensboro Bridge, providing access for Second Avenue trains to Astoria and Corona (1915–17).

Most of the elevated and surface lines belonging to the BRT and built before 1900 were now rebuilt with heavy-duty track to accommodate steel subway cars, permitting connections with new subways to be built along Fourth and Flatbush avenues in Brooklyn and along Broadway and Nassau Street in Manhattan; service was also extended to Richmond Hill, Jamaica, Astoria, and Corona in Queens. The elevated system reached its greatest level of use in 1921, when it carried 384 million passengers. In 1923 the BRT was reorganized as the Brooklyn–Manhattan Transit Corporation (BMT). After 1923 a number of elevated lines were abandoned because subways were being built parallel to them: the 42nd Street spur to Grand Central Terminal was closed in 1923, as were the Sixth Avenue spur between 53rd and 59th streets in 1924, and the East 34th Street spur in 1930.

The Depression decreased ridership, and under Mayor Fiorello H. La Guardia els were eliminated to raise property values along the tracks. The Sixth Avenue line was abandoned on 4 December 1938 and razed in 1939, and in June 1940 the city acquired the IRT and the BMT to facilitate the further removal of elevated lines, which during the following decades were abandoned along Ninth Avenue (11 June 1940), Second Avenue (north of 57th Street on 11 June 1940, south of 57th Street on 13 June 1942), Fifth Avenue in Brooklyn (1 June 1940), Third Avenue in Brooklyn (1 June 1940), Fulton Street (1 June 1940 and 29 April 1956), the Brooklyn Bridge (5 March 1944), Lexington Avenue (14 Oct 1950), Third Avenue between Chatham Square and 149th Street (12 May 1955), and Myrtle Avenue (4 Oct 1969). The Third Avenue line in the Bronx, from 149th Street to Gun Hill Road along Third and Webster avenues, closed on 29 April 1973. In the early twentieth century one pre-1904 elevated structure remains standing and in use—a portion of the "J" train (built in 1893), along Fulton Street, Brooklyn, between Alabama Avenue and Crescent Street. Brooklyn's Franklin Avenue shuttle right-of-way, originally an 1878 steam railroad to Coney Island, then a BRT/BMT pre-1904 elevated route, was rebuilt extensively in the late 1990s between Prospect Park and Fulton Street. About 70 route miles (113 route kilometers) of elevated rapid transit lines are still in daily use in New York City.

elevators. The main mechanical means of moving vertically in New York City's tall buildings. Their beginnings in the city date back to 1853, when Elisha Graves Otis developed a device in his workshop in suburban Yonkers that would stop an elevator car with a severed cable from falling. Otis marketed his safety break aggressively and demonstrated it at New York City's Crystal Palace in 1854. Though Otis sold his first elevators to carry freight, elevators dedicated solely to passenger traffic soon followed, first in 1857 in the Broadway store of E. V. Haughwout and Company, and then elsewhere, most prominently in the Fifth Avenue Hotel, which

Otis Brothers advertisement for hydraulic elevators, 1878

opened in 1859 with an elevator designed by Otis Tufts. Elevators suddenly enabled architects and developers to construct buildings taller than four or six stories, increasing urban density.

As elevators became more common in the urban landscape, engineers continued to develop their technological capabilities. Elevators became taller and faster, especially after the shift from steam power to hydraulics in the 1870s, the introduction of electricity in the 1890s, and the introduction of the first gearless traction elevators in 1902. The first push-button elevator appeared in 1892, but it could manage only one trip at a time. Picking up multiple passengers and dropping them off at different floors remained impossible without elevator operators until about 1920, so all but the shortest buildings continued to rely on elevator operators until that time. Operators helped to develop the etiquette and social practices that evolved in elevators. They collaborated with passengers and building managers to create and enforce rules about facing the front of the elevator, taking off one's hat, whether to tip the operator, and so on. By the 1920s a new managerial focus on "service" encouraged managers to see operators as a valuable resource. They began to train operators to be friendly, to chat with passengers, and to allay fears about elevator travel. Though often demeaning, the social roles played by elevator operators helped them to build rapport with passengers that eventually led to leverage against their bosses. Operators built unions throughout the early twentieth century, but their first substantial victories did not come until the 1930s and 1940s, when they learned how to build solidarity with tenants and use it on the picket line and in labor arbitration. This was a short-lived victory; by the 1960s the higher cost of labor pushed New York City's building managers to install automatic elevators, displacing most operators. Those who remained, on expensive residential blocks and also scattered throughout the city, became institutions, well loved by their tenants and well protected by their union, Local 32B-32J of the Service Employees International Union.

In 1948 the Otis and Westinghouse companies began to sell the "Autotronic" and "Select-O-Matic" elevator systems, which automatically shifted traffic schedules over the course of the day. Elevator manufacturers have continued to experiment with new systems of traffic management. Milestones include the Elevonic 101 system released by Otis in 1979, which controlled elevators through microprocessors; the introduction of "fuzzy logic" in Japanese elevators in 1992; and the most recent generation of consoles that take reservations for specific floors and then direct passengers to specific elevators. This last innovation, called *destination dispatching,* mimics the abandoned role of the starter, returning the flow of elevator traffic to an earlier pattern; like all innovations in automatic elevators, it creates rules and algorithms that replicate patterns that operators and starters developed and practiced intuitively.

Ellington, Duke [Edward Kennedy] (*b* Washington, D.C., 29 April 1899; *d* New York City, 24 May 1974). Bandleader, composer, and pianist. After a failed attempt to break into jazz in New York City in 1922, he returned in the following year to join the Washingtonians, led by the banjoist Elmer Snowden. A fellow sideman was the cornetist Bubber Miley, who was the first of the highly individual soloists with whom Ellington became associated. Later in 1923 the band began working at the Hollywood Club, on West 49th Street at Broadway. After Snowden left in 1924, Ellington took over as its leader, and until 1927 the band continued working regularly at the Hollywood (renamed the Kentucky Club in 1925). During this time the trombonist Tricky Sam Nanton joined the band, and Ellington recorded his first masterpiece, *Black and Tan Fantasy* (1927), written with Miley and featuring Miley's growling, "wa-wa" melody. The trumpeter Cootie Williams (who replaced Miley), the clarinetist Barney Bigard, and the saxophonists Johnny Hodges and Harry Carney brought new solo voices into the orchestra during its engagement from 1927 to 1931 at the Cotton Club (on Lenox Avenue at West 142nd Street). The setting was perverse—a pseudo-African "jungle" revue—but it stimulated Ellington, who brought forth jazz of a wide emotional and sonic palette and supplanted Fletcher Henderson as the foremost big-band leader in jazz.

Duke Ellington and his orchestra, 1923

In 1931 Ellington embarked on a lifetime of international touring, but he maintained his permanent residence in New York City, and his band often recorded and occasionally held engagements there, including brief returns to the Cotton Club in 1933 and 1937. Throughout his life he drew inspiration from the vitality of the city, a debt that he acknowledged most directly in the program notes to his composition *Harlem Air Shaft* (recorded in 1940). It was not Ellington but his protégé Billy Strayhorn who composed the well-known celebration of the city's transit system, *Take the "A" Train* (recorded in 1941), which became the band's theme song and was thus closely identified with its leader. In 1943 the orchestra broadcast on radio during its residency at the Hurricane Club (on Broadway and West 51st Street), and it performed at the Zanzibar (Broadway and West 49th Street) in 1945. Carnegie Hall was the venue for the premiere of several of Ellington's ambitious extended works in concerts given periodically between 1943 and 1951, and he first performed his *Second Sacred Concert* at the Cathedral of St. John the Divine in 1968. Ellington's addresses in the city included 381 Edgecomb Avenue (in the 1930s), apartment 4A at 935 St. Nicholas Avenue (1939–61), 400 Central Park West, his sister Ruth's apartment at 333 Riverside Drive (from 1961 until his death), and the Lincoln Towers, 140 West End Avenue.

Barry Kernfeld

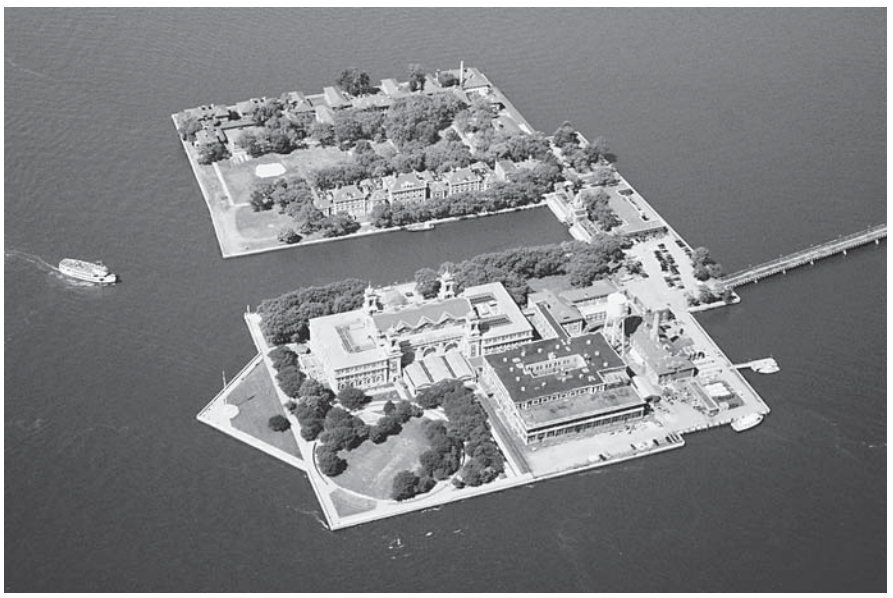
Elliott, Charles Loring (*b* Scipio, near Auburn, N.Y., 12 Oct 1812; *d* Albany, N.Y., 25 Aug 1868). Painter who studied art in Onondaga Hollow, New York, before moving to New York City in 1829. After training under John Quidor, he worked as an itinerant portraitist for 10 years. Competition from Henry Inman inspired him to hone his skills, and he gained a considerable reputation for fashionable portraiture, particularly of women. A prolific painter, he was a founder of the Century Association and belonged to the National Academy of Design. After Elliott's death his self-portrait at the National Academy of Design was draped in black and surrounded with more than 30 of his works.

Carrie Rebora Barratt

Ellis, Perry (Edwin) (*b* Portsmouth, Va., 30 March 1940; *d* New York City, 30 May 1986). Fashion designer. After receiving his master's degree in retailing from New York University in 1963, Ellis returned to his native Virginia

where he began his fashion career as a buyer for the department store Miller and Rhoads. Singled out for his ability to predict which clothes would sell, he was recruited by the Vera Companies of Manhattan Industries in 1974. His talent at redesigning clothing earned him a chance to create his own line, and in 1978 he founded his eponymous clothing brand. Ellis's oversized look and offbeat sportswear designs broke away from the more conservative menswear designs of contemporaries such as Ralph Lauren and Calvin Klein. His talent earned him both financial success and fashion notoriety during the 1970s and 1980s, and his studio in New York City was famous for the creative freedom that it allowed young designers.

Anne E. Kornblut



Ellis Island. Island in Upper New York Bay, near the coast of New Jersey. Named for Samuel Ellis, who acquired the island in 1785, it was purchased from his heirs in 1808 by the State of New York and turned over to the federal government. For a time its fort and arsenal were used to defend the harbor; however, it is best known as the site of a federal immigration center, which, between its opening on 1 January 1892 and it closing in 1924, was the point of entry for more than 12 million immigrants, or 71 percent of all immigrants to the United States. The wooden buildings first used to house the immigration center were destroyed by fire in 1897; a fireproof replacement, designed in a French Renaissance style and trimmed with brick and limestone, was built by the local firm of Boring and Tilton and opened on 17 December 1900. Designed to accommodate as many as 500,000 immigrants a year, the new building became inadequate when the actual volume of immigrants each year was sometimes double this number. The government enlarged the island with landfill, from its original 3 acres (1.2 hectares) to 27.5 acres (11 hectares); added new wings and a third floor to the main building; and eventually erected 33 additional buildings. The heart of the center was a huge registry room where officials and health inspectors sought to deny entry to paupers, polygamists, people who were mentally defective, contract laborers, criminals, and people suffering from debilitating and contagious illnesses. More than 98 percent of the prospective immigrants gained entry, and 80 percent did so in fewer than eight hours. Once cleared, immigrants took a ferry to the Battery (about one-third of them settled in or near New York City) or a train to destinations throughout the country.

Congress in 1924 curtailed mass immigration and provided that those seeking entry would be screened in their countries of origin. This diminished the role of Ellis Island as an immigration center, and from that time it was used primarily to detain deportees. In 1954 the Immigration and Naturalization Service moved its offices to Manhattan, and Ellis Island was declared surplus property. The government tried to sell the island in the late 1950s, but lack of an adequate bid and public protest saved it from passing into private hands. In 1965 President Lyndon B. Johnson proclaimed the island a national monument to be run in conjunction with the Statue of Liberty by the National Park Service (NPS). Congress, however, declined to act on his request to appropriate funds for restoring the disused immigration facility as a historic site, and the facility deteriorated during the following years. In 1982 a commission formed by President Ronald Reagan set up a private foundation to collect corporate and individual donations for the repair and restoration of both Ellis Island and the Statue of Liberty. The project to restore Ellis Island began in 1984 with a budget of $160 million. The main building, restored to look as it did between 1918 and 1924 and housing a new museum of immigration, opened to the public in September 1990.

Since the opening of the museum about two million people have visited Ellis Island annually. Further funding from the Statue of Liberty–Ellis Island Foundation and the labor of 12,000 volunteers from the Church of Jesus Christ of Latter-Day Saints (Mormons) enabled the NPS in 2001 to create the American Family Immigration Center, which provides public access to an automated database of millions of records of immigrants who passed through the facility. Visitors could enter only the main building, however, because the other structures had not been stabilized and there was no money or plan for their repair and restoration. The remaining buildings, mostly on the south side of the island, continued to deteriorate so badly that the National Trust for Historic Preservation placed them on its list of the 11 most endangered historic places. In 2001 the NPS signed an agreement with Save Ellis Island (SEI), another private nonprofit organization, for it to become the primary fund-raiser and partner to the NPS in "a program to preserve, rehabilitate, and enhance the South Side of Ellis Island." By 2007 most of the structures had been stabilized, and on 2 April, the NPS and SEI opened to visitors the restored Ferry Building, where they could view an exhibit titled *Future in the Balance: Immigrants, Public Health, and Ellis Island's Hospitals.*

Ellis Island, 2009

Ellison, Ralph (Waldo) (*b* Oklahoma City, 1 March 1913; *d* New York City, 16 April 1994). Writer. Named after the American transcendentalist Ralph Waldo Emerson, he earned a scholarship through his trumpet playing in 1933 to Tuskegee Institute, where in 1936 he was introduced by the head of the music department to Howard University professor Alain Locke. Ellison set out for New York City after his third year, hoping to earn the wages to return to school in the fall. In Harlem, which Ellison would later recall as "over-

crowded and exploited politically and economically," he took a series of odd jobs but ultimately began to focus on writing rather than art and music. Locke was in New York City while Ellison was staying at the Harlem Young Men's Christian Association and introduced the young intellectual to poet Langston Hughes, through whom he met novelist Richard Wright. In 1938 Ellison secured a job with the Federal Writers' Project researching folklore on "Negro culture." He remained on the project until 1942, when he began editing the journal *Negro Quarterly.* Though much of Ellison's writing was influenced by Marxism, by 1944 he had begun to question the dedication of communism to the black cause. Between 1943 and 1945 Ellison worked as a cook and baker on a merchant ship. During this period, he received a fellowship to begin his first novel, which was never published in its entirety.

During a 1945 trip to Vermont, Ellison first saw himself as an "invisible man," identified by others only as an embodiment of stereotypes and not as an individual. He worked on his novel *Invisible Man* for the next five years, interspersed with freelance jobs, before its publication in 1952; the following year it became a best seller and won the National Book Award. The novel is set largely in Harlem and ends with the Harlem riot of 1943. Ellison later taught at various academic institutions. During the 1960s he was criticized by some writers and political leaders for not being more active in the Black Power movement. He was also active in elite circles such as philanthropic boards and Manhattan's Century Club, an exclusive group that he lobbied hard to enter, strongly opposing the inclusion of women at the club. Ellison died of pancreatic cancer, leaving more than 2000 pages of an unfinished novel, which was published in 2010 as *Three Days before the Shooting*. He is buried in Trinity Church Cemetery in Washington Heights.

Garrett A. Felber

Elmhurst. Neighborhood in northwestern Queens (2000 pop. *ca* 100,000), bounded to the north by Roosevelt Avenue, to the east by Junction Boulevard, to the south by the Long Island Expressway, and to the west by railroad tracks (Conrail). Established in 1652 as Newtown, it was the administrative seat of the town of Newtown from 1683 to 1898, and was renamed in 1896 to avoid any association with the foul smells of Newtown Creek. The neighborhood became known for a fashionable housing development built north of the railroad station by the Cord Meyer Development Company between 1896 and 1910. Developments were added between 1905 and 1930 in adjoining areas, including Elmhurst Square, Elmhurst South, Elmhurst Heights, and New Elmhurst. After World War II Elmhurst evolved from an almost exclusively white, middle-class suburban community with a large Jewish and Italian population to the most ethnically diverse neighborhood in the city. By the 1980s immigrants from 112 different countries had settled there. Chinese immigrants accounted for one-fifth of the total, and there were large numbers as well from Colombia, Korea, India, the Philippines, the Dominican Republic, Ecuador, Pakistan, Peru, and Guyana. The neighborhood also had the first enclosed shopping mall in Queens (built in 1973). Three colonial churches are still used, two of which are known for their historic graveyards. The local subway station is Grand Avenue–Newtown. In the early twenty-first century Elmhurst was still considered the most ethnically diverse neighborhood in Queens.

Howard Arlington Northacker, *History of the First Presbyterian Church of Newtown at Elmhurst, New York* (New York: First Presbyterian Church of Newtown, 1927)

Vincent Seyfried

Elmhurst Hospital Center. Medical center and teaching hospital. The second-oldest institution in the municipal hospital system, it traces its origins to the establishment on the southern end of Blackwell's Island (now Roosevelt Island) of Island Hospital, which began as an infirmary for a prison nearby and grew into a general-care hospital for patients who could not be accommodated at Bellevue Hospital; the two hospitals were administratively separated in 1847. After a fire destroyed Island Hospital in 1858 prisoners confined on the island quarried granite there and erected a new structure. A stone from these years bearing the name of Island Hospital is now part of the southern facade of the hospital in Elmhurst. After a public outcry over filthy wards and poor care, the institution was renamed Charity Hospital in 1870 and its first medical superintendent was appointed. The hospital in 1875 opened a maternity ward, where its use of the new techniques of antisepsis made great progress against puerperal fever. In the same year the hospital opened a school of nursing, the fourth in the United States. Between 1910 and the 1930s the facility (now renamed City Hospital) grew from 742 beds to more than 1000. It was, however, impossible to reach by land until 1920, when an elevator connected Blackwell's Island to the Queensboro Bridge.

The need for expansion to serve the growing population of Queens led to the removal of City Hospital to 79-01 Broadway in 1957, at which time it was renamed City Hospital Center at Elmhurst. It became affiliated with the Mount Sinai School of Medicine in 1964 and took its current name in 1988. In the early twenty-first century the center had 531 beds and a wide range of outpatient services. It offered primary and specialty care to more than one million people in western Queens and was particularly well known for its emergency department, department of rehabilitation medicine, emergency psychiatric services, programs for patients with AIDS, and women's health services and for being a municipal acute care hospital with a skilled nursing unit.

Sandra Opdycke

El Morocco. Nightclub opened as a speakeasy in 1931 at 154 East 54th Street by John Perona. After the repeal of Prohibition, it became one of the most popular establishments in New York City. Known for its zebra-striped banquettes and glittering dark-blue ceiling, it attracted members of fashionable society, politicians, and entertainers. It moved to 307 East 54th Street in 1960. After Perona's death in 1961, a number of different owners closed and reopened the club several times. Although no longer an establishment of repute, it retained much of its original decor and ambiance until it closed in 1997.

Matthew Kachur

Elm Park. Industrial and residential area on the northern shore of Staten Island (2009 est. pop. 1500). Elm Park is bordered by Kill von Kull to the north, Port Richmond to the east, Mariner's Harbor to the west, and Forrest Avenue to the south. This part of Staten Island, along Richmond Terrace, was the earliest to industrialize. Nineteenth-century commercial enterprises included dye, varnish, brick, and chalk manufacturing works. The 1931 opening of the Bayonne Bridge linked Elm Park and its adjacent sections to the New Jersey industrial corridor, which includes Bayonne. Local children attend Public School 21. A substantial percentage of the school population is first-generation Latino.

Nancy V. Flood

Eloise. Children's book about a mischievous six-year-old girl named Eloise who lives at the Plaza Hotel. Written by actress Kay Thompson (*ca* 1903–98) and illustrated by Hilary Knight (*b* 1926), the book, fully titled *Eloise: A Book for Precocious Grown Ups,* was published in 1955 and became an instant success with both children and adults, selling more than 150,000 copies. "I am a city child," Eloise declares at the beginning of her story. "I live at the Plaza." Eloise and her pet dog and turtle have the run of the hotel, where she terrorizes the staff with her antics, such as ordering room service for one roast-beef bone, one raisin, and seven spoons with her signature line, "Charge it please and thank you very much." The character was rumored to have been based on Thompson's goddaughter Liza Minnelli,

but Eloise more likely came from Thompson's nightclub act at the Plaza's Persian Room in 1954 when she would slip into character as a little girl during rehearsals, to great effect. Thompson, who lived rent-free at the Plaza, collaborated with Knight on *Eloise in Paris* (1957), *Eloise at Christmastime* (1958), and *Eloise in Moscow* (1959); a fifth book, *Eloise Takes a Bawth,* was scheduled for publication in 1964, but Thompson stopped publication (the book was finally published in 2002) and refused to allow any of the books to be republished during her life. Eloise became an iconic figure at the Plaza, and her portrait, painted by Knight, was hung in the hotel's Palm Court in 1957; after it was stolen during a fraternity party in 1960, Knight painted another one. As of the early twenty-first century the portrait remained in place, and Eloise fans continued to visit the famed hotel-dweller.

Kate Lauber

els. See Elevated railways.

Eltingville. Neighborhood in southwestern Staten Island (2009 pop. *ca* 20,000), bounded to the north by Greenridge, to the east by Great Kills, to the south by Lower New York Bay, and to the west by Annadale. The area was successively called South Side and Sea Side (1873), both after the name of its post office, before taking its current name, which recalls a family that settled the area in the early nineteenth century. The neighborhood was a wooded area where a largely Scandinavian population lived in small clusters of one-family houses until the completion in 1964 of the Verrazano–Narrows Bridge, which led to an influx from the Italian areas in Brooklyn, a sharp increase in the construction of one-family and multi-family houses and town houses, and a growth in commercial development along such streets as Hylan Boulevard. The population of Eltingville remained ethnically diverse in the early twenty-first century, with the Orthodox Jewish community increasing in size. The intersection of Richmond Avenue and Amboy Road is the oldest and most active commercial area and the site of a station of Staten Island Rapid Transit.

John-Paul Richiuso

Ely, Smith(, Jr.) (*b* Hanover, Morris County, N.J., 17 April 1825; *d* Livingston, N.J., 1 July 1911). Mayor. A prosperous merchant in New York City, he was elected as a Democrat to the state senate and twice to the U.S. House of Representatives during the 1870s, resigning after his appointment as mayor in 1877. He was reappointed in 1878 and was the commissioner of Central Park in 1897 and 1898.

James E. Mooney

Emerald Societies. Irish American fraternal societies organized according to occupation to engender Celtic pride. Music, particularly bagpipe bands, is a key component of the organizations. In the early twenty-first century the Grand Council of United Emerald Societies boasted more than 10,000 members and 25 affiliate societies, located predominantly in the the tri-state area. There are affiliate societies for employees of federal, state, and city agencies (including the police and fire departments) as well as for the utilities.

John J. Concannon

Emergency Medical Service. Principal provider of emergency medical care outside the hospital in New York City. It was formed in 1970 by the same legislation that established the New York City Health and Hospitals Corporation. From 1972 all employees dealing with patients were required to be eligible for state certification as emergency medical technicians (EMTs), with training in first aid, cardiopulmonary resuscitation, and emergency childbirth. The service inaugurated its own EMT training program in 1973; the first teams of EMTs began working in city ambulances in 1975; and the service was designated the coordinating agency for emergency medical care in New York City in 1977, with the authority to dispatch ambulances from both municipal and private hospitals. The service introduced a training program in 1984 for paramedics, who in addition to the training given to EMTs learn such procedures as reading electrocardiograms. Calls to the Emergency Medical Service are transmitted to the 911 emergency system of the Police Department; in response it dispatches basic life-support ambulances, staffed by two EMTs, and advanced life-support ambulances, staffed by two paramedics.

Andrea Balis

Emerson, Haven (*b* New York City, 19 Oct 1874; *d* New York City, 21 May 1957). Physician and public health official. As the commissioner of the Metropolitan Board of Health from 1915 to 1917 he expanded the health district plan to Queens and dealt effectively with the polio epidemic of 1916. From 1922 to 1940 he was the director of the DeLamar Institute of Public Health at Columbia University. He was among the first to advocate treating alcoholism as a disease and helped to form the American Heart Association. As the chairman for the American Public Health Association of the Committee on Control of Communicable Diseases he produced several influential reports, among them "Control of Communicable Diseases in Man" (1917). He lived for many years on the East Side of Manhattan.

Joseph S. Lieber

Emerson Hill. Neighborhood in northeastern Staten Island, bounded to the north by the Staten Island Expressway, to the east by Richmond Road, to the south by Dongan Hills, and to the west by Ocean Terrace. It occupies a site with one of the highest elevations in the city (300 feet [90 meters]) and affords views of the Narrows and New York Harbor. The history of the area is closely linked to the New England transcendentalists. From 1837 to 1864 it was the home of William Emerson, a judge of Richmond County from 1841 to 1843 whose house at the foot of the hill, called the Snuggery, was visited occasionally by his brother Ralph Waldo Emerson and from May to October 1843 by Henry David Thoreau, who worked as a tutor to Emerson's children. When fire destroyed the Snuggery in 1855, Emerson built a house on the hill that later became known as the Unger House. Iron was mined in the area in the middle of the nineteenth century, but declined by the 1870s. The hill was converted into a private community around 1930 by the real estate developer Cornelius G. Kolff, who gave it its current name. Only two roads lead to the enclave: Emerson Drive to the north and Douglas Road to the east. In the early twenty-first century Emerson Hill was a small, semiprivate community of fine one-family homes.

John-Paul Richiuso

Emery Roth and Sons. Architectural firm. Its founder, Emery Roth, Sr. (1871–1948), emigrated alone from Hungary at the age of 13; in 1893 he settled in New York City, where he worked as a draftsman until he bought an existing practice in 1898. The firm specialized in large residential buildings, particularly hotels and luxury apartments, among them the Ritz Tower (1926), the Beresford (1929), and the San Remo (1930). Roth's sons Julian and Richard were partners by the 1930s, and after World War II they became leading designers of office towers with highly functional, economical interiors. In both longevity and volume, Emery Roth and Sons ranks among the premier architectural firms in New York City.

Steven Ruttenbaum, *Mansions in the Sky: The Skyscraper Palazzi of Emery Roth* (New York: Balsam, 1986)

Carol Willis

Emigrant Savings Bank. New York City's only survivor of the nineteenth-century thrift movement still operating under its own name. In 1925 it was the largest savings bank in the United States. Depositors were overwhelmingly Irish for the bank's first century because of its close relationship with the Irish Emigrant Society (established 1841), a local group that handled remittances to Ireland. These de facto banking functions led the society, under the leadership of Gregory Dillon, a Catholic native of County Roscommon, and Joseph Stuart, a Presbyterian from County Armagh,

to charter the Emigrant Industrial Savings Bank. It opened on 30 September 1850 at 51 Chambers Street, an address it maintained until 1969 when its headquarters moved to 5 East 42nd Street. Through the agency of Emigrant Savings Bank, Archbishop John Hughes financed a brick-and-mortar infrastructure for the rapidly expanding Catholic population, including a $400,000 mortgage for St. Patrick's (new cathedral). Emigrant's reputation as a Catholic bank was buttressed by its officers' charitable work. Emigrant's Test Books, transferred to the New York Public Library in 1995, are a rich source for Irish genealogy and social history. As of 2010 it operated 34 branches in the New York city metropolitan area.

Marion R. Casey, "Refractive History: Memory and the Founders of the Emigrant Savings Bank," *Making the Irish American: History and Heritage of the Irish in the United States,* ed. J. J. Lee and M. R. Casey (New York: New York University Press, 2006)

Marion R. Casey

Emmet, Thomas Addis (*b* Cork, Ireland, 24 April 1764; *d* New York City, 14 Nov 1827). Lawyer. He moved to New York City in 1804. Although he had extensive schooling and experience, his prominence in the Irish Rebellion against British rule in 1798 raised the suspicions of conservative Federalists in the city, who initially opposed his admission to the bar. Once accepted he quickly became what the jurist Joseph Story called "the favorite counsellor of New York." His most notable case was *Gibbons v. Ogden* (1824), in which he unsuccessfully defended before the U.S. Supreme Court the legality of the steamboat monopoly of New York State. He lived at 48 White Street.

Frederick S. Voss

Emmett, Dan(iel Decatur) (*b* Mount Vernon, Ohio, 29 Oct 1815; *d* Mount Vernon, 28 June 1904). Minstrel. With three other unemployed musicians he formed the Virginia Minstrels in February 1843 and presented the first American minstrel show in New York City, which inspired a nationwide obsession with the genre. Between 1858 and 1866 he composed and performed songs for Bryant's Minstrels, including "Blue Tail Fly" and "Turkey in the Straw." He is credited with writing "Dixie" ("Dixie's Land") for the minstrel stage in New York City in 1859, which was adopted by the Confederacy as its unofficial anthem; however, the authorship of the song has been and continues to be disputed.

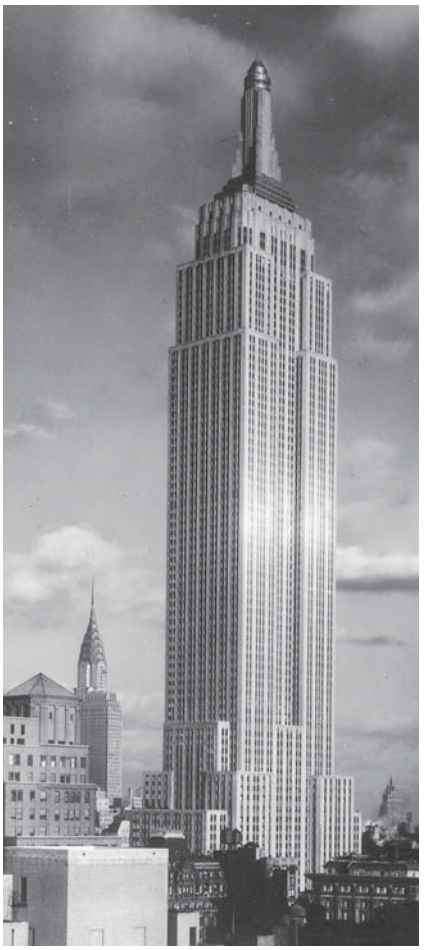
Robert B. Winans

Empire Blue Cross and Blue Shield. Private, nonprofit firm that provides health insurance in New York State, formed in 1973 by the merger of the Associated Hospital Service, or Blue Cross (1935), and the United Medical Service, or Blue Shield (1945). Soon after its formation it set up a health maintenance organization (Health Net) and implemented a hospital reimbursement system mandated by the state to contain the cost of inpatient care. During the mid-1990s the firm was one of few remaining nonprofit insurers in the United States to use "community rating," a system under which small group and individual customers with the same policy are charged the same premium regardless of how frequently they use medical services. It also continued to offer open enrollment, or guaranteed acceptance, to all applicants able to pay premiums, regardless of their medical status; state regulations helped to support this practice by controlling the rate of increase in hospital rates, thus reducing the gap between reimbursements paid by Blue Cross and Blue Shield and those paid by competing, profit-making insurers. In the early twenty-first century Empire Blue Cross and Blue Shield provided insurance to nearly five million Americans, most of them in New York City and its surrounding counties.



Robert A. Padgug

Empire Insurance Company. Insurance firm. Formed on 1 March 1925 as the Red Cab Mutual Casualty Company and renamed Empire Mutual Casualty in 1937, the firm took the name Empire Mutual Insurance Company in 1954, when its charter was broadened to permit underwriting property insurance as well as casualty insurance. It ceased underwriting in February 1977, when a financial examination by the state Department of Insurance showed its financial condition to be unsound. Under the control of the department, Empire was reorganized as a stock company on 1 January 1988 with offices at 122 Fifth Avenue. In 1998 it moved into the newly constructed Brooklyn Renaissance Plaza at 335 Adams Street.

Robert J. Gibbons

Empire State Building. Skyscraper on a site of 2 acres (0.8 hectare) on Fifth Avenue between 33rd and 34th streets. At 1250 feet (381 meters) in height, it culminated the commercial real estate boom of the 1920s and remained the world's tallest building until the 1970s. The project was a purely speculative venture for which construction costs were initially estimated at $50 million. The chief investors were the self-made millionaire John J. Raskob and the industrialist Pierre S. du Pont; Alfred E. Smith was the head of the corporation. Contracts for the project were signed in September 1929, only weeks before the stock market crash. The architectural firm of Shreve, Lamb and Harmon collaborated with structural and mechanical engineers and the general contractors Starrett Brothers and Eken to develop the design, guided throughout by the principle of maximum return on investment. Breaking records not only for height but for speed of construction, the entire operation was a spectacular demonstration of modern engineering and managerial efficiency. Demolition of the existing building on the site, the Waldorf-Astoria, began on 1 October 1929, and the first structural steel columns were set on 7 April 1930. At the peak of operations 3500 people were employed on construction, and in one 10-day period 14 stories were added to the frame. The job was completed 45 days ahead of schedule and $5 million under budget. Opening ceremonies were held on 1 May 1931 to wide acclaim, but leasing was slow during the Depression, and the building remained only half rented until after World War II, prompting some to call it the "Empty State."

On the foggy Saturday morning of 28 July 1945, a B-25 bomber crashed into the 79th story, killing 14 people but causing only minor damage to the structure. In 1953 a television antenna 200 feet (60 meters) tall was placed atop the structure; floodlighting of the upper

Empire State Building, ca *1930*

stories was introduced in 1964. Usually described as 102 stories tall, the tower includes 85 stories of commercial and office space (2,158,000 square feet [200,665 square meters]) and an observation deck. A metal-and-glass "mooring mast" for dirigibles (used successfully only once, but immortalized by the 1933 film *King Kong*) added the equivalent of 16 stories. Admired for its majesty and fine proportions, the Empire State Building is visible from many parts of the city and dominates the skyline of midtown Manhattan. The American Civil Society of Engineers has named it one of the Seven Wonders of the Modern World. It was designated a National Historic Landmark in 1986. After the destruction of the World Trade Center in the 11 September 2001 terrorist attacks, the Empire State Building once again became the tallest building in New York City. A $550 million renovation, including $20 million to make the building more energy efficient, is expected to be finished in 2010.

Encyclopedia of the Social Sciences. Encyclopedia in 15 volumes edited in New York City and published during 1930–35 by Macmillan, sponsored by the Social Science Research Council under the editorship of E. R. A. Seligman of Columbia University and Alvin Johnson of the New School for Social Research. The work was influential in legitimating a school of American social science premised on scientific rationalism, cultural pluralism, and democratic social reform. Contributors to the *Encyclopedia of the Social Sciences* included the philosophers John Dewey and Morris Raphael Cohen, the anthropologist Franz Boas, the economist Wesley Mitchell, the political scientist Harold Laski, and the historian Charles A. Beard.

Endicott and Company. Firm of lithographers. Formed in Baltimore as Endicott and Swett, it was moved to New York City in 1831 by George Endicott (1802–48), who by 1840 was joined by his brother William (circa 1817–51); in 1845 the firm was renamed G. and W. Endicott. The offices were at various locations during its early years and then successively at 59 Beekman Street (from 1846), 57 Beekman Street (1870–86), and 51 Cedar Street. The firm produced portraits, sheet music, membership certificates, views, and book illustrations and frequently worked for Currier and Ives. It became a leader in the industry in the mid-nineteenth century by engaging versatile painters and printers in an environment that encouraged work of high quality. The firm's artists included George T. Sanford (1815–48), John Penniman (1817–50), Francis D'Avignon (1813–after 1860), and Charles Parsons (1821–1910), a maritime specialist who began as an apprentice printer for the Endicotts and later became the head of the art department at Harper and Brothers. After the death of the brothers, George's widow, Sarah, and their son Francis took control of the business. Operations and products were standardized in 1851, and in the following year the firm was renamed Endicott and Company and began to cater to a mass market with prints of whaling, equine subjects, and later Civil War scenes. From 1886 to 1896 the firm was run by the second George Endicott, who renamed the firm after himself. Prints of New York City by Endicott and Company include "Park Hotel" (1834), "St. Thomas Chapel, Ravenswood (Queens)" (1839–40), two interior views of the U.S. Post Office on lower Broadway (1845), "View of the Ruins of the Great Fire" (1845), and "Harlem Bridge" (n.d.). The firm won awards for excellence in 1835, 1836, 1846, 1848, and 1856 at the annual American Institute Fair of New York City.

Wendy Shadwell

Engeman, William A. (*b* New York City, 1838; *d* Brooklyn, 11 Jan 1884). Businessman. As a young man he became wealthy by selling provisions to the Union army. After the Civil War he moved to Brooklyn, where he purchased undeveloped lots in Duck Hill, a section of Coney Island now known as Brighton Beach. By 1868 he owned 200 acres (80 hectares) of land on which he built the Ocean Hotel. He later sold much of his property and used the proceeds to introduce thoroughbred racing to Coney Island in 1879.

Stephen Weinstein

engineering. New York State was the birthplace of professional engineering in the United States. Civil engineering was first offered as an academic subject by the U.S. Military Academy at West Point in 1801, and degrees in the subject were first granted by Rensselaer Polytechnic Institute in 1835. On 5 November 1852 the first professional national engineering society, the Association of Civil Engineers (ASCE), was formed in New York City by 12 engineers led by Alfred W. Craven, chief engineer of the Croton Aqueduct Department. Often civil engineers engaged in public works met with conflict in the municipal bureaucracy: Craven argued that the authority for developing public works should rest with the experts in his office rather than with politicians, and in 1860 he was removed from office for insubordination by Mayor Fernando Wood. In 1865 the state legislature supported Craven by authorizing him to plan and manage the sewage system in Manhattan. The membership of the ASCE remained at 12 in 1867, but increased to 212 in 1871 and to 1090 in 1891. Around the turn of the century several other engineering societies were formed in New York City: the American Society of Mechanical Engineers (1880), the American Institute of Electrical Engineers (1884), and the Institute of Radio Engineers (1912). During these years the engineering profession became divided into factions, as the mining, mechanical, and electrical branches forged alliances with business and industry, while civil engineers continued to work on public projects. In 1894 Colonel George E. Waring, Jr., was appointed the street cleaning commissioner of New York City. A staunch environmentalist, he implemented changes relating not only to street cleaning but also to the water supply, sewerage, drainage, street paving, and household sanitation. The successful efforts of Craven and Waring to unify the administration of the city's public works were furthered during the first two decades of the twentieth century by Nelson P. Lewis, chief engineer of the Board of Estimate and Apportionment from 1902, who saw public works as the foundation of a comprehensive city plan that also provided for transportation and the street system, recreation facilities and public buildings, and a coordinated sanitary system. His efforts to unify engineering and planning culminated in 1921 in his work on the Regional Plan of New York and Its Environs, sponsored by the Russell Sage Foundation, which addressed the development of parts of New Jersey and Connecticut in addition to that of the city.

Footbridge suspended over construction on the Brooklyn Bridge, 1881

The trend toward integrating municipal services was reversed during the New Deal, when engineering efforts became administered by public authorities with specialized areas of jurisdiction: these included, in the field of transportation, the Triborough Bridge and Tunnel Authority, the New York City Transit

Authority, and the Port of New York Authority, and in sanitation, the Interstate Sanitation Commission. These divisions reflected the continued specialization of engineering in general, which persisted despite the efforts of some engineers in the city to unify the profession.

In the early twenty-first century engineering was taught at several institutions of higher learning in New York City, including the Fu School of Engineering at Columbia University (formed in 1864 as the School of Mines; given its current name in 1926), Cooper Union, and Polytechnic University, which merged with New York University in 2009.

Moehring, *Public Works and the Patterns of Urban Real Estate Growth in Manhattan, 1835–1894* (New York: Arno, 1981)

Joanne Abel Goldman

English. An English fleet took possession of New Netherland in 1664, sent by James, the duke of York (the future King James II, 1685–88). At the time New Amsterdam, the colonial capital, was inhabited by about 1500 people of Flemish, Walloon, French Huguenot, German, Danish, and Swedish background, most of whom spoke Dutch.

The concentration of the Dutch in New York City posed a threat to the English regime. When a Dutch fleet attacked the colony in 1673, the Dutch population welcomed the invaders and for 15 months supported a restoration of New Netherland. At the end of the war the States General again surrendered the colony to England, which restored its institutions for local and provincial government, including an elective assembly (briefly from 1683 to 1685; permanently after 1691). The city charter of 1686, granted by Governor Thomas Dongan, created a municipal government patterned after those of England, with an appointive mayor and an elective Board of Aldermen and Common Council.

The English population grew slowly, and the shortage of single English women in New York at the time led many unmarried English men to seek brides among the Dutch and the French. For a generation after the conquest the children of Englishmen who intermarried were often brought up in the Dutch Reformed Church, which was better organized in New York than the Church of England. Between 1677 and 1703, when about 5000 people lived in New York, the English share of the city's European population grew only from 20 to 25 percent, but at the same time the English assumed a disproportionate share of the highest offices and wealthiest occupations. Along with the French, the English dominated the Dock Ward near the East River, the city's richest neighborhood. Anglicans formed Trinity Church and installed William Vesey as its first rector on Christmas Day in 1697. Dutch families, particularly the wealthier ones, began learning English and taking other steps to help assimilate into the culture of the conquerors.

During the eighteenth century the English built cultural institutions to sustain their dominant position. William Bradford's weekly newspaper the *New York Gazette* became the first newspaper in the city in 1725, soon joined by John Peter Zenger's more contentious *New York Weekly Journal.* English-speaking religious denominations continued to grow and acquired greater autonomy; a Quaker meeting was formed in 1681, as were Baptist and Presbyterian congregations in 1716. From 1741 to 1758 a New Side (revivalist) Presbyterian Synod made New York City its headquarters. Among Anglicans, Trinity Church erected St. George's Chapel in 1752 and St. Paul's Chapel in 1766 (now the oldest public building in Manhattan). It also opened King's College in 1754. With the Anglican minister Samuel Johnson as its first president, King's graduated its first class in 1758; it was reopened as Columbia College after the American Revolution.

By the time of the American Revolution the city had 21,000 inhabitants, and the English were the dominant ethnic group in both numbers and influence. At the first federal census in 1790 the total population of the city was more than 33,000, exceeded in the United States only by Philadelphia; 74.2 percent of the total was of British origin, including the English (41.6 percent), Scots-Irish (14.9 percent), Irish (7.9 percent), Scots (7.5 percent), and Welsh (2.3 percent). The Dutch population had fallen to 16.5 percent of the total. In southern New York the Dutch constituted a majority (59 percent) only in Kings County, and there the English share of the population had risen to 31.5 percent.

The victory of the United States in the war made New York City and its surrounding communities more densely British than they had ever been. English immigration resumed soon after the war ended. Although most English immigrants assimilated easily, they encountered some of the same problems faced by other ethnic groups in New York City, as well as many of their own. During the War of 1812 the federal government imposed legal and physical restrictions on British citizens, and English merchants engaged in international trade were interned in an unprovisioned camp at Fishkill, New York. From 1834 to 1858 English immigrants accounted for a disproportionate share of the residents in Blackwell's Island Penitentiary and City Prison, Bellevue Hospital, the almshouse, and the lunatic asylum, sometimes twice as high as in the city as a whole. The St. George's Society, a club for upper-class professionals and merchants formed in 1770, attempted to aid English immigrants. Religious organizations formed by the British, such as the Salvation Army and the Young Men's Christian Association, also took root in the city and made efforts to assist the needy.

Throughout the nineteenth century many skilled workers and craftsmen emigrated from Great Britain. Textile workers, carpenters, and stonecutters often received better pay in New York City than they did at home. As passage across the Atlantic became cheaper and easier, the number of seasonal workers in New York City increased. At mid-century an estimated 800 English and Scottish bricklayers sailed to the city to work during the summer months. Prominent among English immigrants were architects such as Richard M. Upjohn and Thomas Adams, and landscapers such as Calvert Vaux, who designed much of Central Park. Women found work primarily as domestic servants and dressmakers.

Workers were assisted by groups such as the General Society of Mechanics and Tradesmen (1785), which in 1820 established a free school for the sons and daughters of deceased and indigent members, and in the following year added an apprentices' library. The society in 1833 began what were probably the first free lecture courses in New York City. In the 1820s and 1830s the English joined unions of carpenters, ship carpenters, typographers, printers, and bakers. The membership list of the New York Union Society of Journeymen House Carpenters in 1833–36 consists largely of English, Scottish, and Irish names. Fanny Wright, Robert Dale Owen, Thomas Skidmore, and George Henry Evans all helped to form the New York Workingmen's Party in 1829. In the 1830s several wealthy Englishmen formed a social club on Park Place, where they gathered for meals and games such as billiards, whist, chess, and checkers. The English in the city celebrated national holidays such as St. George's Day and (later) Queen Victoria's jubilees (1887, 1897). The city also had a number of pubs that served whiskey and porter, like the Richard the Third House, the Brown Jug Tavern, Luke Shaw's Eagle Porter House, and the Albion Hotel.

The English brought their sports as well, including English athletic equipment, regulations, gambling rules, sports magazines and newspapers, and sporting clothes. English immigrants created communities centered around sport that fostered the development of sporting clubs and associations. Two well-known cricket clubs in the city were the St. George Cricket Club (1838) and the New York Cricket Club (1844). The English wove into the cultural fabric of New York a love of sport and the human connections it can provide. English colonists introduced into New York such sports as ninepins, skittles, bowls, ball games, horse racing, fox hunting, rugby, soccer, and wrestling. After the American

Revolution, English immigrants were influential in introducing such sports as rowing, boxing, cricket, archery, croquet, track and field, tennis, badminton, polo, and yachting.

Most of those who emigrated from England in the nineteenth century were young and either Anglican or Methodist. They initially attended churches already existing in the city and later joined those built to sustain interest in Anglicanism, such as the Free Church of St. George the Martyr, founded in the 1840s. During the first half of the nineteenth century most of the English in New York City read American newspapers, only a few of which were devoted to English interests. Among those published in New York City were *The Albion; or, British, Colonial, and Foreign Weekly Gazette,* which catered to an educated readership and was published from the 1820s to the 1870s, and the *Anglo-American,* which focused on literary articles and news from England, and lasted only a few years in the 1840s. The *Old Countryman,* a newspaper aimed at the less educated and the working man, merged with another newspaper, the *Emigrant,* which ceased publication in the 1840s.

In 1855 the English were the third-largest ethnic group in the city (after the Irish and the Germans), and were represented in all city wards. The 16th ward, which extended along the Hudson River from 14th Street to 26th Street, had 1957 English immigrants, more than any other ward. The wealthy tended to live in Greenwich Village; laborers commonly lived in the northwestern wards of the city, or on the Lower East Side between Peck Slip and Catherine Street. The number of English immigrants in the city increased from 22,714 in 1885 to 35,907 by 1890, during which time they nevertheless declined as a proportion of the foreign-born from 7 percent to 5.5 percent and as a proportion of the total population from 3.6 percent to 2.4 percent. In Brooklyn the number of English immigrants also increased absolutely (from 12,611 in 1855 to 27,754 in 1890) and declined relatively. During the depression of 1893–97 and into the twentieth century, the number of English immigrants settling in New York City dropped sharply, and by 1920 they represented only 1.3 percent of the total population. English social institutions weakened, schools and churches opened their doors to other ethnic and religious groups, immigrants intermarried, and the group lost much of its distinctive character.

After 1920 women who immigrated to the United States from Britain outnumbered men. The War Brides Act of 1946 increased the number of English women entering New York City, and of the 58,259 English immigrants in the city in 1960, women accounted for 57 percent. The St. George's Society, which along with the British–American Chamber of Commerce is one of the few organizations catering to the city's English community, began accepting women as members in 1989.

Immigration laws increasingly favored the highly skilled and educated. In the 1970s many scientists, engineers, and especially physicians left England for the better opportunities and lower taxes available to them in New York City. In 2000, 28,996 immigrants entered the city from the United Kingdom, and the 2000 census showed that U.K. immigrants made up 2.7 percent of Manhattan's population, one of the city's five largest groups of foreign residents. The 2004 American Community Survey estimated 25,128 immigrants from the United Kingdom and 9205 from England.

Environmental Defense Fund [EDF]. Environmental advocacy group formed in 1967 formerly known as Environmental Defense. It became one of the nation's leading watchdog organizations and pioneered the use of litigation, the courts, and policy research to focus public attention on strong environmental laws and their strict enforcement. The EDF grew out of the activities of the Brookhaven [New York] Town Natural Resources Committee in the mid-1960s. In later decades the EDF relocated to 257 Park Avenue South in New York City and became a national leader in environmental protection and standards enforcement in areas such as endangered species, the protection of fisheries, farm and food policy, public health, and global warming.

E. P. Dutton. Book publisher. Opened in 1852 as Ide and Dutton, it was renamed E. P. Dutton and Company in 1858 when Edward Payson Dutton acquired full ownership of the business. In 1868 a branch office was opened at 726 Broadway in New York City, and the following year the firm's headquarters moved to 713 Broadway. E. C. Swayne, head salesman and European representative for the firm, arranged a partnership between the firm and the German printer Louis Nister, whose fine color illustrations increased the sales of Dutton's children's books and novelty items; Swayne became a partner in 1878. With 700 titles in its religious and juvenile lines alone, the firm moved in 1882 to 31 West 23rd Street. In 1906 the firm moved into mass-market publishing when it became the American publisher of Everyman's Library, a series of classic literature reprints. The company moved to 681 Fifth Avenue in 1911 and in 1913 expanded into educational publishing by acquiring the Thompson–Brown Company, a textbook publisher. Dutton died in 1923, leaving John Macrae and Henry Clapp Smith as trustees. In 1928 the two divided the firm, with Macrae remaining in publishing and Smith taking over the retail shop, which he renamed Dutton's. Macrae soon moved his operation back downtown to 300 Park Avenue South, near its former location.

Dutton published such authors as Van Wyck Brooks, Gore Vidal (who was briefly an editor in 1946), Maurice Herzog, Françoise Sagan, Jorge Luis Borges, and Aleksandr Solzhenitsyn and other writers from the Soviet Union. Children's books by such authors as A. A. Milne and Judy Blume were a mainstay. In 1962 the firm moved to 201 Park Avenue South. Under the direction of John (Jack) Macrae III in the 1970s, the firm changed owners several times; in 1975 it was sold to the Elsevier Publishing Company. Dutton made several acquisitions in the late 1970s and published such authors as Mickey Spillane, John Irving, Joyce Carol Oates, Lawrence Durrell, and Gail Sheehy. In 1978 it moved to 2 Park Avenue, and in 1981 it was purchased from Elsevier by the Dyson–Kissner–Moran Corporation. In 1986 it was acquired by the Penguin Group, where it currently operates as an imprint. Dutton and Penguin moved in 1990 to 375 Hudson Street.

Marjorie Harrison

Episcopalians. The Episcopal Church in America began as part of the Church of England and was therefore known as Anglican. In 1674 the first ministerial stipend was paid for Anglican services in New York City, and by 1686 the bishop of London probably had jurisdiction over Anglican churches in the colony of New York. In 1686 Governor Edmund Andros decreed that services according to the Book of Common Prayer should be held every Sunday and holy day, and that Communion should be administered regularly; he also provided for the licensing of members of the clergy and schoolteachers by the archbishop of Canterbury. Students preparing for ordination were tutored privately by senior clergy. In 1692 there were about 90 Anglican families in New York City and two Anglican congregations in the entire province. Trinity Church was formed by royal charter on 6 May 1697. Its first rector was William Vesey, an Anglican deacon and priest, and until 1700 its congregation met in the only Anglican church building in the province. In 1705 it received a

farm of 62 acres (25 hectares) from Queen Anne. Ten congregations were formed in the province between 1700 and 1710, all supported by the Church of England. Anglican texts including the Book of Common Prayer were published in New York City as early as 1710. King's College was chartered under Anglican auspices in 1754 with the provisions that its presiding officer be an Anglican and that its chapel conform to the Anglican prayer book. By 1770 St. Paul's Chapel and St. George's Chapel also opened. Many Anglicans remained loyal to the Crown and fled the city after the American Revolution, among them Charles Inglis, the rector of Trinity Church from 1777 (he later became the first bishop of Nova Scotia). The first Anglican services in Brooklyn were held on Fulton Street in 1784. One of the church's most prominent members in the city was John Jay, later the first chief justice of the United States and the first president of the New York Society for the Promoting of the Manumission of Slaves (formed in 1785).

The church hierarchy expanded during the following years. At a convention in 1785 the New York Episcopal diocese was formed, and at another in 1786 Samuel Provoost was recommended for consecration as its first bishop, the ceremony taking place at Lambeth Palace Chapel in London in 1787. Among well-known Episcopalian laymen was James Duane, the first mayor after the war and a member of the vestry of Trinity Church. There were about 50 churches and 35 clergy members in New York State when Provoost retired in 1801. The General Theological Seminary (1817) was eventually built on land donated by Clement Clarke Moore. A black congregation, St. Philip's, was established in 1809. Benjamin Treadwell Onderdonk became bishop in 1830. The Seamen's Church Institute, a chapel aboard a ship moored on the East River near Pike Street, opened during his tenure. A supporter of the Oxford Movement, which called for a revival of High Anglican traditions, Onderdonk encountered resistance to the ordination of Arthur Carey, a student at the General Theological Seminary and an enthusiastic supporter of the movement; he waved aside complaints at Carey's ordination on 2 July 1843 on the grounds that they had already been heard and dismissed. Onderdonk was soon charged with licentiousness and immorality by his opponents, and after a trial on 2 January 1845 he was suspended by the presiding bishop; he was not replaced until 1852, when Jonathan Mayhew Wainwright, a supporter of Low Church traditions, was elected provisional bishop with right of succession. The diocese of western New York split off in 1838. About this time the painter Thomas Cole became active in the church and diocese, in part through his efforts to tie the work of the Hudson River School to noble moral and religious purpose.

The number of parishes increased in the mid-nineteenth century. The Oxford Movement inspired the formation of the churches of the Transfiguration, St. Mary the Virgin, and St. Ignatius and a revival of the Gothic style by such architects as Richard Upjohn (Trinity, Holy Communion, and Ascension churches) and James Renwick (Grace, Calvary, and St. James churches). The concept of a total community was introduced by William Augustus Muhlenberg, who formed the Church of the Holy Communion in 1844 and sponsored a sisterhood of deaconesses (1852) that expanded the scope of women's social ministries. St. Luke's Hospital, opened in 1850 on Fifth Avenue at 54th Street by Muhlenberg, was built around a three-story chapel. Most Episcopalians in the city remained neutral on the issue of slavery before the Civil War. An exception was William Jay, who challenged the rule that blacks could be approved for ordination but not admitted to the diocesan convention. His son John Jay, Jr., persuaded the diocese to admit St. Philip's into full membership in 1853. A women's ministry, the House of Mercy, was established at 86th Street and the Hudson River as a home for abandoned girls. It was taken over in 1863 by the Sisters of St. Catherine, who were allied with Muhlenberg and took lifetime vows, a habit, and monastic rule of life; they later became known as the Community of St. Mary. After Wainwright's death in 1854 Horatio Potter was elected provisional bishop of New York. He reconciled the factions divided during Onderdonk's tenure and proposed to build a cathedral in the city. About 1871 Edward A. Washburn, the rector at Calvary Church, and his assistant, William Graham Sumner, organized the Club, an association of the city's prominent Episcopal clergy. A number of women's orders were also formed, among them those of St. John the Baptist and St. Margaret. In 1881 the Order of the Holy Cross was established on the Lower East Side by James Otis Sargent Huntington. During the 1880s there were about 50 Episcopal churches in Manhattan. An elite organization for laity, the Church Club of New York (1887), sponsored a library, club rooms, and good works for the benefit of the poor. Seth Low, the president of Columbia University and a well-known reformer who later became mayor of New York City, led opposition to the governance of black congregations under a separate jurisdiction. Henry Codman Potter became the bishop of New York in 1887.

At the turn of the twentieth century, Sunday services were usually held at 10:30 a.m. and consisted of morning prayer, ante-Communion, a litany, and a sermon; baptisms were held immediately afterward, with Sunday school in the afternoon (marriages and funerals were generally held in homes). An evening prayer service that incorporated a sermon and music by a choir was common until the 1920s. Most churches had an altar made of wood, but with no cross upon it. Pews were usually subject to annual rental assessments, having been first sold at auction during construction. Music was provided by organists and small paid choirs. In 1903 David Hummel Greer, the rector of St. Bartholomew's, became the first regular bishop coadjutor. He became bishop of New York in 1908 after the death of Henry Codman Potter (bishop since 1887). The synod house, the bishop's house, the deanery (Ogilvie House), and a school were added to the Cathedral of St. John the Divine. Prominent Episcopalians in the city included the financier J. P. Morgan and Nicholas Murray Butler, president of Columbia. By 1913 the Seamen's Church Institute moved to a new building at 25 South Street, where each night it housed about 400 men. Trinity parish built the Chapel of the Intercession at 155th Street and Broadway in 1915. The diocesan conventions of 1917 and 1920 endorsed Prohibition; the one in 1920 proposed selecting women as delegates to diocesan conventions and candidates for vestries. Charles Sumner Burch was chosen to succeed Greer as bishop in 1919; during the same year the national headquarters of the Episcopal Church opened at 281 Fourth Avenue (they were later moved to 815 Second Avenue). Burch was succeeded in 1921 by the rector of Trinity Church, William Thomas Manning, who was rigidly orthodox and forbade the barefoot liturgical dance at St. Mark's Church in the Bowery, the use of Communion cups, and remarriage after divorce. In a sermon at the Cathedral of St. John the Divine in 1930 he attacked Judge Ben Lindsay's stance on divorce, prompting

Episcopal Bishops of the Diocese of New York

Samuel Provoost (1787–1801)
Benjamin Moore (1801–16)
John Henry Hobart (1816–30)
Benjamin Treadwell Onderdonk (1830–61; suspended from duties 1845–61)
Jonathan Mayhew Wainwright (provisional bishop 1852–54)
Horatio Potter (provisional bishop 1854–61, bishop 1861–87)
Henry Codman Potter (1887–1908)
David Hummel Greer (1908–19)
Charles Sumner Burch (1919–20)
William Thomas Manning (1921–46)
Charles Kendall Gilbert (1947–50)
Horace William Baden Donegan (1950–72)
Paul Moore, Jr. (1972–89)
Richard Frank Grein (1989–2001)
Mark Sean Sisk (2001–)

Lindsay to defend himself before the congregation of 3000. Initially Manning devoted himself to building the Cathedral of St. John the Divine, but he was forced to suspend his efforts in the face of financial difficulty and World War II (even the steel scaffolding was given over to the war effort). A strong supporter of women and blacks in the church, he escorted a locksmith to open a parish church that had been closed in a dispute over segregation. He also had an apartment in a slum dismantled and then reassembled in the cathedral for the congregation to see.

As membership waned, the church adapted to meet the changing needs of its parishioners. The membership of St. Bartholomew's, the largest congregation in the city, declined from 14,000 in 1926 to 2000 in 1930; that of Trinity, the smallest, declined from 1100 to 150. Under the episcopate of Horace William Baden Donegan from 1950, the diocese allowed women to serve on vestries (1957) and to be elected to diocesan convention (1958). Donegan also emphasized social work and with the sports announcer Red Barber erected a building to house the Episcopal City Mission Society. Other prominent Episcopalians at the time included Fiorello H. La Guardia, Franklin D. Roosevelt, and Thomas E. Dewey. James Albert Pike, a former Roman Catholic and agnostic, was a popular speaker and apologist for the Christian faith and the Episcopal Church as the chaplain of Columbia and dean of St. John the Divine. Samuel Shoemaker, the rector of Calvary Church, was known for his evangelism and helped to form Alcoholics Anonymous. The Community of the Holy Spirit, established during the late 1940s by Ruth Younger as a religious teaching order for women, opened St. Hilda's and St. Hugh's, a school at 619 West 114th Street. Paul Moore, Jr., bishop of New York from 1972, emphasized human rights, social action, and urban problems. Although he could not ordain them, he allowed five female deacons to take part in an ordination service on 15 December 1974; the ordination of women was allowed by the church in 1976. Moore also resumed construction of the cathedral in 1979. Harold L. Wright was elected the first black assistant bishop in 1974. Richard Frank Grein, bishop of New York from October 1989 until 2001, focused on community programs, evangelism, education, administrative restructuring, and relations with the Orthodox Church in Russia. In the early part of the twenty-first century, as many Episcopal parishes were attempting to split from their dioceses over disputes concerning human sexuality and to affiliate with foreign provinces of the Anglican Communion, the New York diocese remained remarkably stable under the leadership of Mark Sean Sisk (bishop from 2001), with little fragmentation or departure of those from either extreme.

J. Robert Wright

Equality League of Self Supporting Women. Woman suffrage organization formed in 1907 in New York City by Harriot Stanton Blatch. In contrast to the genteel methods of other suffragist groups, it recruited wage-earning women and sought publicity through such tactics as street parades. It developed the militant, agitational style that led to votes for women in New York State in 1917. In 1910 the organization changed its focus to legislative lobbying and was renamed the Women's Political Union. Its strategies influenced the formation of the National Woman's Party.

Ellen Carol DuBois

Equal Rights Party. See Locofocos.

Equitable Building. Skyscraper at 120 Broadway in lower Manhattan. It was built from 1913 to 1915 as the headquarters for the Equitable Life Assurance Society of the United States by Ernest R. Graham and Associates. The building's volume was massive for its time, rising 40 stories with no setbacks, and covering the entire block bounded by Broadway, Cedar, Nassau, and Pine streets. It casts a 7-acre (2.8-hectare) shadow, making the streets below perpetually gloomy; this influenced the passage of the 1916 Zoning Resolution, which required setbacks for new buildings to allow sunlight to reach street level. The structure was designated a National Historic Landmark in 1978.

Caleb Smith

Equitable Building, 2009

Equitable Life Assurance Society of the United States. Insurance company formed on 26 July 1859 by Henry Baldwin Hyde and members of Manhattan's Fifth Avenue Presbyterian Church. The only financial product providing old-age security before the development of pensions, life insurance was then regarded as a form of philanthropy. ("Assurance" in the company's name suggests reliable payment of dividends.) The first president, William C. Alexander, was the son of the church's rector, and Alexanders were prominent in the company for many years. Hyde dominated Equitable until his death in 1899. Among his innovations were tontines (which worked like annuities), imaginative marketing, and a vigorous sales effort. By 1900 Equitable was one of the world's largest financial institutions, with agencies in 91 countries, more than $1 billion of insurance in force, and $40 million in annual premium income. Hyde held the majority interest in its shares. As the company and its assets were energetically wooed by bankers and stockbrokers, scandals broke out concerning financial self-dealing by officers and extravagant behavior by Hyde's son and heir, James Hazen Hyde. The 1905 Armstrong Committee investigations conducted by Charles Evans Hughes (later a New York governor, presidential candidate, and U.S. Supreme Court justice) left Equitable limping. The company converted from a stock company to one owned mutually by policyholders, ended its foreign business, and regained its reputation. Taking a chance, in 1910 it entered the new area of group insurance, which provided annuities for employees, and went on to dominate it. In the 1970s it introduced policies backed by the stock market and later acquired the investment firm Donaldson, Lufkin and Jenrette and the mutual fund specialist Alliance Capital. Suffering from declining capital due to fluctuating interest rates and poorly performing products, the company, under chief executive Richard H. Jenrette, was converted to a public corporation in 1992, returning to a stockholder-owned company. It then sold a majority interest to the French insurer AXA, of which it is a subsidiary.

Equitable has always had a large presence in New York City. Before computers were introduced in the 1960s, the company had as many as 10,000 employees, many of them female clerical workers recruited from city high schools who stayed with "Mother Equitable" for decades. When a prohibition against insurance companies' owning real estate other than their offices was eased in 1938, Equitable built the Clinton Hill and Fordham Hill apartment complexes in Brooklyn and the Bronx and financed a number of buildings, including the Time and Life Building on Sixth Avenue. The company's name is on four buildings in Manhattan. In 1870 Hyde built the company's headquarters at 120 Broadway. Designed by

George B. Post, this immense structure had some of the first elevators in an office building, allowing Hyde to create a pioneering upper-floor rental market for premium-priced offices above the company's own two floors. The building burned down in 1912 and was replaced by what was then the world's largest office building, the 40-story Equitable Building, owned by T. Coleman du Pont and designed by Ernest R. Graham (still standing). It cast such a long shadow over Trinity Church and the neighborhood that the city in 1916 passed a law mandating setbacks in upper floors. Later home offices owned wholly or in part by Equitable were at 393 Seventh Avenue (1924–61, architect Starrett and Van Vleck), 1285 Avenue of the Americas (1961–86, architect Skidmore, Owings and Merrill), and 787 Seventh Avenue (architect Edward Larrabee Barnes, 1986–96). The company and its parent, AXA, are at 1290 Avenue of the Americas.

John Rousmaniere, *The Life and Times of the Equitable* (New York: Equitable Companies, 1995)

John Rousmaniere

Erasmus Hall High School and Academy of the Arts. Public high school at 911 Flatbush Avenue in Brooklyn. Built as a private school for the children of Dutch farmers in 1787 and deeded to the City of Brooklyn in 1896, it was the first school to be chartered by New York State. The neo-Gothic structure was the first public school building in the United States to be designated a federal landmark. Four adjoining buildings were built around a central courtyard between 1905 and 1939, and the original building was restored in 1936, 1952, and 1987. Erasmus Hall is the second-oldest public school in the United States. In 1994 the campus split into three separate schools: Humanities, Science and Mathematics, and Business and Technology. In 2004 the school expanded to include the High School for Service and Learning and in 2006 the Academy for Hospitality and Tourism. Its alumni include chess player Bobby Fischer and entertainer Barbra Streisand.

B. Kimberly Taylor

Ericsson, John (*b* Värmland, Sweden, 31 July 1803; *d* New York City, 8 March 1889). Naval engineer. He studied in London from 1826 and pursued an interest in steam engines. About 1837 he met Captain Robert F. Stockton of the U.S. Navy, who became interested in his work on a steamship operated by a screw propeller. He moved to New York City in 1839 and oversaw the design and construction of the screw warship the *Princeton,* which Stockton had promoted. Later he developed "caloric" (hot-air) engines that proved unsuccessful for ship propulsion but were widely used for industrial purposes. At the Delamater Iron Works he built for the navy the revolutionary ironclad warship the *Monitor* (1861); its successful engagement against the Confederate ironclad the *Merrimack* brought him contracts for several similar vessels. From 1864 to 1889 Ericsson lived at 36 Beach Street.

Darwin H. Stapleton

Erie Basin. Man-made harbor in Brooklyn, built in the 1850s at the southern end of Red Hook by William Beard. By the late nineteenth century it was one of the most important shipping depots in the Port of New York, viewed as a terminus of the shipping network that included the Erie Canal. Grain shipped by barge from the Midwest accounted for most of the traffic. The basin contained several ship repair facilities, the largest of which was the Anglo-American Dry Docks. After it fell into disuse the facility was bought in 1958 by the Port of New York Authority. Early in the twenty-first century the nearby area found new life as a cruise port for the ocean liner RMS *Queen Mary 2* and other vessels as well as a site for large retail chain stores.

John J. Gallagher

Erie Canal. Canal completed in 1825 linking the Hudson River above Albany to Lake Erie at Buffalo. One of the greatest American engineering projects of the nineteenth century, it was a key factor in the emergence of New York City as the commercial capital of the United States. The Erie Canal was the first link between the Atlantic seaboard and the continental interior, breaching the Appalachian Mountain range at its single substantial gap, the Mohawk River Valley through central New York. The canal established New York City's virtual monopoly on nascent Great Lakes trade. The city quickly dominated the east–west movement of goods, people, and produce that Virginia and other especially southern rivals never accomplished and that Canada only approximated after the opening of the St. Lawrence Seaway (1959). Had the canal not immediately initiated permanent national commercial networks between the city and the interior, railroads might have made rivals of other seaboard cities during the 1830s. As it happened, parallel lines of first railroads and then highways reconfirmed the city's position as the center of American global trade.

It is ironic that no member of the city's large state legislative delegation voted for the canal's 1817 enabling law. The city's assembly members and senators, all Tammany Republicans, were driven by twin fears: that city taxpayers would be burdened with escalating costs for a project of uncertain practicability and only upstate benefit, and that a successful project would elevate its greatest advocate, populist Republican and Tammany antagonist DeWitt Clinton. The latter fear was sound. The longtime mayor, recently deposed by political opponents from the then-appointive office, was elected governor in a landslide two weeks after the enabling law was passed. "Clinton's Ditch" remains his enduring legacy. The canal was not Clinton's idea, however. A series of pseudonymous essays by a bankrupted pioneer grain merchant in a western New York newspaper (1807–8) launched serious consideration of the concept, prompting a state survey (1808) that proved it feasible. In 1810 a fellow state senator asked Clinton to give his influential support to a bill creating a canal commission to conduct detailed surveys and eventually oversee construction. Clinton was named to the commission, which was led for the next six years by Gouverneur Morris. Questions of design, funding, and popular support, plus the War of 1812, discouraged progress until December 1815, when Clinton, then holding no public office, revived the subject at a meeting of influential men at the City Hotel; the meeting produced a forceful memorial by Clinton addressed to the legislature and circulated throughout the state. A new commission was named (1816), with Clinton at its head; after detailed surveys, the start of construction was authorized (1817).

The canal was largely the work of upstate New Yorkers: country surveyors who taught themselves engineering; farmers, townspeople, and others along the canal line who contracted to build the canal in hundreds of short sections; and, in the later construction years, mostly Irish immigrants who provided the labor. A number of controversies arose during construction, but it was completed with relatively few delays, missteps, or budgetary crises. The canal was 363 miles (584 kilometers) long, with 83 locks to accommodate nearly 700 feet (213 meters) of level changes between the Hudson River and Lake Erie. It was only 40 feet (12 meters) wide at the surface, narrowing to 28 feet (8.5 meters) at a 4-foot (1.2-meter) depth; horses or mules pulled canal barges at 4 miles (6.4 kilometers) per hour. The course up the length of the Mohawk River Valley was through familiar territory; the next 200 miles (322 kilometers) to the nascent village of Buffalo was through sparsely settled country previously accessible only by notoriously rutted and often impassable roads.

New York City's greatest contribution during the construction period was financial. City-based merchants, banks, and other investors purchased most of the $7 million in state bonds that largely financed the project. The Bank for Savings, whose chief depositors were the city's working poor, eventually held $1 million in canal bonds; John Jacob Astor purchased more than $200,000 worth. Manhattan auction houses paid roughly $1.3 million to the canal construction fund through 1 to 2 percent duties on auction sales, the method of market entry then for nearly half of all imported goods. Less directly, city business interests contributed a significant share of canal

tolls, which ultimately generated a $40 million profit for the canal before tolls were abolished (1883).

The slenderness of the waterway contrasts with its enormous effect, especially on New York City. Transportation costs between Buffalo and the city were reduced by up to 90 percent and transportation time from three weeks to eight days. The city's population, which had briefly declined in the early 1810s (largely because of restrictive national trade policies and war), nearly doubled during the canal construction years and quadrupled during the following 30 years. In 1815 the city handled less than one-fifth of U.S. exports and in 1860 well over one-third. In 1820 the city was a distant third to Baltimore and Philadelphia in flour exports; by 1827 it was the runaway leader. In 1821 (the first year of available statistics) the city handled just more than one-third of U.S. imports, and by 1860 more than two-thirds, with six times the imports as second-place Boston.

Although many factors influenced the city's rise as the nation's commercial capital, the canal was the most evident, in reality and perception; the successful ongoing construction of the canal in 1822 inspired the first editorial reference to New York as "a mighty and flourishing empire." Clinton eloquently and accurately predicted the canal's effect on the city a year and a half before the canal was completed: "That city will in the course of time become the granary of the world, the emporium of commerce, the seat of manufactures, the focus of great monied operations, and the concentrating point of vast, disposable, and accumulating capitals, which will stimulate, enliven, extend, and reward the exertions of human labour and ingenuity, in all their processes and exhibitions; and, before the revolution of a century, the whole island of Manhattan, covered with habitations and replenished with a dense population, will constitute one vast city."

Clinton's Ditch was enlarged to 70 feet (21.3 meters) wide and 7 feet (2.1 meters) deep during 1836–62 and was replaced by the current 12-foot-deep (3.7-meter-deep) broad canal for motorized vessels from 1905 to 1918. Used now almost exclusively for pleasure boating, the Erie Canal remains a historical link to the city's rise.

Shaw, *Erie Water West: A History of the Erie Canal, 1792–1854* (Lexington: University Press of Kentucky, 1966); Evan Cornog, *The Birth of Empire: DeWitt Clinton and the American Experience, 1769–1828* (Oxford: Oxford University Press, 1998)

Gerard Koeppel

Ernst, Morris (Leopold) (*b* Uniontown, Ala., 23 Aug 1888; *d* New York City, 21 May 1976). Lawyer. His family moved to New York City when he was two years old and lived on the Lower East Side before moving to the Upper East Side. He attended Horace Mann High School in Riverdale. In 1913 he passed the bar and two years later cofounded the New York City law firm Greenbaum, Wolff and Ernst with which he was associated until his death. In 1917 he helped found the National Civil Liberties Bureau, later known as the American Civil Liberties Union (ACLU). He was one of two general councils for the ACLU from 1929 to 1954. Many of the cases he argued defended literary and artistic freedoms. His most famous case was in 1933 when he successfully defended James Joyce's *Ulysses* from being censored in the United States. He was a friend of Presidents Franklin D. Roosevelt, Harry Truman, and Herbert Hoover as well as of New York governor Herbert Lehman. He served on the New York State banking board from 1933 to 1945. He died in his home at 2 Fifth Avenue.

Jessica Montesano

Ernst and Young. Accounting firm. It was formed in 1989 by the merger of Ernst and Whinney (1906), founded and based in Cleveland, and Arthur Young (1894), founded in Chicago and based in New York City. The new firm was almost immediately embroiled in the savings and loan crisis, and ultimately was required to pay some $204 million in a civil suit and $400 million to the federal government. Despite these early troubles Ernst and Young grew into one of the largest public accounting firms in the world, with more than 130,000 employees worldwide. By 1992 it was performing more audits of publicly held, multinational companies than any other accounting firm and it was also active in the diverse branches of management consulting. Its company headquarters were at 5 Times Square in the early twenty-first century.

Chad Ludington

espionage. As the communications center of the United States, New York City became associated with espionage at the time of the American Revolution. Nathan Hale spied on British forces in Harlem. The Culper ring, a successful operation conducted on behalf of General George Washington in 1777, was named for the aliases of its members Abraham Woodhull (Samuel Culper, Sr.) and Robert Townsend (Samuel Culper, Jr.) and led by Major Benjamin Tallmadge, a local businessman who traveled about Manhattan listening to the conversations of British soldiers and observing activities on the docks; a network of couriers conveyed messages to Washington's headquarters by way of Long Island and Connecticut. The Culper ring employed invisible ink (known as sympathetic stain) and a code that assigned the numbers 711 to Washington, 727 to New York City, and 728 to Long Island. It operated undetected until the end of the war.

During World War I German saboteurs infiltrated a terminal of the Lehigh Valley Railroad on Black Tom Island, in New York Harbor near Jersey City, New Jersey, that stored ammunition intended for the Russian army. On the night of 30 July 1916 they exploded 34 carloads of munitions and 11 carloads of high explosives (totaling 1066 tons [967 metric tons]), causing $14 million in damages and killing seven people. Later in the war the United States employed the skills of the cryptologist Herbert O. Yardley. After the war Yardley established a secret office that did public business as the Code Compilation Company but worked principally for the State Department under the name the American Black Chamber; its offices were successively in a brownstone building at 3 East 38th Street in Manhattan, at 141 East 37th Street, and at 52 Vanderbilt Avenue. Over the years Yardley's staff broke the codes of Argentina, Brazil, China, Costa Rica, Cuba, the Dominican Republic, El Salvador, France, Germany, Great Britain, Japan, Liberia, Mexico, Nicaragua, Panama, the Soviet Union, and Spain. On 31 October 1929 Secretary of State Henry L. Stimson discontinued the operation on the grounds that "gentlemen do not read each other's mail." Yardley regarded this action as foolhardy and unjustified: he recounted the code-breaking activities in his book *The American Black Chamber* (1931) and spoke widely about his experiences.

Even before the United States entered World War II, Nazi Germany sought to gain strategic information and undertake sabotage. As early as 1937 a German American named Hermann Lang provided secret blueprints of the Norden bombsight to agents of a German espionage service called the Abwehr. The activities of German agents in the United States were monitored by the Federal Bureau of Investigation (FBI) with the cooperation of a German American double agent, William G. Sebold (also known as William G. Sawyers), who at the behest of the FBI set up the Diesel Research Company, with offices on 42nd Street; at the same time he maintained radio contact with the Abwehr in Hamburg from his home at Centerport, Long Island, using the call letters CQDXVW-2 and sending messages supplied by the FBI and army intelligence that skillfully combined information and misinformation. Lang's boastful account to Sebold on 7 March 1940 of his exploits with the Norden bombsight was monitored and recorded by the FBI, which on 30 July 1941 arrested Lang and about 30 other German spies. Sebold was the chief witness for the prosecution in the trial that followed; with the other convicted agents, Lang was given a prison sentence, and after the war he was deported to Germany. The attempts of the government to halt espionage and sabotage by what was known as the "fifth column" were depicted in the film *The House on 92nd Street* (1945).

The Nazi sabotage mission that came closest to doing damage in New York City was Operation Pastorius (1942), in which eight Germans in two groups of four, all with extensive experience in the United States, came across the Atlantic Ocean in the submarine U-202. They carried false identity papers, guns, explosives, and U.S. currency and were assigned to destroy bridges, railroad lines, and factories. On 14 June one group landed near Amagansett, Long Island, and took the Long Island Rail Road to Penn Station. The leader of the group, George Dasch, and Ernest Burger decided during dinner at the Waldorf-Astoria to divulge their mission to the FBI: Dasch went to Washington, D.C.; convinced the director of the FBI, J. Edgar Hoover, of his identity; and disclosed that the second group of saboteurs was to land in Florida. The authorities then apprehended Dasch's conspirators—Richard Quirin and Heinrich Heinck near Amsterdam Avenue and 75th Street in Manhattan, and Burger at the Governor Clinton Hotel. All eight men were tried by a secret military tribunal in Washington, D.C., and on 12 August Quirin and Heinck were executed with the four members of the second group. After serving prison sentences Dasch and Burger were pardoned in 1948 and returned to Germany. It was during World War II that the Office of Strategic Services was formed. Many Americans who played important roles in its early days were associated with New York City, among them William J. Donovan, its first director, and William Casey, who later served as the director of the Central Intelligence Agency.

The Soviet Union engaged in espionage in New York City as early as the 1920s, often conspiring with American communists and others sympathetic toward them; a prominent courier and eventual defector was Whittaker Chambers. Of several espionage rings operated by the Soviet Union toward the end of World War II, the one based in New York City was the largest and most effective. Organized by Anatoly Yakovlev, nominally a vice consul, the network functioned from 1944 to 1946. It included the German physicist Klaus Fuchs, who worked at Columbia University and was instrumental in developing the atomic bomb. The network may also have included Julius and Ethel Rosenberg, who were executed for treason in 1953. In Brooklyn the master spy Rudolf Abel worked undercover from 1950 to 1957. The United Nations soon provided a cover for espionage: many members of its secretariat were nationals of the Soviet Union and its allies, and even countries with which the United States had no diplomatic relations maintained missions in New York City. The Soviet Union was also able to conduct espionage from its mission at 136 East 67th Street, from its compound in suburban Glen Cove, Long Island, and from its 19-story residence in Riverdale in the Bronx, which had antennas on its rooftop and was well situated for wireless interception.

In 1996 FBI Special Agent Earl Edwin Pitts was arrested and charged with conspiracy to commit espionage for Russia and the former Soviet Union. He had worked in FBI foreign counterintelligence investigations in the bureau's New York City office from January 1987 to August 1989. Among other offenses, the FBI stated that Pitts had turned over a secret list of all Soviet officials in the United States with their known or suspected posts in Soviet spy agencies during his five-year relationship with the KGB. Pitts's association with the Russian surveillance organization was traced back to a meeting at the New York Public Library between him and Aleksandr V. Karpov, a high-level Russian official. Pitts pleaded guilty in 1997 and was sentenced to 27 years in prison.

Martin Ebon

Esposito, Meade (*b* Brooklyn, 1907; *d* Manhasset, N.Y., 3 Sept 1993). Political leader. Educated in public schools, he was a bail bondsman when he began his rise to prominence in 1960 by defeating a Democratic leader in Canarsie, a neighborhood in southeastern Brooklyn. In 1969 he was elected chairman of the Democratic Party in Brooklyn, the largest county political organization in the United States. For many years he was the host to the famous and powerful at legendary political lunches at Foffe's restaurant in downtown Brooklyn. He played a major role in rallying party leaders behind Edward I. Koch's successful mayoral campaign in 1977. After retiring as county leader in 1983 he remained one of the state's most influential politicians until his indictment and conviction in 1987 for having made an illegal gift to Representative Mario Biaggi of the Bronx. Esposito was given a suspended two-year prison term and fined $500,000.

Kenneth T. Jackson

Esquire. Men's magazine. Founded in 1933 during the Great Depression, it was established by Arnold Gingrich and David Smart. It started off as a racy magazine for men but soon developed into a more cosmopolitan publication, with a focus on men's fashion. In the 1940s the magazine developed a reputation for its literary contributions from writers such as Ernest Hemingway and F. Scott Fitzgerald. During the 1960s it was in the forefront of New Journalism, featuring contributions from Tom Wolfe, Norman Mailer, Tim O'Brien, John Sack, and Gay Talese. From 1969 to 1976 Gordon Lish served as the magazine's fiction editor and became known as "Captain Fiction" because of the authors whose careers he assisted, including Raymond Carver, Richard Ford, and Cynthia Ozick. *Esquire* was sold by its original owners to Clay Felker in 1977, who sold it to 13–30 Corporation two years later. When 13–30 dissolved in 1986, the Hearst Corporation bought it. David Granger was named editor in chief in June 1997. In 2009 the magazine started the Daily Endorsement Blog, aimed at promoting one item in any category every day, including its first presidential endorsement (Barack Obama) in November 2008. In the early twenty-first century *Esquire*'s main offices were located in midtown Manhattan.

Benjamin Yakas

Essex Street Market. Market on Grand Street between Ludlow and Essex streets, opened in 1818. It soon closed and in 1836 was replaced by the Monroe Market. In 1940 the municipally owned Essex Street Retail Market was set up to replace open-air markets in the area, as part of Mayor Fiorello H. La Guardia's efforts to remove pushcarts and itinerant peddlers from the Lower East Side. It was run cooperatively by merchants until 1986. Its management was then turned over to a private developer who evicted several merchants and raised rents for others. In the early twenty-first century the Essex Street Market remained an example of a successful commercial space that caters to local residents and visitors.

Suzanne R. Wasserman

Estonians. An Estonian community took root in New York City during the 1890s, when immigrants founded the New York Estonian Evangelical Lutheran Church, began publishing the first Estonian-language newspaper, and formed the American Estonian Benefit Society (renamed the New York Estonian Society in 1910) in Harlem. Significant immigration resulted from the failed 1905 revolution against Russia. The revolution created polarization among Estonians in New York City, where many revolutionaries joined the Communist Party of America. After a brief independence, Estonia was forcibly incorporated within the Soviet Union from 1944 to 1991 and emigration was prohibited. The United States did not recognize the legality of the Soviet annexation of Estonia and continued to recognize Estonia's diplomatic mission located at Rockefeller Center.

Between 1948 and 1952 about 10,000 Estonian refugees moved to the United States, the majority from government and professional ranks. A third of them settled in New York City, and Estonian House, the beaux-arts terra-cotta building at 243 East 34th Street purchased in 1946 by the Estonian Education Society, became the center of Estonian life in the city. The Lexington Avenue Lutheran Church eventually grew to 3200 members, making it one of the largest Estonian religious organizations in the world. By the time of the collapse of the Soviet Union in 1991 and the reestablishment of Estonian independence, many of the Estonians in the city were work-

ing in business and banking or as attorneys, engineers, and educators. Even those who moved to the suburbs continued to look to New York City for Estonian-related activities. Since 1991 Estonian immigration to New York City has consisted mainly of younger people coming to study, to work, and to see the world. In 1992 the Sixth World Estonian Festival was held in the city, drawing thousands of compatriots from five continents. Estonians cooperated with New York Latvians and Lithuanians to form the Baltic Appeal to the United Nations (BATUN) in 1966 for the purpose of lobbying for the freedom of the Baltic states. The New York City metropolitan Estonian population in 1933 was estimated at 12,000; in 2008 the number was 3800. In 2005 the city itself had 1000 residents of Estonian descent.

Marju Rink-Abel

Ethical Culture Fieldston School. Independent coeducational elementary and secondary day schools in Manhattan and the Bronx. Their origins may be traced to the opening by Felix Adler in 1877 of a free kindergarten sponsored by the Ethical Culture Society. The school added elementary grades in 1880 and tuition-paying students in 1890. Originally called the Workingmen's School, it became the Ethical Culture School in 1895. It expanded to include a high school by 1900, graduating its first class in 1905. In 1928 the Fieldston School, newly constructed on an 18-acre (7-hectare) campus in Riverdale, opened for students in grades seven to 12. The Fieldston Lower School was built in 1933 on the campus. In the early twenty-first century the name Ethical Culture Fieldston School refers to the Ethical Culture School at 33 Central Park West in Manhattan and the Fieldston Lower, Middle, and Upper Schools on Fieldston Road in the Bronx; the four divisions serve about 1700 students.

Richard Schwartz

Ethical Culture Society of New York. Religious humanist association formed in 1876 by Felix Adler, the rabbi of Temple Emanu-El in New York City and a leading exponent of Reform Judaism. The association was based on his philosophy of ethical idealism, a blend of Kantian ideas and social and pedagogical reform. It soon became a leading advocate of radical political and social reforms, including those aimed at workers, women, and the poor. Some of its first leaders opened the first settlement house in the country, the University Settlement (1886), as well as the Hudson Guild (1895) and the first Workingmen's School (1877), which became the Ethical Culture School. In the early twenty-first century the society belonged to the American Ethical Culture Union, which was recognized as a religion but supported no one theology, doctrine, or creed, instead upholding the philosophy that human life is of the utmost value and that improved social, interpersonal, and ecological relations are possible through dedication to the potential and betterment of human beings.

Horace L. Friess, *Felix Adler and Ethical Culture: Memories and Studies*, ed. Fannia Weingartner (New York: Columbia University Press, 1981)

Amie Klempnauer

Eugene M. Lang Foundation. Charitable organization formed in 1968 by Eugene M. Lang (*b* 16 March 1919), a native of New York City and the founder of the Refac Technology Development Corporation. The foundation focuses its efforts on educational institutions, in particular Eugene Lang College at the New School for Social Research. It also supports medical care and research and makes grants to about 75 educational, cultural, and social service organizations in the city. During the 1980s Lang offered to pay the college tuition of every member of a sixth-grade class at Public School 121 in East Harlem who completed high school, and he later paid for tutoring and other assistance to the students. By January 1989 his example had inspired 21 other New Yorkers to make similar commitments to disadvantaged elementary school students. Lang continues to focus his philanthropic efforts on education in the early twenty-first century.

Kenneth W. Rose

Eugenio María de Hostos Community College. Junior college of the City University of New York, opened in 1968 at 475 Grand Concourse in the Bronx as the first branch of the university deliberately placed in an economically depressed area. The school was a pioneer in bilingual education and developed a strong health sciences program in affiliation with several hospitals in New York City. It offers day care free of charge to its students. In 2010 the college enrolled about 4700 full- and part-time students.

Marc Ferris

Europe, James Reese (*b* Mobile, Ala., 22 Feb 1881; *d* Boston, 10 May 1919). Music director. He moved to New York City in 1903, where he made his reputation as a music director in black musical theater. In 1910 he formed the Clef Club, both a booking agency and an informal union for black musicians in New York City. He led a 100-piece orchestra drawn from the Clef Club at Carnegie Hall in 1912 in the first of several concerts of music by black composers, emphasizing art music to counteract the prevailing opinion that blacks could produce only ragtime. In 1914 he became the music director for the internationally famous white dance team of Vernon and Irene Castle, which brought him national prominence and engagements from members of fashionable society in New York City. In the same year he left the Clef Club to form a competing organization, the Tempo Club. During World War I he led the 369th Infantry military band, which was all black. At the height of his career, he was killed by a deranged member of his band.

Edward A. Berlin

Evacuation Day. Date of the final departure of British military forces from the United States, 25 November 1783. The signing of the Treaty of Paris on 3 September signaled the end of the American Revolution. New York City was the last official post held by the British, and after a delay of several days they evacuated the city under the direction of General Guy Carleton at one o'clock in the afternoon of 25 November, ending more than seven years of occupation. Within the hour American forces commanded by Generals George Washington and George Clinton marched the length of Manhattan to the Battery. At Fort George the American flag replaced the British flag. Boisterous celebrations continued for the next 10 days, culminating in Washington's poignant farewell to his officers on 4 December at Fraunces Tavern; the last British warship left for England the next day from Staten Island. For more than a century, Evacuation Day was marked by martial parades, patriotic oratory, and banquets; its 100th anniversary was one of the great civic events of the nineteenth century in New York City. The holiday ceased to be observed after World War I because of its proximity to Thanksgiving and the decline of anti-English sentiment, except for a brief revival on the occasion of its bicentenary in 1983.

Robert I. Goler

Evans, George Henry (*b* Bromyard, England, 25 May 1805; *d* Granville, N.J., 2 Feb 1856). Editor and land reformer. He moved to the United States with his father and brother in 1820 and worked as a printer's apprentice in Ithaca, New York. He soon became an admirer of Thomas Paine's writings on free thought and moved to New York City, where he joined a circle of craftsmen sympathetic to Paine's ideas. Allied with Frances Wright and Robert Dale Owen, he became a spokesman for an important faction of the Workingmen's Party in 1829 and during the next decade edited several newspapers devoted to labor issues (including the *Working Man's Advocate*), defended the union movement, and took part in the Locofoco revolt within the Democratic

Party. After 1840 he concentrated on land reform, which he considered the only practicable solution to class injustice. Supported by such prominent labor leaders as Mike Walsh and John Commerford, he formed the National Reform Association in 1844, appealing to workers with the slogan "Vote Yourself a Farm," but gained only a small following. Undeterred, he promoted the cause until the end of his life. Evans's ideas later influenced such diverse political efforts as those culminating in the Homestead Act of 1862 and Henry George's campaign for a single tax during the 1880s.

Sean Wilentz

Evans, Walker (*b* St. Louis, 3 Nov 1903; *d* Old Lyme, Conn., 10 April 1975). Photographer. He lived in New York City in the late 1920s, and his career began there in 1930, when his photographs were published in *The Bridge,* an anthology of poems by Hart Crane. In 1932 his work was exhibited at the Julien Levy Gallery, and in 1938 a major exhibition of his photographs for the Farm Security Administration was mounted at the Museum of Modern Art (MoMA). A later exhibition at the museum (1966) featured photographs he had taken of subway riders in New York City in 1938 and 1941. Evans was a contributing editor at *Time* (1943–45) and an associate editor at *Fortune* (1945–65). A retrospective of his work appeared at MoMA in 1971.

Laura Gwinn

Evarts, William M(axwell) (*b* Boston, 6 Feb 1818; *d* New York City, 28 Feb 1901). Lawyer and statesman. He graduated from Yale College and attended Harvard Law School, and in 1841 he began practicing law in New York City, where he became one of the best-known members of the bar. A staunch Republican, he successfully represented President Andrew Johnson in his impeachment proceedings in 1868 and was rewarded by being appointed attorney general. He was president of the New York Law Institute and a founder and first president of the Association of the Bar of the City of New York. At the Geneva arbitration in 1871–72 he represented the United States in its claims against England for having plundered the *Alabama* during the Civil War. He provided legal counsel for the Republican Party in the disputed presidential election of 1876 and was appointed secretary of state by the eventual winner, President Rutherford B. Hayes (1877–81). In 1885 he was elected by the New York State legislature to the U.S. Senate; he was largely responsible for the passage of the Evarts Act of 1891, which created the federal court of appeals.

Elliott B. Nixon

Everard. Bathhouse at 28 West 28th Street. Built in 1890 by James Edward, it was very successful as a public bathhouse in the red-light and gambling district of the Tenderloin in the early 1900s. The building itself was four floors, with 150 rooms and 150 walk-in lockers. It boasted the world's largest steam room, was open 24 hours, and catered mainly to a homosexual clientele after the 1950s. On 25 May 1977 the building burned down, resulting in nine deaths.

Jessica Montesano

Everett House Hotel. Hotel formerly at 212 Fourth Avenue near Union Square, built in 1848. Named for the Massachusetts statesman Edward Everett, who spoke at Gettysburg along with Lincoln, it was an imposing, classically designed brick structure with large, elegant rooms and antique furniture. The Everett House Hotel was considered one of the finest of its time; England's King Edward VII, then Prince of Wales, stayed there, and William "Boss" Tweed had headquarters there. It went bankrupt in 1906; in 1908 the Everett Building was built on the site (designated a New York City landmark in 1988).

Shan Jayakumar

Evergood, Philip (*b* New York City, 26 Oct 1901; *d* Bridgewater, Conn., 11 March 1973). Painter. The son of the Australian painter Meyer Blashki, he studied at the Art Students League and the Educational Alliance in New York City. During the 1930s he worked for the Public Works of Art Project and the mural division of the Federal Art Project of the Works Progress Administration, for which he completed a mural at the Richmond Hill Library in Queens. As the president of the Artists' Union (elected in 1937) he worked for artists' rights and for permanent government sponsorship of the arts. Evergood painted in an expressionist style characterized by an agitated line, distortions of human anatomy, and bold primary colors. The Whitney Museum of American Art owns a large collection of his works, including *Lily and the Sparrows* (1939).

Patricia Hills

Evergreens Cemetery. Nonsectarian cemetery on the Brooklyn–Queens border near east New York. Founded in 1849 as the Cemetery of the Evergreens, the 225-acre (91-hectare) burial ground is a fine example of a classic rural cemetery that is designed, maintained, and used both as a place of interment and as a picturesque park. It is the only cemetery on which the mid-nineteenth-century landscape architect Andrew Jackson Downing worked. The initial buildings, one of which still stands in the twenty-first century, were designed by Alexander Jackson Davis. Calvert Vaux, John Y. Culyer, Samuel Parsons, Jr., and Richard Schermerhorn, Jr., are among other architects and engineers who have worked on the Evergreens. The monuments include distinguished examples of important styles, including high Victorian, Gothic Revival, and zinc (also called white bronze).

The grounds, located high on Long Island's terminal moraine, are historic. On the eve of the Battle of Brooklyn, 10,000 British soldiers crossed this land at night and outflanked George Washington's Continental Army. The site was chosen as a cemetery for its beauty and sweeping views of Manhattan and Jamaica Bay, for its proximity to Williamsburg's German American population, and because it allowed development in both Brooklyn and Queens (by law, no more than 200 acres [81 hectares] could be used for a cemetery in any one county). After two decades as a nonprofit entity, the cemetery was reorganized in 1872 as the Evergreens Cemetery, a for-profit corporation. The largest stockholder was William R. Grace, a shipping and banking magnate and two-term mayor of New York. Grace family members and employees continued to serve as officers and trustees into the 1980s. (The Evergreens returned to nonprofit status in 1952.)

A wide variety of people are interred at the Evergreens. Besides remains transferred from the churchyards of Brick Presbyterian, St. Mark's in the Bowery, St. Ann's, Sands Street Methodist, and other prominent Manhattan and downtown Brooklyn churches, leaders of the German American community, white and black Civil War veterans, merchant seamen (the Seaman's Grounds is the cemetery's oldest section), and many Chinese Americans are buried there. During the height of the anti-Asian movement in the 1880s the Chinese government chose the Evergreens as its New York cemetery, and burials in the several Celestial Hill sections continue to this day. Interred there also are victims of the 1904 disaster of the steamship *General Slocum,* the Triangle Shirtwaist fire of 1911, the 1918–19 influenza pandemic, and the race riots of the 1980s (Michael Griffith and Yusef Hawkins, two men killed in race-related crimes, are buried at the Evergreens). Other graves include those of the painter Martin J. Heade; the pioneering animator Winsor McCay; the first world champion of chess, William Steinitz; and a long line of show business figures, including major African American stars, from the slave pianist "Blind Tom" Wiggins to Adelaide Hall, Bill "Bojangles" Robinson, and the saxophone genius Lester "Pres" Young.

By the year 2000 the Evergreens was almost filled, with 525,000 graves. The board of trustees limited burials in order to preserve land and "emphasize the role of the grounds as a park, a bird sanctuary, and an historic

site." Old trees have been replaced, and historic graves and lots have received special attention. In 2007 the New York State Board of Historic Preservation recommended that the Evergreens Cemetery be added to the National Register of Historic Places.

John Rousmaniere

Everlast Sports Manufacturing. Firm of sporting goods manufacturers formed in 1917 by Jacob Golomb (1893–1951), who named it for a durable men's bathing suit that he invented in 1910 and sold on the Lower East Side. In 1919 Jack Dempsey wore gloves bearing the name of the firm when he won the world heavyweight championship, and in 1921 Everlast began mass-producing boxing equipment that earned a reputation for reliability and durability. In 1938 the firm moved to a large facility at 750 East 132nd Street in South Bronx. It began producing swimwear, T-shirts, and other apparel in 1983, a venture that it soon abandoned in favor of licensing its logotype to other manufacturers; in 1989 licensing fees exceeded $2 million. Everlast was able to endure a decline in the popularity of boxing because of its name recognition and steady sales in large department stores in New York City. Daniel Golomb, son of the founder, sold the company in 2000 to George Horowitz. In 2003 Everlast moved its factory to Missouri and in 2007 was bought by Sports Direct.

Elizabeth J. Kramer, Stephen A. Stertz

Ewing, Patrick (*b* Kingston, Jamaica, 6 Aug 1962). Basketball player. He moved to the United States at age 13 and enrolled at Georgetown University in 1981. Renowned for his ability to block shots, Ewing led Georgetown to three consecutive National Collegiate Athletic Association championships from 1983 to 1985, winning in 1984. Over that span he also helped his school win three Big East championships at Madison Square Garden. In 1985 he was drafted by the New York Knicks as the first selection of the National Basketball Association (NBA) draft and soon became a fan favorite. The Knicks struggled during Ewing's first two seasons but made the playoffs every year for the rest of his career in New York, which ended in 2000 when he was traded to the Seattle SuperSonics. Ewing never won a championship but made the NBA finals twice. In his 17-year professional career, Ewing made 11 all-star teams, tallied more than 24,000 points and 11,000 rebounds, and blocked nearly 3000 shots. In 2003 the Knicks retired Ewing's jersey number, 33, in a ceremony at Madison Square Garden.

David White

excursion boats. Recreational waterborne travel for residents of New York City began in the early nineteenth century on sailing sloops. These were joined after 1825 by steam-powered boats, which were larger and faster and therefore permitted longer pleasure trips. Steam towboats also came into use on holidays to take passengers to the Atlantic fishing grounds. Pressed by competition from the railroads, shipping companies turned increasingly to the excursion business and developed large, fast, luxurious ships that could accommodate as many as 5000 passengers. Converted river and coastal liners were operated independently and proved profitable on short runs. Low fares made it possible for working- and middle-class New Yorkers to enjoy excursions lasting a day or longer.

Popular destinations included various riverside "groves," or picnic grounds, as well as beaches, resorts, amusement parks, and historic locations. From the earliest days of steamboat travel passengers frequented the Elysian Fields (at Hoboken, New Jersey), West Point, Newburgh, and Poughkeepsie on the Hudson River, and Sandy Hook and Monmouth Beach on the New Jersey shore. By the mid-nineteenth century Kingston Point on the Hudson and Bergen Point and Long Branch on the New Jersey shore were well visited. In the years after the Civil War, Glen Island was developed on the East River, as were Iona Island on the Hudson; Rye Beach, Seacliff, and Great Neck on Long Island Sound; and Coney Island and Rockaway in New York Bay. Early in the twentieth century Bear Mountain, Verplanck Point, Indian Point, Excelsior Grove, Forest Grove, and Alpine Grove became popular destinations on the Hudson. Often barges were used, propelled by steamboats or tugboats. Both daytime and evening trips were popular, offered by such companies as the McAllister Lines, the Iron Steamboat Company, the Meseck Line, the Hudson River Day Line, the Circle Line, and the Wilson Line. Among the best-known boats were the *Plymouth Rock,* the *Great Republic,* the *General Slocum* (which burned in 1904), the *Mandalay,* the *City of Keansburg,* the *Bay Belle,* the *Alexander Hamilton,* and the *Dayliner.* The first regular tour around Manhattan Island was probably that offered by Captain John Roberts from 1908. Only two companies remained active by 1990: the Circle Line, offering half-day trips around Manhattan and special charters, and the Seaport Line at South Street Seaport, which in 1985 began operating for private parties the sidewheelers *Andrew Fletcher* and *DeWitt Clinton* for trips around the harbor, and John F. Kennedy's former presidential yacht, the *Honey Fitz.* In 1993 the *Andrew Fletcher* and the *DeWitt Clinton* were sold to operators outside New York City. In the early twenty-first century some large private yachts continued to offer various charter services such as dinner sailings.

Arthur G. Adams

executions. See Public executions.

Explorers Club. Professional society with the mission of "encouraging scientific exploration of land, sea, air, and space," founded in New York City in 1904. Members of the club have accomplished many "famous firsts," which include traveling to the North Pole, the South Pole, the summit of Mount Everest, the deepest point in the ocean, and the surface of the moon. The annual dinner, held in New York City, honors the world's top explorers and is known for exotic fare such as tempura-style tarantula, termite spring rolls, roasted rattlesnake, yak Wellington, and ostrich tartare. Individuals are not eligible for membership solely on the basis of travel experience, but must also have participated in at least one scientific expedition. However, supporters of the club's goals are invited to become Friends of the Explorers Club. In addition to its headquarters at 46 East 70th Street in Manhattan, where it hosts weekly lectures and public programs, the club has more than 30 domestic and international chapters.

Holly Cronin

Exxon. Huge petroleum refiner and retailer. Among its forerunners was the Standard Oil Company (Ohio), set up by John D. Rockefeller in 1870. The headquarters were moved to 26 Wall Street as Rockefeller sought to consolidate his control over the oil industry. The firm eventually became known as Standard Oil Company (New Jersey) to distinguish it from other firms in the Standard network. It soon became the country's largest industrial corporation. In 1911 the Standard Trust was divided by the U.S. Supreme Court into 33 components; Standard Oil Company (New Jersey) received the largest share of the properties but was prevented from achieving integration by World War I, which led to cooperation among the country's oil companies to supply petroleum products to the Allies. Led by Walter Clark Teagle from 1917, Standard Oil of New Jersey after the war bought a one-half interest in Humble Oil and Refining Company, a Texas firm that offered a large supply of domestic crude as well as many successful entrepreneurs. The firm restructured its management and in 1927 took the first steps toward becoming a holding company. The search for oil continued, and new sources were found in Canada, Venezuela, and Iraq. A complicated series of patent agreements with the German firm of I. G. Farbenindustrie was reached in 1929, and the two firms later set up a joint American study company to trade research information on coal, petroleum, and natural gas

that might lead to the manufacture of cheap artificial rubber and toluene. In 1942 these activities were considered treasonable by a committee of the U.S. Senate led by Harry S. Truman. Standard Oil of New Jersey merged with Socony–Vacuum Oil in 1934 to form Standard–Vacuum, which took over operations in the eastern hemisphere and lasted until April 1960.

After the end of World War II, Standard Oil of New Jersey continued its global search for petroleum reserves. Esso Chemical was formed as a wholly owned affiliate devoted to research. Seeking relief from antitrust suits and a wider world market, Standard Oil of New Jersey took the name Exxon on 1 November 1972; Esso Chemical became Exxon Chemical in 1973. Exxon remained the largest industrial corporation in New York City during the following decades, a period that included the disaster of the *Exxon Valdez* in March 1989. On 27 August 1990 the firm moved its headquarters to Irving, Texas.

Exxon explosion. Explosion and fire that occurred the night of 6 December 1970 at the Exxon Corporation (then known as Humble Oil and Refining Company) Bayway oil refinery in Linden, New Jersey, 1 mile (1.6 kilometers) west of Arthur Kill, which separates New Jersey from Staten Island. The refinery was engulfed in fires and explosions that lasted for hours, creating 1000-foot-high (305-meter-high) flames that lit up night skies and shattered windows all across Staten Island. Seven workers were injured, but no one was killed. Although sabotage was originally suspected, subsequent investigation traced the cause to an overheated reactor in the refinery. On 20 March 1979 another, less serious, explosion occurred at the same Exxon refinery, also injuring seven workers and again causing broken window glass in Staten Island.

Andrew Sparberg

E-ZPass. Electronic toll collection system that tracks vehicles as they pass through collecting stations, enabling drivers to prepay toll fares without stopping at the tollbooth or opening a window. The system consists of a remote device the size of a deck of cards, which is placed on the windshield of the automobile, and an electric system in the tollbooth. First implemented in the Hudson River tunnels in the 1980s and then in the tri-state area, the program aimed to reduce congestion on some of the busiest roads in the United States. By 2000, 68 percent of cars traveling on weekdays in New York and 58 percent of cars traveling on weekends used E-ZPass. As of 2010 E-ZPass was compatible with similar systems throughout the Northeast.

Nicholas Kelly

F

Facade Law. Law signed on 27 February 1980 to protect pedestrians from falling masonry (amending chapter 27, section 129, of the New York Administrative Code). It was prompted by the death in the preceding year of a first-year student at Barnard College who was struck by masonry that fell from a building at Columbia University. The law requires that owners of buildings have the condition of facades examined by experts and submit reports of those examinations to the city's Department of Buildings. Despite fears by preservationists that the law would encourage owners to remove historic facades rather than repair them, a study in 1990 concluded that there had been widespread compliance and few instances of facade stripping.

Brooke J. Barr

Factory Investigating Commission. The enforcement of factory laws became the responsibility of agencies of New York State in the 1880s. The laws and agencies were largely ineffective until after a fire on 25 March 1911 in the top three stories of the 10-story Triangle Shirtwaist factory in New York City. Within minutes the fire claimed 146 young Jewish and Italian women, many of whom jumped to their deaths from the windows. This tragedy resulted in the formation of the New York State Factory Investigating Commission. Led by State Senator Robert F. Wagner (i) and Alfred E. Smith, speaker of the New York State Assembly, the commission also included three other legislators; Mary E. Dreier, president of the New York Women's Trade Union League; Samuel Gompers, president of the American Federation of Labor; and two representatives from business. It employed a paid staff, received voluntary help from such reformers as Frances Perkins, and focused its efforts on factories in New York City. Between 1911 and 1914 the commission made more than 60 recommendations covering all industrial conditions. It was held together largely by Wagner and Smith, who used their political power to ensure that most of the recommendations were adopted by the legislature: 56 recommendations became the basis of a comprehensive system of laws that replaced weak and disjointed ones enforced with varying degrees of effectiveness. The new code revised fire laws and provided for automatic sprinklers in buildings with seven stories or more, established a 54-hour week for women in factories, regulated the operation of dangerous machinery, set standards for lighting, ventilation, and washrooms, extended the regulation of homework, banned several industries from using tenement labor, and reorganized the state's Department of Labor, doubling the number of inspectors to 125 and establishing an industrial board empowered to issue regulations that had the force of law. A minimum-wage law for women and children was the only major proposal that was defeated. The commission's work was the pinnacle of progressive reform in the city and state and became the basis for other labor law during later years.

Irwin Yellowitz

Factoryville. Name applied to the northwest corner of West New Brighton in Staten Island from the late nineteenth century to the 1930s. It was derived from the large factories that covered the area, including that of the New York Dyeing and Print Works. The center of the neighborhood lay at the foot of Broadway.

James Bradley

Fairchild Publications. Firm of magazine publishers. It was formed in 1892, when a peddler named Edmund Fairchild took over a failing trade newspaper devoted to the men's clothing business. The paper was eventually called the *Daily News Record* and included a small feature about women's wear: in July 1910 this became the separate publication *Women's Wear Daily,* now the liveliest and best known of several trade publications owned by Fairchild. Others include *Home Furnishings Daily, Golf Pro Merchandising, Footwear News, Supermarket News, Electronic News, Metalworking News, M,* a glossy publication edited by Clay Felker (the founder of *New York* magazine), and several business directories. The firm was bought by Capital Cities Communications in 1968. In 1991 its offices moved to 7 West 34th Street. In 1999 Fairchild Publications was sold by the Walt Disney Company to Advance Publications, the parent company of Condé Nast Publications.

Leslie Gourse

Fairmount. Neighborhood in west central Bronx, lying within Tremont and bounded to the east by Southern Boulevard and to the west by Crotona Park. It is named after the estate of Robert Cochran, built in 1854. A village that took shape near Southern Boulevard and extended westward along 175th Street was one of the three "mounts" that gave Tremont its name. The extension of the Third Avenue elevated line in the 1890s and trolley cars in the early twentieth century spurred development. By the 1930s Tremont Avenue was the main street, and the largely Jewish population lived in apartment buildings. The Cross Bronx Expressway cut through the area in 1955. In the late twentieth and into the early twenty-first century, the population was largely Latin American.

Lloyd Ultan

fairs and festivals. More than 100 fairs and festivals sponsored by religious, ethnic, civic, and educational organizations, and by tenants' councils, community school boards, and block associations, are held each year in New York City. Most take place between May and October and last from a few hours to a weekend or longer. The most common venues are streets from which traffic is blocked, plazas, and parks; often there are processions, as well as plays and puppet shows mounted on temporary stages, and vendors selling food, clothing, and other goods. The public is usually admitted free of charge, but some fairs and festivals are organized to raise money, and a few, such as the San Gennaro Festival, have become successful commercial enterprises. Some events draw as many as 100,000 spectators a day.

The earliest street festival in the city was organized in July 1884 by the Church of Our Lady of Mount Carmel at East 116th Street in Manhattan to celebrate religion and Italian culture; the event included a procession and was repeated annually into the early twenty-first century. Among the other important ethnic festivals in the city are those of the Chinese New Year in midwinter, which transforms Mott Street in Manhattan south of Canal Street into a colorful display of dragon dances and fireworks; the West Indian carnival and parade along Eastern Parkway to Prospect Park in Brooklyn, an extraordinary procession reminiscent of Mardi Gras that has been adapted to the calendar and climate of New York City by being held on Labor Day; the festival of Good Friday at Crotona Park in the Bronx, which begins with a procession at St. Joseph's Church on Bathgate Avenue and continues with a reenacted crucifixion; the festival of the Giglio, celebrated in midsummer in Williamsburg and in the Bronx along Water Place, which commemorates San Paolino's return to his people (the symbolic "lily" is a structure of wood, paint, and papier-mâché 85 feet, or 26 meters, tall that serves as a platform for a seated orchestra carried through the streets on the shoulders of 100 men); the ancient Korean harvest festival of Choo-Seok, staged on a Sunday in autumn at Flushing Meadow Park by worshippers wearing Korean garb and offering fruits and prayers at the ancestral altar, while dancers, singers, drummers, and wrestlers perform and compete in an immense open space encircled by booths where Korean food is served; the Ganesha Chathurthi celebration at the Bowne Street Hindu Temple in late

summer, marked by the depositing of a statue in a body of water nearby; and the Native American Pow Wow, produced by the Thunderbird Dancers at the Queens Farm Museum, which brings together members of 25 Indian tribes from throughout the Americas.

Other fairs and festivals commemorate patriotic occasions. Independence Day and Evacuation Day (25 November) were celebrated as early as the eighteenth century. Reenactments of historic battles were part of celebrations marking the 100th anniversary of the Civil War (at Richmondtown Restoration in Staten Island, 1961) and the 200th of the United States (at Forest Park in Queens, 1976); these later became annual events. The centenary of the Statue of Liberty was celebrated in 1986. Among the festivals honoring the struggles for independence of other nations are the Ecuadorian Festival and Parade, the Greek Cypriots National Heritage Festival, Colombian Independence Day, and the Czechoslovak Festival.

The 1970s and 1980s saw a proliferation of local festivals, many of which continue today. Some are boroughwide, such as the Richmondtown Autumn Celebration in Staten Island (based on Old Home Day, begun in 1941), Bronx Week (1970), and Queens Day (1977). Neighborhood festivals in Brooklyn include the East New York Street Fair, the Midwood Mardi Gras, and Welcome Back to Brooklyn, along with the larger Atlantic Antic, Flatbush Frolic, and Seventh Heaven fairs (all begun in 1975). In Manhattan festivals in Murray Hill and Gramercy Park and the Plantathon rival larger and more prominent fairs on avenues and cross streets that draw several hundred thousand participants: the Ninth Avenue International fair, the Columbus Avenue fair, and the 52nd Street fair (all dating from the 1970s), and the Second Avenue fair, Third Avenue fair, Avenue of the Americas fair, and 42nd Street fair (all dating from the 1980s).

Cultural festivals on a more modest scale include the Annual Fence Show (each September in Staten Island), the Promenade Arts Exhibition (on weekends in May and October in Brooklyn Heights), the Columbus Park Chinatown Summer Cultural Festival (on Sundays in midsummer in Manhattan), and the Queens Ethnic Music and Dance Festival (in September). Grand cultural festivals in Manhattan are held in midtown: the Museum Mile fair (June), the Lincoln Center Out-of-Doors Festival (August), and the New York Is Book Country fair (September). Harlem Week in late August salutes achievement in entertainment and sports. Its organizers exhort New Yorkers: "You haven't done this town till you've done it uptown."

Mimi Gisolfi D'Aponte

Fairview Heights. Obsolete name for a neighborhood in northeastern Staten Island lying within Castleton Corners and bounded to the north by Victory Boulevard, to the east by Clermont Place, to the south by Holden Boulevard, and to the west by Bradley Avenue. The name appears in the *Atlas of the Borough of Richmond, City of New York from Official Records, Private Plans and Actual Surveys* (1898) but never became widely used.

John-Paul Richiuso

Fairway. Independent food retailer, known by the slogan "Like No Other Market," with two stores in Manhattan, one in Brooklyn, and one in Plainview, Long Island. The original location, at 74th Street and Broadway, was established in 1930 as a fruit and vegetable market and then expanded to encompass all types of retail food products. Fairway added new locations in 2000 (133rd Street and 12th Avenue in West Harlem, and Plainview). In 2005 a fourth Fairway market opened on Van Brunt Street in Red Hook, Brooklyn, in a former nineteenth-century coffee warehouse. Fairway is known for its cheeses, meat, fish, fruits, and vegetables.

Andrew Sparberg

Fall River Line. Overnight passenger and freight steamship service connecting New York City with Fall River, Massachusetts, and Newport, Rhode Island. It began service to Fall River in 1847, at a time when the lower Connecticut River had not yet been bridged and most traffic between New York City and southern New England moved by water across Long Island Sound, with rail connections from Fall River to Boston. From 1893 the route was dominated by the New England Steamship Company, a subsidiary of the New Haven Railroad. The line was served by such large and well-appointed ships as the *Pilgrim* (1883), the *Puritan* (1889), the *Priscilla* (1894), and the *Commonwealth* (1907). The *Priscilla* was known for its elegant Renaissance interiors. It slept 1500 passengers, carried 800 tons (725 metric tons) of freight, and was powered by a four-cylinder, double-inclined compound engine of 8500 horsepower with five boilers. The steamer measured 440 feet (134 meters) by 52 feet (15.8 meters). The opening of the Cape Cod Canal in 1916 allowed for more direct travel to Boston, but the Fall River service continued until 1937.

Roger Williams McAdam, *The Old Fall River Line* (Lincoln, R.I.: Mowbray, 1937; rev. 1972 as *Floating Palaces: New England to New York on the Old Fall River Line*)

Arthur G. Adams

family planning. The use of artificial contraceptives increased during the mid-nineteenth century across the country as well as in New York City among the middle and upper classes. By mid-century abortions ended about 20 percent of pregnancies in the city; one of the city's best-known abortionists was the English immigrant Ann Trow Lohman, known as Madame Restell. Many other methods of birth control existed but none was particularly effective. Opposition to birth control grew as doctors professionalized and conservative groups endorsed strict moral codes. By the twentieth century the notion of separating sexual activity from reproduction slowly became accepted, and efforts to legalize and promote contraception were centered in New York City. One of the first public advocates of contraception was the anarchist Emma Goldman, who advocated family planning as a means of countering economic and sexual exploitation of workers. These efforts were soon overshadowed by the work of Margaret Sanger, who helped to coin the phrase "birth control" in 1914 and became the leader of the movement, opening the first birth control clinic in the country in Brownsville in 1916; she met with fierce opposition. In 1915 the suffragist and sex-education advocate Mary Ware Dennett formed the National Birth Control League, an organization reorganized in 1918 as the Voluntary Parenthood League. Despite Sanger's willingness to seek legislation making physicians the sole distributors of contraceptives, the city's medical establishment was reluctant to endorse birth control. An exception was Robert L. Dickinson, a gynecologist in Brooklyn who in 1923 established the Committee on Maternal Health to conduct medical research on reproductive health issues, including birth control and abortion. In 1931 the New York Academy of Medicine finally endorsed the use of birth control on medical grounds. Physicians' right to acquire and distribute contraceptives was established by the U.S. Supreme Court in the case of *United States v. One Package* (1936), a challenge to federal bans on the importation of contraceptives that was brought by the Birth Control Clinical Research Bureau, a facility opened at 17 West 16th Street by Margaret Sanger in 1923. The bureau and the American Birth Control League merged to form the Birth Control Federation of America in 1939, renamed the Planned Parenthood Federation in 1942 (see Planned Parenthood Federation of America, Inc.).

In New York City, as in the rest of the country, access to family planning services remained limited at the end of the 1950s, largely because the Catholic Church opposed birth control and abortion. As late as 1957 municipally funded health centers in the city would not provide contraceptives or information about them, and none of the city's 17 birth control centers was housed in a public hospital; Planned Parenthood offered the only subsidized family planning services in the city. The unofficial ban on dispensing contraceptives in municipal hospitals was eased on 17 September 1958 by the Board of Hospitals, which allowed contraceptives to be used in cases where pregnancy jeopardized a woman's life. Birth control became fully incorporated into

the city's health programs only after the U.S. Supreme Court legalized the distribution of birth control devices to married couples in 1965 and to unmarried individuals in 1972. Abortions continued to be performed, occasionally resulting in criminal prosecution, but in April 1970 New York State passed a liberal reform law that made abortion legal. Because New York City did not impose a residency requirement, its abortion clinics served thousands of women from across the country until the U.S. Supreme Court legalized abortion nationwide in the case of *Roe v. Wade* (1973). In 1999, Plan B, an emergency contraceptive also known as "the morning after pill," became available in the city by prescription only. After federal changes in legislation, in November 2006 New York City pharmacies began carrying Plan B over the counter, and it became available in 94 percent of the city's drugstores in less than a year; the city's Department of Health and Mental Hygiene began offering emergency contraceptives at each of its 10 sexually transmitted disease (STD) clinics for free and without parental consent. In the early twenty-first century a wide range of family planning services are offered in most New York City hospitals and in a network of family planning clinics administered by the city's Human Resources Administration, but these facilities continue to face serious challenges.

Mohr, *Abortion in America* (New York: Oxford University Press, 1978); James Reed, *From Private Vice to Public Virtue: The Birth Control Movement and American Society since 1830* (Princeton, N.J.: Princeton University Press, 1978)

Esther Katz

F and M Schaefer Brewing. Firm formed in 1842 by Frederick Schaefer and Maximilian Schaefer, immigrants from Wetzlar, Prussia; it was the city's first producer of lager beer. For its manufacturing process it imported bottom-floating yeasts from Germany and fermented them at low temperatures. After operating for many years near Grand Central Terminal, the firm moved to Brooklyn in 1915. It manufactured ice and near-beer during Prohibition, and while remaining under family control expanded after World War II by buying breweries in Baltimore and in Albany, New York. For a time after 1945 it produced the sixth-largest volume of malt beverages in the country. It opened a modern factory near Allentown, Pennsylvania, in 1972 and in the following year bought the brand name of Piels, a beer made in Brooklyn from 1883 to 1963. Schaefer was the country's seventh-largest brewer in 1975, when it suffered financial losses that forced it to close its production facilities in the city, including its brewery in Brooklyn in 1976.

K. Austin Kerr

FAO Schwarz. Firm of toy and game retailers formed in 1863 in Baltimore by Frederick August Otto Schwarz, an immigrant from Westphalia who moved to New York City in 1870 to open the Schwarz Toy Bazaar at 765 Broadway. With his three brothers he built a prosperous business by drawing on the expertise of select toy manufacturers in Europe. In 1880 he moved to larger quarters at 42 East 14th Street, across from Union Square. He moved the store to two other locations in the city before eventually settling uptown at 745 Fifth Avenue in 1931. In 1963 the Schwarz family sold the company, which went through several owners. In 1986 the store moved across the street to 767 Fifth Avenue. Although the firm later opened 17 stores throughout the United States, the flagship emporium in New York City remained the best known, in part because of its prominent location and in part because it was shown in several films. One of these films, *Big* (1988), featured Tom Hanks and Robert Loggia performing "Heart and Soul" and "Chopsticks" on the store's giant floor keyboard. A children's bank was opened at the store in 1988 by the First Women's Bank. In 1996 it opened FAO Schweetz, a candy retailer. In 2001 it opened FAO Baby on Fifth Avenue. In 2003 FAO Inc. filed for Chapter 11 bankruptcy, emerging in late April of the following year. That same year Vendex sold its share in the company to the hedge fund D. E. Shaw. In 2009 the company was acquired by Toys "R" Us Inc. The firm is known worldwide for its large selection of distinctive and expensive merchandise.

F. A. O. Schwarz Toys through the Years (New York: Doubleday, 1975)

Frank Morrow

Fareynikte yidishe geverkshaftn. See United Hebrew Trades.

Farley, James A(loysius) (*b* Grassy Point, N.Y., 30 May 1888; *d* New York City, 9 June 1976). Political leader. After graduating from Packard Commercial School in 1906 he worked as a bookkeeper. He was a warden of the port, the president of the state athletic commission, and a state assemblyman before he opened a bookkeeping firm in 1926. The secretary and chairman of the state Democratic committee from 1928 to 1944, he played an important role in the election of Franklin D. Roosevelt to the presidency in 1932. From 1932 to 1940 he was both chairman of the Democratic National Committee and postmaster general. After opposing Roosevelt's bid for a third term, he left public life and became chairman of the export division of Coca-Cola, a position he held for 35 years. He wrote an autobiography, *Jim Farley's Story* (1948). In 1982 the General Post Office at 421 Eighth Avenue was named the James A. Farley Building in his honor.

John T. Casey and James Boules, *Farley and Tomorrow* (Chicago: Reilly and Lee, 1937)

James E. Mooney

Farley, John M(urphy) (*b* Newton-Hamilton, County Armaugh, Ireland, 20 April 1842; *d* New York City, 17 Sept 1918). Cardinal. After moving to New York City in 1864, he was ordained on 11 June 1870 and in the same year became an assistant at St. Peter's in New Brighton. He was John McCloskey's secretary from 1872 until 1884, when he became the pastor of the Church of St. Gabriel's in the East 30s (now defunct), a position he retained until 1902. His handling of a breach between the clergy and the hierarchy that began as a confrontation between Michael A. Corrigan and Edward McGlynn won him the admiration of archdiocesan priests: to resolve it he recognized clerics passed over for chancery positions by elevating them to the title of monsignor, a papal honor previously reserved for the chancery. From 1891 to 1902 he was the vicar general and president of the Catholic school board. Appointed an auxiliary bishop on 21 December 1895 and an archbishop on 15 September 1902, he opened Cathedral College (1903), authorized the *New York Review* (1905–7), and helped to finance and edit the *Catholic Encyclopedia* (1907–12). Under his auspices national parishes were first established in the city for Italian-speaking Albanians who practiced Oriental rites (Our Lady of Grace, 1907), for Lithuanians (Our Lady of Vilna, 1909), and for Slovenians (St. Cyril's, 1916). He welcomed into his archdiocese the motherhouse of the Catholic Foreign Mission Society of America (established at Maryknoll in New York City, 1911), was named a cardinal on 27 November 1911, introduced monthly retreats for the clergy, and instituted a system for supervising charitable work and parishes dominated by ethnic minorities (1912). When the United States entered World War I he helped to organize the National Catholic War Conference and promoted wartime charities within his see, even though his health was failing. Farley is buried beneath St. Patrick's Cathedral.

Mary Elizabeth Brown

Farmer, A. W. Pseudonym of Samuel Seabury.

farming. See Agriculture.

Farragut. Neighborhood in east central Brooklyn, bounded to the north by Cortelyou Road and Holy Cross Cemetery, to the east by Kings Highway, to the south by tracks of the Long Island Rail Road, and to the west by Brooklyn Avenue. The area was originally

part of the town of Flatbush and is named for the Civil War admiral David G. Farragut. From 1925 to 1950 the population consisted largely of Jews and Italians, who lived in one- and two-family detached and semidetached houses built in the 1920s and 1930s. A number of apartment buildings were erected after World War II; Vanderveer Estates (1949–50), a middle-income complex of 59 buildings, houses 2500 families. Most of the new immigrants settling in Farragut in the 1980s were blacks from the Caribbean. More than a quarter were Haitian, and there were also a large number of immigrants from Guyana, Jamaica, Trinidad and Tobago, Barbados, Grenada, China, and the Soviet Union. In the early twenty-first century Church Avenue is the principal commercial thoroughfare.

Walter Thabit, *East Flatbush on the Threshold* (New York: New York City Department of Planning, 1969)

Elizabeth Reich Rawson

Farrar, Straus and Giroux. Firm of book publishers formed as Farrar and Rinehart in June 1929 by John Farrar, Frederick Rinehart, and Stanley M. Rinehart at 12 East 41st Street. Sales for the first month totaled $26, but by September the firm had earned $46,000. In 1946 the firm of Farrar, Straus was formed by Farrar and Roger W. Straus, Jr., with offices at 580 Fifth Avenue. Renamed Farrar, Straus and Young in 1951 and Farrar, Straus and Cudahy in 1955, it took its current name in 1964 after the editor Robert Giroux became a full partner. It bought Octagon Books in 1968 and Hill and Wang in 1971 and remained one of few independent publishers after resisting attempts by several corporations to take it over. Farrar, Straus and Giroux remained known for literary excellence: between 1945 and 1985 it published the work of 13 Nobel laureates, including Aleksandr Solzhenitsyn and T. S. Eliot. Farrar, Straus and Giroux was acquired by Verlagsgruppe Georg von Holtzbrinck of Stuttgart, Germany, in 1994. In the early twenty-first century the firm's corporate offices were located at 19 Union Square West.

Allen J. Share

Farrell, Eileen (*b* Willimantic, Conn., 13 February 1920; *d* Park Ridge, N.J., 23 March 2002). Classical vocalist. Farrell came to New York City in 1939 and found work with the radio chorus of the Columbia Broadcasting System (CBS). The following year the network gave the soprano her own program, "Eileen Farrell Presents," which lasted seven years. In 1946 she married a New York City police officer and began making appearances with symphony orchestras. At one time she held the record as the New York Philharmonic's most frequent soloist. One critic wrote of the "immense softness" of her voice. She performed at the Roxy Theater in Manhattan and was a member of the acclaimed Bach Aria Group. Her first opera performance was in 1956 in Mascagni's *Cavalleria Rusticana* in Tampa. Farrell's Metropolitan Opera debut came with a new production of Gluck's *Alceste* in 1960; she remained at the Met for five seasons. Throughout the 1960s and early 1970s she was a popular guest on many top television variety programs. From 1971 to 1980 she taught voice at Indiana University.

Brian Kellow

Farrell, Suzanne [Ficker, Roberta Sue] (*b* Cincinnati, Ohio, 16 Aug 1945). Dancer. She attended the School of American Ballet in 1960 and a year later joined New York City Ballet. While there Farrell received much attention from George Balanchine, who considered her one of his muses and the ideal ballerina of his style. He created many principal roles for her in such works as the *pas de deux* "Meditation" (1963) and his full-length ballet *Don Quixote* (1965). Praised for the silken quality of her movements, her daring, and her fluid response to music, she inspired much of Balanchine's later choreography, including the ballets *Variations* (1966) and "Diamonds," a section of *Jewels* (1967). In 1969 a dispute between Balanchine and Farrell caused her and her husband, the dancer and choreographer Paul Mejia, to leave New York City Ballet and join Maurice Béjart's Ballet du XXe Siècle in Brussels. She returned to Balanchine's company in 1975, however, after the two reconciled. He then choreographed a series of renowned works for Farrell, including *Chaconne* (1976), in which she was paired with the favored partner of her later years, Peter Martins; *Vienna Waltzes* (1977); *Davidsbündlertänze* (1980); and *Mozartiana* (1981). After retiring in 1989 Farrell wrote *Holding On to the Air: An Autobiography* (1990) with Toni Bentley. In 2000 she started her own company, Suzanne Farrell Ballet, which trains dancers in the Balanchine style.

Nancy Reynolds

Far Rockaway. Neighborhood in southeastern Queens (2000 pop. *ca* 35,000), toward the eastern end of the Rockaway Peninsula west of the border with Nassau County. Canarsee Indians named the area Reckouacky (probably meaning "place of our people"), from which the present name derives; they sold it in 1685 to John Palmer, who in turn sold it in 1687 to an inhabitant of Flushing, Richard Cornell. Until 1898 the area was part of the town of Hempstead. In 1809 Cornell's heirs divided the land into 46 parcels; these were acquired in 1833 by John L. Norton, who later sold them piecemeal. During the same year the area became a seaside resort after a hotel called the Marine Pavilion opened to serve those fleeing an outbreak of cholera in New York City. Before the hotel burned in 1864, it served many illustrious guests, including Henry Wadsworth Longfellow, Washington Irving, and Jonathan Trumbull. More hotels and summer boarding houses appeared after rail service was extended by the South Side Railroad in 1869 and the Long Island Rail Road in 1872. A lack of city services inspired a secession movement, and a bill to make Far Rockaway a separate city passed the state legislature in 1915 and 1917 before being vetoed by the mayor of New York City. The area remained a beach resort until 1956 when the subway reached Far Rockaway. In the 1960s and 1970s many old mansions became nursing homes, and high-rise apartments rose along the shore. In the 1980s new immigrants from Jamaica and Guyana moved there. There were also immigrants from El Salvador, Haiti, the Dominican Republic, Guatemala, and Afghanistan. As of the early twenty-first century nearly 25 percent of the population was Orthodox Jewish. The neighborhood remained dominated by lower middle-class and middle-class housing and struggled with above average crime rates and poor schools.

Vincent Seyfried

Fasanella, Ralph (*b* Brooklyn, 7 Sept 1914; *d* Yonkers, N.Y., 16 Dec 1997). Painter. After fighting in the Spanish Civil War and serving in the navy during World War II, he moved to 47 Grove Street in Greenwich Village and became an organizer for the Congress of Industrial Organizations. He taught himself painting at the age of 30 and became known for his compassionate depictions of ordinary people in New York City and of immigrant life. His paintings, which frequently depict the city's bridges, subways, and parks, are "primitive" yet detailed and symbolic. Representative examples include a series of two paintings called *Iceman Crucified.*

Patrick Watson, *Fasanella's City: The Paintings of Ralph Fasanella with the Story of His Life and Art* (New York: Alfred A. Knopf, 1973)

Betty Kaplan Gubert

fashion. During the early nineteenth century New York City became the fashion center of the United States. With access to the Great Lakes region afforded via the Hudson River, the city enjoyed an advantage over such port cities as Boston, Philadelphia, and Charleston, South Carolina. Tailors, furriers, jewelers, haberdashers, and milliners multiplied in the city as it developed into a distribution center. Dry-goods stores gave way to department stores that were so impressive that travelers from Europe often likened the shopping in the city to that of Paris and London. Retailers settled into the best residential areas, which continued to move north as homeowners sought more space and quiet. By the 1820s the

most successful shops congregated at lower Broadway, where A. T. Stewart, widely recognized as the city's most innovative retailer, erected a "marble palace" to house his business in 1846. Other merchants opened shops nearby and followed Stewart when he moved in 1862 to even grander quarters, bounded by Broadway, Fourth Avenue, and Ninth and Tenth streets. Eventually an elaborate shopping district took shape: it ran from 14th to 23rd streets between Sixth Avenue and Broadway and was later known as the Ladies' Mile.

Custom-made clothing dominated the fashion industry in New York City until manufacturers in the 1850s introduced "ready-to-wear," mass-produced clothing inspired by uniforms sold to the U.S. Army and Navy. The first ready-to-wear garment was the men's business "uniform," consisting of a tailored frock coat and trousers. Ready-to-wear for women included easily fitted outerwear articles such as mantles and capes that appeared in exclusive stores in New York City during the late 1850s, but in general women's ready-to-wear clothing did not become popular until women began wearing simpler clothing. Articles of women's clothing that resembled menswear in style such as shirtwaists (tailored blouses), walking skirts, and jackets were produced as ready-to-wear in the 1860s, inspired in part by the movement for women's rights. Unsized clothing patterns first appeared in fashion magazines in the early 1850s; sized patterns introduced in 1864 made it possible for amateur seamstresses and women working at home to produce fashionable clothes tailored to the wearer. By the 1890s most women owned an outfit consisting of a shirtwaist, jacket, and skirt. Sold separately, these items were suited to the development of retail catalogues, or wish books, which became popular in the 1870s and offered a multitude of ready-to-wear clothing.

A distinctly American style emerged in the 1890s. The "Gibson girl," a healthy, sporty image depicted by the illustrator Charles Dana Gibson, helped to define the fashions of New York City as natural and becoming, in contrast to the imposing artificiality of fashions from Paris. As early as the 1920s supporters of fashions made in America like Dorothy Shaver, vice president of Lord and Taylor, added designer labels to American clothing in an effort to counter the perception that clothing made in New York City was copied from French styles. Among the many successful designers working in the city during the 1930s were Claire McCardell, Charles James, Valentina, Lilly Daché, Nettie Rosenstein, Elizabeth Hawes, Germaine Monteil, Jessie Franklin Turner, Tom Brigance, and Clare Potter. During the 1940s New York City residents produced 125,000 designs a year. Their output was notable for its diversity: it included haute couture, ready-to-wear of high quality (known as "couture-caliber"), tailored coats and suits, inexpensive house dresses, and sportswear. Much innovation in fashion occurred during World War II, when the fashion industry was cut off from the influence of Paris and freer to promote native design. The core of the fashion district at the time was the intersection of 57th Street and Fifth Avenue, with most department stores on Fifth Avenue and specialty stores selling primarily custom-made clothes and accessories off Fifth and Madison avenues in the 1950s and 1960s. The district saw the closing of several of its department stores during the 1960s and 1970s.

In the late 1970s New York City emerged as an international fashion capital rivaling Paris and Milan. The city became the base for such leading designers as Halston, Bill Blass, Geoffrey Beene, Perry Ellis, and Donna Karan, and fashion shows increased in number and importance. The fashion world was ravaged, however, in the 1980s and early 1990s by the AIDS epidemic, which claimed the lives of several leading figures.

Another important force in reinforcing the city's influence as a fashion center is the large number of fashion publications published there, notably the trade newspaper *Women's Wear Daily* and the magazines *Vogue* and *Harper's Bazaar.* In addition, New York City became the home to several of the leading fashion design programs in the world including Parsons The New School for Design (1896) and the Fashion Institute of Technology (1944). These programs educated designers who were on the cutting edge of fashion, including Donna Karan, Calvin Klein, Tom Ford, and Michael Kors. In 1993 the industry event Fashion Week moved to Bryant Park and established a biannual, spectacular exhibition of contemporary designers in New York City. That same year the Fashion Center Business Improvement District, a not-for-profit corporation, was established to promote New York City's apparel industry and to improve the quality of life and economic vitality of Manhattan's garment district. In the early twenty-first century development along the High Line park inspired several fashion houses to relocate to the meatpacking district and Chelsea neighborhoods in Manhattan. These designers, including Diane von Furstenberg, and their interest in the area helped to reaffirm New York City's prevalence as a leader in high fashion.

Caroline Rennolds Milbank, Anne Epstein

Fashion Group International. Nonprofit professional organization of women in the fashion industry and related fields, formed in 1930 by Edna Wollman Chase of *Vogue;* Carmel Snow of *Harper's Bazaar;* Virginia Pope of the *New York Times;* the designers Claire McCardell, Lilly Daché, Edith Head, and Adele Simpson; and the cosmetics executives Elizabeth Arden and Helena Rubinstein. Eleanor Roosevelt served on the advisory board. The organization soon set up a placement bureau for the unemployed and also became an advocate for women working in fashion and related industries. The organization maintains a library, awards scholarships to fashion and merchandising schools, provides career counseling services, and supports environmental awareness programs and breast cancer research. In addition to the headquarters in New York City there are 44 regional groups throughout the United States and the world. In 2010 the Fashion Group International had more than 6000 members.

Phyllis Barr

Fashion Institute of Technology [FIT]. Public institution founded by Mortimer C. Ritter and Max Meyer in 1944 to create "the

Fashion Institute of Technology, 2009

MIT for fashion industries." Ritter, Meyer, and other apparel manufacturers organized the Educational Foundation for the Fashion Industries, which instigated a charter for fashion design and technology education in New York City. Originally located at 225 West 24th Street at the High School for Needle Trades (later renamed the High School of Fashion Industries), the college offered only design and scientific management degrees to its 100 students. In 1957 FIT became the second State University of New York community college, and in the late 1970s it offered four-year and then graduate curricula. In 1967 the school founded a museum, which currently holds 50,000 garments and accessories. In the 1970s it moved to its current location in the heart of the garment district, at Seventh Avenue and 27th Street, where it occupies a full city block and eight buildings. In 2007 it expanded to offer undergraduate and graduate degrees for 43 fashion-based majors, including design, pattern making, photography, and business, and it enrolled over 10,000 students. Its courses present students with real-world situations and equipment for programs such as jewelry, toy, and interior design. Graduates from FIT include fashion moguls Calvin Klein, Rebecca Moses, Bob Abajan, and Norma Kamali.

Stephanie Miller

Fashion Week. Biannual event founded in 1943 by fashion publicist Eleanor Lambert. Press Week, as it was originally called, publicized American designers who had previously worked in the shadow of the Parisian fashion scene. After American designers gained renown during the mid-twentieth century, they began producing individual shows at private spaces around New York City. In an effort to consolidate the shows for greater exposure, in 1993 Fern Mallis, former executive director of the Council of Fashion Designers of America, founded 7th on Sixth at Bryant Park. In fall 2010 Fashion Week moved from Bryant Park to Damrosch Park at Lincoln Center.

Kate Lauber

Father Divine [Baker, George] (*b* Hutchinson's Island, Ga., *ca* 1879; *d* Merion, Pa., 10 Sept 1965). Preacher. He worked part-time as a Baptist preacher and moved to Brooklyn before settling in Sayville, New York, where he formed the Peace Mission Movement, which provided meals for hungry members during the Depression. In 1933 he moved the organization to Harlem and it gained thousands of followers. He soon opened 200 centers in New York City and in Philadelphia, where he made his headquarters from 1942. Father Divine issued the publication *New Day* to promote his views; he supported celibacy and the use of cash in business transactions and inveighed against welfare, tobacco, liquor, and profanity. After his death, his wife, Mother Divine, succeeded him as the leader of the movement.

James E. Mooney

Father Knickerbocker. Pen name of Washington Irving.

fauna. A wide range of animal species thrives in the diverse habitats of New York City. The waters off the city support more than 75 species of finfish, including the Mummiching (*Fundulas hetroclitus*) and the Bluefish (*Pomatomus saltatrix*), an aggressive carnivore and popular game fish. Young Bluefish, called "snappers," are common in the inlets and bays in summer and rely on such estuaries as New York Harbor for their growth. Birds such as terns (Common, Least, and Roseate) and gulls (Laughing, Black-backed, Bonaparte, Ring-billed, and Herring) are found along the coasts. Marsh islands and coastal dunes along the shore support Black Skimmers, Oystercatchers, and Brown Pelicans. Piping Plovers (considered threatened under the Endangered Species Act), which remain in the area from mid-March until early September and raise their chicks along the tidal wrack lines, make slight depressions in the sand to use as nests. Patches of Saltwater Cordgrass (*Spartina alterniflora*) and Seatmeadow Cordgrass (*Spartina patens*) harbor many animals. Coastal ecosystems abound with Mugwort, Sweet Clover, and Reedgrass (*Pharargmites australis*), an especially valuable plant to wildlife: its roots are the preferred food of muskrats, and its dense stems provide cover for pheasants. In the summer, nesting Red-winged Blackbirds are often seen flying in these areas hunting for insects. Waterbirds like the Canvasback, Scaup, Pintail, and Mallard live around freshwater bodies such as East Pond in the Jamaica Bay Wildlife Refuge, Clove Lake on Staten Island, and Alley Pond in Queens, which attracts nesting passerine (songbirds) like warblers (among them the Blue-winged Warbler).

The Norway Rat (or Brown Rat) was carried to North America by European settlers and is found throughout the city's sewer system; it is a choice food of Barn Owls. Other mammals in the city include the Raccoon, the Gray Squirrel, the Opossum, and several species of bat, among them the Hoary, Red, and Silver-haired bats and the Little Brown Myotis. Efforts are being made to restore the Hempstead Plains, grasslands not unlike the Western prairies that once stretched from eastern Brooklyn through Queens, Nassau, and Suffolk counties (only 19 acres [8 hectares] survived development, all in Nassau). In Brooklyn the National Park Service retards the growth of woody vegetation through mowing and fires, allowing the return of such grassland animals as Grasshopper Sparrows, Short-eared Owls, Meadowlarks, Upland Sandpipers, Meadow Voles, and White-footed Mice.

Unusual species living in the city include Monk Parakeets in Brooklyn and a band of Black-tailed Jack Rabbits inhabiting the grounds of John F. Kennedy International Airport in Queens; both probably escaped from shipments at the airport in the mid-twentieth century. A Florida Manatee named Chessie turned up in the East River in 1995, and Humpback Whales have been stranded on New York beaches. The North American Beaver, a species deeply embedded in New York's early economic development, returned in 2007 after being hunted almost to extinction during the heyday of the fur trade. The lone male beaver building a home on the Bronx River—the first sighted in New York in 200 years—was nicknamed "José" after U.S. Representative José E. Serrano of the Bronx, who has directed millions of dollars toward the environmental revitalization of the river.

Fauset, Jessie Redmon (*b* Camden, N.J., 27 April 1882; *d* Philadelphia, 30 April 1960). Novelist, editor, and poet. The first black woman to graduate from Cornell University, she taught for almost 20 years at DeWitt Clinton High School in the Bronx and edited the *Crisis* (a publication of the National Association for the Advancement of Colored People) and a monthly magazine for black children. Her home in Harlem was an important literary salon during the Harlem Renaissance. Fauset published four novels between 1924 and 1933, and her poems have been collected in anthologies.

James E. Mooney

FDR Drive. Controlled-access highway running along the east side of Manhattan Island from the financial district to Harlem. Built under the direction of Robert Moses during the administration of Mayor Fiorello H. La Guardia and named for President Franklin D. Roosevelt, it was planned as a link in a projected circumferential belt parkway. Much of the landfill on which it is constructed consists of the rubble of buildings from London destroyed during World War II by the Luftwaffe's blitz. Convoys of ships returning

FDR Drive, 1940

from Great Britain carried the broken masonry in their holds as ballast.

Kenneth T. Jackson

Federal Archives Building. Office and residential building at 641 Washington Street in Manhattan. It stands 10 stories tall and fills the block bounded by Washington, Christopher, Barrow, and Greenwich streets. The brick building was built in 1892–98 by Willoughby J. Edbrooke in the Romanesque Revival style as a federal appraisers' warehouse, where customs agents weighed and tested samples of imports to determine customs duties. In 1938 the building was remodeled into office space for use by the federal archives. The federal government abandoned the building in 1976, and in 1982 it was again renovated for commercial and residential use. It was designated a landmark on 15 March 1966.

Brooke J. Barr

federal courts. See Courts, §3.

Federal Hall. Name given to two buildings successively occupying the same site at Wall and Nassau streets in lower Manhattan. The first, constructed in 1699 as the second city hall of the colony of New York, was remodeled in 1788 by Pierre L'Enfant and was the site of George Washington's inauguration on 30 April 1789. The second, now known as Federal Hall National Memorial, was designed by Ithiel Town and Alexander Jackson Davis in 1834 and erected in 1842. It is best known for the monumental statue of Washington by John Quincy Adams Ward that stands before it (1883). The building is one of the finest examples in New York City of Greek Revival architecture. Broad steps lead from Wall Street to a portico of eight Doric columns 32 feet (10 meters) high, which support an architrave with 16 triglyphs crowned by a plain triangular pediment. The northern face of the building (on Pine Street) also has a portico. Inside is a light-filled rotunda; the walls of the building are 5 feet (1.5 meters) thick.

The building was used successively as the custom house for the Port of New York (1842–62), as a subtreasury after the Customs Service moved to larger quarters at 55 Wall Street, as a branch of the Federal Reserve Bank (1920–25), for various federal offices (1925–55), and as a museum of the National Park Service (from 1955).

Mollie Keller

Federalist. Series of 85 essays advocating ratification of the Constitution of the United States. Seventy-seven of the essays were published in the newspapers the *Independent Journal* and the *New York Packet* between October 1787 and August 1788; these and eight others were included in a book entitled *The Federalist* published in New York City in 1788 by J. and A. M'Lean. The essays were written by Alexander Hamilton (nos. 1, 6–9, 11–13, 15–17, 21–36, 59–61, and 65–85) and John Jay (nos. 2–5 and 64), both natives of New York City, and James Madison (nos. 10, 14, 18–20, 37–58, and 62–63), a Virginian then living in the city, and were all signed with the pseudonym "Publius." The authors addressed the essays to "the People and State of New York," whose support for the Constitution they considered indispensable to the success of the new federal union. The essays were widely read and discussed and have been reprinted many times. They are regarded not only as an important Federalist document but also as a great work of political philosophy.

Edward Millican, *One United People: The Federalist Papers and the National Idea* (Lexington: University Press of Kentucky, 1990)

Edward T. O'Donnell

Federal Hall, 2009

Federalist Party. Political party of the late eighteenth and early nineteenth centuries. Taking coherent shape between the ratification of the U.S. Constitution in 1788 and the presidential election of 1792, it sought to maintain close ties with Great Britain and was sympathetic to commercial and manufacturing interests. The party became powerful in New York City during the 1790s, owing to the prominence of its leaders, Alexander Hamilton and John Jay, and property restrictions on voting; it declined because of Thomas Jefferson's election in 1800, the souring of relations with Britain after 1805, the expansion of suffrage, and the arrogance and insensitivity of its leaders, who too often tried to command the deference rather than win the support of the city's voters. The party lost control of the Common Council when voting laws were made more liberal in 1804, but regained control briefly in 1806 and again in 1809 as the city suffered the effects of the Embargo Act of 1807, which was endorsed heavily by Jefferson. Bolstered by the unpopularity of the War of 1812, it retained the majority until 1815, except in 1813 when the council was evenly divided between Federalists and Republicans. The party nominated Rufus King of New York for vice president in 1808 and for president in 1816, and supported DeWitt Clinton in 1812. It eventually disintegrated nationwide and ceased to exist in the city by 1820.

Evan Cornog

Federal Reserve Bank of New York. One of 12 banks created by the Federal Reserve Act of December 1913. It opened for business in New York City on 16 November 1914 with a 20-year charter. Although the powers granted by the legislation were minimal by modern standards, the Federal Reserve System was designed to regulate the currency, control domestic credit, and prevent financial panics of the kind that had repeatedly afflicted the country. The potential dominance of New York in the system was offset by the other Federal Reserve banks, while the Federal Reserve Board, appointed by the president of the United States, was to countervail the influence of the commercial banks that owned the Federal Reserve banks. Nevertheless, the New York bank immediately became the most influential unit in the system; on its first day it accepted $99,611,670 in deposits from 479 commercial banks.

At the first board meeting of the New York Federal Reserve Bank, Benjamin Strong was elected its principal executive officer, or governor. A former president of Bankers Trust, Strong had assisted J. P. Morgan in containing the financial crisis of 1907 and had intimate knowledge of foreign money markets. His bank dominated Federal Reserve Board decisions and purchased government securities for the other 11 banks. In 1916 the New York bank began accepting the gold reserves of foreign nations, and it coordinated much of the financing of World War I. Afterward, Strong implemented the system's adoption of open market operations as a principal instrument of monetary policy; he developed successful stabilization policies and facilitated Great Britain's return to the gold standard. By 1927 the Federal Reserve Bank of New York was the world's preeminent central bank, and all its units were granted charters of indefinite duration.

The Federal Reserve Bank of New York operated at 62 Cedar Street until 1924, when its permanent headquarters at 33 Liberty Street were completed. Designed by Phillip Sawyer and occupying a full city block, the stone building was modeled after a Renaissance Florentine palace and reaches five stories below street level to the bedrock of Manhattan Island. Designated a city landmark in 1965, its vaults hold 25 to 30 percent of the world's monetary gold reserve. The bank's principal offices are still located in this building, but some of its staff and operations were relocated to a high rise on Maiden Lane in the late 1970s.

Strong died in October 1928 and his successor, George Harrison, had to confront the stock market crash of 1929 and deepening Depression. The New York bank was unable to implement effective countercyclical measures, and monetary policy shifted to Washington, D.C.; the Banking Act of 1935 created a new board of governors, with individual bank leaders designated as presidents. The Federal Reserve Bank of New York remains the largest and most active unit of the Federal Reserve System and is uniquely influential in the development and implementation of monetary policy. It occupies a permanent seat on the Federal Open Market Committee and executes committee policy by buying and selling government securities for all the Federal Reserve banks and by conducting operations in foreign currency markets. It also performs standard Reserve Bank functions by lending to depository institutions, supervising banks, collecting checks, managing payments systems, and serving as fiscal agent for the federal government. Since George Harrison, it has had a number of distinguished presidents, including Allan Sproul (1941–56), Alfred Hayes (1956–75), Paul Volcker (1975–79), E. Gerald Corrigan (1985–93), and William J. McDonough (1993–2003).

Federation of Jewish Philanthropies. An agency formed in 1917 by 54 Jewish charitable organizations to consolidate their fund raising. During its first campaign it collected $200,000 more than its individual member organizations had done in 1915. To avoid conflicts the agency excluded religious educational organizations; in 1942 it absorbed a parallel organization in Brooklyn. By the late 1960s funds raised for Jewish agencies in Queens, Nassau, Suffolk, and Westchester counties reached $22 million. In 1974 the federation combined its fund-raising activities with those of the United Jewish Appeal.

Jean Ulitz Mensch

Feehan, William M. (*b* Queens, 29 Sept 1929; *d* New York City, 11 Sept 2001). Firefighter. He grew up in Jackson Heights, Queens. After graduating from Saint John's University in 1952, he joined the army and served in the Korean War. He joined the Fire Department in 1959, starting as a probationary firefighter, and steadily rose in rank, becoming the first person in the history of the department to hold every rank. He was appointed deputy fire commissioner in 1992 and served briefly as acting fire commissioner in 1993. After 1993 Feehan retained his position as deputy fire commissioner until 11 September 2001 when he raced to the World Trade Center from Fire Department headquarters in Brooklyn Heights after the terrorist attacks. Along with his close friend, Chief of Department Peter J. Ganci, Feehan directed rescue operations until the collapse of the South Tower took his life.

Max Seppo

Feiffer, Jules (Ralph) (*b* Bronx, 26 Jan 1929). Cartoonist and writer. As a child in the Bronx during the Depression he was influenced by comics and radio programs; he soon imitated master cartoonists' work and at an early age produced his own comic books. From 1946 he worked as an assistant to the syndicated cartoonist Will Eisner, with whom he produced "The Spirit" from 1949 to 1952, a popular cartoon carried by the *New York Daily Compass,* the newspaper of the Progressive Party. Feiffer attended the Pratt Institute in Brooklyn from 1947 to 1951. He wrote the book *Munro* while serving in the army from 1951 to 1953, followed by *Passionella* and *Sick, Sick, Sick,* none of which he was able to publish. Seeking to arouse interest in these works, he offered his services gratis to the *Village Voice,* which published his weekly comic strip of social and political satire. This became nationally syndicated in 1959; *Sick, Sick, Sick* was published during the same year and *Passionella* in 1960, and *Munro* was eventually made into an animated film by Al Kouzel and Gene Deitch that won an Academy Award.

His play *Little Murders* had its premiere on Broadway in 1967 but closed after seven performances; it reopened in 1969 under the direction of Alan Arkin at the Circle in the Square and won an Obie Award and an Outer Circle Drama Critics award. In 1971 he adapted *Little Murders* for the screen and wrote the screenplay for *Carnal Knowledge* (directed by Mike Nichols). He next completed a dramatization of "Hold Me," a comic strip he had produced in 1962, for the American Place Theater in 1977 and the screenplay for Robert Altman's *Popeye* in 1980. In 1985 he won a Pulitzer Prize for editorial cartooning. Feiffer's many books include *The Great Comic Book Heroes* (1965, edited by E. L. Doctorow), the cartoon novel *Feiffer on Nixon: The Cartoon Presidency* (1974), *Tantrum* (1979), and *Ronald Reagan in Movie-America* (1988). In addition to politics he also bases his work on the struggles of individuals in modern urban society. He lives in Manhattan.

Grai St. Clair Rice

Feinberg Law. Statute passed by the New York state legislature in 1949, requiring the state Board of Regents to list organizations it found to be subversive and to disqualify from public school employment any member of a listed organization. A product of the Red Scare that dominated American political life after World War II, the law mandated strict enforcement of existing statutes that barred from employment any school employee who advocated the overthrow of the government by "force, violence or any unlawful means." A 1953 amendment extended the law to state universities; the same year, the Board of Regents listed the Communist parties of the United States and of New York State as subversive organizations. Three years later, the regents required employees to sign a "Feinberg Certificate" declaring that they were not Communist Party members, and that if they had ever been, they had communicated that fact to the president of the state university.

Two suits were brought in New York State courts challenging the law; among the plaintiffs were the New York City Teachers' Union, individual teachers, parent–teacher associations, taxpayers, and Communist Party leaders. Initially, both courts (one of them in Kings County) struck down the law as a violation of the rights to free speech and due process; but in 1952 the U.S. Supreme Court reversed those decisions and upheld the law. (New York City math teacher Irving Adler was the lead plaintiff.) It was another 15 years before the Supreme Court overruled the *Adler* case and invalidated the Feinberg Law in *Keyishian v. Board of Regents,* a suit brought by five teachers at the State University of New York at Buffalo. Recognizing that "our Nation is deeply committed to safeguarding academic freedom, which is of transcendent value to all of us and not merely to the teachers concerned," the Court said that the First Amendment "does not tolerate laws that cast a pall of orthodoxy over the classroom."

Adler v. Board of Education, 342 U.S. 485 (1952); *Keyishian v. Board of Regents,* 342 U.S. 485 (1967); *Lederman v. Board of Education,* 196 Misc. 873 (Supreme Court of New York, 1949)

Marjorie Heins

Feld Ballet. Ballet company. Formed in 1974 by Eliot Feld, it gave the premieres of his own ballets and performed others by George Balanchine, Bronislava Nijinska, and David Parsons. Efforts begun in 1982 with the Board of Original Ballets Foundation to raise funds for a permanent home led to the renovation of an old movie theater, renamed the Joyce Theater. The company made its European debut at the Festival International de Danse in Paris and was featured on the public television series *Dance in America.* The New Ballet School, opened by Feld in 1978, offered free training to talented students in the public schools. After expanding in the 1990s to include a full academic curriculum and partnership with the New York City Department of Education, the school changed its name to NYC Public School for Dance, but it is commonly known as Ballet Tech. As of 2010 the school was located at 890 Broadway and had enrolled 17,240 students throughout its history.

Peter Maguire

Feldman, Morton (*b* Brooklyn, 12 Jan 1926; *d* Buffalo, N.Y., 3 Sep 1987). Composer. He grew up in Brooklyn where he worked for his family's textile business and began playing music at age eight. He graduated from New York's High School for Music and Art. In 1950, while attending a concert by the New York Philharmonic, Feldman met John Cage, who influenced his musical style. Feldman was part of the New York School of composers, which included Cage, Earle Brown, David Tudor, and Christian Wolff. His music was experimental and minimalist, inspired by New York City's abstract expressionist painters including Jackson Pollock and Mark Rothko, for whom Feldman named his 1971 composition *Rothko Chapel.* At the age of 47, he ended his nine-to-five job in New York City's garment industry to accept a teaching position at the University of Buffalo. His other works include *String Quartet II* (1983), which was more than six hours long and did not receive a full performance until 1999 when it premiered, in full, at Cooper Union in Manhattan.

Max Seppo

Felt, James (*b* New York City, 29 June 1903; *d* New York City, 4 March 1971). Real estate developer and public official. He graduated from the Wharton School in 1924, worked in real estate for his father, Abraham Felt, and in 1932 established his own firm, which dealt primarily in building management, tenant relocations, and the assembly of land packages for large development projects. As the chairman of the New York City Planning Commission from 1 January 1956 to 22 December 1962, he devised a master plan for the rezoning of New York City and conducted a major urban renewal study that called for the rehabilitation of older buildings, despite strong opposition from Robert Moses. In 1961 he urged Mayor Robert F. Wagner (ii) to form the Mayor's Committee for the Preservation of Structures of Historic and Esthetic Importance, the predecessor to the Landmarks Preservation Commission. His projects as a developer included Stuyvesant Town and Peter Cooper Village.

Brooke J. Barr

feminism. New York City became a center of feminist activism after the Civil War. The women's club Sorosis was formed in 1868 by the writer Jane Cunningham Croly in response to the decision of the New York Press Club to bar women; it provided an intellectual and social forum for women and was one of the first organizations of its kind in the country. During the same year Elizabeth Cady Stanton and Susan B. Anthony organized the National Woman Suffrage Association, which held conventions during the 1870s that provided platforms for advocates of women's rights, including the radical orator Victoria Woodhull. During the Progressive era the number of women's associations in the city increased rapidly. Among those formed were the Consumer's League (1891), the National Consumer's League (1899), the New York Federation of Women's Clubs (1895), the New York Women's City Club (1915), and a branch of the Woman's Peace Party (1915). The New York Women's Trade Union League (1903) took part in the shirtwaist strike of 1909–10 and protested the Triangle Shirtwaist fire of 1911. Women established many of the 82 settlement houses open in the city in 1911, including the College Settlement (1889) and the Henry Street Settlement (1893), which was directed by Lillian Wald. The issue of woman suffrage led to the formation of several local societies: the Woman Suffrage Party, the Equality League of Self Supporting Women, the New York City Equal Suffrage League, the New York Collegiate Suffrage League, and the Progressive Union for Woman Suffrage, which organized the first suffrage parade in 1908. Heterodoxy, a feminist discussion group, was formed by 25 women in 1912. Margaret Sanger published the magazine *Woman Rebel* in 1914 and in 1916 opened the country's first birth

control clinic, in Brownsville in Brooklyn. The pacifist Crystal Eastman and the anarchist Emma Goldman were also prominent figures in the struggle for feminist goals in New York City.

During the 1920s such national organizations as the League of Women Voters (1920) and the National Federation of Business and Professional Women's Clubs (1919) opened branches in the city. In 1935 Mary McLeod Bethune organized the National Council of Negro Women at a Young Women's Christian Association in Harlem. Even as feminism declined nationally between the 1920s and the 1950s, the city remained a center for professional women in such fields as publishing, journalism, advertising, and retailing and attracted female college graduates seeking employment.

During the feminist revival of the 1960s the city became known as a stronghold for women's liberation. Such groups as New York Radical Women, New York Radical Feminists, and the Redstockings were formed late in the decade and grew rapidly. The news media covered feminist demonstrations, among them the invasion of McSorley's Old Ale House (which refused admission to women until 1970) and protests at the offices of national publications. Feuds within the local branch of the National Organization for Women (1966) also received widespread publicity. On 26 August 1970 thousands of women joined the Strike for Equality, a march to celebrate the 50th anniversary of woman suffrage. *Ms.* magazine was launched in the city in 1972. Local feminist leaders included Betty Friedan, president of the National Organization for Women from 1966 to 1970; Gloria Steinem, editor of *Ms.;* and the writers Kate Millett, Robin Morgan, and Susan Brownmiller. In the 1980s and 1990s, feminists in the city supported reproductive rights and economic equality, and strove to end sexual harassment and violence against women. These campaigns continued into the twenty-first century. Local colleges and universities, which founded women's studies programs and research centers, endorsed feminist goals. Among educational resources available since the 1970s are the Tamiment Library at New York University, whose collections include the archives of the New York chapter of NOW; the Feminist Press at the City University of New York, which publishes books by and about women; and Barnard College's annual conference on "The Scholar and the Feminist."

fencing. The distinction of New York City as the unrivaled center for the sport of fencing in the United States dates back to 1754, when a Dutchman named John Rievers opened a physical-education school that offered fencing lessons in lower Manhattan, near the corner of Stone and Whitehall streets. Fencing first began to emerge as a popular sport in the United States in the late 1840s, inspired by the *Turnvereine,* the German gymnastic societies, which had integrated fencing into their exercise regimens. The city's first fencing club, or *salle,* opened in 1874 at Broadway and West 43rd Street; its enterprising owners, a French fencing master named Regis Senac and his son Louis, soon emerged as U.S. fencing's earliest advocates. Their illustrated handbook *The Art of Fencing* was a best seller across the country. The Senacs owed much of their commercial success to the celebrity quotient of some of their clients, who included members of such prominent New York City families as the Vanderbilts, the Astors, and the Pierpont Morgans. By the turn of the twentieth century as many as 75 fencing establishments had sprung up around the city. The New York Athletic Club (NYAC), founded in 1868 on Central Park South, hired the elder Senac as its first fencing instructor. The NYAC's biggest local rival, the Fencers Club, founded in Manhattan in 1883, set out to become a mecca for top-ranked fencers and coaches; now situated on West 29th Street, it remains the best known of the country's oldest continuously operating salles. Fencing's rising popularity was demonstrated in 1893 when a crowd of more than 20,000 filled Madison Square Garden to watch an international meet featuring saber fencers on horseback.

The sport's long-standing racial and gender barriers were slow to fall, with traditionalists arguing that some fencing events were "unladylike." Virtually all of the city's high-level fencing facilities were accessible only to well-to-do white men, including officers of U.S. fencing's first governing body, the Amateur Fencers League of America (AFLA). The AFLA was established in New York City in 1891 by a group of New York fencers who had broken away from the Amateur Athletic Union in a dispute over rules for the national championships. A year later the first AFLA-sponsored national championship was held in Manhattan. (The AFLA continued to oversee the sport until 1981, when it was reorganized, relocated, and renamed the United States Fencing Association.) Although most of the yearly international fencing tournaments were held in Europe, New York City was the established venue for one of the most prestigious, the Martini and Rossi Challenge (later called the Wilkinson Sword Challenge). College-level fencing in the United States came under one roof in 1898, when a group of former Columbia University fencers founded the Intercollegiate Fencing Association. Women got a national fencing championship of their own with the creation in 1929 of the National Intercollegiate Women's Fencing Association (NIWFA), which oversees the oldest collegiate championships for women in any sport. One of its cofounders, New York University fencer Julia Jones (later Jones Pugliese), was the first NIWFA foil champion. In 1956 she became the first American woman to coach a collegiate fencing team, leading New York University and later Hunter College (where she spent 36 years) to a record number of AFLA and NIWFA championships. A lifelong New Yorker, she also had the distinction, at the 1970 World University Games, of being the first woman to coach a U.S. team at an international competition.

The popularity of fencing in twentieth-century New York City was greatly influenced by two events. One was the city's decision, at the height of the Depression, to offer fencing lessons in the public schools, thereby making public schools a de facto farm system that supplied talented young fencers to collegiate fencing powerhouses like Columbia University, New York University, City College, and St. Johns University. (It is widely believed that the decades-long dominance of New York collegiate fencing was never the same after fencing was dropped from the public school curriculum in the 1970s.) The second factor was immigration, which brought successive waves of European fencing masters to the United States. They arrived with new fencing techniques and strenuous conditioning programs that helped American fencers win international competitions. Some of the most notable immigrants included the Italian champion Aldo Nadi, who taught in New York City from 1935 to 1943; Michel Alaux, who was awarded the title Maître d'Armes by the New York Fencers Club in 1956 and was its head fencing master until 1974; Csaba Elthes, who moved to New York City from Hungary soon after the 1956 uprising there; and Giorgio Santelli, an Italian-born Olympic saber fencer (and Nadi's former Olympic teammate). Santelli's father, who had coached the Hungarian Olympic team, turned down an offer to become the chief fencing coach at the NYAC—and sent his son in his place. Santelli's subsequent accomplishments as coach for the Fencers Club, New York University, Columbia University, and five U.S. Olympic teams helped cement the reputation of his fencing school, Salle Santelli, as the country's leading producer of championship fencers. The school was near the Avenue of the Americas in Greenwich Village and also housed George Santelli Inc., the largest U.S. supplier of fencing equipment. It is estimated that by the time of his death in 1985, Santelli had taught 8000 people how to fence.

The AFLA's all-white membership was finally broken, briefly, in the 1930s by Violet Barker, a young African American woman

who had begun taking fencing lessons at the Harlem Young Men's Christian Association. Barker had won a non-AFLA women's foil tournament, and her prize included complimentary membership in the AFLA. A short time later, however, at her first official AFLA competition, she was turned away by the organizers, who told her that blacks were not welcome. When she showed them her membership card and protested that she was in fact an AFLA member, one of the league officials told her "not anymore," and tore up her card. Barker never fenced again. In the early 1960s Uriah Jones moved to New York City from Connecticut looking for more advanced fencing instruction but had difficulty finding a fencing academy that would teach a black man. Santelli took him in as a student, however, and in 1968 Jones became the first African American to compete as a member of a U.S. Olympic fencing team and in 1971 to win an AFLA national fencing championship. Peter Westbrook of New York University, a protégé of Csaba Elthes who won a bronze medal at the 1984 Olympics, likened Jones's entry into fencing to that of Jackie Robinson's into baseball. Westbrook, a six-time Olympian, founded the Peter Westbrook Foundation in 1991 in New York City, which promotes fencing and academic success among inner-city youth. Before Westbrook, the best Olympic finish for an American fencer had come at the Rome Games in 1960 when Albert Axelrod, a Fencers Club member who had learned to fence at Stuyvesant High School in Manhattan, won the bronze medal in foil.

In 1988 the United States Fencing Association sanctioned the first national championship event in women's saber, a triumph for leading proponents of the event such as Salle Santelli's Denise O'Connor, a two-time Olympic foil fencer who later coached the women's team at Brooklyn College, and Ruby V. Watson, an African American fencer from Brooklyn who was nationally ranked in saber, foil, and épée. New York City is still the prime destination for world-class fencers and fencing masters from abroad; New Yorkers typically represent 50 to 60 percent of every U.S. Olympics fencing team. The city's reputation as the capital of American fencing seems likely to endure.

Aldo Nadi, *The Living Sword: A Fencer's Autobiography* (Sunrise, Fla.: Laureate Press, 1995); Richard Cohen, *By the Sword: A History of Gladiators, Musketeers, Samurai, Swashbucklers and Olympic Champions* (New York: Modern Library, 2002)

David Pitt

Ferber, Edna (*b* Kalamazoo, Mich., 15 Aug 1885; *d* New York City, 7 April 1968). Novelist and playwright. She achieved early success with her short stories about a traveling saleswoman who sold petticoats in the Midwest, and she also worked as a reporter. On the advice of her publisher she moved in 1912 to Manhattan. With George V. Hobart she adapted her stories for the stage; their dramatization *Our Mrs. McChesney* opened on Broadway in 1915 and ran for 151 performances. She became an occasional member of the Algonquin Round Table and an increasingly prolific writer. She received the Pulitzer Prize for her novel *So Big* (1924). Her novel *Show Boat* (1926) was the basis for the musical of the same name by Jerome Kern. Ferber's sentimental realism, strong female characters, and wit are most effective in the plays she wrote with George S. Kaufman, especially those, like *Dinner at Eight* (1932) and *Stage Door* (1936), that satirize metropolitan life. She wrote two memoirs, including *A Peculiar Treasure* (1939). She lived in the 1920s at 50 Central Park West, in the early 1930s at the Hotel Lombardy (111 East 56th Street), from 1934–38 at 791 Park Avenue, and from about 1950 to the end of her life at 730 Park Avenue.

Brenda Wineapple

Fermi, Enrico (*b* Rome, 29 Sept 1901; *d* Chicago, 28 Nov 1954). Physicist. In 1933 he formulated a theory of beta decay based on the neutrino. After winning the Nobel Prize for physics in 1938 he moved to New York City and joined the physics department at Columbia University, where he worked with H. L. Anderson on nuclear fission. He remained at Columbia until 1945. Fermi was an important figure in the Manhattan Project, which developed the atomic bomb.

James E. Mooney

Ferraro, Geraldine A(nne) (*b* Newburgh, N.Y., 26 Aug 1935). Politician. She became a teacher and lawyer (1961–74) and then Queens County assistant district attorney (1974–78) and representative of New York's ninth congressional district (1979–85). She ran unsuccessfully for vice president in 1984 (with Walter Mondale as the Democratic presidential candidate), the first woman nominated by a major political party to that office, and also for the Democratic nomination for U.S. senator from New York in 1992 and 1998. President Bill Clinton appointed her to the U.S. delegation of the U.N. Commission on Human Rights (1993–96). She wrote *Ferraro: My Story* (1985), *Changing History: Women, Power, and Politics* (1998), and *Framing a Life: A Family Memoir* (1998). Her papers are at Marymount Manhattan College.

ferries. Because it is built largely on islands, New York City depended on ferries before it had bridges and tunnels. American Indians had been crossing local waterways with rafts and canoes for centuries when European settlers first made organized crossings of the East River in 1642. In 1661 the Netherlands Council granted a ferry charter to William Jansen for a route from Manhattan to Communipaw (now in Jersey City), New Jersey. Charters for other routes soon followed.

Early vessels were scows propelled by oars and sails, until small sloops and a distinctive sailing vessel called a periauger became dominant during the eighteenth century. The first steam ferry, the *Juliana,* began service in 1811 from Hoboken to Vesey Street under the direction of Colonel John Stevens. In the following year Robert Fulton and Robert R. Livingston established another service across the Hudson River, between Cortlandt Street and Powles Hook, with the *Jersey* and the *York*. Routes from Manhattan to Brooklyn across the East River were inaugurated successively by Fulton and William Cutting (from Beekman's Slip, 1814), by the South Ferry (from Whitehall Street to Atlantic Street, 1836), and by the Hamilton Ferry (from the Battery to Hamilton Avenue, 1846). By 1854 the Union Ferry Company had consolidated a dozen competing lines and was making 1250 crossings a day at a standard fare of two cents. Williamsburgh, for example, was served by six steam ferries leaving Peck Slip every 10 minutes during the working day and Grand Street every five minutes. By 1860 the various East River ferries were carrying almost 33 million passengers a year (about 100,000 each working day), and by 1870 about 50 million a year. Indeed, the folk wisdom of the time held that when there was fog in the harbor, half the business population of New York City would be late for work.

The early boats were catamarans with center paddle wheels. They were double-ended to obviate turning at terminals and to accommodate horse-drawn vehicles as well as passengers on foot. Later single hulls and side paddle wheels became the normal arrangement until the introduction in 1899 of the double-ender the *Bergen,* which by 1920 became the standard. Eventually, diesel power replaced steam on all local routes.

During the nineteenth century ferry services came largely under the control of railroad companies: ferries from Staten Island to Perth Amboy, New Jersey, and Whitehall Street were run by the Baltimore and Ohio; from Communipaw to Liberty Street and West 23rd Street by the Jersey Central; from Powles Hook to Cortlandt, Desbrosses, and West 23rd streets by the Pennsylvania Railroad; from Pavonia, New Jersey, to Chambers and West 23rd streets by the Erie Railroad; from Hoboken to Barclay, Christopher, and West 23rd streets by the Lackawanna Railroad; from Weehawken to Cortlandt and West 42nd streets by the West Shore–New York Central Railroad; and from Edgewater,

New Jersey, to West 125th Street and from Staten Island to Elizabeth, New Jersey, and Bayonne, New Jersey, by the Public Service Railways. Many smaller routes were also served. Other routes were served by independent operators and by government agencies: on the East River by the Williamsburg Ferry and the Brooklyn Union Ferry, across the Narrows and the Hudson River by the Electric Ferry Company, across the Kill van Kull and the Arthur Kill by Sunrise Ferries, to Staten Island and various harbor islands by the City of New York, and to Ellis Island and Governors Island by the federal government.

The opening in 1883 of the Brooklyn Bridge dealt a severe blow to the commuter ferry in New York City. Manhattan was soon connected with the Bronx, Queens, and Brooklyn by bridges and tunnels that were accessible in all weather and carried many more vehicles than ferries could. By 1925 all commercial ferry lines across the East River had stopped operating. Among the ferries made obsolete by new bridges were one from College Point in Queens to Clason Point in the Bronx (by the Bronx–Whitestone Bridge, 1939) and another from St. George, Staten Island, to the foot of 69th Street in Bay Ridge, Brooklyn (by the Verrazano–Narrows Bridge, 1964). Ferry lines connecting Manhattan to New Jersey proved more durable: the longest-lived, run by the Lackawanna Railroad, lasted until 1967. Some lines survived: the Staten Island Ferry; a ferry between City Island and Hart Island run by the city; and a ferry between South Ferry in Manhattan and Governors Island run by the U.S. Coast Guard for service members and their families.

Periodic attempts to revive private commuter ferry service began in the early 1980s, in part because of increasing traffic congestion and environmental concerns. Among the routes that were introduced were ones from Weehawken to Pier 78 (on West 38th Street), from Hoboken (operating out of the old Lackawanna Railroad slip) to the Battery Park City Terminal at the World Financial Center, from La Guardia Airfield to Pier 11 on the East River at the foot of Wall Street, and from Roger Avenue in Jamaica Bay at Inwood, Queens, to Pier 11 (served by a modified hovercraft capable of running at 40 knots). Most of the new routes were popular with commuters, and during several severe storms during 1992–93 only ferries remained in service when tunnels were flooded.

The role of ferries grew exponentially after the terrorist attacks of 11 September 2001. They were used to move thousands of people out of downtown Manhattan, and when businesses reopened, for several years they replaced the Port Authority Trans-Hudson Corporation (PATH) commuter trains to and from New Jersey. In 2002 New York Water Taxi began service in an iconic, 74-passenger, yellow vessel connecting Fulton Ferry Landing in Brooklyn, Pier 11, the Battery, Chelsea Piers, and West 42nd Street in Manhattan. In 2007 five private companies ran ferries between points in Manhattan and landings in Brooklyn, Queens, New Jersey, Yonkers, and Haverstraw, New York.

Arthur G. Adams

Ferriss, Hugh (*b* St. Louis, 12 July 1889; *d* New York City, 29 Jan 1962). Architectural illustrator. After attending Washington University he moved to New York City in 1912 and worked in the office of Cass Gilbert. From 1915 he worked as a freelance artist, preparing illustrations for newspapers and magazines and perspective renderings for architects. Inspired by his interest in the city and his belief in the inspirational power of images, he made futuristic drawings of an ideal skyscraper city that were the basis of several exhibitions in the 1920s and were later published in the book *The Metropolis of Tomorrow* (1929). Ferriss was an officer to several professional organizations and a consultant on the design teams of the World's Fair of 1939–40 and the United Nations headquarters. He is best known for romantic charcoal drawings of the city's skyscrapers. In 1953 he published *Power in Buildings,* which contained drawings of major works of American engineering and architecture since 1929. His rooftop studio at Park Avenue and 40th Street was an aerie from which he drew inspiration.

Carol Willis

Ferry Point Park. Public park in the Bronx, near the entrance to the Bronx–Whitestone Bridge. In 1668 the land was recorded as the property of Micah Spicer, and it was farmed during the next two centuries. A ferry terminal stood on the site in the nineteenth century. The land was purchased around 1850 by the shipping magnate Augustus diZerega and the tobacco manufacturer Jacob Lorillard, who in turn sold it to the Catholic House of the Good Shepherd in 1916. In 1937 the site was converted into a park and given its current name. In 1998 the city granted Ferry Point Partners the rights to build a golf course designed by Jack Nicklaus on the site. The project fell through around 2001, leaving tons of landfill but no golf course. As of 2010 a new project was under way to turn unused land into a community area with sports fields as well as a waterfront promenade featuring a beach and picnic areas.

festivals. See Fairs and festivals.

Fiduciary Trust Company International. Money management firm formed in 1931 by two lawyers from New York City, Grenville Clark and Elihu Root. In reaction against the excesses of banking during the 1920s, the two resolved that their firm would neither make commercial loans nor underwrite any securities. They also aimed to advertise as little as possible, a policy that the firm has maintained. Fiduciary Trust invests globally. In the early twenty-first century it had more than $10 billion under management for more than 1600 individuals and families and more than 200 corporations.

Chad Ludington

Field, Cyrus W(est) (*b* Stockbridge, Mass., 30 Nov 1819; *d* New York City, 11 July 1892). Industrialist. He made his fortune in the paper business and with a group of wealthy associates formed the New York, Newfoundland and London Telegraph Company to undertake the laying of the first telegraph cable between the United States and Great Britain; he formed a similar company in 1854 in London. The initial line was completed in 1858 and worked for only three weeks. He pursued the project until a permanent cable was laid in 1866 from Ireland to Newfoundland (extended by land lines to New York City). Between 1877 and 1879 he built the elevated railway system on Third Avenue. Field lived in a mansion on the northeast corner of Lexington Avenue and 21st Street in Gramercy Park.

Paul Israel

Field, David Dudley (*b* Haddam, Conn., 13 Feb 1805; *d* New York City, 13 April 1894). Lawyer. A prominent and controversial member of the city's Bar Association for 60 years, he was best known for his efforts to codify the law: he drafted a code of civil procedure that was adopted by New York State in 1848. He also represented Jay Gould and Jim Fisk in their efforts to save the Erie Railroad from takeover attempts by Cornelius Vanderbilt and August Belmont (1868–69) and defended William M. "Boss" Tweed in civil and criminal trials (1873–78). Field's draft of a penal code for New York State was enacted after many alterations in 1881.

James D. Folts

Fields, C(lara) Virginia (*b* Birmingham, Ala., 6 Aug 1945). Civil rights activist, politician, and educator. A social worker and strong advocate for education and civil rights who marched with Dr. Martin Luther King, Jr., she served as a district leader and chair of Manhattan Community District 10. She became the first African American woman from Manhattan elected to the City Council. Fields was Manhattan borough president from 1998 to 2005.

Celedonia Jones

Fieldston. A privately owned neighborhood in the northwestern Bronx, bounded to the north by 250th Street, to the east by Manhattan College, to the south by Manhattan College Parkway, and to the west by the Henry Hudson Parkway. The land was once an estate of 250 acres (100 hectares) purchased in 1829 by Major Joseph Delafield, who named it after his family seat in England. At the beginning of the twentieth century the Delafield family developed it for housing. Lots were laid out along the contours of the rugged terrain rather than according to the grid adopted in other parts of the city. The name Delafield Woods was used for a while during the first quarter of the twentieth century; game was abundant and deer were seen until 1908. After the Interborough Rapid Transit subway along Broadway was extended to 242nd Street, the first house was completed in 1911. During the 1920s houses in the Tudor style were built, many designed by Dwight J. Baum, a local resident. Manhattan College, run by the Christian Brothers, moved to the area from Harlem after a land purchase in 1922. Mayor Fiorello H. La Guardia lived in the neighborhood during his later years. Several private schools also established themselves in the area, including the Fieldston School, Horace Mann Preparatory School, and the Riverdale Country Day School. Fieldston's residents pay a fee for services offered by the city in areas such as sewers and additional services such as snow and leaf removal. Known for its trees, large houses, and rural ambience, Fieldston was one of the wealthiest neighborhoods in the city in the early twenty-first century.

Gary D. Hermalyn

Fierstein, Harvey (Forbes) (*b* Brooklyn, 6 June 1954). Playwright and actor. The son of a handkerchief manufacturer, he grew up in Brooklyn and attended high school and studied art in Manhattan. He performed in cabarets on the Lower East Side, often as a female impersonator, and was well known for his portrayal of Ethel Merman. At age 22 he wrote an autobiographical one-act play that was produced off Broadway; he played the leading role of Arnold Beckoff. This play and two others completed in 1981 became *Torch Song Trilogy,* which ran on Broadway for three years and in 1983 won Tony Awards for best actor and best play. His musical *La Cage aux Folles* (1983), which he wrote while riding the subway to work, also won a Tony Award. In the early twenty-first century Fierstein undertook a number of film and television projects. In 2008 Fierstein was nominated for the Drama Desk Award for Outstanding Book of a Musical for *A Catered Affair.*

Janet Frankston

Fifteenth Street Meeting House. Quaker house of worship on 15 Rutherford Place and

Fieldston, 246th Street and Delafield Road, 1992

East 15th Street. It was founded in 1885 by the Hicksites, a branch of the Religious Society of Friends (Quakers). In the early twenty-first century the meeting house ran traditional Quaker worship sessions, a homeless shelter, and an art program.

Max Seppo

Fifth Avenue. Manhattan's showcase avenue, it is synonymous with upscale retailing, expensive residences, and important religious and secular institutions. Stretching for 6.75 miles (10.9 kilometers) between Washington Square and 142nd Street, Fifth Avenue divides cross streets between east and west. New York University anchors the south end; the Flatiron Building and Madison Square at 23rd Street announce the avenue's entrance to midtown. Between 34th and 59th streets venerable retail stores (such as Lord and Taylor [1826], Saks Fifth Avenue [1924], Tiffany's [1837], and Bergdorf Goodman [1901]) share the avenue with the Empire State Building, the New York Public Library, St. Patrick's Cathedral, Rockefeller Center, and St. Thomas Church. Former Fifth Avenue stores now out of business include B. Altman, Franklin Simon, Arnold Constable, Best, and Bonwit Teller. Between 59th and 110th streets along Central Park was, a century ago, the domain of luxurious mansions and town houses; in 2009 exclusive apartments shared Fifth Avenue with the Hotel Pierre, Temple Emanuel-El, the Church of Heavenly Rest, Mount Sinai Hospital, and a multitude of museums—the Frick Collection; Metropolitan Museum of Art; Solomon R. Guggenheim Museum; Cooper–Hewitt, National Design Museum; Jewish Museum; Museum of the City of New York; and El Museo del Barrio. North of 110th Street, Fifth Avenue remains residential in the twenty-first century, with hilly Marcus Garvey Park interrupting it between 120th and 124th streets.

Andrew Sparberg

Fifth Avenue Coach Lines. Firm of bus operators. Formed in 1885, it ran horse-drawn buses on Fifth Avenue between Washington Square and 89th Street. In 1905 it began the first successful motorbus operation in the United States, retiring all its horse-drawn buses in 1908. The firm demonstrated that single- and double-decker buses could be durable, urban mass transit vehicles. As New York City grew during 1900–30, bus routes were extended northward to Harlem and Washington Heights along Riverside Drive, upper Seventh Avenue, St. Nicholas Avenue, and Broadway and eastward over the Queensboro Bridge to Jackson Heights. After forming the New York City Omnibus Corporation as a subsidiary in 1926, the firm purchased New York Railways, the dominant streetcar operator in Manhattan, and converted the streetcars to buses between February 1935 and August 1936. Double-decker bus service ceased in 1953. The firm acquired the Surface Transportation Corporation in 1956, assuming its five bus routes in Manhattan and its entire system in the Bronx. In 1962 Fifth Avenue was purchased by a group of investors led by Harry Weinberg, whose efforts to discharge some unionized employees to reduce costs promptly caused a strike on 1 March. As a result of the strike the city acquired the firm's buses and garages by legal condemnation on 22 March, and the routes were taken over by the Manhattan and Bronx Surface Transit Operating Authority, itself part of the New York City Transit Authority.

Andrew Sparberg

Fifth Avenue Hotel. Hotel on Fifth Avenue between 23rd and 24th streets (opposite Madison Square), built by the developer Amos Eno from 1856 to 1858. Initially far from the hotel district, it was known as Eno's folly but soon became popular for its luxuriousness. It occupied a six-story building with a colonnade at the entrance and had fireplaces in every bedroom, private bathrooms, and elegant public rooms; it was also the first hotel in the city with elevators, which were steam-operated and known as the "vertical railroad." The hotel, at the time the largest in the world, could accommodate 800 guests, and a staff of 400 provided some of the best service in the city. Within a few years most of the city's grand hotels moved into the surrounding blocks. The hotel was the headquarters of the state Republican Party and contained an office of the Republican boss Thomas C. Platt, an architect of consolidation; a corridor off the lobby where he met petitioners seeking favors became known as the amen corner. By the turn of the century fashionable neighborhoods moved north, and in 1908 the Fifth Avenue Hotel was closed and demolished. It is commemorated by a plaque on its former site.

Fifth Avenue, 2009

Fifth Avenue Presbyterian Church. Church at Fifth Avenue and 55th Street, formed in 1875 by a congregation organized in 1808 on Cedar Street. Its first minister, John Brodhead Romeyn (1808–25), a moderator of the Presbyterian General Assembly, gave the church its reputation as the "cathedral church of Presbyterianism." Later ministers at the church included John Hall (1867–96), John Sutherland Bonnell (1935–62), and Bryant Kirkland (1962–87). Among the institutions formed under their leadership were the Duane Street Mission (1836–1913); the Romeyn Chapel on East 14th Street (1858–1904), which enrolled more than 800 children in its Sunday school; and a Chinese Sunday school (to 1909).

A Noble Landmark of New York: The Fifth Avenue Presbyterian Church, 1808–1958 (New York: Fifth Avenue Presbyterian Church, 1960)

David Meerse

Fifth Avenue Vietnam Peace Parade Committee. Committee that organized marches in New York City nearly every spring and autumn between 1965 and 1973 to protest the Vietnam War. Its headquarters were at 5 Beekman Street and later at 17 East 17th Street and 156 Fifth Avenue. Several marches drew hundreds of thousands of participants,

including one on 15 April 1967 at which Martin Luther King, Jr., spoke. In 1967 the committee gathered 70,000 signatures to force a referendum on ending the war immediately and shifting funds from the military to schools, hospitals, and programs for the poor. It also organized "Stop the draft week," a series of protests at the Whitehall Street Induction Center on 4–8 December 1967.

Jonathan D. Bloom

52nd Street. A street between Fifth and Sixth avenues known for its jazz clubs during the 1930s and 1940s. Also called Swing Street, it was lined with Victorian brownstones that were used as speakeasies during Prohibition and converted to restaurants and nightclubs after its repeal in 1933. Clubs such as the Onyx, the Famous Door, Jimmy Ryan's, the Three Deuces, the Downbeat, Hickory House, and Kelly's Stable featured the big bands of Count Basie and Woody Herman and such soloists as the pianists Art Tatum and Fats Waller, the singer Billie Holiday, the trumpeter Roy Eldridge, and the violinist Stuff Smith. The clubs attracted racially mixed audiences and provided a fertile environment for improvisation. By 1943 such innovative bebop musicians as Charlie Parker, Miles Davis, Bud Powell, and Dizzy Gillespie had shifted their attention from Harlem to 52nd Street because of its greater opportunities for money and exposure; after riots erupted in Harlem that same year white customers increasingly favored clubs in midtown. The clubs of 52nd Street eventually lost popularity because of the unscrupulous practices of some owners, the association of jazz with drugs, harassment by the police, and an increase in real estate values as skyscrapers began to crowd midtown Manhattan. Jazz districts took shape around Times Square in the late 1940s and later in Greenwich Village. Several clubs opened on Broadway, among them the Royal Roost (1674 Broadway, 1946), Bop City (1619 Broadway at 49th Street, 1948), and Birdland (on Broadway just north of 52nd Street, 1949). By January 1950 Jimmy Ryan's was the only club still offering live music on 52nd Street. During the following years the street was dominated by striptease houses, and in the 1960s large office buildings replaced the brownstones.

Filipinos. Most people from the Philippines who settled in New York City after the 1920s were either soldiers assigned to local military installations such as Governors Island or farmworkers who moved from the western United States to seek employment. The Filipino Social Club of Brooklyn was formed in 1928. More Filipinos moved to the city after World War II, but their numbers remained small; this group included the children of earlier immigrants and students. The third and largest phase of Filipino immigration to the city began in the 1960s, as local hospitals actively recruited Filipino doctors and nurses; Filipino accountants, engineers, and teachers were also in demand. Others fled the Philippines as political refugees during the dictatorship of Ferdinand Marcos (1971–81). Filipinos during these years assimilated into the American mainstream and were not as visible as other immigrant groups. Most were familiar with American culture because of the former status of the Philippines as an American colony (1898–1946) and spoke English in addition to their native language (Tagalog). There were 43,229 people of Filipino ancestry in the 1990 census, and almost 50,000 in 2000. The most common occupation among Filipinos in the city was nursing, and in many local hospitals Filipino nurses came to constitute the majority of the nursing staff.

The largest concentration of Filipinos in New York City is in Queens, especially Woodside, Jackson Heights, and Elmhurst. More than 90 percent of the Filipinos are Roman Catholic, and they practice religious rituals such as the Flores de Mayo (also called the Santa Cruzan) and the block rosary (or Santo Niño). Other Catholic churches that offer services for Filipinos include St. Francis de Sales Church, Holy Innocents Roman Catholic Church, the Church of St. Agnes, and the Church of the Blessed Sacrament in Manhattan; and St. Sebastian's Roman Catholic Church, St. Michael's Church, and Immaculate Conception Church in Queens. There are several Filipino newspapers in the city, and television stations include GMA Pinoy TV, GMA Life, the Filipino Channel, Filipino on Demand, and MYX. The annual Philippine Independence Day Parade usually takes place the first Sunday of June.

Chibu Lagman, Noël Shaw

Fillmore East. Theater on Second Avenue between Sixth and Seventh streets, converted in 1968 into a venue for rock concerts. Bill Graham, a rock impresario who had also opened the Fillmore West in San Francisco, operated it. The club, known as "the church of rock and roll," featured up-and-coming artists, including Joe Cocker, Jimi Hendrix, Janis Joplin, and Neil Young as well as the members of the Grateful Dead, the Incredible String Band, the Jefferson Airplane, Pink Floyd, Country Joe and the Fish, and Procol Harum. An in-house production company called the Joshua Light Show mounted elaborate light shows during the performances. The audiences at the Fillmore East were known for rowdiness. Famous live performances were recorded there, including the Allman Brothers' classic *At Fillmore East*. The theater closed in 1971 because of Graham's discontent with the commercialization of the music scene.

Nicholas Kelly

filmmaking. Filmmaking had its origins just outside New York City, when Thomas Edison worked in suburban Orange, New Jersey, from 1888 to 1893 with his staff of experimenters, notably William Kennedy Laurie Dickson. In early 1894 Dickson and the cameraman William Heise initiated regular commercial production at the Black Maria studio next to Edison's laboratory. They made 35-millimeter films, ranging in length from 50 to 150 feet (15 to 45 meters), that were meant for exhibition in the peephole kinetoscope. Charles E. Chinnock, a former employee of Edison, probably made the first motion picture film in what became New York City itself, in November 1894; he built a camera and made films for exhibition in his own, somewhat larger version of the kinetoscope. His first film, shot on the rooftop of 1729 St. Marks Avenue in Brooklyn, was of a boxing match between Robert T. Moore and James W. Lahey. Short films of dancing girls, a cockfight, and other subjects followed, all made in imitation of Edison's work. Early filmmaking in New York City was also pursued by other former associates of Edison: from May 1895 Woodville Latham and his sons Otway and Gray produced pictures for their eidoloscope projector at 35 Frankfort Street in Manhattan; Dickson by the spring of 1896 had become a part owner and the chief cameraman for the American Mutoscope Company; and Charles Webster and Edmund Kuhn formed the International Film Company and were in production by October 1896. After the Edison company completed the construction of a portable camera in May 1896, its staff members shot scenes of everyday life (*Central Park, Elevated Railway Station, 23rd Street,* and *Shooting the Chutes*). Within a short time they were using a makeshift studio on the rooftop of 43 West 28th Street.

New York City quickly became the center of the American film industry, a position it retained until World War I. Many early film companies were short-lived; the three principal producers before 1906 were the Edison Manufacturing Company, the American Mutoscope Company (later renamed the American Mutoscope and Biograph Company), and the American Vitagraph Company (its production entity was known from 1905 as the Vitagraph Company of America). After a proliferation of storefront theaters from late 1905 through 1906, film production expanded

rapidly. The Kalem Company was formed in early 1907 with offices at 31 West 24th Street. Kalem along with Edison, Biograph, Vitagraph, two European producers with offices in New York City (Pathé and Méliès), and three producers from Chicago and Philadelphia formed the Motion Picture Patents Company in New York City in late 1908. The company intended to control all film production in the United States, but these plans failed. Carl Laemmle's Independent Moving Picture Company and the New York Motion Picture Company were making films in the city and area by 1909. They were followed in 1910–11 by the Yankee Film Company, the Champion Film Company, Reliance, Solax, Rex, Atlas, Thanhouser, Powers, and Nestor. All had offices in New York City, though many had studios in the outer boroughs, in Yonkers and New Rochelle in Westchester, and in Coytesville, Jersey City, and Fort Lee in New Jersey. Several united to form the Universal Film Manufacturing Company in 1912.

In the same year Adolph Zukor, Edwin S. Porter, and Daniel Frohman formed the Famous Players Film Company, with offices on West 26th Street, to make feature films of three or more reels (one hour or more in length). These initially featured well-known theatrical stars in filmed adaptations of their stage hits: James O'Neill in *The Count of Monte Cristo* (1912), James Hackett in *The Prisoner of Zenda* (1913), and Minnie Maddern Fiske in *Tess of the D'Urbervilles* (1913). William Fox expanded into filmmaking in 1914, producing *A Fool There Was* (1914) with Theda Bara and *Regeneration* (1915), directed by Raoul Walsh: both offered exterior scenes shot in New York City. In 1913 the vaudeville impresario Jesse Lasky, Samuel Goldfish (later known as Samuel Goldwyn), and Cecil B. DeMille formed the Jesse L. Lasky Feature Play Company. All New Yorkers, the three followed a growing trend by establishing production studios in California. They acquired some of David Belasco's employees (notably the lighting designer Wilfred Buckland) and film rights to his plays, which resulted in such productions as *The Girl of the Golden West* (1914) and *The Warrens of Virginia* (1915).

Film producers in New York City seeking better weather and new locales began sending small companies of actors and staff to California, Florida, and Cuba for winter shooting. Biograph, for example, sent a company to Los Angeles in January 1910. By 1912 Bison and Keystone (both owned by the New York Motion Picture Company), Nestor, Selig, Kalem, and Pathé had permanent production units based in Los Angeles, and Hollywood was the dominant production center by 1915, though executive offices remained in New York City. Production in the city continued, but a coal shortage in the winter of 1918–19 forced most remaining production units to move to the West Coast and encouraged the further consolidation of operations.

Some production then returned to New York City, where creative personnel sometimes felt more at home. Norma Talmadge returned from the West Coast in 1917 and with her husband and producer, Joseph Schenck, opened a studio at 320 East 48th Street where *The Song of Love* was filmed in 1924. By 1920 William Randolph Hearst had converted Sulzer's Harlem River Park and Casino at 127th Street and Second Avenue into the Cosmopolitan studio, which turned out pictures featuring his mistress, the comedian Marion Davies (*The Restless Sex* [1920] and *When Knighthood Was in Flower* [1922]), and *Humoresque* (1920), set on the Lower East Side. Fox opened a studio in May 1920 on West 55th Street in Manhattan, where Pearl White and Allan Dwan worked briefly. In September of the same year the Famous Players–Lasky Corporation (forerunner of Paramount) opened a new studio in Astoria (see Kaufman Astoria Studios) where Gloria Swanson made nine films, including *Manhandled* (1924). In 1922 the city's share of American production stood at 12 percent, compared with 84 percent for Hollywood. Hearst and Davies shifted operations to the West Coast in 1924; in 1927 the Astoria Studio temporarily closed, as did the Biograph studio (which had been operated for several years by First National); and Talmadge retired soon after the arrival of sound. Independent filmmakers producing pictures for specific ethnic or racial groups remained. The Lower East Side nurtured the production of Yiddish films (for example *Broken Hearts* [1926], directed by Maurice Schwartz), and Harlem became a center for the production of African American films. Oscar Micheaux had a business office in the city by 1922 while he shot much of *Body and Soul* (1924, with Paul Robeson) and *The Exile* (1930) in Fort Lee. Avant-garde films were also made occasionally, beginning with *Manhatta* (1921), inspired by Walt Whitman and directed by Charles Sheeler and Paul Strand.

Sound at least temporarily revived filmmaking in New York City. By 1926 the Fox Film Corporation was conducting sound experiments at its studio in the city, which was also the base of Fox Movietone News (begun in 1927). The heavy dependence of feature filmmaking on sound stages reduced some of the advantages of Hollywood (notably its weather), and New York City was closer to actors and directors who worked on Broadway. Paramount converted the Astoria Studio to sound; its first talking feature appeared in 1929. Most films were adaptations of Broadway plays and musicals or vehicles that tested young talent from the stage. Perhaps this was one reason why the critic Harry Potamkin called for a "New York school" of filmmaking in December 1929; *Applause* (1929), made by Rouben Mamoulian, director of the Theatre Guild, and two experimental films were somewhat wistfully offered as evidence. Feature filmmaking in New York City had virtually ceased by 1937, a year in which not a single feature was shot there in its entirety, according to the *Film Daily Year Book.* Astoria was producing only shorts and inserts for Hollywood pictures. Even an independent Yiddish production of the late 1930s such as *Dem Khazns Zundl* (The Cantor's Son, 1937) could not be counted because extensive exteriors were shot in Pennsylvania, New Jersey, and Long Island. Among the very few films of the period made entirely in the city were films with African American casts such as *Moon over Harlem* (1939, directed by Edgar G. Ulmer) and *Murder on Lenox Avenue* (1941). By the late 1930s most experienced technicians had moved to Hollywood. Although Mayor Fiorello H. La Guardia tried to induce makers of films to return east in 1939, the war ended his efforts before any noticeable success.

New York City nonetheless remained a center of documentary activity (see Documentary filmmaking), a strength that was reinforced during the war when the Army Signal Corps took over Astoria Studio and made it the headquarters for its extensive filmmaking operations. Many Hollywood film people did return to New York City in uniform. Meanwhile, important structural changes were occurring in the industry that ensured a different future for American filmmaking. In 1938 the federal government sued Paramount Pictures for monopolistic practices, among them the exclusion from their theaters of independently produced films. The case broke up the vertically integrated film industry and facilitated independent production. With tax laws further encouraging this trend, the number of independent producers increased rapidly after 1945. The production of feature films that were relatively close to the mainstream returned to the city with such pictures as *The House on 92nd Street* (1945), *Miracle on 34th Street* (1947), and *Naked City* (1948). Radio-Keith-Orpheum (RKO) built a studio on 134th Street and Park Avenue just after the war; the Hollywood producer David O. Selznick used it for *Portrait of Jennie* (1948). At the same time the city after World War II became the most important center of avant-garde filmmaking in the world. The arrival of Hans Richter and other Europeans contributed to this prominence, as did the activities of Maya Deren, who made her own films (beginning with *Meshes of the Afternoon* [1943]) and was associated with the Film Artists Society (1953, renamed the Independent Film Makers Association in 1955), the Creative Film Foundation (1955), and the film society Cinema 16 (1947–63), which educated several

generations of cineastes in experimental and art film.

The rise of television and the continued strength of the theater supported the revival of filmmaking in New York City, providing training for technicians as well as early opportunities for such directors as Elia Kazan and Sidney Lumet. Kazan moved back and forth between filmmaking in Hollywood and theatrical directing in New York City, until *On the Waterfront* (1954), which was shot in suburban Hoboken and on a small stage at the old Vitagraph studio in Brooklyn. Lumet's first film, *Twelve Angry Men* (1957, with Henry Fonda), was shot at the old Famous Players studio on West 26th Street. Both were the work of the cinematographer Boris Kaufman, who helped train a generation of cinematographers in the city.

In the early 1950s the tradition of social realism associated with documentary film gave way to underground films—bizarre sexual extravaganzas by Ron Rice, Ken Jacob, George and Mike Kuchar, and especially Jack Smith. The movement was brought to public prominence by the success of Andy Warhol's *The Chelsea Girls* (1966) and fragmented amid the political activism of the late 1960s: the members of New York Newsreel made agitational political films (such as *Columbia Revolt* [1968]), while other filmmakers forged a school of severely aestheticist "structural" films (beginning with Michael Snow's *Wavelength* [1967]) that bore a kinship with minimalist painting and sculpture. This independent film culture was sustained by many institutions, of which four were especially important: the journal *Film Culture* (first appearing in January 1955), which initially emphasized the European art cinema but by the end of the decade had committed itself to the American avant-garde; the New American Cinema Group, an organization formed to promote independent film production; the Filmmakers' Cooperative, a nondiscriminatory distribution agency run by and for filmmakers; and the Anthology Film Archives, a permanent collection of the "monuments of cinematic art" opened in 1970. A central role in all of these was played by Jonas Mekas, an émigré from Lithuania who also made a series of "diary films" (beginning with *Diaries, Notes and Sketches (Walden)* [1968]).

In the 1950s and 1960s old studios were refurbished: the Biograph Studio in the Bronx became the Gold Medal Studio, where Kazan shot *A Face in the Crowd* (1957). The Famous Players studio, renamed the Production Center Studios, was used for such films as Lumet's *Long Day's Journey into Night* (1961) and Mel Brooks's *The Producers* (1967). A garage across from the old Cosmopolitan Studio was converted into the Filmways Studio, used for shooting Burt Balaban and Stuart Rosenberg's *Murder Incorporated* (1960), Francis Ford Coppola's *The Godfather* (1971), and Woody Allen's *Annie Hall* (1977). These small and in many ways outdated facilities closed in the late 1970s and were essentially replaced by the newly renovated Astoria Studio, reopened in November 1975 and renamed the Kaufman Astoria Studios in 1982. Elsewhere, unexpected structures were converted to provide sound stages: the Silver Cup Studios in Long Island City, for example, were an old bakery converted into 13 stages that opened in 1983; and the Chelsea Piers studio was built in 1988 on an abandoned pier at 23rd Street and the Hudson River.

As a growing number of television series were made on the West Coast, feature filmmaking in New York City was to an extent sustained by Madison Avenue, which was creating increasingly sophisticated television advertisements in the 1960s and 1970s. Television commercials provided technical expertise, temporary work for people working in films, and a chance to break into the business for others. Mayor John V. Lindsay set up the Mayor's Office of Film, Theater and Broadcasting in May 1966 to facilitate citywide production. It offered greater police cooperation while centralizing and simplifying the issuing of permits for location shooting.

Independent features continued to be made by New Yorkers such as Robert Frank (*Pull My Daisy* [1959]), Shirley Clarke (*Cool World* [1965]), Robert Downey (*Putney Swope* [1969]), and John Cassavetes (*Husbands* [1970]). In the late 1960s and early 1970s a new generation of filmmakers emerged that was fiercely committed to New York City: Woody Allen (*Take the Money and Run* [1969], *Hannah and Her Sisters* [1986], *Shadows and Fog* [1992], *Bullets over Broadway* [1994]), Martin Scorsese (*Mean Streets* [1973], *Taxi Driver* [1976], *King of Comedy* [1982]), and Paul Mazursky (*Next Stop, Greenwich Village* [1976]). Others such as Milos Forman (*Ragtime* [1981]) also worked extensively in the city, as did younger filmmakers such as Spike Lee (*She's Gotta Have It* [1986], *Do the Right Thing* [1989]). In the 1970s the avant-garde was revitalized by feminists, notably Yvonne Rainer, and members of racial minorities. Production was also pursued by a band of small-time but determined independents such as John Sayles (*The Brother from Another Planet* [1984]), Jim Jarmusch (*Stranger Than Paradise* [1984]), Amos Poe (*Alphabet City* [1982]), Raul Ruiz (*The Golden Boat* [1990]), Charles Lane (*Sidewalk Stories* [1991]), Todd Haynes (*Poison* [1991]), and Hal Hartley (*Trust* [1991]). Filmmakers often engaged issues of particular urgency to the city, notably the politics of race, violence, and American identity. The late 1980s saw something of a revival of the avant-garde, with Super-8 film and video figuring prominently.

Many productions spend a few days of location shooting in the city while shooting studio scenes in Los Angeles or Europe. According to the Mayor's Office of Film, Theater and Broadcasting, each year during the 1980s from 61 to more than 100 feature films were shot at least in part in the city. Between November 1990 and May 1991 the Hollywood studios boycotted New York City in a labor dispute with local unions. This along with a weak economy and overproduction opened the 1990s on a note of uncertainty, but by mid-decade feature filmmaking returned to the city, with films by Ang Lee (*The Wedding Banquet* [1993]), Brian De Palma (*Carlito's Way* [1993]), and Wayne Wang (*Smoke* [1995]).

After the terrorist attacks of 11 September 2001, Robert De Niro, Jane Rosenthal, and Craig Hatkoff founded the Tribeca Film Festival to spur the economic and cultural revitalization of lower Manhattan. The festival grew out of De Niro's Tribeca Film Center, the first commercial space in Tribeca dedicated to housing film, television, and entertainment companies, founded in 1989. The Tribeca Film Festival and Center focus on assisting filmmakers to reach the broadest possible audience and promoting New York City as a major filmmaking center. In 2005 the New York State Film Production credit program went into effect. The program, which offered studios tax credits from the city and state for up to 35 percent of production costs, used its initial $690 million to generate more than $2.6 billion in state and local taxes and directly brought 2500 jobs to New York City by 2008. New York City remains a filmmaking center into the twenty-first century, with many films, including *Cruel Intentions* (1999), *Spider-Man* (2002), and *The Devil Wears Prada* (2006), filmed on location in the city and featuring city landmarks.

financial printing. The printing of bonds, stock certificates, prospectuses, annual reports, proxy mailings, Securities and Exchange Commission registration statements, public-offering circulars, and state and federal disclosure forms. The first printers catering to the needs of New York City's financial community were established during the colonial period, among them Bowne and Company, formed in 1775 by Robert Bowne. Aided by proximity to the financial center on Wall

Street, the city's financial printing business prospered throughout the nineteenth century and most of the twentieth, eventually dominated by a few major firms; joining Bowne were Sorg Printing (1820), Francis Emory Fitch (1886), Charles P. Young and Company (1902), and Pandick Press (1923). Later in the twentieth century, however, rapid changes in both financial markets and information technology caused turmoil. A boom in mergers and acquisitions during the 1980s along with the emergence of new types of complex financing prompted an increased demand for financial printing services, attracting competitors such as R. R. Donnelly, a large Chicago-based commercial printer, as well as new startup firms. Overall, sales rose to new highs, but profits dwindled as competition drove down prices and technological advances required new capital investments. Old typesetting machines had to be scrapped in favor of computer-based typesetting equipment. Added strains came with both the stock and bond market crashes of 1987 and the advent of new electronic systems for filing, disseminating, and exchanging financial documents. By 1990 Sorg, Charles P. Young, and Pandick were all forced into bankruptcy; financial printing had become a global business no longer centered in New York City.

Owen D. Gutfreund

Finch College. Women's college in Manhattan. It began in 1900 as a finishing school for young women run from a small apartment at 635 Madison Avenue by Jessica Garetson Cosgrave (1871–1949), a writer, feminist, and editor of the Sunday supplement of the *New York World*. In 1904 she opened the Finch School for Girls at 61 East 77th Street, naming it for her first husband, William Finch. She opened an elementary school in 1916 at 170 East 70th Street called the Lenox School to prepare students for Finch, which in the same year moved to 52 East 78th Street. The school received a state charter in 1937, becoming Finch Junior College, and was one of the most famous finishing schools in the nation; in 1952 it became a four-year college offering bachelor's degrees in arts and sciences. It suffered financially in the mid-1970s and closed in 1976, the buildings razed to make way for an Orthodox Jewish school. Notable alumnae of Finch College include Tricia Nixon, daughter of President Richard Nixon; the actresses Suzanne Pleshette and Arlene Francis; and the rock star Grace Slick.

James Bradley

Fine, Reuben (*b* Bronx, 11 Oct 1914; *d* New York City, 26 March 1993). Psychoanalyst and chess player. Born into a poor family, he graduated from City College in 1932 and won the world chess championship in 1938. One of the most feared players at the Marshall and Manhattan chess clubs in New York City, he was the finest "speed" player in the United States. He won eight of the 13 international competitions in which he took part and tied for second in most of the others, and also won seven U.S. Open tournaments between 1932 and 1941. During World War II he withdrew from competitive play, earned a doctorate in psychology, and set up a successful practice as a lay analyst in New York City, where he lived for most of his life. He was director of the New York Center for Psychoanalytic Training and the founder and first president of the Division of Psychotherapy and the Division of Psychoanalysis of the American Psychological Association. Fine's published writings include *The Psychology of the Chess Player* (1967) and *The Healing of the Mind: The Technique of Psychoanalytic Psychotherapy* (1971; 2nd edn 1982).

Kenneth T. Jackson

Fine Arts Federation. Arts council formed on 18 April 1895 by the American Institute of Architects, the Municipal Art Society, the National Sculpture Society, the Society of Beaux-Arts Architects, and five other organizations of artists and civic reformers; incorporated in October 1897. The stated purpose of its founders was to "ensure united action by the Art Societies of New York in all matters affecting their common interests, and to foster and protect the artistic interests of the community." The first president was the noted architect, critic, and writer Russell Sturgis. In cooperation with other organizations and the architect John M. Carrère, the federation was instrumental in establishing the Art Commission of the City of New York in 1898, and it later assumed responsibility for submitting the names of prospective members to the mayor. In 2010 the federation had 22 member organizations.

Finley, John H(uston) (*b* Grand Ridge, Ill., 19 Oct 1863; *d* New York City, 7 March 1940). Educator and journalist. After earning a BA from Knox College (Galesburg, Illinois) he did graduate work in social science at Johns Hopkins University and moved to New York City, where he worked for the State Charities Aid Association in the 1890s. He was president of Knox College from 1892–99 and taught at Princeton University from 1900 to 1903, when he became president of City College of New York. During his decade in office the college became a major institution dedicated principally to educating male students from the lower middle class. Many were the sons of recent immigrants, and a large number were Jews, whom he welcomed in spite of the rampant anti-Semitism of the time. In 1905 he oversaw the moving of the main campus to a complex of Gothic Revival buildings in upper Manhattan designed by George B. Post. Finley left New York City in 1913 to become the state education commissioner but returned in 1920 to join the *New York Times;* for two decades he composed many of the lighter items on the editorial page and became a minor celebrity in the city's cultural life.

Finns. Until the late nineteenth century most of the Finns who settled in New York City were sailors. The Finnish Seamen's Mission, the first Finnish religious organization in the city, was formed in 1887 by Emil Panelius. According to the federal census, the city had 9845 inhabitants of Finnish extraction in the city in 1900. Finns established communities in Bay Ridge in Brooklyn, on and around Fifth Avenue between 115th and 136th streets, and along Eighth Avenue near Sunset Park in Brooklyn, a neighborhood that was named Pukin Maki (Goat Hill) by its residents and came to be known as Finntown. Men worked as tailors, goldsmiths, silversmiths, watchmakers, carpenters, and masons, and many women as domestic servants. The Finnish Aid Society Imatra, formed in 1890 with the aim of furthering Finnish culture in the city, built its own hall at 740 40th Street in Brooklyn. In the same year the socialist political organization the Workers' Club Imatra (no. 15) was formed in Manhattan and set up headquarters at 2056 Fifth Avenue in a building known as Fifth Avenue Hall (where the Socialist Party nominated Eugene V. Debs for the presidency in 1920). The club joined in 1906 with other Finnish socialist groups in the United States to form the Finnish Federation of the Socialist Party and later became more heavily involved in the American labor movement. The newspaper *New Yorkin Uutiset,* which launched in 1906 and ceased publication in 1996, united the local Finnish community. Finns also established athletic clubs, choral groups, temperance societies, libraries, and social and cultural clubs.

In 1916, 16 Finnish families built a four-story cooperative apartment building in Brooklyn and named it Alku I (Beginning I). It was soon followed by two cooperative garages and a cooperative shopping complex containing a pool room, a restaurant, a meat market, a bakery, and a grocery. The success of this project helped to further the acceptance of the cooperative movement throughout the United States. The number of Finns living in New York City reached 20,043 in 1930, after which time Finnish immigration to the United

States slowed. Fifth Avenue Hall was sold in 1955; the proceeds were used to support the newspaper *Raivaaja* (Pioneer). The Workers' Club Imatra, which after several changes came to be known as the Finnish American League for Democracy, closed in 1974. As of 2010 about 3000 Finns lived in the New York City metropolitan area. Current Finnish organizations include the New York Finnish Lutheran Congregation, located at 83 Christopher Street, and the American-Scandinavian Foundation, located at 58 Park Avenue.

Erica Judge

Fiorello H. La Guardia High School of Music and Art and Performing Arts. Public high school opened in 1936 in upper Manhattan as the High School of Music and Art by Mayor Fiorello H. La Guardia. Admission was based on competitive auditions and the evaluation of portfolios. The enrollment was at first 250 students but eventually grew to about 2000. Benjamin M. Steigman was the first principal (1936–59). In 1961 the school absorbed the High School of Performing Arts (an annex of the Metropolitan Vocational High School, opened in 1947 on West 46th Street in the theater district). Through efforts begun by the city planning commissioner Robert Moses the school moved in 1984 to a new building behind Lincoln Center, directly across the street from the Library and Museum of the Performing Arts; it took its current name in 1989. The school is considered a model for other high schools of the arts throughout the United States. The High School of Performing Arts on 46th Street was the setting for the film and the television series *Fame*.

firearms. Guns arrived in New Amsterdam with Dutch settlers in the seventeenth century and have been part of the fabric of the city ever since, including a period during the nineteenth century when Manhattan gun dealers made the city the number one entrepot in the country for the small arms trade. Given the stringent regulation of guns in the city in the twenty-first century, it is a surprise to many to learn that the National Rifle Association was founded in New York City in 1871 and even ran a rifle range at Creedmore in Queens until the 1890s.

During the first years of settlement, Dutch "trade guns" were exchanged for furs with American Indians, and the British continued this tradition. There are extensive records of freemen and apprentices working as gunsmiths, stockmakers, armorers, and locksmiths as well as in other gun-related trades throughout the first two centuries of settlement. During the Revolutionary War a wide variety of guns were brought to the city from France, Britain, and Germany, and Committee of Safety muskets were made in the city. During the 1600s and 1700s artisans, often sole proprietors, made guns from imported and sometimes domestic parts. After the Revolution, the roots of many of New York City's large gun dealing "houses" were evident in businesses started by families such as the Moores, Coopers, Wolfes, and others.

In the first decades of the nineteenth century, gun selling underwent a transition that is evident in the work of Joseph Finch, who operated a shop from 1799 to 1825. By the 1830s and 1840s Smith and his peers were overtaken by dealers who imported mass-produced guns from overseas and from large domestic producers, especially those along the Connecticut River valley, and then sold them globally. By mid-century, a thriving gun dealer district was evident on Maiden Lane and on nearby blocks on Pearl Street and Broadway, an area remembered as "the great store center" by gun dealer Adam W. Spies. Gun sellers included manufacturers and importers, hardware stores (the phrase "hardware, cutlery and guns" is often found in historical documents), secondhand dealers, and even elite shops like Tiffany and Company, which by 1862 was proudly advertising "Military Wares" in city directories. Keeping pace with the expanded market, gun advertising moved from manufacturers' notices in newspaper classifieds and trade cards in the early century to elaborate illustrated broadsides and advertisements in city directories and magazines, culminating in lavish catalogs by the last few decades of the century.

Samuel Colt opened a New York City office at 155 Broadway in 1836 as an outlet for his Paterson, New Jersey, manufacturing operation. But Colt's revolver was not an icon then, and for most of the three decades before the Civil War the pepperbox (a multiple-barreled revolver) was the most popular handgun in New York City and everywhere else. Colt's resurrected company in Hartford, Connecticut, eventually became so powerful that he made his city dealers (whom he called "the Allies") sign exclusive distribution contracts including price controls from at least 1860 to 1873. After the Civil War New York City's dealers looked for markets outside of the United States, while domestic sales focused on cheap pocket pistols that were marketed with a wide range of brand names for the first time, including American Boy, Bang Up, Conqueror, Defiance, Little Giant, My Friend, and Tramps Terror. During the last decades of the century, guns were also marketed in elaborate catalogs, alongside "novelties," with the cheapest pistols selling for less than $1.

The most famous "New York City" shooting—that between Alexander Hamilton and Aaron Burr in 1804—actually took place in nearby Weehawken, New Jersey, and the parties used English-made flintlocks borrowed from Hamilton's brother-in-law. Particularly grisly killings, whether by axe, knife, or gun, were always covered in the papers, and it was not uncommon for them to note the use of guns in self-defense during "riots." Surprisingly, given the domestic violence caused by people armed with guns in the twentieth century, during most years of the nineteenth century, New Yorkers were more likely to kill each other with edged weapons rather than with guns. The notorious exceptions were the 1863 draft riots, during which gun violence was more prevalent. Indeed, in the wake of the riots, a report issued by Metropolitan Police Board president Thomas Acton noted that "the practice of carrying concealed deadly weapons by the violent and vicious classes of the city has become common." The city passed its first laws to require a permit to carry a pistol in the 1870s, and in 1911 the state enacted the Sullivan Law, probably the most stringent handgun control law in the country, requiring a person to have a permit to both purchase and carry a gun.

The twentieth century saw increasing levels of gun violence in urban areas, and New York City was no exception, as advances in production, marketing, and sales inevitably led to greater gun use. In the decades following passage of the Sullivan Law, authorities began to seriously enforce laws that controlled or banned concealed weapons. For most years in the century, with the exception of a period from the 1940s through the early 1960s, homicides by guns exceeded those by edged weapons. Violent crime rates and gun use spiked in the 1980s and early 1990s. The New York City Police Department estimated that there were two million illegal guns in circulation in the city during 1993, a year in which more than 1500 people were shot to death.

City gun ownership and use in violent crimes has fallen drastically since the 1990s for a number of reasons, including the end of the crack cocaine epidemic, the deployment of more police officers who better target gun crimes, and an improved economy. Because New York City has some of the most restrictive, expensive, and lengthy gun licensing requirements in the country, the vast majority of guns seized by authorities are from out of state. The city's most recent effort to target illegal guns has been to sue out-of-state gun dealers whom the city argues do not abide by federal firearms laws and whose guns have ended up in New York. This combination of

structural changes and police tactics reduced the number of people shot to death to fewer than 300 in 2008. At the same time the city has become a difficult place for law-abiding citizens to own guns, and the police note that 92 percent of those who have applied for gun permits or permit renewals since 1994 have been denied.

fireboats. Ships that are equipped with firefighting equipment. The first in New York Harbor was put into service as early as 1800 and consisted of a hand pumper mounted on a barge run by 12 volunteers. Between 1867 and 1875 a privately owned steam-propelled "floating engine," the *John Fuller,* was rented by the Fire Department. Recognizing that New York was handling more shipping than all the other harbors in the United States combined, the department obtained its own vessel, the *William F. Havemeyer,* in 1875. With the consolidation of the two cities in 1898, Brooklyn added its two marine units to the three already in service in New York City at the time. The most powerful fireboat in the world, the *Firefighter,* went into service in 1938.

Fireboats were the first units in the Fire Department to be equipped with two-way radios (1937). They helped land-based units fight fires aboard ships at dock, including the SS *Normandie* (1942) and the aircraft carrier USS *Constellation* (1960), and other fires onshore, such as the Hoboken pier fire (1900), which killed 400 and destroyed the North German Lloyd docks; the Black Tom naval ordnance depot explosion in Jersey City (1916); and Brooklyn's Furman Street warehouse fire (1935).

During World War II fireboats undertook the dangerous mission of scuttling the ammunition-laden freighter *El Estero,* which exploded amid other ships carrying high-octane aviation fuel at a pier in Jersey City on 14 April 1943. The massive explosion was similar to the incident that destroyed the port of Halifax, Nova Scotia, in 1917. The *Firefighter* and the *John J. Harvey* were lashed to the freighter, which they towed away from the populated shore into deeper water. Similarly, the oil tankers *Alva Cape* and *Texaco Massachusetts* were separated by fireboats after colliding and catching fire in 1966, as were the tankers *Sea Witch* and *Esso Brussels* in 1974. After the terrorist attacks of 11 September 2001, the entire force of Fire Department boats, augmented by the retired, restored, and civilian-run fireboat *John J. Harvey,* supplied the only water available for operations at Ground Zero for three days.

The only fire protection on the water for the entire Port of New York, fireboats are directed by officers trained both as firefighters and marine engineers and often fight fires involving highly volatile cargo with the potential for enormous damage and loss of life. The city's fireboats frequently respond to alarms in Westchester County along the shore of Long Island Sound and along the western bank of the Hudson River as far south as Perth Amboy, New Jersey. They also are used in public celebrations and to greet incoming ships.

In 1975 the fireboat fleet was reduced from 10 to five units. Despite pressing concerns about the deterioration of aging oil refineries and storage tanks, toxic waste dumps along the shoreline, increasing numbers of liquefied natural gas tankers unloading in the harbor, and the use of Staten Island as a home port by the U.S. Navy, little attention was paid to augmenting the aging fireboat fleet until the increase in local and international passenger traffic in the harbor during the 1990s prompted a new look. In 2007, after an international design competition, bids for two new fireboats were awarded. In response to the threat of possible terrorist attacks like those of 11 September 2001, the new boats will be equipped to monitor chemical, biological, radiological, nuclear, and explosive agents (C-BRN), and they will have the ability to pump 50,000 gallons per minute. One of these fireboats, the *Three Forty Three,* was named in honor of the 343 New York City firefighters who lost their lives on 11 September 2001 at the World Trade Center.

Donald J. Cannon

fire escapes. Metal steps enclosed by railings installed on the exterior faces of multistory buildings to allow people to leave during an emergency. Throughout the seventeenth and eighteenth centuries New York City's residences consisted primarily of single-family homes, so fire escapes were not needed. By the early nineteenth century, however, multiple-unit TENEMENTS began to be seen in Manhattan, which were designed to accommodate larger numbers of immigrant families. From the 1820s this type of building became increasingly popular; by 1863 tenements housed more than 60 percent of the Manhattan population in more than 15,000 structures. Tenements were overcrowded, and fire safety was virtually nonexistent. The single interior stairwell was typically open (unenclosed) from the basement to the top floor, allowing a fire on a lower floor to quickly spread to the top of the building and block the only means of escape. Such a fire would sometimes force occupants to jump from upper-floor windows. This was the case on 2 February 1860 in a six-story tenement at 142 Elm Street. Despite heroic efforts by volunteer firefighters, 10 people died. Although this tragedy exposed deficiencies of a single-exit stairwell, it did not immediately lead to regulatory changes. It would take several more years and many fatal fires before the first Tenement House Law was enacted in 1867. The new regulations called for a secondary means of egress, presumably fire escapes, on tenement houses. In 1868 the city's Superintendent of Buildings issued specific design patterns for construction of fire escapes. These regulations were applied to existing and new tenements. The earliest fire escapes were essentially vertical ladders that were difficult to descend. Revisions to the Tenement House Law in 1901 required a stair angle of no more than 60 degrees, making the fire escape easier to climb down. This became the common zig-zag stair pattern found on most extant tenements. Despite such improvements, regulations called for narrow 20-inch-wide (51-centimeter-wide) steps that were only 6 inches (15 centimeters) deep, making a quick exit difficult. Even with these modest regulatory improvements, fire escapes, which were exposed to the elements year round, were poorly maintained. Furthermore, as more modern types of building construction evolved, complaints about their unsightliness grew. Tenants used them as extra storage space, and burglars used them to gain access to apartments. A 1968 revision to the city's building code banned fire escapes on new buildings. Long a part of the urban landscape, fire escapes have been used as a place for romance and a place to sleep outdoors on hot summer nights; these uses were enshrined in popular culture, for instance, in Leonard Bernstein's musical *West Side Story* (1957; 1961 film version) and Alfred Hitchcock's film *Rear Window* (1954).

Fire escape, 2009

firefighting. Firefighting in New York City has evolved from a period of leather buckets and volunteers, through technological changes and political upheaval, to the challenges presented by modern-day skyscrapers, including the 110-story World Trade Center twin towers, which collapsed on 11 September 2001 after terrorists flew jetliners into them.

1. The Seventeenth and Eighteenth Centuries: Noisemakers and Sober Men

During colonial times all able-bodied men were required to help extinguish fires. In 1648 Governor Peter Stuyvesant hired fire wardens to cite the owners of poorly maintained wooden chimneys, the principal fire hazard in the city. In 1658 nighttime "rattle watch" was established, in which men patrolled the city with loud noisemakers that they sounded in the event of fire. The English established strict codes for the design and maintenance of chimneys and required every house and business to have leather fire buckets at hand.

Throughout the seventeenth century, fires were uncommon in the city because of the slow rate of development and the predominance of brick in construction. As the city grew larger and more populous after 1700, brick and stone proved too costly for most residents, and the risk of fires increased as wood became the favored construction material. The Common Council recognized the increased danger of fire and imported two Newsham hand pumpers from London in 1731. A volunteer force of 30 "strong, able, discreet, honest, and sober men" was appointed in 1737 by the General Assembly. The efficiency of this force proved crucial in controlling several fires, particularly during the "Negro plot" of 1741, marked by the burning of Fort George. By 1770 the city had eight engines and a force of 170 men. During the American Revolution, firefighting became a chaotic, improvised affair undertaken by members of the Royal Navy and local residents. Two major fires occurred during the war: the first, in 1776, was actually a series of fires probably caused by arson that destroyed nearly 500 houses in what is now the Lower West Side (more than one-third of the city), and the second consumed 64 houses near Cruger's Wharf along the East River in 1778. In 1785 Brooklyn residents voted to provide for a volunteer force of one company employing a captain and five men. On 19 March 1787 the Fire Department of the City of New York was reorganized by a special act of the state legislature, which appropriated funds for a chief engineer and six subordinates, to be appointed by the Common Council. There were few fires during the decades after the Revolution: only five broke out in 1795, and the annual total never exceeded 10, although there was a large fire in the "coffeehouse district" in 1796. In 1799 the Manhattan Company became the first of several private companies authorized to provide a steady supply of water to supplement existing supplies, which were drawn from rivers, cisterns, wells, natural springs, and primitive pumps. A makeshift fireboat was first employed in New York Harbor in 1800 to protect the increasingly vital waterfront. The number of fires increased annually from a low point of six in 1800, as development intensified and shoddily built wood-constructed neighborhoods expanded northward.

Hook-and-ladder company outside its headquarters in lower Manhattan, 1891

2. The Nineteenth Century: Reform and Development

During the early years of the nineteenth century, new volunteer companies were established to fill the growing need for greater protection. By 1810 three hook-and-ladder companies and 34 engine companies were staffed by 1005 volunteers. Riveted hose was introduced in 1808, replacing leaky hand-stitched hoses. After its incorporation in 1816 the Village of Brooklyn elected its first chief engineer to lead 35 firefighters assigned to three companies. That same year, the New York City Common Council encouraged enlistment in fire companies by offering to exempt veteran firefighters from jury duty and service in the militia. However, the Fire Department during these years was poorly organized: the role of the chief engineer was not clearly defined, and for a time civilian members of the Common Council were empowered to direct men and equipment during fires. Volunteers lacked coordinative leadership and control at the scenes of fires, and

water supplies, inadequate at best, usually froze in winter. Firefighting methods were crude, often involving spectacular rescues, exterior "surround and drown" tactics, and the tearing down of adjacent buildings. Some firefighters were accused of drunkenness, theft, and failure to answer alarms, and some companies earned a reputation for brawling rather than firefighting. By 1834 insurance companies formed a paid salvage unit, known as the Fire Patrol, which rushed to fires in order to save whatever property it could. Some New Yorkers attributed the severity of the Great Fire of December 1835 to the negligence of the volunteer companies and called for a force of paid professionals.

The largest fire since 1776 occurred in Chatham Square in 1811 as more than 100 buildings burned. To address the need for a reliable source of water, a water reserve on Chambers Street near City Hall was authorized at that time. A serious fire occurred in 1821 at Crane's Wharf, followed by an outbreak of yellow fever in 1822. An increase in the water supply for both firefighting and drinking occurred during this period, but not at a pace to keep up with the increase in population. The Common Council authorized the construction of an additional water supply for fighting fires in 1829 at 13th Street and the Bowery, which was becoming the densest part of the city. The stone tower, 44 feet (13 meters) in diameter and 27 feet (8 meters) high, held an iron tank that contained more than 300,000 gallons of water that connected to iron pipes that fed the water to 30 fireplugs; there were also 50 cisterns in strategic locations.

Between the 1830s and the early 1860s, volunteer firefighting companies played a central role in city politics. Although many men joined companies to prove their courage and skill, others recognized that membership in a

Major Fires within the Current Boundaries of New York City, 1741–2006

18 March 1741	Fort George: Governor's house, barracks, and chapel destroyed.
21 Sept 1776	Great Fire of 1776: One-third of city affected, 492 houses destroyed.
3 Aug 1778	Cruger's Wharf: 64 houses destroyed.
9 Dec 1796	Coffee House Slip below Front St. between Murray Wharf and the Fly Market: 50 houses destroyed.
18 Dec 1804	Second Coffee House Fire, in area surrounding Wall and Pearl streets: 40 houses destroyed.
19 May 1811	Great Fire of 1811, in area surrounding Chatham St.: One firefighter killed, 102 houses destroyed.
24 Jan 1821	Crane's Wharf, Front St.: 31 houses destroyed.
18 May 1828	Bowery Theater, at Bayard St.: Two people killed, 25 to 30 buildings destroyed.
30 Apr 1833	Greenwich Village, in area surrounding Hudson and Greenwich streets: 90 to 100 buildings destroyed.
12 Aug 1835	Fulton, Nassau, and Ann streets: Five people killed, 35 houses destroyed.
16–17 Dec 1835	Great Fire of 1835, at Wall, Broad, and South streets: 20 blocks destroyed (600–700 buildings).
23 Sept 1839	National Theater, Leonard and Church streets: The theater, a school, and three churches destroyed.
5 Oct 1839	Water, Pearl, and Fletcher streets: Entire blocks affected, probably more than 100 buildings destroyed.
19 July 1845	Great Fire of 1845, at Broad St., Exchange Place, and William St.: 30 people killed, 300 buildings destroyed.
9 Sept 1848	Henry, Pineapple, Sands, and Washington streets, Brooklyn: Seven blocks of buildings destroyed, including three churches, two newspapers, and a post office.
5 Feb 1850	5–7 Hague St., Queens: Explosion kills 64 people.
10 Dec 1853	Offices of Harper and Brothers, Franklin Square: 16 buildings destroyed.
25 Apr 1854	Jennings, 231 Broadway: 11 firefighters killed.
5 Oct 1858	Crystal Palace, 42nd St. and Fifth Ave.: Building destroyed.
2 Feb 1860	Tenement on Elm St.: 20 people killed.
13–16 July 1863	Draft riots: Fires citywide, 43 buildings destroyed.
5 Dec 1876	Brooklyn Theater, 313 Washington St.: 295 people killed.
31 Jan 1882	World Building, Park Row and Nassau St.: 12 people killed.
22 Aug 1891	Taylor Building, Park Row: 61 people killed.
6 Feb 1892	Hotel Royal, Sixth Ave. and 40th St.: 28 people killed.
17 March 1899	Windsor Hotel, 565 Fifth Ave.: 33 people killed.
4 Nov 1902	Madison Square Garden: 15 people killed.
15 Jun 1904	*General Slocum* burns: 1021 people killed.
25 May 1911	Triangle Shirtwaist factory, Washington Place and Greene St.: 146 people killed.
6 Jan 1912	Equitable Life Assurance Building, 120 Broadway: Six people killed.
13 Sept 1919	20 acres (8 hectares) lying within area bounded by Sutton, Norman, and Greenpoint avenues, Greenpoint: 30 oil tanks destroyed.
29 Jan 1931	Lincoln Arcade, Broadway between 65th and 66th streets. Eight people injured, nine firefighters injured. Building destroyed.
13 July 1932	Coney Island residential area, 178 buildings destroyed.
1 Aug 1932	Ritz Tower Hotel: Seven firefighters killed.
18 Aug 1941	SS *Panuco,* Pier 27, Brooklyn: 41 people killed.
9 Feb 1942	SS *Normandie:* One person killed, 128 injured, ship destroyed.
24 Dec 1943	Lodging house, 437–439 West 42nd St.: 18 people killed.
17 Jan 1946	Staten Island Ferry, Battery: Three people killed, many injured, ferry house destroyed.
11 Dec 1946	Knickerbocker Ice Plant, 184th St. and Amsterdam Ave.: 37 people killed.
3 Dec 1956	Luckenbach Steamship Lines: Nine people killed.

(*continued*)

Major Fires within the Current Boundaries of New York City, 1741–2006 (*Continued*)

4 Apr 1956	Artificial-flower factory, 4065 Third Ave., Bronx: Six firefighters killed.
16 July 1956	Wanamaker Building: 187 firefighters injured, building razed.
14 Feb 1958	Elkins Company, 137 Wooster St.: Two firefighters and four members of a fire patrol killed.
19 Mar 1958	SGS Textile Printing Co., 623 Broadway: 24 people killed.
19 Dec 1960	USS *Constellation,* Brooklyn Navy Yard: 50 people killed.
10 May 1962	Mill Basin: Largest quantity of oil ignited since 1919 Greenpoint fire.
3 Oct 1962	Telephone company, 213th St. and Broadway: 23 people killed.
26 Oct 1962	Sefu Soap and Fat Co., 44–15 56th Road, Queens: Six firefighters killed.
17 Oct 1966	6 East 23rd St.: 12 firefighters killed.
13 Jan 1967	Explosion in Queens: Four city blocks destroyed.
8 Jan 1968	232–236 Johnson St., Brooklyn: 13 people killed.
18 July 1968	115–155 Mexico St., Queens: 11 people killed.
3 Feb 1969	595 Fifth Ave.: 11 people killed.
19 Dec 1969	31 Covert St., Brooklyn: 11 people killed.
10 Feb 1973	Gas tank explosion, Staten Island: 40 people killed.
24 Oct 1973	Puerto Rican Social Club, Bronx: 25 people killed.
25 Mar 1990	Happy Land Social Club, 1959 Southern Blvd., Bronx: 87 people killed.
8 Sept 1991	Staten Island Ferry Terminal: 20 injured.
25 Mar 1994	62 Watch St.: Three firefighters killed.
17 June 2001	Long Island General Supply Store: Three firefighters killed.
11 Sept 2001	World Trade Center: 2749 people killed, including 343 firefighters.
2 May 2006	Greenpoint, Brooklyn, former rope factory: 14 firefighters injured.

FDNY fire truck, 2009

fire company was often the first step in a political career (as it was for seven mayors elected after 1835). Foremen gained recognition, status, and financial rewards, legal and illegal. One of the best-known foremen was William M. "Boss" Tweed, who formed Americus Engine Company 6 on Henry Street in 1848 and became the boss of Tammany Hall. He won the loyalty of many fire companies, and saloons owned by firefighters soon became associated with the Tammany organization. In 1838 and 1841 the Common Council tried to remove the Fire Department from politics by reorganizing it, but the department continued to be dominated by Tammany Hall and was increasingly racked by violence, rioting, and sabotage.

The Fire Department also became enmeshed in the ethnic, religious, and class divisions that marked the city during the 1840s, and rivalries between companies grew so violent as to impair firefighting. During the 1850s Tweed's engine company was one of the most notorious. Embezzlement also became a serious problem. Of more than $240,000 approved by the council between 1835 and 1861 for the purchase of new equipment, only about $100,000 was spent as intended: the rest made its way to Tammany Hall or was pocketed by corrupt foremen. Faced with an increasingly disorganized department, chief engineer Alfred Carson (1848–57) regularly railed against the Common Council for failing to deal with the problems of the department. As long as the council was dominated by Tammany Hall, Carson's criticisms were ignored, except by those who sought to remove him. In February 1857 Carson was narrowly defeated by Harry Howard, who was supported by Tammany Hall and those who opposed any further structural or technological reform of the volunteer system. Despite negative publicity, however, the volunteer fire department enjoyed the support of the working class, and companies celebrated their affiliations in poems, plays, and songs. The iconic figure of "Mose the Fireman" was portrayed hundreds of times in the play *A Glance at New York* beginning in 1848.

The mid-nineteenth century introduced increasingly numerous, complex, and deadly firefighting challenges, including 300 buildings destroyed in the Broad Street district (1845), a major conflagration in downtown Brooklyn (1848), a warehouse fire and collapse killing 11 volunteer firefighters (1854), the burning of the New York Crystal Palace (1858), and the death of 20 residents in an Elm Street tenement fire (1860). Such threats of large fires led to more reform efforts and improved technology. A primitive telegraphic fire alarm system was authorized in December 1847, and by the summer of 1851 the city's fire headquarters were linked, though unreliably, to the city's fire bell towers. In 1854 Alfred E. Baker was hired by a consortium of

insurance companies to investigate arson cases as the first fire marshal of the city. In 1859 insurance companies presented firefighting volunteers with their first two steam-powered fire engines.

Fire companies in the city were instrumental in both exacerbating and controlling the draft riots of July 1863. On 13 July, after the names of about 50 conscripts had been drawn, members of Black Joke Engine Company set fire to the office of the marshal for the ninth district on Third Avenue and 47th Street and prevented anyone from extinguishing it, setting the riots in motion. By the following day, however, most companies in the city, including the Black Joke, were patrolling their neighborhoods, fighting rioters, and protecting property. In letters to local newspapers, business leaders and railroad owners praised the fire companies for their vigilance.

By the mid-1860s the close ties between Tammany Hall and the volunteer companies and rising losses from fires led to renewed demands for a full-time paid professional fire department. In the spring of 1865 the state legislature replaced the volunteer companies with the Metropolitan Fire Department (MFD), a paid force of 700 exclusively under the direction of a board of commissioners. The shift to a professional department led to improvements in firefighting techniques. By early 1866 steam engines, horses, and a telegraph system were in service in downtown Manhattan. Efficiency improved after General Alexander T. Shaler, president of the board of fire commissioners (1867–70), reorganized the department according to a military model in which specialization, discipline, and merit were encouraged by a system of daily advisory orders, trials for disobedience, and ranks (the ranks of captain and lieutenant remained in use into the twenty-first century, as did such terms as battalion). By 1870 the MFD had extended service to the suburban districts north of 86th Street and in 1874 assumed responsibility for the West Bronx after it was annexed by New York City. Between 1867 and 1875 a private steam-propelled "floating engine," the *John Fuller,* was leased to the department. Locked-door fire alarm boxes were set up in the streets, and instructional classes began in 1869. The MFD soon won the praise of businesses, newspaper editors, and the public as losses due to fire plummeted. In 1869 the editor of the *New York Herald* established the James Gordon Bennett Medal, an award still presented yearly for the most outstanding act of heroism on the part of a member of the Fire Department.

The MFD was replaced in 1870 with the Fire Department of the City of New York (FDNY), retaining most of Shaler's organizational innovations. A school for foremen (company officers) opened in 1878. During the same period, new techniques and equipment for fighting fires were gradually introduced, including "interior attacks"; taller ladders; steam engines with greater pumping pressure; the first fireboat, the *William F. Havemeyer;* keyless alarm boxes; and telephones. After a fire at the offices of the *New York World* in 1883, a School of Instruction, the forerunner of the present-day Fire Academy, was established. Despite attempts by

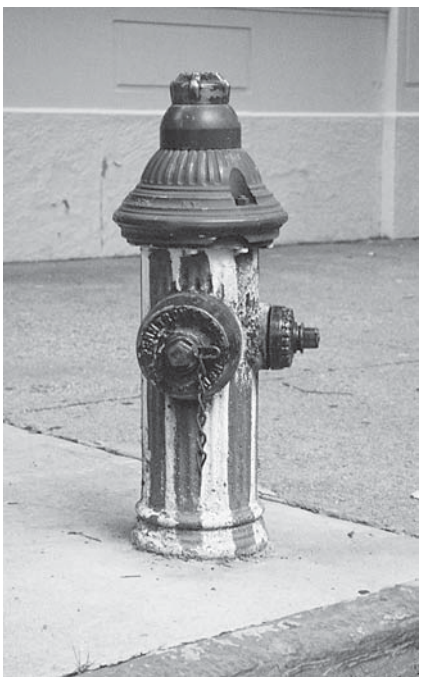
some politicians to interfere with funding and appointments, the introduction of civil service in 1884 helped to increase professionalism and keep the department out of politics. Responding to the deaths of more than 350 people in tenement fires during the 1890s, the FDNY joined the movement for housing reform. During the last ten years of the nineteenth century, the area served by the FDNY more than doubled. In 1895 the East Bronx was annexed to the city, and with consolidation in 1898, the FDNY absorbed the fire departments of the City of Brooklyn and of several communities in Queens.

3. The Twentieth Century and into the Twenty-First: Modern Challenges

Firefighting challenges and improvements continued at the turn of the twentieth century. The burning of the excursion steamship *General Slocum* in June 1904 killed more than 1000 passengers. When a fire at the Triangle Shirtwaist Company in 1911 killed 146 people, the FDNY helped to draft legislation to improve the safety and working conditions at factories. Working conditions for firefighters also improved during this period. Until 1919 all firefighters were required to remain on continuous duty save for two meal periods each day. Officers received 14 days of vacation annually, firefighters 10 days. After the Uniformed Firefighters Association (UFA) was formed in 1919, two platoons worked in split shifts, allowing firefighters to spend more time at home. Volunteer fire departments continued to operate in outlying sections of Brooklyn, Queens, and Staten Island until the 1920s, when many were taken over by the paid department. A few independent volunteer departments remained in operation into the twenty-first century, including one in Breezy Point.



A fire at the headquarters of Equitable Insurance in 1912 demonstrated the growing need for more effective methods of fighting fires in buildings taller than 10 stories. Gasoline-powered fire apparatus began to replace horse-drawn equipment in 1907, with the changeover completed by 1922. A fire alarm system was installed with a headquarters in Central Park and 1831 keyless boxes. Fireboats continued to be modernized during the 1930s as the first two-way radios were introduced in 1937, and the most powerful fireboat in the world, the *Firefighter,* began operation in 1938.

After major brush fires swept suburbanizing Staten Island during the spring of 1963, the FDNY assigned more companies there and installed larger mains. Twelve firefighters were killed in October 1966 when the floor of a building on 23rd Street in Manhattan collapsed in the worst disaster in the history of the FDNY before the terrorist attacks of 11 September 2001. In the mid-twentieth century the number of fire alarms increased sharply, from 62,021 in 1950 to 398,867 in 1975. The FDNY faced severe challenges during the 1970s, known as the War Years. After unsuccessful negotiations for higher salaries, the UFA called a strike on 6 November 1973. It lasted only five and a half hours, but all participants were fined after the courts ruled that the strike had violated the Taylor Law, which forbids public employees from striking. In 1975 budget cuts reduced the FDNY by 32 fire companies, and the fireboat fleet was also reduced. To distribute the workload more equitably between the busiest areas (with as many as 7000 runs a year) and the slowest (about 1500 a year), the FDNY introduced reassignments, interchanges, and supplementary squads. At the same time new technologies continued to improve its efficiency. Voice-activated street alarm boxes of the Emergency Reporting Service (ERS) replaced older pull boxes beginning in 1971, and a computer-assisted dispatching system in 1977 resulted in faster response times. (By 2007 the average time between an incoming alarm and the arrival of the first unit on the scene was only four minutes citywide.) Tower ladders, more efficient engines, and a super pumper unit were purchased. Hazardous materials units were formed when traditional tactics were found to be dangerous in fighting chemical fires and fires in buildings made of new materials. By the 1980s the number of alarms peaked and then began to decline, with 96,089 fires in the city in 1990. Affirmative action laws contributed to more opportunities in the FDNY for African Americans, Latinos, and women; 42 women joined the force in 1980 after a lengthy but successful class-action suit.

Before 11 September 2001 about 800 firefighters of the MFD and FDNY had been killed in the line of duty, but on that day 343 members of every rank—including First Deputy Commissioner William M. Feehan, Chief of Department Peter Ganci, and Chaplain Mychal Judge—died when the twin towers of the World Trade Center collapsed after being struck by terrorist-controlled jetliners. Within hours of the disaster thousands of firefighters, emergency workers, and paramedics from New Jersey, Long Island, Connecticut, and suburban counties to the north raced into New York City to help their comrades. In the aftermath of the 9/11 disaster private corporations and public agencies contributed many pieces of replacement apparatus. One, an engine donated by the state of Louisiana after 9/11 that served Brooklyn as Engine 283, was sent back to that state in 2005 to help residents of New Orleans after Hurricane Katrina, along with 660 members of the FDNY, including the New York City Urban Search and Rescue Team, the FDNY Disaster Assistance Response Team, the FDNY Incident Management Team (IMT), communications and support personnel, and members of the FDNY Counseling Services Unit. The engine remained in New Orleans as that city struggled to rebuild.

In 2002 the FDNY recorded 82 civilian fire fatalities, the lowest total since 1927. Between 9/11 and December 2007, 13 additional firefighters lost their lives in the line of duty. In 2008 the FDNY reported it had 11,275 active firefighters in the five boroughs.

First Bank of the United States. Federal bank. Proposed by Alexander Hamilton, it was formed with capital assets of $4.7 million in Philadelphia in 1791 as a fiscal agent of the federal government and a commercial bank. It had eight branches, including one on what is now Pearl Street in Manhattan that opened on 1 April 1792 with assets of $1.8 million. The larger allotment of capital to Philadelphia was greatly resented by the branch in New York City, which was often unable to meet customers' demands, and the bank's deflationary policy of demanding the redemption of state notes was fiercely opposed by other banks in the city, including the Bank of New York. One of the most avid foes of the First Bank was John Jacob Astor, who offered to lend his own money to the federal government as an incentive not to renew the bank's charter, which was rescinded by Congress in 1811.

John T. Holdsworth, *First Bank of the United States* (Philadelphia: University of Pennsylvania Press, 1910)

James Bradley

First Baptist Church. Church at 265 West 79th Street in Manhattan, near Broadway. It began as a branch of the New Jersey Scotch Plains Baptist Church before incorporating under its own name in 1762. The church was situated in lower Manhattan until it moved to 39th Street and Park Avenue during the pastorship of Thomas Anderson (1862–78). The current building, designed by George Keister, was constructed in 1894 on a diagonal to the street, breaking the regularity of the city's grid plan. The structure has a unique stained-glass roof and two unequal towers rising on either side of the entrance, the taller one representing Christ as the head of the church and light of the world and the smaller deliberately left incomplete, a symbol of the wait for the return of Christ.

Aileen Laura Love

First Houses. Complex of eight four- and five-story buildings, each containing 123 apartments, on Third Street and Avenue A in Manhattan. It opened for tenants in December 1935 as the first completed project of the New York City Housing Authority and the first municipally built public housing project in the United States. The project began when the chairman of the housing authority, Langdon Post, sought to hasten the transfer of funds promised by the head of the U.S. Public Works Administration, Secretary of the Interior Harold Ickes, by accepting Vincent Astor's offer of a long-term, low-interest mortgage on a group of deteriorated "old law" tenements on the Lower East Side. Bernard Baruch provided a loan that allowed the authority to buy other buildings on the block. A refusal by the owner of the buildings, Andrew Muller, to sell prompted the authority to sue; the decision that slum clearance was a public purpose for which the authority could use eminent domain was reaffirmed by the New York State Court of Appeals in *New York City Housing Authority v. Muller* (1936). Laborers funded by the Works Progress Administration built the First Houses from designs by Frederick Ackerman, technical director of the housing authority. They demolished every third building on the block, thus making room for landscaped courtyards that allowed for cross-ventilation in the apartments, and renovated the remaining structures. They then built playgrounds, indoor recreation rooms, laundry rooms, and a health clinic. The First Houses were designated a landmark by the city in 1974.

Rosalie Genevro

First National City Bank (of New York). Commercial bank later known as CITIBANK.

First Presbyterian Church, Brooklyn. Church formed in 1822 on Cranberry Street. It was the site of a celebration when Brooklyn was incorporated as a city in 1834. The church moved in 1846 to 124 Henry Street, where its congregation actively supported abolitionists. Important contributions to church music were made by its pastor Charles S. Robinson (1860–76), author of 15 collections of hymns, and its organist and choirmaster Raymond H. Woodman (1880–1941). Under Philip Elliott (1931–61) the congregation initiated the Heights Fellowship (1949–52) to promote internationalism, ecumenism, and racial harmony, an effort that was continued by Paul Smith in the late 1980s.

David Meerse

First Presbyterian Church in Jamaica. Church at 89-60 164th Street in Queens, formed in 1662 by the oldest continuous Presbyterian congregation in the United States. The congregation first met in a stone building erected in 1699 at Jamaica Avenue and Union Hall Street (used by the British as a military prison during the American Revolution). The second church building was completed in 1813 and moved to 164th Street in 1920. In honor of Andrew Magill, who served as pastor for 34 years, the Magill Memorial Building was built in 1923 to provide Sunday school rooms and church offices.

David Meerse

First Shearith Israel Graveyard. Cemetary and historic site at 55 St. James Place. Interred in this graveyard are members of the First Shearith Israel Synagogue, the first Jewish congregation in America, buried between 1684 and 1828. Opened in 1684, it is in fact the second Jewish graveyard in New York, replacing the original graveyard the congregation used from 1656 to 1684; the location of the original site is unknown. The graveyard is a New York Historical Site.

Ben Silk

fiscal crisis. See BUDGET.

Fischer, Bobby [Robert James] (*b* Chicago, 9 March 1943; *d* Reykjavík, Iceland, 17 Jan 2008). Chess player. He moved to Brooklyn in 1948. Fischer's sister Joan bought him his first chess set at the candy store located below their apartment. At age eight he started taking lessons at the Brooklyn Chess Club. He came to prominence as a childhood prodigy, challenging the nation's leading players at the Manhattan Chess Club and the Marshall Chess Club and winning the U.S. Open at the age of 13. By 15 Fischer was a grandmaster. After dropping out of Erasmus Hall High School in Brooklyn to pursue a career in chess, he won a string of matches in the late 1960s with unprecedented ease, and in 1972 he defeated Boris Spassky for the world championship in Reykjavík, Iceland. A moody and temperamental player, he then retired suddenly from tournament chess and led a reclusive life in Los Angeles. In 1992 he reemerged to defeat Spassky in a tournament in Montenegro and Serbia, which was under a United Nations embargo at the time. As a result Fischer found himself facing federal charges and never returned to the United States, ultimately moving to Iceland. He is widely regarded as the greatest American chess player in history.

Marc Ferris

Fish, Hamilton (*b* New York City, 3 Aug 1808; *d* Garrison, N.Y., 7 Sept 1893). Governor, U.S. senator, and secretary of state. A graduate of Columbia College (1827), he was admitted to the bar in 1830. He practiced law in New York City and became active in politics as a Whig. He served in the House of Representatives from 1843 to 1845; as lieutenant governor of New York from 1848 to 1849; as governor from 1849 to 1850; and as U.S.

senator from 1851 to 1857. A moderately antislavery member of the Senate, he joined the emerging Republican Party during his term. He actively campaigned for Abraham Lincoln's election to the presidency in 1860 and supported the Union effort in various capacities during the Civil War. Fish served as secretary of state under President Ulysses S. Grant from 1869 to 1877. In this capacity, he helped secure peaceful outcomes to several foreign policy challenges, including American neutrality in the face of the Cuban insurrection; the negotiation of the Treaty of Washington, which settled the *Alabama* claims with Great Britain and other lingering disputes; and the settlement of the *Virginius* dispute with Spain. In later years, he spent much time at his house in Stuyvesant Square and remained active in civic affairs, including as chairman of the Board of Trustees of Columbia University.

Frank Scaturro

Fish, Nicholas (*b* New York City, 28 Aug 1758; *d* New York City, 20 June 1833). Banker. A son of Jonathan and Elizabeth Sackett Fish and a member of a wealthy mercantile family, he became a close friend and political ally of Alexander Hamilton. In 1793 he was appointed revenue supervisor for the district of New York by President George Washington, a position that he held until 1801. He married Elizabeth Stuyvesant in 1803. As a Federalist alderman he led the opposition to Tammany Hall on the Common Council in 1806–17. He also invested in real estate and bank stocks and was president of the Butchers' and Drovers' Bank (elected 1831), chairman of the Board of Trustees of Columbia University (1824–32), and an active member of St. Mark's Episcopal Church in the Bowery. Fish's home on Stuyvesant Street was a favorite haven for Federalist leaders. His eldest son was the governor, senator, and secretary of state Hamilton Fish.

Elaine Weber Pascu

Fish, Preserved (*b* Portsmouth, R.I., 3 July 1766; *d* New York City, 23 July 1846). Whaling captain and merchant. He worked as a merchant in New Bedford, Massachusetts, before moving to New York City. There he formed a partnership in 1815 with his cousin Joseph Grinnell, also a merchant from New Bedford, with whom he sold whale oil and then acquired ships and organized packet lines to Liverpool and London. He retired from the firm in 1826 and succeeded Stephan Allen as president of the Tradesmen's Bank in 1829. Active in politics, he was a leader of the free trade movement in New York City and a prominent Jacksonian Democrat who joined the Whig Party during the specie crisis of 1837. Born a Quaker, Fish became an Episcopalian during the last years of his life.

Elaine Weber Pascu

Fisher, Avery (*b* Brooklyn, 4 March 1906; *d* New Milford, Conn., 26 Feb 1994). Executive and philanthropist. An amateur violinist, he graduated from New York University in 1929 and then worked in the publishing business for almost 15 years while in his spare time building his own radio sets, amplifiers, tuners, and speakers. In 1937 he formed his first company, Philharmonic Radio, which he sold in 1945. He then formed a second, Fisher Radio, which entered the high-fidelity market with a line of premium components and remained at the forefront through its technical innovations. In 1956 it offered the first transistorized amplifier, and in 1958 it brought out the first stereo radio-phonograph. Fisher counted many musicians among his friends and frequently invited groups of them to his apartment on Park Avenue for evenings of chamber music. In 1969 he sold his company to devote himself to philanthropy. His most public gift was an endowment fund to Lincoln Center that supports the Avery Fisher Prize, a gift of $25,000 to an American instrumentalist. Philharmonic Hall was renamed Avery Fisher Hall in 1973 after he donated $10.5 million to Lincoln Center for the Performing Arts.

fishing. See Commercial fishing and Sport fishing.

Fisk, Jim [James, Jr.] (*b* Bennington, Vt., 1 April 1834; *d* New York City, 7 Jan 1872). Prominent financier. He opened a brokerage house on Broad Street in 1865 that was promptly driven into bankruptcy by the deflation that followed the Civil War. In 1866 he regained prosperity by serving as the agent in the sale of Daniel Drew's Stonington Steamboat Line. With Drew's help during the same year he formed the brokerage firm of Fisk and Belden on Wall Street, which enabled him to develop close ties to Jay Gould. Both he and Gould were brought onto the Erie Railroad Board of Directors in 1867 by Drew, and in March 1868 the three began their struggle with Cornelius Vanderbilt for control of the railroad. In July Fisk became the general manager and controller, Gould the president and treasurer; within three months they issued $23 million in watered stock. When Drew and other stockholders obtained an injunction against them, William M. "Boss" Tweed interceded and influenced the judge to place the railroad under Fisk's and Gould's receivership. In the autumn of 1869 the two conspired with Abel R. Corbin, President Ulysses S. Grant's brother-in-law, to corner the gold market. After Grant released the federal gold reserves on 24 September (known as Black Friday), Fisk lost money but Gould sold short and made a fortune. Together they bought Pike's Opera House at Eighth Avenue and 23rd Street, where they built plush offices for the Erie; Fisk also mounted stage productions there and at Brougham's Theater (on West 24th Street) and the Academy of Music (on 14th Street) and launched the largest ferry on the Hudson River, which he named for himself. He was well known for his flamboyant style. On 6 January 1872 he was fatally shot by Edward S. "Ned" Stokes in the Grand Central Hotel in a dispute over the actress Helen Josephine "Josie" Mansfield.

Fitzgerald, F(rancis) Scott (Key) (*b* St. Paul, Minn., 24 Sept 1896; *d* Hollywood, Calif., 27 Dec 1940). Novelist and short-story writer. He moved to New York City in 1919, took a one-room apartment at 200 Claremont Avenue, and worked for an advertising agency in order to save enough money to marry Zelda Sayre. His first novel, *This Side of Paradise,* published in 1920, articulated the new morality of the "flaming youth" of that era. That same year he and Zelda moved into the Biltmore Hotel, on East 43rd Street. The couple soon became known for their drunken antics at scandalous parties in such luxury hotels as the Algonquin, the Knickerbocker, and the Plaza, a mirror of the excess that Fitzgerald both romanticized and criticized in his novels *The Beautiful and the Damned* (1922) and *The Great Gatsby* (1925). In 1924 the couple moved to Paris and the French Riviera, where they became part of the "lost generation" of

disillusioned American expatriates that included Ernest Hemingway and Gertrude Stein. After Zelda was institutionalized with schizophrenia (1930), her husband's career declined; his novel *Tender Is the Night* (1934) was poorly received, and his attempt at a Hollywood screenwriting career in 1937 failed.

Anthony Gronowicz

5 Boroughs Ice Cream. New York City–based ice cream company founded by Scott and Kim Myles in Astoria, Queens. Inspired by an ice cream maker they received as a wedding gift, the couple experimented at home with various flavors before starting their company in the early twenty-first century. Each flavor aims to "capture the essence of gritty Gotham" and draws upon a particular neighborhood for its theme—flavors include Jackson Heights Mangodesh, Staten Island Landfill, and South Bronx Cha Cha Chocolate, among others. Most ingredients are locally produced, though the ice cream is made upstate in Boonville, New York.

Michael C. Repka

Five Points. Former neighborhood in Manhattan, lying in the sixth ward near Mulberry Bend. It was named for the proximity of five streets: Mulberry Street, Anthony (now Worth) Street, Cross (now Mosco) Street, Orange (now Baxter) Street, and Little Water Street (now defunct). The area was swampy and abutted a large pond known as the Collect (now Foley Square); the pond was filled in as a public works project in 1808, and for a few years it was the site of a well-kept neighborhood surrounding Paradise Square. About 1820 the fill began to sink and the area became foul-smelling. Buildings sank and crumbled, and prosperous residents left. Decaying houses, taverns catering to sailors, and shacks remained along the narrow, unpaved streets. A brewery built in 1792 and once known throughout the northeast for its Coulter beer became rundown and was soon the most squalid and dangerous establishment in the neighborhood. The building was subdivided in the 1830s, and parts of it earned such nicknames as "murderers' alley" and "den of thieves." Some of the residents were freed blacks; destitute Irish immigrants moved in, and soon the neighborhood had an Irish population that was exceeded in size only by that of Dublin.

Filthy conditions left the population vulnerable during the epidemics of the nineteenth century. During an outbreak of cholera in 1832 a third of all the cases reported in the city occurred in the sixth ward. The neighborhood was so disreputable that it attracted the interest of many personages from abroad, including Charles Dickens, who visited in 1842 and wrote in his *American Notes* (1842) of the conditions that he saw: alleys filled with knee-deep mud, free-roaming pigs, rotting houses, women sleeping on the floor. By midcentury the neighborhood was ruled by infamous Irish gangs, each several hundred strong: among these were the Plug Uglies, the Dead Rabbits, and the Roach Guards. Abraham Lincoln visited the area in 1860, and the city tried unsuccessfully to improve it. During the 1880s the journalist and reformer Jacob A. Riis called attention to its wretched conditions, prompting a campaign by the city to eliminate the neighborhood. The city acquired and condemned most of the tenements between 1887 and 1894 and later built Mulberry Bend Park (renamed Columbus Park in 1911). Eventually courthouses covered the area, part of which now lies in Chinatown.

Jacob Riis, *How the Other Half Lives* (New York: Charles Scribner's Sons, 1890); Tyler Anbinder, *Five Points: The 19th-Century Neighborhood That Invented Tap Dance, Stole Elections and Became the World's Most Notorious Slum* (New York: Plume, 2002)

Michele Herman

Five Points, 1827 (from Valentine's Manual, *1855)*

Five Points Gang. Street gang formed in the 1890s. It was led by the former prizefighter Paul Kelly (Paolo Antonini Vaccarelli) and was predominantly Italian; a subgroup called the James Street Gang was led by Johnny "the Brain" Torrio. By some estimates there were 1500 members. Like earlier nineteenth-century gangs, the Five Points Gang used force on behalf of corrupt politicians and businessmen. Involved mostly in illegal enterprises in lower Manhattan, it had as its major rival the Eastmans, a gang led by Monk Eastman that was predominantly Jewish. Kelly made his headquarters at the New Brighton Dance Hall on Great Jones Street. By 1915 business had slowed and the influence of the gang was diminished. Several members later became prominent in organized crime during Prohibition, including Torrio, Al Capone, Lucky Luciano, and Frankie Yale.

Robert W. Snyder

Five Points Mission. Mission formed in 1844 by the Ladies' Home Missionary Society of the Methodist Episcopal Church. By 1850 the society sponsored temperance meetings, a charity day school, and a mission chapel. At first the mission was based in a former saloon at the corner of Cross and Little Water streets. In 1852 it purchased and demolished the "old brewery," an infamous tenement on Cross Street (now Park Street) and constructed in its place a chapel, a parsonage, a schoolhouse, a bathing room, and dwellings for poor families. The Five Points House of Industry at 155 Worth Street, run by the minister Lewis M. Pease, separated from the mission in 1854. Both institutions moved out of the area in the 1890s.

Peter J. Wosh

Flagg, Ernest (*b* Brooklyn, 6 Feb 1857; *d* New York City, 10 April 1947). Architect. In 1882–83 he designed the floor plans for cooperative apartment buildings at 121 Madison Avenue and 245 Fifth Avenue (the Knickerbocker), on which he collaborated with the architect Philip K. Hubert. He was then retained to work on the mansion of Cornelius Vanderbilt, a cousin by marriage whom he so favorably impressed with his work that Vanderbilt sponsored his architectural studies at the École des Beaux-Arts in Paris from 1888 to 1889. On his return to New York City in 1891 he set up an architectural practice and promptly won a competition to design St. Luke's Hospital on Amsterdam Avenue at 113th Street. In his article "The New York Tenement House Evil and Its Cure" (pub-

Ernest Flagg's Singer Building from Liberty Street, ca *1905–10*

lished in *Scribner's* in 1893) he ascribed the dark, airless quality of tenements to the small size of the lots on which they were built (25 by 100 feet [8 by 30 meters]) and advocated combining lots to allow for buildings at least 100 feet square (about 9.3 meters square); this became a standard with the passage of the Tenement House Law of 1901. He designed model tenements for the City and Suburban Homes Company (at 68th and 69th streets on Amsterdam Avenue) and model hotels intended for the working class, for the banker and philanthropist Darius Ogden Mills. He also built the Singer Building (1908) at Broadway and Liberty Street; at 612 feet (186.5 meters) this structure was at the time the tallest building in the world, and its construction set off a debate about the effects of skyscrapers and the availability of light and air in New York City. Later he advocated setbacks and the use of only one-quarter of a lot for tall towers. Among his other notable buildings in New York City were Oliver G. Jennings's mansarded residence at 7 East 72nd Street and his own country house, Stone Court, in Dongan Hills, in Staten Island. Flagg's offices were at 35 Wall Street until 1912, when he moved to 109 Broad Street. About 1906 he built a residence for himself at 109 East 40th Street, and in 1918 he moved his office to 111 East 40th Street. His published writings include *Small Houses: Their Economic Design and Construction* (1922).

Alana Erickson Coble

Flammersburg. Former name of a neighborhood in north central Queens, lying in the southern half of College Point and bounded to the north by 15th Avenue, to the east by 130th Street, to the south by 23rd Avenue, and to the west by 119th Street. It was originally a parcel of 141 acres (57 hectares) bought from the Stratton family in 1851 by John A. Flammer, who divided it into 800 lots. In 1870 the neighborhood became part of College Point.

Vincent Seyfried

Flatbush. Neighborhood in central Brooklyn bounded to the north by Parkside Avenue, to the east by Nostrand Avenue, to the south by Avenue H, and to the west by Coney Island Avenue. Settled in 1652 as one of the six original towns of Brooklyn, it was situated in the center of the area known as Midwout (middle woods). Its name derives from the Dutch word *vlackebos* (wooded plain). The area remained rural until the 1880s, when it was made ripe for development by the opening of the Brooklyn, Flatbush and Coney Island Railroad (2 July 1878) and the impending annexation by the City of Brooklyn (1894). Henry A. Meyer, a local grocer, was the first to initiate large-scale construction. Germania Land and Improvement Company laid a grid across 65 acres (26 hectares) of land formerly occupied by the potato farm of the Vanderveers and built rows of Queen Anne cottages. Acres of farmland quickly became well-planned communities, and by 1910 the area had been transformed into a fashionable suburb that comprised such subdivisions as Vanderveer Park, Ditmas Park, Fiske Terrace, Albermarle–Kenmore Terrace, Manhattan Terrace, Matthews Park, Slocum Park, East Flatbush, Rugby, Wingate, Farragut, Erasmus, Beverley Square East, Beverley Square West, Caton Park, Midwood Park, and Yale Park.

After the opening in 1920 of the Brighton Beach subway line, large apartment buildings were erected along Ocean Avenue as far south as Kings Highway. Many of these new buildings were occupied by Jews from Williamsburg, Brownsville, and the Lower East Side. In these years the neighborhood was the site of Ebbets Field, where the Brooklyn Dodgers played from 1913 to 1957. The attention that the team drew helped to make Flatbush an exemplar of the city in the popular mind, and the characteristic patois of its white, middle-class residents became widely known as Brooklynese (a distinction also ascribed to Greenpoint). In the decades following World War II the Jewish population was largely supplanted by a Caribbean one and by immigrants from Pakistan, Afghanistan, Cambodia, Korea, Central America, and the former Soviet Union. Haitians accounted for about one-third of all immigrants settling in the neighborhood, which attracted about one-quarter of all Haitians who moved to the city. There were also a large number of immigrants from Jamaica, Guyana, Trinidad and Tobago, Grenada, Panama, Barbados, St. Vincent and the Grenadines, China, Pakistan, and the

Flatbush, Albemarle Road, 1991

Dominican Republic. On the whole Flatbush adapted well to its growing ethnic diversity, but it also had its share of difficulties. In the early twenty-first century it remained predominantly African American with Arabs and Mexicans along the western edge of Coney Island Avenue.

In the early twenty-first century Flatbush had 3500 one- and two-family houses and more than 30,000 apartments. Notable buildings in the neighborhood include the Flatbush Reformed Dutch Church, at Flatbush and Church avenues (the present structure is the third on the site and was built in 1798; the first was built by order of Peter Stuyvesant); the Erasmus Hall Museum, in the courtyard of Erasmus Hall High School opposite the church (originally Erasmus Hall Academy, opened in 1787 by the Flatbush Reformed Dutch Church and made a public school in 1896); Flatbush Town Hall at 35 Snyder Avenue (1875); and Loew's King on Flatbush Avenue near Beverly Road (1929), a grand movie theater. Newkirk Plaza, between Newkirk and Foster Avenues, was one of the city's first commercial revitalization projects in 1977. Prominent residents of the neighborhood have included the entertainer Barbra Streisand, football coach Joe Paterno, singer Barry Manilow, and chess champion Bobby Fischer. The main thoroughfare is Flatbush Avenue.

Flatiron Building, ca *1905*

Flatiron Building. Office building at the intersection of Broadway and Fifth Avenue at 23rd Street. Formally known as the Fuller Building, the Flatiron Building was erected in 1902 by Chicago architect Daniel H. Burnham. The building's nickname, and the name by which it is most commonly referred, Flatiron, is derived from the triangular shape of the building's plot, which is reminiscent of a pressing iron. Standing 20 stories tall with a rusticated limestone facade on a steel frame, the building remains a symbol of the early skyscraper era. The two wide expanses of the building flanked by Broadway and Fifth Avenue come to a point at a 6-foot- (1.8-meter-) wide northern apex on 23rd Street. Among those unfamiliar with the possibilities of steel-cage construction, the building's tendency to appear as nothing more than a flat wall from certain angles at first fostered a fear that it could very easily topple over. Far more people, however, made a pilgrimage to the building, making it one of the city's most popular tourist destinations in the early twentieth century. From the observation lounge on the top floor, visitors were offered a sweeping and then-unprecedented view of the city. Sightseers also remarked that from the north the building resembled a ship sailing up the avenue. The intersection at the building created unusual wind patterns, and young men would gather in throngs to watch as the wind whipped up and around the skirts of women walking by. Occasionally the spot became so congested that police would have to break up the gathering crowds, giving birth to the phrase "Twenty-Three Skidoo." Iconic depictions of the building by Edward Steichen and Walter Gropius helped to establish the building in the popular imagination.

Seth M. Scheiner, Joe Piscina

Flatiron district. Neighborhood in Manhattan, lying between Chelsea and Gramercy Park and bounded to the north by 23rd Street, to the east by Park Avenue, to the south by 14th Street, and to the west by Sixth Avenue. Named for the Flatiron Building on 23rd Street, the area was a flourishing commercial district during the late nineteenth and early twentieth centuries. It was known especially for elegant hotels, shops, and restaurants along Sixth Avenue between 14th and 23rd streets, later called the Ladies' Mile (designated a historic district in 1989). The neighborhood became a popular place to live in the late 1960s when artists, especially photographers, moved into its many inexpensive lofts. Since the 1980s the Flatiron district has acquired a reputation for fashionable cafes,

restaurants, and nightclubs; interesting shopping; and a varied housing stock.

James Bradley, Andrew Sparberg

Flatlands. Neighborhood in southeastern Brooklyn (2009 pop. *ca* 27,000), bounded to the north by Flatlands Avenue, to the east by Paedergat Basin, to the south by Avenue U, and to the west by Flatbush Avenue. The name is also applied to the larger area that made up the seventeenth-century town called New Amersfoort by the Dutch and Flatlands by the British, and that includes the present neighborhoods of Marine Park, Mill Basin, Bergen Beach, Georgetown, Canarsie, East Flatbush, and Starrett City. In this vicinity the terminal moraine of Long Island meets the marshes of Jamaica Bay; the rich soil in the area attracted Canarsee Indians, who called the land Keskachauge. In 1636 the land was bought by Jacob van Corlear, Andries Hudde, Wolfert Gerritsen van Couwenhoven, and Wouter van Twiller, the governor of New Netherland. Under their auspices settlements were built near what became Beverly Road and Utica Avenue and near Kings Highway and Flatlands Avenue. The settlements together formed New Amersfoort in 1647, named after a city on the River Eem in the province of Utrecht. Couwenhoven built a plantation near the site on Kings Highway where the Flatlands Dutch Reformed Church was later built. By 1651 Governor Peter Stuyvesant had acquired a large plot in the town, and he granted residents local rule in 1661. Farming was the primary occupation. Colonists grew corn, squash, beans, and tobacco and fed their cattle salt hay; fishermen harvested clams in Jamaica Bay. Slaves accounted for about 20 percent of the population and were an important part of the economy until New York State abolished slavery in 1827. In the 1830s the population was about 700, making Flatlands one of the two smallest towns in the county.

The area grew rapidly after the Brooklyn City Railroad Company initiated horsecar service in 1875 to Kings Highway along the recently opened Flatbush Avenue, providing transportation to downtown Brooklyn. After the Flatbush Avenue streetcars were electrified in 1893, new suburban houses attracted a more diverse population. In 1896 the town was one of the last in the county to be annexed by the City of Brooklyn. Growth continued between 1900 and World War II. Interborough Rapid Transit was extended to the junction of Flatbush and Nostrand avenues, providing service to Manhattan in less than an hour. But the neighborhood was not served by the many transit lines leading to Coney Island and was only transformed by the automobile. Kings Highway, the major east-west artery in southern Brooklyn, stretched beyond Flatbush Avenue in the early 1920s, and two-family brick row houses with garages soon covered fields throughout the town.

House and barn built in Dutch Colonial style in Flatlands, 1900

After World War II much of the remaining open land in southeastern Brooklyn was covered by the neighborhoods of Mill Basin, Bergen Beach, and Georgetown, which were some of the last in Brooklyn to be developed according to a suburban model. The only industrial section was developed in the late 1960s on the northeastern edge of the neighborhood near Canarsie. During the 1980s the neighborhood and its environs attracted immigrants from Jamaica, Haiti, and Guyana, but for the most part the population remained Jewish, Italian, and Irish. The Flatlands Dutch Reformed Church on King's Highway and several eighteenth-century farmhouses, among them the Stoothoff–Baxter–Kouwenhoven house on East 48th Street and the Coe house on East 34th Street, remain from the colonial period.

Maud Dillard, *Old Dutch Houses of Brooklyn* (New York: Richard R. Smith, 1945)

Stephen Weinstein

Flatlands Dutch Reformed Church. Church formed on 9 February 1654 by order of Peter Stuyvesant in New Amersfoort, on a site now at the intersection of King's Highway and East 40th Street. The original building was an octagonal structure covered with spruce shingles that stood until 1794. The site is now occupied by the third church erected there, a building in the Greek Revival style constructed in 1848. The church is surrounded by maple trees and a seventeenth-century cemetery. Designated a landmark by the city in 1973, it was badly damaged by fire in 1977 and rebuilt in the following year.

Stephen Weinstein

Fleet Week. Week during which the U.S. Navy, U.S. Marine Corps, and U.S. Coast Guard dock active military ships in a variety of major cities. Since 1984 New York City has hosted one of the nation's largest Fleet Weeks when ships dock at various piers in the boroughs. It usually coincides with the week of Memorial Day and includes a variety of activities such as tours of visiting ships, lectures, and competitions. Nearly 4000 personnel participate across all five boroughs, volunteering with local community outreach organizations and visiting popular New York City attractions.

Anne Epstein

Fleetwood. Neighborhood in the southwestern Bronx centered at Morris Avenue and 165th Street. From 1870 to 1899 it was the site of Fleetwood Park Racetrack, a trotting track with a circumference of 1 mile (1600 meters) that was attended by such personages as Ulysses S. Grant, John D. Rockefeller, and the newspaper publisher Robert Bonner. After the track was closed, streets were cut through, row houses and apartment buildings erected, and shops opened. The population was at first Irish and Jewish and in the 1960s became largely black and Latino.

Lloyd Ultan

Fleischer, Nat(haniel S.) (*b* New York City, 3 Nov 1887; *d* New York City, 25 June 1972). Sportswriter and publisher. He graduated from City College of New York in 1908 and went to work as a teacher in the public schools. Between 1912 and 1929 he worked for several different newspapers in New York City, including the *Press,* the *Sun,* and the *Telegram,* and in 1922 he launched a boxing magazine called the *Ring.* As the editor of the publication he improved the image of boxing and advocated equal rights for blacks who practiced the sport. Fleischer continued to publish the *Ring* until the end of his life. He wrote *50 Years at Ringside* (1958).

Randy Roberts

Fleischmann Yeast Company. A company formed in 1868 by Charles and Maximilian Fleischmann, two brothers from Vienna. They skillfully promoted German compressed yeast at the Centennial Exposition in Philadelphia. Their showcase outlet, a bakery and café on Broadway at 10th Street, became a fashionable stop for shoppers along the Ladies' Mile. Raoul H. Fleischmann (1885–1969) worked in the Fleischmann family bakery (1907–11) and its successor, the General Baking Company (1911–25), before joining the F-R Publishing Company (1925–69), publishers of the *New Yorker.* The firm's compressed yeast revolutionized home breadmaking in the United States. In 1979 Fleischmann Yeast was acquired by Standard Brands.

Bradford Garnett

Flexner, Abraham (*b* Louisville, Ky., 13 Nov 1866; *d* Falls Church, Va., 21 Sept 1959). Medical educator, brother of Simon Flexner. From 1908 to 1912 he worked for the Carnegie Foundation for the Advancement of Teaching. In 1910 the foundation published his report *Medical Education in the United States and Canada,* which proved influential in modernizing physician training in North America. In 1913 he joined the staff of the General Education Board of the Rockefeller Foundation, where he was successively assistant secretary (1913–17), secretary (1917–25), and director of the Division of Studies and Medical Education (1925–28). In these positions Flexner secured tens of millions of dollars for the advancement of scientific medical education.

Allen J. Share

Floating Hospital. Waterborne hospital established in 1866. It operated only during the warmer months until it began year-round service in 1975. The hospital cruised the Hudson River providing preventive care, health education, and other services to medically underserved groups. The Floating Hospital lost its dock space in lower Manhattan to recovery efforts after the terrorist attacks of 11 September 2001. In 2004, unable to find dock space accessible to the public, the Floating Hospital Corporation sold the ship that had served as the Floating Hospital since 1977, the *Lila Acheson Wallace.* In 2006 the Floating Hospital reopened in Long Island City as a land-based facility with 10 exam rooms.

Andrea Balis

flora. The grasses, flowers, shrubs, and trees growing throughout New York City only remotely resemble the varieties that grew there before European settlement. Many species were brought to the area by colonists, some purposely and others accidentally. A number spread to surrounding areas, sometimes crowding out native species, and a few carried diseases that proved devastating, among them the Dutch elm disease and the chestnut blight, which was introduced by a tree from Europe planted in Central Park. A dominant characteristic of plants in the city is their ability to survive highly acidic rain, a high degree of salinity, and air polluted by ozone, sulfur dioxide, and carbon monoxide; many of those from outside the region are also immune to local viruses and bacteria. Like the ecosystems in other cities, those of New York City grow and change. Many of its plants are found in other cities nearby, including Philadelphia, Newark (New Jersey), and New Haven and Hartford (Connecticut). The Autumn Olive (*Elaeagnus unbellata*), a species native to Asia, is used for reclamation planting because it grows profusely and can withstand extreme drought, salinity, and temperature. Its tart red berries provide food for Bobwhite Quail, Cedar Waxwings, robins, starlings, White-throated Sparrows, and Hermit Thrushes throughout the autumn and early winter. Birches such as the Gray Birch (*Betula populifolia*) are among the first to grow in cleared areas. Another species that thrives in sunny areas is the Black Cherry (*Prunus serotina*), which produces clusters of fragrant white flowers in May and berries that provide food for songbirds in late summer; mature trees range in height from 40 to 100 feet (12 to 30 meters) and have dark, rough outer bark. These trees are soon outgrown by others more tolerant of shade. Other common species in the metropolitan area are the Eastern Red Cedar (*Juniperus virginiana*), the Cottonwood (*Populus deltoides*), the American Holly (*Ilex opaca*), and the Red Maple (*Acer rubrum*). The Salt-spray Rose (*Rosa rugosa*) produces beautiful blossoms from May to October. Its rosehips are a rich source of vitamin C and were eaten in preserves by colonists to prevent scurvy in winter. Mugwort and Sweet Clover grow in salt marshes, often in the wake of construction, as does Reedgrass (*Phragmites australis*), which forces out other marsh grasses but provides a source of food and cover for some wildlife.

Steven D. Garber, John T. Tanacredi

Floral Park. Neighborhood straddling Queens and Nassau County near the intersection of Jamaica Avenue and Little Neck Parkway. It was established around 1870 between Tulip and Carnation avenues in Nassau County and originally named Hinsdale after the chief counsel of the Long Island Rail Road, Elizur B. Hinsdale. The name was changed in 1890 to honor John Lewis Childs, who had opened a large commercial nursery in the area during the 1880s. The neighborhood extended northward into Queens after World War II, when the extension of Hillside Avenue as far east as the county line stimulated housing development between the county line and Little Neck Parkway on land that had long been used for farming. Floral Park remained in the early twenty-first century a community of modest one-family homes.

Vincent Seyfried

Flower Fifth Avenue Hospital. Teaching hospital in Manhattan. It was formed in 1890 as the Flower Free Surgical Hospital at 450 East 64th Street by administrators of the Homoeopathic Medical College of New York (later New York Medical College), who sought greater training opportunities for their students. The hospital had financial support from a prominent businessman and Democratic politician, Roswell P. Flower. Later the hospital and the college together were known as the New York Homoeopathic Medical College and Flower Hospital (1908) and as the New York Medical College and Flower Hospital (1936); a merger in 1938 with the Fifth Avenue Hospital at 105th Street formed an institution known as the New York Medical College, Flower and Fifth Avenue Hospitals. The hospital remained in the city after the college moved to Westchester County in 1972, but financial reverses in the late 1970s brought it near bankruptcy. In 1978 the Roman Catholic archdiocese of New York took over both the college and the hospital, which was converted in the following year from an acute-care facility into the Terence Cardinal Cooke Nursing Home.

Sandra Opdycke

Flower Market. Located at 28th Street and Sixth Avenue since the 1890s, the market is a cluster of wholesale and retail flower shops. In the mid-nineteenth century flowers were sold directly by local growers at markets. Later in the nineteenth century third-party agents were added as wholesale commission

merchants. Manhattan's first flower district was around East 34th Street at the East River in the 1870s and relocated to Sixth Avenue between 26th and 29th streets by the end of the nineteenth century. The market is most active in the early morning, starting as early as 4 a.m. In 1999 the Flower Market Association of New York City was formed and headquartered at 120 West 28th Street. In the twenty-first century the Flower Market was composed of approximately 45 businesses and had estimated annual gross sales of $100 million.

Jessica Montesano

Floyd Bennett Field. First municipal airport in New York City. Built on 1500 acres (600 hectares) of reclaimed marshland in Jamaica Bay and dedicated in 1930 by Mayor James J. Walker, it was named for the pilot who flew Admiral Richard Byrd over the North Pole in 1926. Enlarged in 1936 by the Works Progress Administration, it was used by such aviators as Howard Hughes, Laura Ingalls, and John Glenn. Because of its location one hour away from central Manhattan, it never attracted more than one commercial airline flight a day, and its importance was so diminished after La Guardia Airfield opened in 1939 that in 1942 it was sold to the navy. As Naval Air Station New York it performed a vital function during the U-boat offensive of 1942 by providing air cover for convoys embarking from the Port of New York; the Naval Ferry Squadron based there delivered thousands of aircraft to the fleet from factories on Long Island. In 1972 the field was taken over by the National Park Service, which as of 2007 operated the field as part of the Jamaica Bay Unit of the Gateway National Recreation Area, displaying an old hangar and restored airplanes to the public.

Joseph F. Meany, Jr.

Flushing. Neighborhood in north central Queens, bounded to the north by Bayside Avenue, to the east by the Clearview Expressway, to the south by Union Turnpike, and to the west by Flushing Meadows–Corona Park. It was established by English settlers who received patents for it from Governor Peter Stuyvesant in 1654. The name is a corruption of Vlissingen, a village in the Netherlands. The area was desirable for its woodlands, freshwater, and salt hay. After the arrival of English Quakers in 1657 Stuyvesant sought to renege on earlier promises of religious toleration, prompting freeholders and Quakers in the nearby area to issue the Flushing Remonstrance, one of the earliest documents proclaiming religious freedom in America. Quakers bought land in 1692 for a meetinghouse, which now stands on Northern Boulevard. One of the first nurseries in the country, the Linnaean Gardens, opened in 1737 just north of Northern Boulevard. The nursery industry flourished throughout the nineteenth century, shipping fruit trees and ornamental trees and shrubs across the nation. After the Battle of Long Island in 1776 Flushing was occupied by British troops until 1783. The tolerance of the Quakers attracted a number of African Americans in the early nineteenth century, of whom the best known was Lewis Latimer, an electrical inventor who worked with Thomas Edison. The year 1843 saw the publication of a newspaper and the opening of the Flushing Institute, a secondary school for boys that eventually enrolled students from the southern United States, Central and South America, and Europe. Fast, direct rail service to New York City was provided from 1854. Flushing Town Hall was completed in 1864 (now a cultural center and a city landmark). Development accelerated after the Civil War as many wealthy New Yorkers built elegant houses. From the 1890s until World War I the

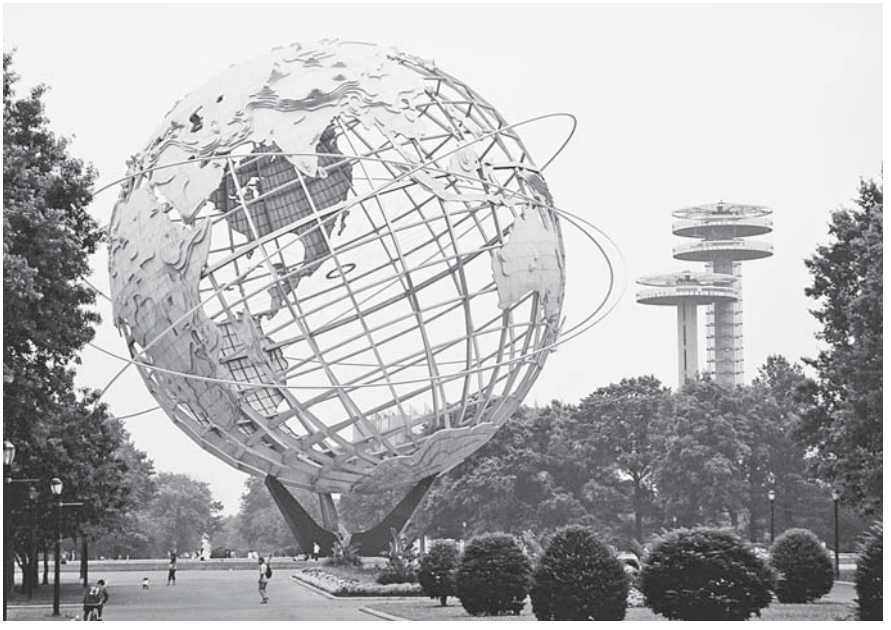
Floyd Bennett Field, 2009

Trustees of Flushing Village, 1887

neighborhood expanded to the east and south and new sections opened up to residential development, including Ingleside, Murray Hill, Broadway–Flushing, Bowne Park, Kissena, and Queensborough Hill. Flushing became a commuter suburb after trolley lines were extended (1888–99) and the Long Island Rail Road was electrified. Flushing High School opened in 1875, making it the oldest in the city; the 1915 building was designated a landmark in 1991.

Apartments were built in the 1920s, and the character of the area changed after subway service was introduced with a five-cent fare in 1928. After World War II apartments displaced entire blocks of houses, and during the 1960s many Japanese, Chinese, and Koreans settled in the neighborhood. Downtown Flushing acquired more urban characteristics. It attracted many immigrants during the 1980s; about 20 percent were Chinese (primarily from Taiwan) and 20 percent Korean, with others from India, Colombia, Afghanistan, Guyana, the Dominican Republic, Pakistan, the Philippines, and El Salvador. During the 1990s the older establishments like Alexander's department store closed and the commercial core saw the growth of Asian mini-malls. Beyond Main Street, blocks of one-family houses remained, interspersed with schools, churches, and well-kept cemeteries and parks. To protect the suburban character of their neighborhood, residents of Broadway–Flushing (north of Northern Boulevard) gained listing on the National Register of Historic Places in 2007 but could not obtain local designation as a historic district. The Landmarks Preservation Commission also declined to designate the Waldheim section.

Historic buildings include the Bowne House (1661) at 37-01 Bowne Street, the oldest surviving house in Queens; the Kingsland House on 37th Avenue, built about 1785, a rare example of English architecture (relocated to Weeping Beech Park in 1968); the Voelker Orth Museum, an 1890s home turned into a museum in 2003; the 1905 Flushing Armory; and RKO Keith's Flushing Theater (1928), a movie palace designed by Thomas Lamb, partially protected by landmark designation but vacant since the mid-1980s. In the heart of the neighborhood at Roosevelt Avenue and Main Street is an extensive network of Asian banks and businesses. There are several large Buddhist houses of worship and a large and ornate Hindu temple. Historic churches include St. George's Episcopal (1854); Bowne Street Community Church, with windows by Louis Comfort Tiffany (1892); and the Macedonia African Methodist Episcopal Church, founded 1811. The many nurseries that once flourished in the area are gone, but some of the trees raised in them survive, notably in Kissena Park; and the Queens Botanical Garden, founded as part of the 1939 World's Fair and established at its current location on Main Street before the 1964 World's Fair, continues the tradition. The historic weeping beech planted by Samuel Bowne Parsons in 1847 died in 1997, but several descendants survive in Weeping Beech Park.



Vincent Seyfried, Jeffrey A. Kroessler

Flushing Meadows–Corona Park. Public park in north central Queens, bounded to the northeast and east by Flushing, to the south by Kew Gardens and Forest Hills, to the west by Elmhurst, and to the northwest by Corona. It is the second-largest park in the city, with an area of 1255 acres (508 hectares). After the local American Indian tribe, the Matinecocks, had been pushed out, European settlers harvested the seafood and marsh grasses there, but the area remained largely natural. After New York's consolidation in 1898, rail lines were extended into the area, landfill was deposited in the tidal wetland to the north, and a river from Flushing Bay was blocked. The area was given over to industrial use and waste dumping: one ash heap reached a height of nearly 100 feet (30 meters) and became popularly known as Mount Corona. Known originally as Flushing Meadow Park, the park became the site of two world's fairs (1939–40, 1964–65), both largely the inspiration of Robert Moses. The fairs caused the addition of several features to the landscape: these included from the first fair a lake, a boathouse, paths, plantings, and the New York City Building (the temporary headquarters of the United Nations from 1946 to 1950 and later the Queens Museum); and from the second fair the Unisphere (a large steel globe and the centerpiece of the fair), Shea Stadium (1964, the former home stadium of the New York Mets), a public marina at Flushing Bay (1964), Space Park (later the New York Hall of Science), the Singer Bowl (from 1976 Louis Armstrong Stadium at the National Tennis Center), and the Winston Churchill Pavilion (a geodesic structure designed by R. Buckminster Fuller, from 1968 an aviary at the Queens Zoo). In 1967 the World's Fair Corporation returned the park to the city. The New York Zoological Society later redesigned and rebuilt the Queens Zoo, which reopened in 1992. In 1997 the 23,000-seat Arthur Ashe Stadium, the largest outdoor tennis venue in the world, opened in the park and replaced Louis Armstrong Stadium as the featured site of the US Open. In 2009 the baseball stadium Citi Field opened, replacing Shea Stadium as the home of the New York Mets.

The Flushing Meadow Improvement: Official Publication of the City and State (New York: Department of Parks, 1936–39)

Jonathan Kuhn

Flushing Remonstrance. Declaration of religious liberty, drawn up and approved at a town meeting in Flushing and dated 27 December 1657. The document was a reminder to Governor Peter Stuyvesant that the Patent of Flushing (1645) offered "liberty of conscience" to settlers. It was inspired by an order from Stuyvesant, a strict Calvinist, forbidding all colonists to allow Quakers into their homes and imposing a large fine of 50 guilders, with half the money going to any informer. The Flushing Remonstrance is sometimes regarded as the "first declaration of independence" and as a forerunner of the First Amendment. The

The Unisphere in Flushing Meadows–Corona Park, 2009

document itself is now held by the New York State Library in Albany.

Jeanne Field Spallone

Flynn, Edward J(oseph) (*b* Bronx, 22 Sept 1891; *d* Ireland, 18 Aug 1953). Party leader. He earned a bachelor's degree and a law degree at Fordham University and was elected a state assemblyman (1918–21) and sheriff of Bronx County (1922–25). As the leader of the Democratic organization in Bronx County from 1922 he maintained a reputation for honesty and a commitment to liberal policies. He was also an adviser to Franklin D. Roosevelt during Roosevelt's tenure as governor of New York and later as president. While serving as city chamberlain (1925–28), secretary of state of New York State (1929–40), and chairman of the Democratic National Committee (1940–44), Flynn was one of the most influential politicians in New York City. Flynn wrote a memoir, *You're the Boss* (1947).

See also Bronx, §2.

Chris McNickle

Flynn, Elizabeth Gurley (*b* Concord, N.H., 7 Aug 1890; *d* Moscow, 5 Sept 1964). Activist and political leader. After moving with her family to New York City in 1900 she attended Public School 9 in the South Bronx and Morris High School, leaving before graduation to become one of the few female organizers of the Industrial Workers of the World. She quickly became known as a strike leader, civil rights advocate, and extraordinary orator. She helped form the American Civil Liberties Union in 1920; in 1940 she was expelled from its board of directors for her membership in the Communist Party. Convicted of sedition under the Smith Act in 1952, she served three years in federal prison before being released in 1957. At her death she was the national chair of the Communist Party.

Martha Foley

F. Marquand. Former name of Black, Starr and Frost.

Fokine, Michel [Fokin, Mikhail (Mikhailovich)] (*b* Saint Petersburg, 23 April 1880; *d* New York City, 22 Aug 1942). Dancer and choreographer. He received his early ballet training at the Imperial School of Ballet in St. Petersburg and joined Sergei Diaghilev's Ballets Russes in Paris in 1909. He taught in New York City from 1919 and in 1923 settled there with his family, where he taught a generation of American dancers and restaged the better known of his more than 60 ballets. Fokine's influential choreographic principles helped to make ballet a serious theatrical form rather than mere entertainment. His book *Fokine: Memoirs of a Ballet Master* was published in 1961.

Dawn Lille Horwitz, *Michel Fokine* (Boston: Twayne, 1985)

Barbara Barker

Foley, James A. (*b* 1883; *d* New York City, 11 Feb 1946). Legislator and surrogate. He served in the state legislature (1907–19), where with Alfred E. Smith and Robert F. Wagner he guided the effort of the "new Tammany" to rewrite the state's labor laws after the Triangle Shirtwaist fire. In 1919 he was chosen Democratic leader of the state senate, which he left to become a surrogate in Manhattan (1920–46). In 1946, he was elected to lead Tammany Hall but resigned immediately, pleading ill health. He was urged to run for mayor and the U.S. Senate, but he declined to leave the probate bench. Foley was a nationally respected authority on the law of estates and an influential delegate to the state constitutional conventions of 1915 and 1938. He lived at 243 East 17th Street.

Frank Vos

Foley Square. Intersection of Duane, Lafayette, Center, and Pearl streets north of City Hall in Manhattan, and by extension the surrounding area. Much of the land once lay beneath the waters of the Collect, a pond drained and completely covered over by 1811; the area soon after became the site of one of the city's most notorious slums. In later years a number of municipal, state, and federal buildings were built around the square, including the New York County Court House (1926) and the U.S. Court House (1936), renamed for Thurgood Marshall in 2003. The square is named for Thomas F. Foley (1852–1925), a saloonkeeper and politician associated with Tammany Hall.

Linda Elsroad

folk and ethnic dancing. At the beginning of the twentieth century, officials in New York City promoted European folk dancing as a "wholesome" alternative to increasingly popular ragtime dances. The city's most evangelistic supporter of European folk dances was Elizabeth Burchenal, an employee of the Board of Education who worked with the Playground Association of America and set up after-school programs for girls from 1911. In 1915 the English Folk Song and Dance Society opened a branch in New York City; the society sent May Gadd, an English dance instructor, to New York City in 1927. She became director of the society in 1937 and remained in office for 46 years. During her tenure the society, which she renamed the Country Dance and Song Society of America to reflect her interest in Appalachian dances, sponsored seasonal festivals that regularly attracted hundreds of dancers and established folk dance clubs at local high schools and colleges, including Brooklyn College, Barnard College, and the Juilliard School; she also worked with the choreographer Agnes de Mille on the dance steps for the musicals *Oklahoma!* and *Brigadoon.* The New York Folk Festival Council, formed in 1931 and based at 222 Fourth Avenue, presented annual events in public parks, including a festival in May 1934 in Prospect Park that attracted 20,000 participants and spectators.

A leader in ethnic dance in the city was Asadata Dafora, who moved to New York from Freetown, Sierra Leone, in 1929, formed Shogola Olobo in 1932 and the African Dance Troupe in 1935, and wrote the dance opera *Kykunkor,* which opened at the Unity Theatre on East 23rd Street in April 1934. Dafora also provided choreography for *Bassa Moona,* which premiered in 1937 at the Majestic Theatre in Brooklyn and was staged at the Daly Theatre in Manhattan. In 1940 Mary Ann and Michael Herman formed the Community Folk Dance Center, which inspired so many imitators that John Martin, the dance critic for the *New York Times,* discontinued his weekly listing of folk dance events for lack of space. The Hermans had several changes of residence before moving in 1951 to 108 West 16th Street. There they opened Folk Dance House, maintained a costume collection and reference library, and conducted classes full-time. Although the building was demolished in 1969, they continued to teach and to present traditional folk-dance programs at St. Vartan's Armenian Church at 630 Second Avenue. In 1980 they moved to Long Island. Their contemporary La Meri also helped draw public attention to ethnic dancing during the 1940s. After settling in New York City in 1939, she formed a partnership with the dancer and choreographer Ruth St. Denis, with whom in May 1940 she opened the School of Natya at 66 Fifth Avenue. La Meri also led the Ethnologic Dance Center, which she moved in 1943 to 110 East 59th Street.

Several dancers overcame cultural prejudice, racism, and censorship in working to gain acceptance for the folk dances of the southern hemisphere. Katherine Dunham, a figure most closely associated with modern dance, launched the "anthropological" dance movement. After her local debut at a "Negro Dance Evening" at the 92nd Street Y in 1937, she moved her troupe to the city in 1939 and accepted the directorship of the New York Labor Stage. In 1945 she opened the Dunham School of Dance and Theater on West 43rd Street, which specialized in Afro-Caribbean dance; the school lasted until the mid-1950s. The Trinidadian anthropologist and dancer Pearl Primus also invigorated ethnic dance in the city during the 1940s. After a 10-month engagement at Café Society in 1943 she made her debut at the Belasco Theater the following year. Throughout her career she maintained a connection to the city through her School of Primal Dance (1961) at 17 West 24th Street

and her teaching position at Hunter College. The Haitian dancer Jean-Léon Destine presented traditional Afro-Haitian dances in the 1940s and specialized in *vodun* dance. Perhaps best known for his short film *Witch Doctor,* he taught in Manhattan into the 1990s. The Philippine Dance Company of New York was formed in 1943 by Bruna Seril; led from 1969 by Reynaldo Alejandro, it achieved popularity and undertook national and international tours while maintaining a regular performance schedule in the city.

Early in the twenty-first century ethnic dance troupes representing every region of the globe remained based in New York City. Institutions that supported folk dancing included the McBurney Young Men's Christian Association (YMCA) at 215 West 23rd Street and the 92nd Street Y, which offered instruction in Israeli dancing.

folk music. Songs from England, Ireland, Scotland, and Africa were sung during the colonial period in public gatherings, homes, and workshops in New York City. Mariners at South Street in the first half of the nineteenth century devised many kinds of ballads and sea chanteys from songs of British and African origin. At mid-century Irish, English, and Scottish balladeers performed regularly on the stage, and their songs became popular in taverns. Songs were often published as broadsides to assure wide distribution. At the end of the century German, Swedish, and other immigrants organized choral societies that preserved their folk songs, some of which were later adapted for the vaudeville stage. In the early twentieth century blues songs were introduced in the city by blacks from the rural South.

Members of the Industrial Workers of the World often sang as they picketed during the early twentieth century, and folk music became an important vehicle for political expression during the 1930s: the Popular Front, a movement loosely associated with the Communist Party, spread its ideas through folk music. At the same time many folk musicians took up residence in New York City, including Leadbelly (Huddie Ledbetter, 1885–1949), a singer, songwriter, and blues guitarist from Louisiana who moved to the city in 1935 after his work came to the attention of Library of Congress folklorists John A. Lomax and his son Alan Lomax; Woody Guthrie, who sang about farmers displaced during the Dust Bowl of the 1930s; and Pete Seeger, who adopted the ballads and banjo styles of the southern Appalachian mountains. All three performed traditional songs and their own material and were associated with the bohemian culture of Greenwich Village, making the city a center for a new kind of folk music.

Between 1941 and 1942 the Almanac Singers were organized by Seeger, Guthrie, Lee Hays, and Millard Lampell. The group's members lived in a loft known as Almanac House at 130 West 10th Street and performed for drives organized by the Congress of Industrial Organizations and antifascist functions sponsored by the Popular Front. The group included several musicians who became well-known soloists: Burl Ives, Cisco Houston, Bess Lomax, and Earl Robinson. In the years after World War II Greenwich Village remained a center of folk music, and sing-alongs were often held in Washington Square despite the objections of city authorities. The radical group People's Songs was formed about this time, but it was less influential than earlier groups owing to the conservative political climate after the war. From the late 1940s to the early 1950s the Weavers became immensely successful for their arrangements of topical folk songs from around the world, and their song "Good Night, Irene" (1950) sold two million copies, an unprecedented number for a folk song.

During the 1950s and 1960s folk music was revived by Seeger and a new generation of singers, many of whom had been influenced by the civil rights movement and the student left. Two of the best known were from Brooklyn: Dave Van Ronk played the blues; and Elliot Charles Adnopoz, who took the name Ramblin' Jack Elliott, played in Guthrie's style and traveled west. The most influential folksinger was Bob Dylan, an admirer of Guthrie who moved to New York City in 1961 and performed original and traditional songs, accompanying himself on acoustic guitar and harmonica. He performed throughout the city before gaining public recognition. By the mid-1960s he turned to an electric style influenced by rock-and-roll. Judy Collins and the group Peter, Paul and Mary were among many folksingers who lived in the city during the 1960s and sang about the civil rights and antiwar movements. They first performed for small audiences at clubs in Greenwich Village such as Gerde's Folk City on West Third Street, and their records were later sold internationally. Irish folk music was revived in Ireland and the United States by the Clancy Brothers and Tommy Makem. The Pennywhistlers performed folk songs from Eastern Europe and the Balkans.

As radicalism declined in the 1970s so did the political importance of folk music, but solo folksingers accompanied by guitar continued to be popular in New York City. Indian folk music was performed in such celebrations as the Divali festival, as was *taiko* drumming during Japanese cherry blossom festivals. The rhumba, popular in Latin American neighborhoods, was introduced in nightclubs by well-known performers like Tito Puente and Celia Cruz. In the 1980s the Ethnic Arts Center and the World Music Institute supported performances by a range of international folk artists, and the Eagle Tavern on West 14th Street in Manhattan became a center for Irish folk music; in Greenwich Village musicians established Speakeasy's, a cooperative cafe on MacDougal Street where singers and songwriters performed topical songs and traditional folk music. In the early twenty-first century small venues in the city continued to showcase folk music, including the tiny Postcrypt Coffeehouse in the basement of St. Paul's Chapel at Columbia University, which was founded in 1964.

Barbara L. Tischler

Folks, Homer (*b* Hanover, Mich., 18 Feb 1867; *d* New York City, 13 Feb 1963). Reformer. He moved to New York City in 1893 and in the same year was appointed by Louisa Lee Schuyler as the secretary of the State Charities Aid Association, a private organization that monitored public welfare institutions. In 1898–99 he served on the first Board of Aldermen of New York City and worked to reform municipal building codes. As the city's commissioner of public charities (1902–3) he opened the first municipal hospital for tuberculosis, on Blackwell's Island. He also prevailed on the state legislature to pass the Public Health Law (1913) and the Public Welfare Law (1929). He was a member of the New York State Public Health Council (1913–49). In 1921 he was instrumental in opening the East Harlem Health Center, the first neighborhood health center in New York City; its success led the city's public health department to take charge of it, and by 1944 the department operated 14 other centers in the city. During the Depression of the 1930s Folks advised President Franklin D. Roosevelt on welfare. He resigned from the State Charities Aid Association in 1947.

Follin, Miriam. See Leslie, Miriam.

food. New Yorkers enjoy a greater variety of food and drink than most other Americans because of the city's size, its status as a port, and its many immigrant groups. Manhattan was a center of the rum trade during the colonial period and had four rum distilleries in 1770. During the nineteenth century seafood was so abundant that lobsters were an everyday item, oysters were common at large fish houses, and caviar from the Hudson was served without charge by saloons. Much of the seafood destined for American markets passed first through Fulton Market in New York City, enabling local retailers and restaurant owners to take the freshest fish. Even

salmon caught in the Pacific Northwest was typically shipped to New York City for sale, then back again to Portland (Oregon) and Seattle. With the arrival of large numbers of German immigrants in the 1840s New York City became an important center of brewing. In 1877 the Hell Gate brewery, established by the German immigrant George Ehret, was the largest brewer in the United States, and by 1879 there were 78 breweries in Manhattan and 43 in Brooklyn. Much of the demand for seafood and other products resulted from the fondness of New Yorkers for dining out. The grand dining RESTAURANTS of the late nineteenth century and the hotel restaurants of the early twentieth served native fish with a European flair. Among the dishes created or popularized in the city were lobster Newburg, sole Marguery, and baked Alaska (served at Delmonico's); crabmeat Remick (at the Plaza Hotel); clams Casino (by Julius Keller at Narragansett Pier); vichyssoise (at the rooftop garden of the Ritz–Carlton Hotel by Louis Diat); and chicken Divan (at Divan Parisien on East 45th Street). A number of popular mixed cocktails also originated in New York City, including the Bloody Mary (first served at the King Cole Bar in the St. Regis Hotel by the Parisian bartender Ferdinand "Pete" Petiot and known as the "red snapper"); the Manhattan (at the Manhattan Club in 1874 to honor the election of Governor Samuel J. Tilden); the Bronx, made up of gin, sweet vermouth, and orange juice (at the Waldorf Hotel in 1906 by the bartender Johnnie Solon); the Christy girl, made with peach brandy, gin, and grenadine (at the Sherry–Netherland Hotel); the gibson, named for the illustrator Charles Dana Gibson (at the Players); sangria (at the Spanish Pavilion during the World's Fair of 1964–65); and the kamikaze, a drink of lemon juice, lime juice, Cointreau, and vodka (at Les Pyrénées by Tony Lauriano in 1972).

In many neighborhoods of New York City elegant French and Italian restaurants are found alongside Korean grocers, pizzerias, Greek diners, soda shops, delicatessens, and Chinese markets. Many popular foods were created by immigrants who adapted their traditional recipes according to what was available in the United States. Italian dishes made in this fashion included veal parmigiana, clams Posillipo, spaghetti and meatballs, veal Marsala, Italian cheesecake, and spaghetti alla Caruso (all adaptations of Neapolitan or Sicilian dishes), pizza (originally poor people's food in Naples), pasta primavera (made with fettuccini noodles and vegetables by Sirio Maccioni, the owner of Le Cirque), and the hero sandwich. A large number of the foods associated with American Jews originated in New York City and were at first unknown to Jews in Europe and the Middle East, including bagels, blintzes, knishes, lox, Danish pastries, cheesecake, the Reuben sandwich, and egg creams, a confection sold at candy stores made with chocolate syrup, milk, and seltzer (but neither eggs nor cream). American Jews also popularized seltzer (called *belchwasser* or Jewish champagne and drunk as a remedy for dyspepsia), the bottled chocolate drink Yoo-Hoo, and the coffee-flavored soda Manhattan Special. Other ethnic foods originated or popularized in the city include the hot dog (by Nathan Handwerker of Nathan's at Coney Island); the English muffin (by Samuel Bath Thomas sometime after 1880); London broil (in restaurants throughout Manhattan); chocolate fondue (at the Chalet Suisse in 1956 by Konrad Egli); negimaki, a dish of beef rolls and scallions with soy sauce (at the restaurant Nippon by its owner Nobuyoshi Kuraoka in 1959); and eggs Benedict. Although most of these foods were well liked, immigrants also created a market for such exotic items as squid, mussels, salt cod, tripe, brains, heart, kidneys, chilies, cilantro, broccoli, and leeks.

Since the 1980s a surge of Latin American immigration has led to neighborhoods whose markets and eateries cater specifically to the recently arrived locals. In Queens, Brooklyn, and the Bronx one will easily find stores selling Salvadoran specialties like *pupusa* (stuffed masa cake), Cuban pork sandwiches, Peruvian rotisserie chickens, and Haitian *fritaille* (fried foods). In the late 1990s immigration from the various states once called Yugoslavia resulted in large numbers of Albanians, Serbs, Croatians, and Montenegrins bringing their homeland foods to the city, from Dalmatian *pasticada* (stuffed beef cooked in wine and spices) to steak à la Zagreb (breaded veal stuffed with ham and cheese), Albanian *corba* (a rice and lemon soup), *ematur* (an almond cake), and *kungull me kos* (battered and fried morsels of squash with garlic-yogurt sauce).

Many of the most popular American candies and confections were first made in New York City (see CONFECTIONERS), including Tootsie Roll (named by Leo Hirschfield for his daughter) and Chunky (named by Philip Silverstein for his granddaughter). The German immigrant Henry Heide sold more than 350 brands of candy from his shop in the city, among them Jujubes, Jujyfruits, Red Hot Dollars, Chocolate Sponge, Mexican Hats, Parlay bars, and Turkish Taffy. Yogurt became popular throughout the United States after Daniel Carasso and Joe Metzger began producing it under the name Dannon at a small factory in the Bronx. The ice-cream sandwich and a soft ice cream called frozen custard were introduced in the city, which was also the headquarters of two important makers of "premium" ice cream, Häagen-Dazs and Sedutto's.

The principal wholesale food market for the city, at Hunts Point in the Bronx, is the largest produce market in the world. It sells more than $1 billion worth of produce yearly and handles 50 to 60 percent of the nearly four billion pounds (1.8 billion kilograms) of fruit and vegetables consumed annually in greater New York.

New York Dragons (2001–)	AFL*

NFL = National Football League, AFL = American Football League, AAFC = All-American Football Conference, WFL = World Football League, AFL* = Arena Football League. A slash indicates that a team changed its name or league.

first played organized football in 1873. From the earliest days, games between local colleges were overshadowed by games between out-of-town schools that played in New York to attract more fans. As early as the 1880s Princeton and Yale played annually in the city on Thanksgiving Day, and in the 1890s crowds of more than 30,000 attended their games at the Polo Grounds. During the 1920s, games between the college football powerhouses Army and Notre Dame created the most excitement.

Brickley's Giants, which played only two games in 1921 as part of the National Football League (NFL) before disbanding, was the city's first major professional team. A new NFL team called the New York Giants was formed in 1925 by Tim Mara. The following year Red Grange, a recently graduated collegiate football star, and his agent Charles Pyle asked permission from Mara and the NFL to form another team in New York City. When the request was denied, they created the first of four organizations known as the American Football League (AFL). Among the teams in the new league was the first of five teams called the New York Yankees, which played in Yankee Stadium, and another called the Brooklyn Horsemen, which played four games before merging with the Brooklyn Lions of the NFL (the new team finished the season as the Brooklion Horsemen); the first AFL ceased operations after one year. The NFL soon established several more teams in the city, including the New York Yankees (1927–28), the Staten Island Stapletons (1929–32), and the Brooklyn Dodgers (1930–44), owned first by Dan Topping (who in 1939 acquired a controlling interest in the baseball Yankees and in 1946–48 owned the New York Yankees of the All-America Football Conference).

College football in New York City had its heyday during the interwar years, though it never generated the enthusiasm that it did elsewhere. New York University played its best football from 1926 to 1928. Led by Ken Strong, the team lost only four games in three seasons. In 1934 Columbia pulled a major upset by defeating Stanford by a score of 7 to 0 in the Rose Bowl. The team used a play called the KF-79 in which the quarterback, Cliff Montgomery, made a series of handoffs and fake handoffs to the halfbacks. From 1935 to 1937 the Fordham University Rams were known for their vaunted defensive line called the seven blocks of granite, which included Vince Lombardi and Alex Wojciechowicz. During the 1930s the Rams played a number of memorable scoreless games against the powerful University of Pittsburgh. In 1936 Fordham did not surrender a touchdown until the last game of the season, when its loss to New York University by a score of 7 to 0 ended its chances of playing in the Rose Bowl. On 25 October 1947 Columbia pulled off another remarkable upset by ending Army's 32-game winning streak.

Professional football teams proliferated during the late 1930s to the early 1950s, though many of them were short-lived: in the second AFL the Brooklyn Tigers (1936) and the New York Yankees (1936–37); in the third AFL the New York Yankees (1940) and the New York Americans (1941); in the All-America Football Conference the New York Yankees (1946–49) and the Brooklyn Dodgers (1946–48), who were absorbed by the Yankees after three losing seasons; and in the NFL a team called successively the New York Bulldogs (1949) and the New York Yanks (1950–51). The New York Titans, an original member of the fourth AFL (formed in 1960), became the New York Jets in 1963. In January 1969, the Jets, led by quarterback Joe Namath, defeated the Baltimore Colts in Super Bowl III by a score of 16 to 7. Often considered the greatest upset in the history of professional football, the Jets' victory gave instant credibility to the AFL, leading to its merger with the NFL the following year. The New York Stars of the World Football League played only six home games at Downing Stadium on Randalls Island in 1974 before disbanding. The Jets and the Giants remained the city's two main professional football teams into the twenty-first century. Though the Giants and the Jets moved to Giants Stadium in New Jersey in 1974 and 1983, respectively, both franchises retained the New York designation in their names. The Giants won the Super Bowl in 1987 and 1991. The Giants also won the Super Bowl in 2008, defeating the New England Patriots. In the final decades of the twentieth century, two Arena League Football teams, the New York Knights (1988) and the New York Cityhawks (1997–98), played their home games for a short time at Madison Square Garden.

New York City has also had several enduring rivalries between high school teams, such as that between De Witt Clinton High School and the High School of Commerce (now Louis D. Brandeis High School) and in Brooklyn between Erasmus Hall and Manual Training High School (now John Jay High School). Sid Luckman played for Erasmus Hall before his career at Columbia and with the Chicago Bears, and Yankee baseball great Lou Gehrig played football for Commerce.

Seven members of the Pro Football Hall of Fame were born in New York City: players Art Donovan (Bronx), Sid Luckman (Brooklyn), and John Mackey (Manhattan); owners Tim Mara (Manhattan), Wellington Mara (Manhattan), and Dan Reeves (Manhattan); and coach Vince Lombardi (Brooklyn).

Joseph A. Horrigan

Forbes, Malcolm (Stevenson) (*b* Brooklyn, 19 Aug 1919; *d* Far Hills, N.J., 24 Sept 1990). Publisher. He grew up in suburban Englewood, New Jersey, and attended Princeton University (AB 1941). In 1946 he joined the staff of *Forbes,* a fortnightly business magazine launched by his father, and from the mid-1960s he was its publisher, president, editor in chief, and sole owner. He was also a Republican state senator in New Jersey (1952–

58) and the unsuccessful Republican gubernatorial candidate in New Jersey in 1957. In his later career he became well known as a devotee of motorcycle riding and hot-air ballooning, as a collector of Fabergé eggs and historical artifacts and memorabilia, and as the host of lavish parties (several aboard his yacht and one in Morocco). For all his flamboyance and flair for publicity, Forbes was a shrewd businessman whose publishing concerns flourished under his management. He died of a heart attack at age 70.

Christopher Winans, *Malcolm Forbes: The Man Who Had Everything* (New York: St. Martin's, 1990)

B. Kimberly Taylor

Ford, George B. (*b* Clinton, Mass., 1879; *d* New York City, 13 Aug 1930). Architect and urban planner. After studying architecture at the École des Beaux Arts in Paris, he joined the New York City firm of George B. Post in 1907. He lectured on city planning at Columbia University from 1911–14, helped to author New York City's first zoning ordinance (passed in 1916), and in 1925 founded the journal *City Planner.* Concurrently, he volunteered his services to the Red Cross in France during World War I and headed up postwar reconstruction efforts there. During the 1920s he served as consultant to the Regional Plan Association of New York and was named its director in 1930 (succeeding the first director, Thomas Adams). His appointment was cut short by his death later that year of post-operation complications.

Susan Kriete

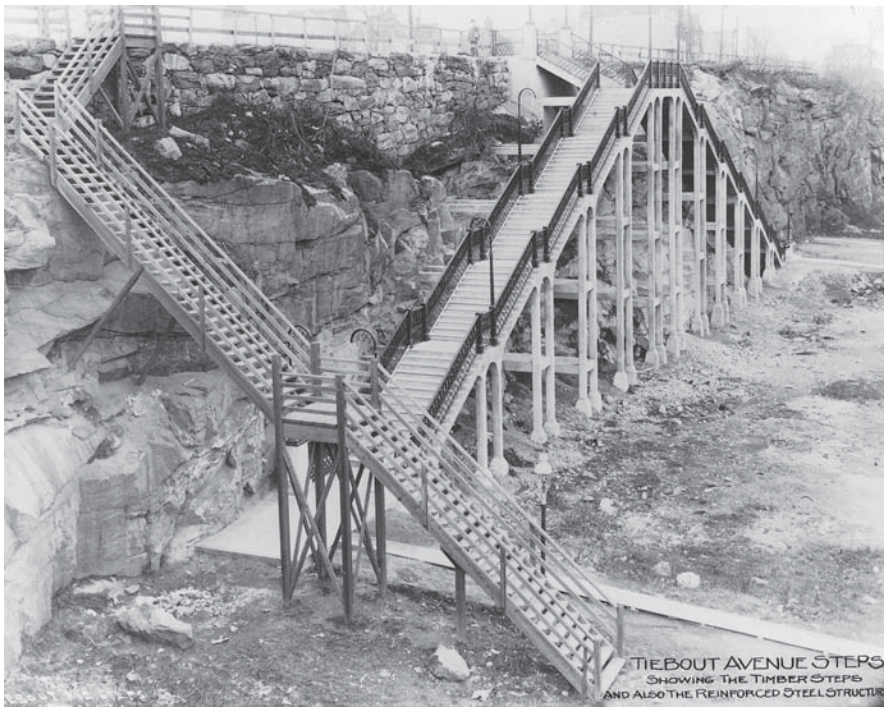
Ford, Patrick (*b* Galway, Ireland, 12 April 1837; *d* New York City, 23 Sept 1913). Journalist. In 1846 he moved to Boston with his parents, and after working in the printing office of William Lloyd Garrison's journal the *Liberator* he enlisted in the Union Army. He later settled in Charleston, South Carolina, before moving to New York City, where in 1870 he launched the weekly newspaper *Irish World* (renamed *Irish World and American Industrial Liberator* in 1878), soon the most important publication of its kind in the United States. Ford supported Irish nationalism, the right to strike, woman suffrage, the eight-hour day, the income tax, abolishing monopolies, insuring federal greenbacks, and nationalizing land in the United States and in Ireland, where he hoped that such a program would become a means for gaining independence. After the Land League was formed in Ireland in 1879 he oversaw the formation of 2500 similar organizations throughout the United States. A powerful voice in city politics, he supported such figures as Edward McGlynn and Henry George, a mayoral candidate in 1886. Ford lived at 350 Clermont Avenue in Brooklyn.

Kevin Kenny

Ford, Whitey [Edward Charles] (*b* Queens, 21 Oct 1928). National Baseball Hall of Fame pitcher. He was called "Whitey" for his blond hair, "Slick" for his craftiness on the mound, and "Chairman of the Board" for his ability to remain calm under pressure. He joined the New York Yankees in 1950, spent 1951–52 in the U.S. Army during the Korean War, rejoined the Yankees in 1953, and for the next 17 years was one of the premier pitchers in baseball. His lifetime record of 236 wins and 106 losses gave him the best winning percentage (.690) of any twentieth-century pitcher. He led the American League three times in wins and twice in earned run averages and shutouts. In 1961 he won the Cy Young Award in addition to being voted Most Valuable Player in the World Series; he was the starting pitcher in the World Series eight times. He was elected to the Hall of Fame in 1974. In 1987 the Yankees dedicated a plaque to Ford at Yankee Stadium in Monument Park. It reads: "One of the greatest pitchers ever to step on a mound."

Frank Dyer

Ford Foundation. Philanthropic organization. For decades the nation's largest, it was chartered in Detroit in 1936 to further charitable ends and to save the Ford family from having to sell the Ford Motor Company to pay the taxes on the estates of Henry Ford and his son Edsel. Until 1950 the foundation granted about $1 million a year to charities in greater Detroit. In that year the foundation's assets increased markedly when it was bequeathed 88 percent of the company's stock. A five-member study committee was then appointed by Henry Ford II to make plans for expanding the foundation; entities soon formed as a result included the Fund for the Advancement of Education, the Fund for Adult Education (a pioneer in educational television), and the Fund for the Republic. The foundation also set up research and policy organizations such as Resources for the Future and the Council on Library Resources. From 1951 to 1953 the foundation had its headquarters in Pasadena, California, home of its first president, Paul G. Hoffman. When Hoffman was succeeded by H. Rowan Gaither, a lawyer from San Francisco, offices were consolidated in New York City, and the foundation built a new building near the United Nations. In 1955 the foundation sold most of its stock and granted $642.6 million in proceeds to private colleges and universities, hospitals, and medical schools. From 1956 to 1965 the foundation was led by Henry T. Heald, a former president of New York University; during his tenure the foundation continued to support higher education (especially business and engineering) and expanded its arts program (it granted $80 million to symphony orchestras). Along with other foundations it was a target of congressional investigations during the 1950s (prompted by allegations of support for subversive activities, financial self-dealing, and undue accumulation of assets) and of inquiries during the 1960s that led to the Tax Reform Act. Its support of civil rights, minority voter registration, and other liberal causes led to boycotts of products of the Ford Motor Company. The foundation was criticized by the teachers' unions for its role in assisting school decentralization in New York City in 1967, which touched off a bitter strike.



In New York City the foundation supported educational, arts, and social service institutions ranging from Lincoln Center to the Vera Institute of Justice. In 1968 it established the Fund for the City of New York to improve the city's public services. McGeorge Bundy, a former national security adviser, was president of the foundation for 13 years from 1965, during which the foundation played a prominent role in civil rights, community development in inner cities, and environmental research and advocacy. In 1977 the foundation severed its ties to the Ford company and family. Franklin A. Thomas, a foundation trustee who became president of the foundation in 1979, focused on domestic poverty, problems of refugees and immigrants, and leadership in state government. By 2007 the foundation had distributed more than $530 million in grants.

The Ford Foundation occupied a brick-and-glass structure at 321 East 42nd Street designed by Kevin Roche and John Dinkeloo. Completed in 1967, the building has an enclosed courtyard with trees and greenery and is among the most elegant works of architecture in the city. As of 2008 the foundation headquarters was located at 320 East 43rd Street.

Fordham. Neighborhood in the northwestern Bronx, centered at the intersection of Fordham Road and the Grand Concourse and bounded to the north by Kingsbridge Road and East 194th Street, to the east by Fordham University and Webster Avenue, to the south by 183rd Street, and to the west by the Harlem River; to the north is Lehman College and to the south Bronx Community College, which occupies the former uptown campus of New York University. During the seventeenth century a few houses stood near what is now the intersection of Bailey Avenue and Kingsbridge Road, and a nearby ford across the Harlem River was the only direct crossing to the Bronx from Manhattan. A parcel of 3900 acres (1580 hectares) extending from the ford to the eventual site of the High Bridge and lying between the Harlem and Bronx rivers

Tiebout Avenue steps in Fordham

was granted in 1671 by Governor Francis Lovelace to the Dutch settler Jon Arcer (John Archer), who named it Fordham Manor after Saxon words meaning "houses by the ford (or wading place)." The first bridge from the Bronx to Manhattan, the King's Bridge, opened in 1693 a short distance from the ford. After Arcer's death the manor was divided into small farms. Claimed mostly by the British but raided by both sides during the American Revolution, the area was the site of many skirmishes between British and Continental troops that devastated local farms. It remained rural until the mid-nineteenth century. In 1841 the New York and Harlem Railroad was extended to a street that later became Fordham Road, and near the station St. John's College, a Roman Catholic college that later became Fordham University, was built. Edgar Allan Poe moved in 1846 to a small cottage, his last home, near what became Poe Park.

The neighborhood grew tremendously after rapid transit was extended from Manhattan. The Third Avenue elevated line was extended to Fordham Plaza in 1901; the Jerome Avenue elevated line opened in 1918, and the Grand Concourse subway in 1933. Between 1900 and 1950 a shopping district developed on Fordham Road, which became the largest in the borough and included Alexander's department store. Many five-story walk-up apartment buildings and six-story buildings with elevators were erected, a large number of which remained standing in the first decade of the twenty-first century. Most residents from the 1920s on were middle-class and working-class Jews, Irish, and Italians who had moved from crowded sections of Manhattan, and often they were the children and grandchildren of immigrants. The neighborhood became known for its outstanding schools, including the Bronx High School of Science. From the 1950s many older residents moved to the suburbs, and by 1980 much of the population consisted of Puerto Ricans, other Latin Americans, and blacks, many from the South Bronx. In the following years large-scale housing abandonment of the sort that had occurred in the South Bronx was forestalled, in part through the efforts of the Northwest Bronx Community and Clergy Coalition. From the 1980s many of the new immigrants settling in Fordham and its environs were Dominican; in the early twenty-first century there was an influx of Mexicans. Although the neighborhood has many problems, its apartment buildings are for the most part well maintained, as are its few one- and two-family houses. In 2001 the old Alexander's department store was refurbished and several new stores moved in, and retail sales continued to grow. The Fordham Road Business Improvement District was created in 2005. Fordham remains a vital area, best known for its shopping district and as the site of Fordham University.

Peter Derrick

Fordham Preparatory School. Jesuit high school for boys on East Fordham Road in the Bronx, opened in 1841 as part of St. John's College (now Fordham University). Initially a boarding school, it lacked its own principal until 1921, and in the following years it became a day school. In 1970 it formed its own board of trustees and split off from the university, moving to a building on the east side of the university campus in 1972. The student enrollment in 2010 was 950.

Gilbert Tauber

Fordham University. Roman Catholic institution opened in 1841 as St. John's College by Bishop John Hughes in Fordham Manor. The first president was John McCloskey, later archbishop of New York. Unable to staff the school or support it financially, Hughes transferred control to the Society of Jesus in 1846, the year in which the first bachelor's degree was awarded. Until 1855 the Jesuits maintained a seminary at the school. The college opened a medical school and a law school in 1905 and in 1907 took its current name and established Fordham University Press. Later it opened the School of Pharmacy (1912), the School of Sociology and Social Service (1916), the School of Business Administration (1920), and the School of Education (1938). The law school moved successively to 42 Broadway in lower Manhattan, 20 Vesey Street, 140 Nassau Street, the Woolworth Building (where it remained for 30 years), and 302 Broadway (1943). The university became widely known for its athletic programs; from 1935 to 1937 the football team achieved great success with a defensive line known as the "seven blocks of granite" that included Vince Lombardi. In 1955 the university became part of the project to develop Lincoln Center, and in the early 1960s several divisions including the law school moved to a new campus bounded by 62nd Street, Amsterdam Avenue, 60th Street, and Columbus Avenue. When the university created St. Thomas More College in 1964, it became coeducational; in 1969 it came under the control of a lay board of trustees. As of 2010 Fordham had more than 16,000 undergraduate and graduate students in more than 70 academic programs at 10 schools and colleges. Two archbishops of New York graduated from Fordham: John Cardinal Farley (1867) and Francis Cardinal Spellman (1911).

Bernadette McCauley

Forest City Ratner. Commercial real estate development company. Established in 1985, the Brooklyn-based company is headquartered at One MetroTech Center and is a subsidiary of Forest City Enterprises. Notable projects include the completed New York Times Building and New York Mercantile Exchange as well as the Atlantic Yards Project in Brooklyn.

Jessica Montesano

Forest Hills. Neighborhood in central Queens, bounded to the north by the Long Island Expressway, to the east by Flushing Meadows–Corona Park, to the south by Union Turnpike, and to the west by Junction Boulevard and disused track of the Long Island Rail Road (the former Rockaway Beach line). It occupies what was once farmland owned by Frederick D. Backus, George Backus, and Horatio N. Squires, of which 600 acres (243 hectares) in the area then known as Whitepot were bought in 1906 by the Cord Meyer Development Company. The area was named Forest Hills for its proximity to Forest Park, and its streets were assigned names arranged in alphabetical order from Atom (75th Avenue) to Zuni (63rd Drive). The company installed utilities and under the direction of George C. Meyer engaged architects like Robert Tappan and William Patterson to design elegant one-family houses, which were built from 108th Street to 112th Street and between Queens Boulevard and 67th Road; some lots were donated for schools and churches. The Long Island Rail Road opened a station in Forest Hills on 5 August 1911, enabling residents to commute to Manhattan in 30 minutes. The trolley along Queens Boulevard inaugurated service on 27 August 1913 from 71st Avenue to Second Avenue in Manhattan, and Queens Boulevard was widened during the early 1920s. Development hastened after these improvements were made: in 1922 the Queens Valley Golf Club was laid out on 17.5 acres (7 hectares) of land, and by the end of 1924 there were 340 houses. Construction began on apartments along Queens Boulevard, including the Kelvin (1928) and the Livingston, Georgian, and Portsmouth (all 1929). Between 1927 and 1930 the population increased from 9500 to 18,207. Land along Queens Boulevard was excavated by the city in 1931 for the Independent subway, which opened to Union Turnpike on 31 December 1936 and transformed the part of Forest Hills northeast of Queens Boulevard. Additional apartment buildings were constructed and many stores opened to accommodate the growing population (32,500 in 1940). In the six decades after World War II some private houses were razed to build apartments, and the neighborhood became largely middle class, Jewish, and Italian.

The West Side Tennis Club (founded 1892) moved from Manhattan to Forest Hills Gardens in 1914 and built a 13,000-seat stadium in 1923; the club hosted the national tennis championship (since 1968 the US Open) from 1915 to 1977. Forest Hills in the early 1970s was the scene of a bitter dispute between middle-class homeowners and advocates of low-income housing. The controversy received national attention and helped to launch the political career of Mario M. Cuomo, a local lawyer who negotiated a compromise that largely defused the tensions. No open land remained in the mid-1990s, and only northern Forest Hills and sections near Queens Boulevard retained one-family houses on individual

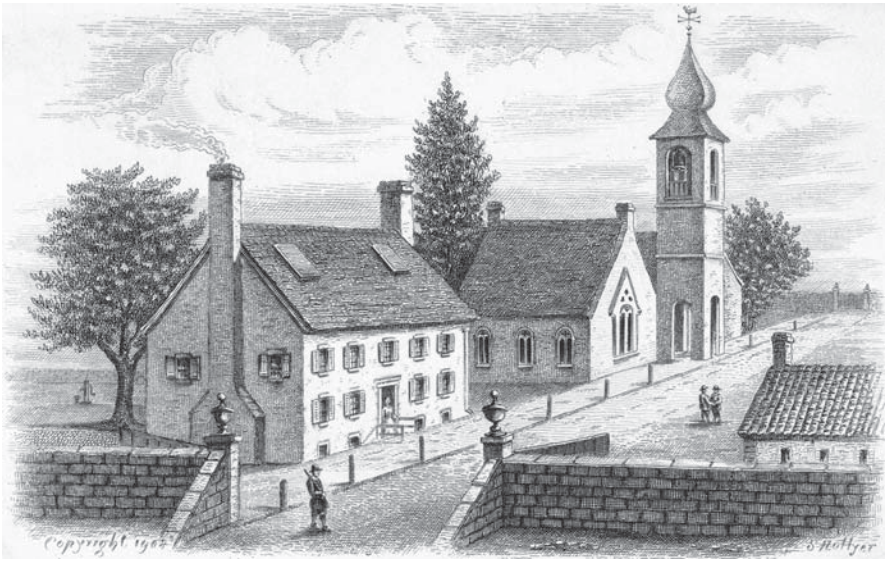
Map of Forest Hills, drawn by Charlie Seewald

lots rather than large apartment buildings. Many new immigrants settled in Forest Hills during the 1980s, especially Bukharian Jews from Central Asia and Iranians. In the early twenty-first century the suburban Cord Meyer area north of Queens Boulevard suffered from the loss of mature trees, the paving of yards, and the demolition of historic houses for significantly larger replacements.

Vincent Seyfried

Forest Hills Gardens. Housing development in central Queens, bounded to the northeast by Burns Street and to the southeast by Union Turnpike; the southwestern boundary is irregular and runs roughly parallel to Burns Street. The planned community consisted of about 800 Tudor style homes and buildings. The land was originally part of an area formerly known as Whitepot and was later included in a parcel of 600 acres (243 hectares) bought in 1906 by Cord Meyer, who in 1908 sold a section below Queens Boulevard to Margaret Slocum Sage, the benefactor of the Russell Sage Foundation. On 142 acres (57 hectares) the landscape architect Frederick Law Olmsted, Jr., planned a Garden City development in the style of an English village, with a green, a railroad station, an inn, and 1500 houses designed by the architect Grosvenor Atterbury. A brick-paved square shaded by trees was built in front of the railroad station, with a town clock, arched passageways, and garden apartments built to resemble a row of country inns. Narrow, winding roads discouraged through traffic and provided room for large front gardens. Between February and May 1910 streets were laid out between Continental and Ascan avenues, and during the summer of the same year houses of varied height and design were erected using the new techniques of steel framing and concrete construction. The high price of land and construction drove the rents to $12 a month in 1910, a prohibitive amount for those with moderate incomes. Many elegant brick houses were built between 1910 and 1917, and in 1916–17 luxury houses were built in Greenway Terrace that sold for about $20,000; the Russell Sage Foundation built others by private contract. In 1912 the inn, a garage, and a country club were opened. The post office began service in 1914, and 10 acres (4 hectares) of land were sold to the West Side Tennis Club, where the U.S. Open tennis championship was contested until 1977 (the well-known tennis stadium opened on 10 August 1923). The Church-in-the-Gardens was built in 1915, followed by the Church of Our Lady Queen of Martyrs (dedicated on 28 May 1916). Several well-known figures lived in Forest Hills Gardens during these years, including Helen Keller, Dale Carnegie, Mayor John F. Hylan, the entertainer Fred Stone, and the sculptor Adolph A. Weinman. In 1922 the Forest Hills Gardens Corporation, an organization of property owners, bought the common areas. The first apartment building, the Forest Arms, was erected in 1924. Development ceased with the entry of the United States into World War II, and in the years following the war only about 25 houses were built; by the mid-1960s the last lots were finally developed. There were about 4500 inhabitants in 1970. Streets, parks, sewers, distinctive streetlights, and traffic lights are owned and maintained by the corporation, which preserves the residential character of the neighborhood. Until the mid-1970s, homes were sold with restrictive covenants, discriminating against Jews, blacks, and working-class people. In the 1980s a number of new immigrants settled in Forest Hills Gardens and its environs, mostly from Iran, India, the Soviet Union, and Israel. In the twenty-first century Forest Hills Gardens real estate remained desirable and expensive.

Vincent Seyfried



Forest Park. Public park in Queens, bounded to the north by Myrtle Avenue and Union Turnpike, to the east by Park Lane, to the south by Park Lane South, and to the west by Cypress Hills Cemetery. It occupies 535 acres (217 hectares) of hilly terrain and was once known as the Brooklyn Forest because of its acquisition in 1895 by the City of Brooklyn. In 1896 the firm Olmsted, Olmsted and Eliot designed a plan for the park, which was executed around the turn of the century. A golf course, originally of nine holes, opened in 1901; the clubhouse (1905), designed in a Dutch Colonial Revival style by the firm of Helmle, Huberty and Hudswell (which also designed the Williamsburgh Savings Bank), now houses the offices of the park's administrator. The park was ravaged in 1912 by a chestnut blight and for a time was used for lumbering; about the same time greenhouses were set up to grow plants for parks throughout the city. Popular carousels by the highly regarded designer Daniel Muller were added in 1918 (destroyed by fire in 1966) and 1972. Jackson Pond was used for fishing and ice skating before being filled in. The Interborough Parkway between Brooklyn and Queens was built through the park in 1935. Forest Park features ballfields, tennis courts, a band shell (on the site of an earlier bandstand and concert grove), a memorial field called Victory Field, a monument to World War I known variously as the Richmond Hill Doughboy and My Buddy, and an enclosed area in which model airplanes may be flown.

Jonathan Kuhn

Forrest, Edwin (*b* Philadelphia, 9 March 1806; *d* Philadelphia, 12 Dec 1872). Actor. He made his debut in New York as Othello in July 1826, then performed often in the Park and Bowery theaters. From 1839 to 1850 he owned and lived in a townhouse at 436 West 22nd Street. In 1849 his rivalry with the English actor William Charles Macready culminated in the bloody Astor Place Riot. After his divorce in 1851 he returned to Philadelphia but continued to act in New York City. In 1853 he appeared as Macbeth at the Broadway Theatre; the engagement lasted four weeks, an unprecedented run. He played Hamlet at Niblo's Garden in 1860 and gave his final performance in New York City in February 1871. Known for his commanding physique and powerful voice, Forrest was the first American-born actor to achieve an international reputation.

Don B. Wilmeth

Fort Amsterdam. The name of a fort erected by the Dutch in lower Manhattan, and by

Fort Amsterdam

extension one of several names sometimes applied to the entire settlement of New Amsterdam. The fort was a four-sided structure at the foot of Broadway, opposite Marketfield, Stone, and Bridge streets, near the eventual site of the U.S. Custom House. Unimpressive even by the standards of the seventeenth century, it was unable to protect the Dutch against a British fleet that appeared in the harbor in the late summer of 1664. On 2 September, without loss of life, Governor Peter Stuyvesant surrendered both fort and city.

Kenneth T. Jackson

Fort Apache. Nickname for the 41st police precinct of New York City, which had its station at Simpson Avenue south of 167th Street in the South Bronx and covers the neighborhoods of Hunts Point and Crotona Park East. The nickname became used when drugs, crime, and arson severely damaged the surrounding area during the 1960s and 1970s. The crime rate declined sharply in the 1990s, and in 1993 the precinct moved to a new precinct house a few blocks away. In 1997 the original precinct house became the new headquarters for Bronx detectives. A 1981 movie called *Fort Apache, The Bronx* starred Paul Newman.

Tom Walker, *Fort Apache* (New York: Avon Books, 1976); Jill Jonnes, *South Bronx Rising: The Rise, Fall, and Resurrection of an American City* (New York: Fordham University Press, 2002)

Evelyn Gonzalez

Fort Greene. Neighborhood lying at the foot of the Manhattan Bridge in northwestern Brooklyn (1990 pop. *ca* 40,000), bounded to the north by the East River, to the east by Vanderbilt Avenue, to the south by Atlantic Avenue, and to the west by Flatbush Avenue. The first European settler (and the first Italian in Brooklyn) was Peter Caesar Alberti, who from 1639 operated a tobacco plantation near Wallabout Bay. The area is named for Nathaniel Greene, a Revolutionary War general who oversaw the construction of Fort Putnam in 1776 on a hill overlooking the bay (the fort survived the Battle of Long Island but was abandoned during Washington's retreat). Between 1776 and 1783 thousands of captured Americans were held in prison ships moored in the bay. Overcrowding, contaminated water, starvation, and disease led to the deaths of nearly 12,000 Americans, whose corpses were interred in shallow graves along the sandy shore. Soon uncovered by the wind and tides, their remains were visible for years. In 1808, they were gathered and placed in a crypt located near the intersection of Hudson Avenue and York Street.

On the site of the tobacco plantation a shipyard opened in 1791, followed by the Brooklyn Navy Yard in 1801. During the 1840s a growing number of free blacks settled and found skilled work in shipbuilding, and by 1870 more than half the black population of Brooklyn lived in the area; many Irish, German, and English immigrants also lived there. In 1848 Frederick Law Olmsted and Calvert Vaux designed Washington Park, which covered 30 acres (12 hectares) of land and had cobblestone walks meandering under chestnut trees; it was later renamed Fort Greene Park. An austere Doric column called the Prison Ship Martyrs' Monument was erected in the park in 1908 and dedicated by the president of the United States. Shipbuilding remained the economic mainstay of the neighborhood until the navy yard closed in 1966. The population became ethnically and economically mixed, and several housing projects were built by the New York City Housing Authority for tenants of low and middle income.

The neighborhood has many types of buildings, including Second Empire brownstones and neo-Greco, Romanesque Revival, Queen Anne, and nineteenth-century Italianate town houses; in 1978 Fort Greene was designated a Historic District. Buildings that became landmarks include the original Hanson Place Baptist Church (1860), which served the Underground Railroad; the Lafayette Avenue Presbyterian Church (1862); the Brooklyn Academy of Music (1908); and the Williamsburgh Savings Bank, the tallest building in Brooklyn (1929).

The 1980s saw an influx of black and white professionals who were attracted by the proximity of the neighborhood to Manhattan and by brownstones that cost less than in other parts of the city. In the mid-1990s several well-known black artists and musicians lived in the neighborhood, and the population was about two-thirds black, a quarter white, and a tenth Latin American. Early in the twenty-first century, the neighborhood continued to gentrify as property values rose, more affluent families bought homes, and crime rates fell.

Fort Greene, 2009

Fort Hamilton. A fort in Bay Ridge, Brooklyn. It is one of the oldest continuously garrisoned federal posts in the United States. Named for Alexander Hamilton, it stands on the site of an early Dutch blockhouse and of Fort Lewis, an earth and timber work that helped to deter British attack during the War of 1812. The structure was built between 1825 and 1831 as the first granite fort in the harbor. A decade after its construction the post engineer, Captain Robert E. Lee, supervised expansion of the gun platform and improvements to the water battery, Fort Lafayette. During the Civil War volunteer regiments trained at Fort Hamilton, and Fort Lafayette became a prison for captured Confederates. The post commander during the first months of the war was Abner Doubleday (called by some the inventor of baseball), who was later a hero at Gettysburg. A ship barrier across the Narrows assisted Fort Hamilton and its sister forts on Staten Island in protecting the harbor against Confederate raiders. Fort Hamilton also provided troops to help quell the draft riots of July 1863.

Rifled artillery made vertical-walled masonry fortifications obsolete after the Civil War. The last decades of the nineteenth century brought a new generation of long-range guns that were not removed from Fort Hamilton until the years surrounding World War II.

Fort Hamilton

Antiship artillery was replaced by antiaircraft artillery, itself removed in 1954 when Nike missiles began 20 years of protecting New York City. Fort Hamilton was a major embarkation and separation center during the two world wars. Early in the twenty-first century it was the home of a recruiting command and the Military Entrance and Processing Station for New York City. Fort Hamilton then supported more than 200 reserve and National Guard units, and as the only active army post in the metropolitan area, it did work once performed by several installations.

The name Fort Hamilton sometimes refers to the immediately surrounding civilian community as well, although less so than formerly. During most of the nineteenth century the fort had no chapel and depended on nearby churches that integrated it into the community. St. John's Episcopal Church, known as the "church of the generals," baptized Lieutenant Thomas "Stonewall" Jackson (later to achieve Civil War fame), and Robert E. Lee was one of its vestrymen. Many Irish or German Catholic soldiers helped put up the first building for nearby St. Patrick's Church. The neighborhood also had several saloons just off post that catered to soldiers. What remained of the civilian neighborhood in the early 1960s was diminished by the construction of approaches for the Verrazano–Narrows Bridge.

Russell S. Gilmore

Fort Hill. Neighborhood in northeastern Staten Island, lying within and near the center of New Brighton at an elevation of 210 feet (64 meters). The name recalls the earthen redoubts built by the British at the time of the American Revolution. During the second half of the nineteenth century the estate of Daniel Low occupied the hill. Eventually the estate was divided and sold in pieces. Fort Hill in later years underwent a resurgence, as young families restored houses to their former condition. In the early twenty-first century it remained a residential area of fine one-family houses, many of which are still owned by descendants of wealthy families who lived in the area during the late nineteenth and early twentieth centuries.

John-Paul Richiuso

fortifications. The defense of New York Harbor began with the city's founding. One of the first actions the Dutch settlers took was to erect Fort Amsterdam on a site now occupied by the former U.S. Custom House at the foot of Broadway in Manhattan. Soon after, they built small blockhouses at strategic points such as the Narrows. When the colony changed hands in 1664, England altered little in the city's defenses except the name of Fort Amsterdam (which became successively Fort James, Fort William, Fort Anne, and Fort George). But during the first half of the eighteenth century additional guns at the shore near the old fort created a redoubtable defense in the area still called the Battery. Effective antiship fortifications spread beyond Manhattan during the American Revolution, and at the same time American engineers built the city's only important nonmaritime forts. In preparation for the Battle of Long Island they built earthworks at various points on Manhattan, Governors Island, and eastern Long Island. The line of defenses behind which the defeated patriots took refuge, to include Fort Greene, Fort Putnam, and Fort Box, was imposing enough to deter General William Howe from immediate attack and permit Washington's retreat across the East River. The triumphant British returned to maritime concerns, and during their seven-year occupation of the city they built the first defenses at the Narrows capable of stopping ships.

In the nineteenth century improved technology made it possible to engage an enemy ever farther out on the water. Later defenses therefore lay in rings progressively more distant from the original settlement. The first half of the century was a time of massive masonry forts, only one of which, Castle Clinton, remains in Manhattan. The rapid expansion of New York City destroyed the early nineteenth-century Red Fort (or North Fort) within a generation; the White Fort (Fort Gansevoort) did not last much longer. The State of New York built Castle Clinton between 1807 and 1811, as tension with England appeared to be building toward another war. (Militarily unneeded by 1823, the fort became Castle Garden during 1823–55, the immigrant station during 1855–90, and the New York Aquarium during 1896–1941, before being returned to its appearance as a fort by the U.S. National Park Service.) Governors Island nearby still bears defenses of the same period: Fort Jay (called Fort Columbus, 1806–1904), Castle Williams, and South Battery. Fort Wood, which is now the sub-base of the Statue of Liberty, also stood ready for the War of 1812. The federal government began Fort Hamilton at the Narrows in 1825 and the earliest surviving defense on Fort Wadsworth in Staten Island in 1847. At mid-century the federal government also undertook a never-completed granite work 10 miles (16 kilometers) south at Sandy Hook, New Jersey, to replace Fort Gates, which dated from the War of 1812. Fort Hancock later rose on the same sand spit, which was too important a site to ignore. Until the dredging of the Ambrose Channel early in the twentieth century, Hancock offered the first shot at an enemy ship nearing the main entrance to New York Harbor.

At the East River entrance to the harbor, army engineers in 1856 completed Fort Schuyler (now the home of the State University of New York Maritime College). Later they began Fort Totten across Long Island Sound at Willets Point. The treacherous waters of Hell Gate provided natural protection against an enemy fleet under sail; the paired forts were intended to deal with steamships. The granite work at Willets Point, like the one at Sandy Hook, became obsolete before it was finished. At the turn of the century, however, when equipped with new long-range guns, Fort Totten emerged as the chief protector of the back entrance to New York Harbor, with reinforcement from Fort Schuyler and Fort Slocum, just south of New Rochelle on Long Island Sound.

Similar long-range guns armed Fort Hancock, rearmed forts Hamilton and Wadsworth, and pushed first-line defenses to dots of land beyond the eastern tip of Long Island, 100 miles (160 kilometers) from the city. Battleships also had been improved, but new batteries were more than a match for them. By the mid-1920s Fort Tilden in the Rockaways covered a 30-mile (50-kilometer) fan of ocean with two of the most powerful coast artillery guns ever made, 16-inch (40.6-centimeter) rifles firing a projectile as heavy as a small automobile. Later, interlocking fire was provided by a similar battery completed during

World War II on the Navesink Highlands near Fort Hancock.

In the 1920s the development of aircraft brought another dimension to the defense of New York City, with bases at both Fort Hamilton and Miller Field, just south of Fort Wadsworth. The navy built Rockaway Naval Air Station (now Jacob Riis Park), from which the first airplane to fly the Atlantic took off in 1919. After a decade as the city's first municipal airport, Floyd Bennett Field became a naval air station in 1941. Warplanes brought a new defensive mission to the harbor forts. In 1922 the 62nd Coast Artillery at Fort Totten set up the prototype antiaircraft installation. During World War II Fort Totten served as the antiaircraft headquarters for the Eastern Defense Command, coordinating guns throughout New York and New Jersey for the city's protection. Nike antiaircraft missiles replaced antiaircraft guns in 1954 and stood guard for the next 20 years. In 1990 the navy began construction of its controversial homeport at Stapleton on Staten Island. Many believed that busy and congested New York Harbor was no place for nuclear-armed vessels, but the argument soon became moot because with the end of the cold war the homeport closed in August 1994. Although no longer based in New York City, the navy, along with the air force, continues to provide for its security; both services would expect to detect enemies and engage them far at sea.

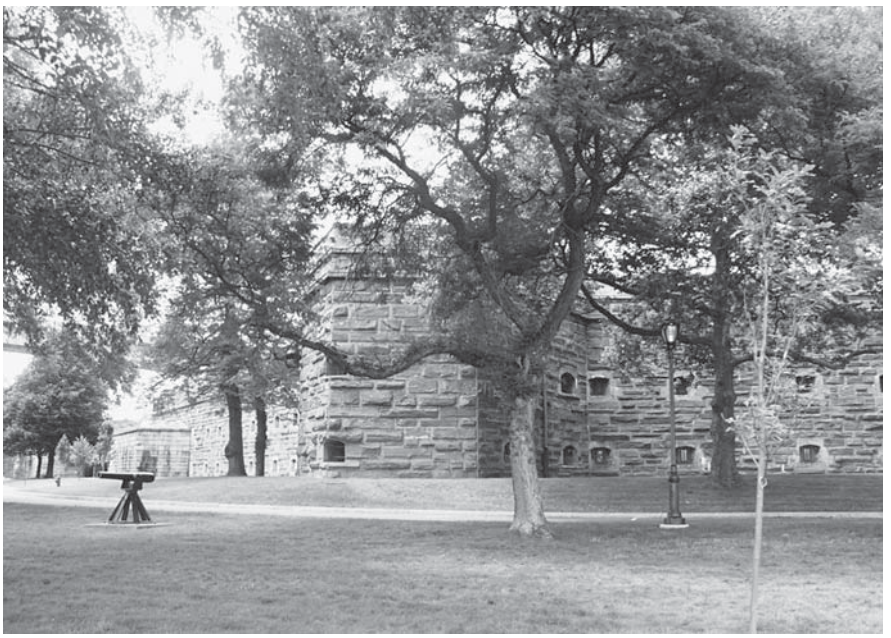
Russell S. Gilmore

Fort Schuyler. A fort in the Bronx, almost directly beneath the Throgs Neck Bridge at the eastern end of Pennyfield Avenue. It was built between 1833 and 1838 to defend New York City against a possible naval attack from Long Island Sound, complementing Fort Totten on Willets Point in Queens on the opposite shore. Never used in battle and all but abandoned between 1878 and 1934, the fort remains an outstanding example of nineteenth-century military architecture: the interior court, known as St. Mary's Pentagon, is particularly impressive. The fort is now part of the campus of the Maritime College of the State University of New York. Visitors may visit a maritime museum within the fort or walk along the ramparts and enjoy a fine view of the northern shore of Long Island.



Kenneth T. Jackson

Fort Totten. A fort at Willets Point in Bayside in Queens. Begun in 1862, it was intended to be the strongest of the nation's system of seacoast fortifications, with five tiers of heavy guns. Work ceased in 1864 when fighting during the Civil War made it plain that vertical-walled masonry forts had become obsolete. The post saw use as a training ground for volunteer units from New York City during the war and afterward was the site of a major military hospital with 5000 beds. After the Civil War the fort housed the Engineer School of Application, and it later became the maritime mine center for the U.S. Army. Engineers also did important developmental work with searchlights and other technical coast defense equipment. Many distinguished engineer officers served at the fort, as well as the young medical officer Walter Reed, later famous for his work on yellow fever. In 1898 the fort was given its current name, after General Joseph Totten (1788–1864). By the turn of the century a new generation of antiship guns in small dispersed batteries, along with the electric mines perfected at Fort Totten, made for a powerful seacoast defense. The fort lost some of this equipment during World War I when guns were shifted to less secure portions of the U.S. coast and to Europe. The mission after World War I became largely one of air defense, which had been assigned to coast artillery as a new specialty. As World War II neared, the fort became the site of the first antiaircraft radar installation on the East Coast. After the war it continued as an administrative and training center for antiaircraft artillery, and when Nike missiles replaced the large sky-sweeping cannon in 1954, it became a nerve center for antiaircraft missiles for several years. In 1963 the secretary of defense announced the end of active service for the fort, and in 1967 it became a subinstallation of Fort Hamilton. Five reserve units based at Fort Totten were activated in Vietnam, and 29 during the Gulf War. The fort continued to provide military housing into the twenty-first century, and the huge 77th Reserve Command kept it involved in the nation's military efforts. In 2008 the park opened as part of the New York City Parks and Recreation system complete with visitors' center at a total cost of $1.3 million.

Russell S. Gilmore

Fort Tryon Park. Public park in Manhattan, bounded to the east by Broadway, to the south by several streets including West 190th, and to the west and north by Riverside Drive. It contains high, wooded ground once inhabited by the Wiechquaesgecks; until the late seventeenth century Dutch settlers called it Lange Bergh (Long Hill). During the American Revolution Hessian and British troops seized a colonial outpost there and named the battlements after Sir William Tryon, the last English governor of the colony of New York. Many prominent citizens built mansions on the heights during the nineteenth century, including C. K. G. Billings, whose mansion was bought by John D. Rockefeller, Jr., in 1917; however, it burned down in 1925. In 1927 Rockefeller sought to build a park on the property and engaged as its designer Frederick Law Olmsted, Jr. (son of a designer of Central Park), whose plan retained the entrance arch and several other rustic features of the estate. The city accepted the park as a gift in 1931, and the plan was completed in 1935. In 1938 the Cloisters opened in the park as a showcase for the medieval art collection of the Metropolitan Museum of Art. The promenades of the Cloisters facing the Palisades in New Jersey and the Hudson River provide some of the most striking views in Manhattan.

Jonathan Kuhn

Fort Schuyler, 2009

Fortune. Business magazine, founded in February 1930 by the publisher Henry R. Luce, who had founded *Time* magazine in 1923. It was marketed to the wealthy classes, despite the recent stock-market crash. It combined articles by highbrow literary writers and upscale business advertisements. By 1937 the magazine had more than 400,000 subscribers. *Fortune* devoted a whole issue to New York City, thereby promoting its advertisers' exhibits. Starting in July 1955 it published yearly lists of the largest industrial corporations in the United States, called the "Fortune 500." The magazine began biweekly publication in January 1978. Among the distinguished literary and political figures who have written for the magazine are Ernest Hemingway, Carl Sandburg, James Thurber, Bernard Baruch, Sidney Hook, Felix Frankfurter, and Adlai Stevenson. In the early twenty-first century *Fortune*'s headquarters were in the Time–Life Building at Rockefeller Center, 1271 Sixth Avenue.

Marjorie Harrison

Fortune, T(imothy) Thomas (*b* Marianna, Fla., 3 Oct 1856; *d* Philadelphia, 2 June 1928). Journalist. He moved in 1881 to New York City and worked as a printer for the *Weekly Witness*. Later that year he helped to publish the *Rumor,* a weekly newspaper that soon became the *New York Globe,* later working as an editor for the *Freeman* (1884–87) and as a reporter and editorial writer for the *Sun*. As an editor he consistently attacked racism and bigotry and advocated militant radicalism to secure civil rights, and in 1887 he initiated a movement to organize the National Afro-American League. As the editor of the *New York Age* during 1889–1907 he offered a position to Ida Bell Wells Barnett, who had been forced to flee Memphis for denouncing lynchings in the *Memphis Free Speech*. He was eventually influenced by his friend Booker T. Washington to assume a more conservative view of race relations. In 1907 financial and personal problems forced him to sell his interest in the *New York Age* to Fred R. Moore; Washington became a silent partner. Fortune struggled during his remaining years as a writer for various black publications.

Sandra Roff

Fortune Society. Nonprofit organization dedicated to re-entry assistance for ex-prisoners. Formed in November 1967 to promote prison reform, the name was inspired by John Herbert's play about prison life, *Fortune and Men's Eyes* (1967), produced by David Rothenberg at the Actor's Playhouse in Greenwich Village. (The play was a shock to the public conscience about how prisoners and ex-prisoners are treated, which inspired a series of lectures by Rothenberg and two ex-prisoners, Pat McGarry and Clarence Cooper.) The Fortune Society publicizes prison conditions and advocates for prison reforms. Staffed primarily by ex-prisoners, it provides ex-prisoners with counseling and housing assistance. Many workers wear their old prison uniforms at the store, which sells goods made by ex-convicts and distributes informational materials. The society believes in an open-door policy to encourage at-risk youth and ex-prisoners to seek help, and it offers transitional residence housing and beds for treatment. One-third of the members of the Board of Directors were at one point prisoners or had substance-abuse problems.

Jessica Montesano

Fortunoff. Firm of jewelry, silverware, and housewares retailers, formed in 1922 at 561 Livonia Avenue in Brooklyn by the Russian immigrant Max Fortunoff (1896–1987) and his wife, Clara (1902–86). The firm built its reputation by underselling its competitors. In 1957 it began selling jewelry. Although the main store was moved in 1964 to suburban Westbury, Long Island, outlets were opened in Manhattan at 154 East 57th Street in 1969 and at 681 Fifth Avenue in 1979. Operating in New York, New Jersey, Connecticut, and Pennsylvania, it was acquired in 2008 by Lord and Taylor. Fortunoff filed for bankruptcy in 2009, and the Fortunoff and Mayrock families, who had owned the company, purchased the property, trademark, and brand name.

Leslie Gourse, Kenneth T. Jackson

Fort Wadsworth. For many decades the oldest continually staffed military reservation in the United States. Located beneath the Verrazano–Narrows Bridge at Bay Street and Wadsworth Avenue on Staten Island, it commanded the Atlantic approaches to New York Harbor. A fortification occupied the site as early as 1663, and the British controlled the installation throughout the American Revolution. On Evacuation Day in 1783 the captain of a warship of the Royal Navy, angered by the jeers of onlooking rebels, fired a shot at the fort that was probably the last of the war. New York State built a fort on the same site during the War of 1812; this was replaced by the present structure in 1847. The installation was renamed in honor of Brigadier General James S. Wadsworth in 1865, soon after he was killed in action during the Battle of the Wilderness in the Civil War. Decommissioned in the early 1990s, Fort Wadsworth is now part of the Gateway National Recreation Area.

Kenneth T. Jackson

Fort Washington Collegiate Church. Church located at Fort Washington Avenue and 181st Street. The redbrick church began as an outreach mission of the West End Collegiate Church. Built in 1909, the youngest of Manhattan's four collegiate churches embodies the teachings and history of the Collegiate Church of New York, the oldest Protestant church corporation in the United States (established 1628). The brick and timber building with stone trim stands on landscaped grounds surrounded by a fieldstone wall and iron fence. Inside, simple wood beams and rafters frame the ceiling. Until the adjoining parish house was built, worshippers probably entered from 181st Street and Colonel Robert Magaw Place, named for the American commandant of Fort Washington before its November 1776 surrender to the British.

Cathy Alexander

Fort Wadsworth, 2009

Forty Thieves. A corrupt group of members of the Board of Aldermen who extorted money from city contracts, franchises, and legislation at a time of expansive development in the early 1850s. One of its members was William M. Tweed, who learned methods of corruption that he later perfected as Boss Tweed.

Neal C. Garelik

Forverts. Yiddish-language daily newspaper launched in 1897, published at 173–75 East Broadway by the Forward Association and known variously as the *Jewish Daily Forward*. At its peak it was among the most widely read newspapers in the country, with a circulation of more than 200,000 in 1924. Under Abraham Cahan from 1901 to 1951 it espoused the cause of democratic socialism, supported the Jewish labor movement, especially trade unions, and published stories and serialized works by such writers as Sholem Asch, Abraham Reisin, Isaac Bashevis Singer, and Zalman Shneor. One of its most popular columns, the "Bintel Brief" (Bundle of letters), offered advice on a variety of topics. The 10-story Forverts Building was completed in 1911 and stood at the center of "Yiddish Newspaper Row" along East Broadway. During the 1920s the Forward Association financed the Yiddish-language radio station WEVD. The newspaper moved north in 1972; the building on the Lower East Side was designated a city landmark. *Forverts* became a weekly newspaper in the 1980s and introduced an English-language edition in 1990. Because of decreasing circulation, it launched a Russian-language edition in 1995, written in a distinct Jewish, yet secular voice. Although the Russian-language edition was sold in 2004, Yiddish circulation has increased in the twenty-first century because of the proliferation of Yiddish language courses at various universities.

Seth Kamil

Fosdick, Harry Emerson (*b* Buffalo, N.Y., 24 May 1878; *d* Bronxville, N.Y., 5 Oct 1969). Minister and writer. He first gained fame as the pastor of the First Presbyterian Church in New York City from 1918. His status as a Baptist and as a liberal in the conflict between fundamentalists and modernists in the 1920s, as well as his much publicized sermon "Shall the Fundamentalists Win?" (1922), led to an effort by William Jennings Bryan and others to oust him from his pulpit for heresy. The issue twice went before the General Assembly of the Presbyterian Church before Fosdick resigned in 1925. Soon after, John D. Rockefeller, Jr., offered to finance a new interdenominational church where Fosdick's thousands of followers could hear him preach each Sunday. The result was the construction of Riverside Church between 120th and 122nd streets in Morningside Heights. Fosdick remained there until his retirement in 1946. An early supporter of birth control and of Alcoholics Anonymous, he was also a professor at Union Theological Seminary from 1915 to 1946.

Kenneth T. Jackson

Fosse, Bob [Robert Louis] (*b* Chicago, 23 June 1927; *d* Washington, D.C., 23 Sept 1987). Choreographer and director. He began dancing in musical comedies at an early age and after serving in the navy, where he worked on his performance technique, moved to New York City and studied at the American Theater Wing. A constant presence on Broadway, he won Tony Awards for many of his musicals, including *Sweet Charity* (1966), which follows the life of a dancer in New York City. In 1972 he received an unusual triple honor when he was awarded a Tony Award for *Pippin,* an Academy Award for *Cabaret,* and an Emmy Award for *Liza with a "Z."* While on Broadway he also choreographed *How to Succeed in Business without Really Trying* (1961), *Chicago* (1975), *Dancin'* (1978), and the films *Lenny* (1974) and *All That Jazz* (1979).

Meryl Cates, James E. Mooney

Foster, George G. (*b ca* 1814; *d* Philadelphia, 16 April 1856). Reporter and satirist. He became one of the first professional city reporters while working for the *New York Tribune* in the 1840s under the direction of Horace Greeley. His experiences at the newspaper led him to write urban sketches that were collected and published as *New York in Slices* (1849) and *New York by Gas-light* (1850); these were widely read and with the collections *Fifteen Minutes around New York* (1853) and *New York Naked* (1854) provide a rather sensational but insightful portrait of the city. Foster also wrote a novel, *Celio; or, New York Above-ground and Under-ground* (1850).

Stuart M. Blumin

Foster, Stephen (Collins) (*b* Lawrenceville [now in Pittsburgh], 4 July 1826; *d* New York City, 13 Jan 1864). Songwriter. After publishing his first song in 1844 he wrote "Oh Susanna!" which became extremely popular, and negotiated one of the first composer's royalty contracts from the publishing firm of Firth and Pond in New York City. He lived at 97 Greene Street during 1860–61 and for some time at 6 Greenwich Street. Many of his songs were introduced by E. P. Christy's Minstrels, including "Camptown Races" and "Old Folks at Home (Swanee River)." Among his later compositions were "My Old Kentucky Home" and "Jeannie with the Light Brown Hair"; his last was "Beautiful Dreamer." Foster suffered from alcoholism and died penniless at Bellevue Hospital in Manhattan.

David J. Weiner

foundations. In the early twenty-first century New York City is home to 5740 of the roughly 72,000 grant-making foundations in the United States, including nine of the 50 largest by assets. Foundations based in the city account for 14 percent of the assets of all American foundations ($83,706 million of $614,656 million) and 13 percent of annual grants ($5,196 million of $39,004 million). If the 26 suburban counties that surround the city are included, the metropolitan region has about 10 percent of the foundations and 20 percent of the assets of all American foundations. Before 1900 the legal climate was hostile toward foundations, and the courts sometimes overturned bequests, such as one by Samuel J. Tilden that eventually led to the formation of the New York Public Library. The climate for foundations improved when the city's political leaders recognized that foundations could be used as instruments for influencing public policy and alleviating social ills, and during the first three decades of the twentieth century many of the foundations in the city were formed.

Among the foundations in New York City are such large, well-known ones as the Ford Foundation, the Carnegie Corporation of New York, the Rockefeller Foundation, the Commonwealth Funds, the Andrew W. Mellon Foundation, the Open Society Institute, the New York Foundation, the Henry Luce Foundation, and the Atlantic Philanthropies. They have full-time professional staffs and governing boards, with most members unconnected to the families that established the foundations. The most common type of foundation in New York City as elsewhere is the smaller family foundation, which generally does not have a full-time staff and is governed by a board consisting of family members, colleagues, and friends; an example is the Albert Kunstadter Family Foundation, run from an apartment on Fifth Avenue, which has assets of $1 million and supports programs in education, the arts, and international affairs. Many early female philanthropists from New York City chose not to put their names on their foundations, such as Margaret Olivia Sage (the Russell Sage Foundation), Anna Harkness (the Commonwealth Fund), and Anna McCormick Blaine (the New World Foundation). The tradition continues,

for example, with Abigail Disney and her husband Pierre Hauser, who named their foundation the Daphne Foundation, and Helen LaKelly Hunt, who named her foundation the Sister Fund. Corporate foundations in New York City range from those on the scale of the Pfizer Foundation (assets of $350 million) and the Goldman Sachs Foundation ($260 million), to such small ones as the Fisher Brothers Foundation ($350,000), the Morris Levine Key Food Stores Foundation (formerly Key Food Stores Foundation, Inc.; $75,000), and the Robert Bowne Foundation, funded by the oldest continuously operating business in the city.

Operating foundations fund their own programs but make few or no grants to other organizations; prominent examples include the Century Foundation, which publishes studies in communications, economics, and international affairs; the Russell Sage Foundation, which focuses on economic and social research; and the Frick Collection, which operates the museum of the same name. Another type, community foundations, receive their funds from many donors rather than a single founder, family, or corporation and grant funds for a wide range of cultural, charitable, and civic activities in one geographic area; the New York Community Trust is the second largest such foundation in the United States, with assets of just over $2 billion (following the Tulsa Community Foundation, $3.1 billion). Some foundations are intended at the outset to last only a certain number of years because of their donors' belief that the funds will do the most good if expended over a fixed period: the Field Foundation, a leader in support of civil rights, discontinued operations in 1989 after 49 years; the Aaron Diamond Foundation (1991 assets of $80 million) was set up in 1955 and expired in 1996; and Atlantic Philanthropies is due to close its doors in 2016. The Altman Foundation, founded in 1913 by a New York City businessman, is one of the oldest continuous foundations in the country. The Wallace Foundation has its headquarters in the city and is involved with educational and cultural programs; the Robin Hood Foundation helps fight poverty in New York City.

Because of intermittent congressional scrutiny beginning in the 1950s, foundations began to work together more closely to foster public accountability. The New York Regional Association of Grantmakers (1979) has 285 members and an annual budget of $1.7 million. In 1991 it established City Connect, which links grant makers and city officials who have common interests. In 2001 it partnered with the Coalition for New Philanthropy to encourage African American, Latino, and Asian American donors. The Foundation Center, headquartered in the city, maintains databases on grant makers and grants and publishes directories and other materials on philanthropic giving. Other organizations group together foundations with similar interests, among them Grantmakers in Health, Women in Foundations / Corporate Philanthropy, Funders Concerned about AIDS, and the Agenda for Children Tomorrow, a project of the New York Community Trust, the Foundation for Child Development, and the United Way. Among the larger foundations in the New York City area in 2000, 173 gave $3 billion in grants, led by the Starr Foundation ($130 million), Ford Foundation ($89.4 million), and Andrew W. Mellon Foundation ($89.4 million).

In the twenty-first century about 37 percent of the money granted by foundations in New York City goes to recipients in the city, more than half by the nine largest foundations. New York–based foundations have historically invested more resources in the public policy arena and civil rights movements than their counterparts in other parts of the country. Small as well as large foundations support social change. The New York Women's Foundation, for example, worked to secure passage of the New York State Anti-Trafficking Act in 2007. With support from 14 foundations, the Campaign for Fiscal Equity filed a successful lawsuit claiming that the underfunding of New York City schools denied students their constitutionally protected right to quality education.

In the twenty-first century the proportion of foundations based in New York City has declined as huge foundations have been formed in other parts of the country. Furthermore, the stock market collapse of 2008 reduced the endowments of foundations and, consequently, their support of nonprofit organizations. Among those hardest hit was the Starr Foundation, which held 15.5 million shares of the ailing American International Group. A major recipient of donations from the financial community, Citymeals-on-Wheels, canceled a $2 million program.

Richard Magat

foundlings. The abandonment of infants was a growing problem in New York City during the nineteenth century. Motivated by poverty or shame, parents left their infants in public places or took them to city officials, who placed them in foster care if they were nursing and otherwise in almshouses. Some children were taken in by private arrangement at "baby farms," which were usually run by women. Because these operations could turn a profit only by severely limiting children's care, they eventually became notorious for infanticide.

Jacob A. Riis, Sister Irene and Her Foundlings *(New York Foundling Society, 1888)*

By the 1850s institutions were organized for children younger than two who could not be cared for in existing orphanages or adopted through the "orphan train" method of the Children's Aid Society (by being sent west). Wet nurses could leave their own infants at Nursery and Child Hospital (1854) while they worked. The Sisters of Charity ran the New York Foundling Hospital (1869) to receive illegitimate infants and thus preserve the reputation of women and families. The New York Infant Asylum (1865, reorganized 1872) accepted pregnant women as well as women nursing their own infants (these were also required to nurse foundlings). The Randall's Island Infant Hospital opened in 1869 as a publicly supported institution for the care of foundlings; by 1896 a controversy over high death rates there led reformers to develop a system of supervised foster care. The last infants were removed from Randalls Island in 1905, and the hospital was later demolished to make way for the Triborough Bridge.

Elsie Essmuller Vignec, *Children of Hope: Some Stories of the New York Foundling Hospital* (New York: Dodd, Mead, 1964)

Mary Elizabeth Brown

foundries. See Metal founding and metalworking.

Four Corners. Neighborhood in north central Staten Island. The area was known as Centreville until the 1870s, when a new post office was named Castleton–Four Corners for the crossing of Manor Road, running north to south, and Victory Boulevard, running east to west (now the site of the main post office of the borough). In the mid-nineteenth century the Constanz Brewery was built on Manor Road just south of Victory Boulevard; it later became a shopping center. The intersection retained the name Four Corners; the surrounding area gradually became known as Castleton Corners. Businesses line both sides of Victory Boulevard. In the early twenty-first century the area remained an upscale commercial district.

Marjorie Johnson

Four Seasons Restaurant. Famous upscale eatery in the Seagram Building at 99 East 52nd Street and Park Avenue. It opened on 20 July 1959 and was designed by Ludwig Mies van der Rohe and Philip Johnson; the latter reportedly ate there every day. The Four Seasons is known for its expensive cuisine and massive indoor plants that change with the seasons; artwork by Pablo Picasso, Jackson Pollock, and Joan Miró; and its four seasons logo. In 1989 it became the second restaurant in New York City to be designated a landmark interior.

Stephanie Miller

Fourth Avenue. Former name of Park Avenue South and Book Sellers Row; see Park Avenue.

Fox, Richard Kyle (*b* Belfast, 12 Aug 1846; *d* Red Bank, N.J., 14 Nov 1922). Journalist. He settled in New York City in 1874 and within one year became the managing editor of the *National Police Gazette,* which he purchased in 1877. For 45 years he published the *Gazette* as a lurid 16-page magazine that included news of sports, crime, and the stage as well as sensational columns such as "Noose Notes," detailing executions, and "Crimes of the Clergy." Fox printed extensive news about prizefighting and helped to popularize pit and combat sports. He wrote *Prize Ring Champions of England from 1719 to 1889* (1889).

Randy Roberts

Fox Hills. Neighborhood in northeastern Staten Island, bounded to the west and north by Vanderbilt Avenue, to the east by Tompkins Avenue and the tracks of Staten Island Rapid Transit, and to the south by Steuben Street. The name was first used in the 1870s by Henry Meyer for his estate, but in the 1890s the area was known as Park Hill. The first 18-hole golf course in Staten Island was opened there in 1900 and was the site of championships until 1935. During World War I the largest army hospital in the nation was built in four months; the buildings were used during World War II as a military training base and as a camp for prisoners of war. Residential development accelerated after 1950. Early in the twenty-first century the area included immigrants from India, Liberia, China, and Jamaica. The Park Hill Apartments on Vanderbilt Avenue dominate Fox Hills.

Harlow McMillen

fox hunting. Fox hunts were first held in the metropolitan area in colonial times. Large packs of hounds were owned in the 1760s by James de Lancey and Lewis Morris; these were combined soon after de Lancey returned from a trip to England with horses and foxhounds. A hunt that became known as the Riding Hunt was organized by John Evers, de Lancey's hunting manager, and held weekly in what are now the Bronx, Brooklyn, and Queens. A few small packs of hounds were used in hunts in Manhattan, and in 1781 the proprietor of the King's Head Tavern in Brooklyn advertised a hunt in order to assemble a festive gathering of drinkers. In 1812 Cato's Tavern, which stood at what is now Third Avenue and 52nd Street, was the headquarters for the Belvidere Hunt. By 1822 all the hunts in Manhattan had been moved to Long Island and Westchester. An effort to revive fox hunting was made in 1856, when the Brooklyn Hunt was launched, but it was discontinued at the outbreak of the Civil War. The last fox hunt in the area was the Queens County Hunt, sponsored in 1877 by Frank Griswold, who imported a pack of Irish hounds for the event.

James E. Mooney

Foxhurst. Nineteenth-century estate in what is now the south central Bronx, on the Hunts Point Peninsula and bordering the Bronx River between what are now Farragut Street and East Bay Avenue. The estate was on a triangular parcel owned by H. D. Tiffany, a son-in-law of William Fox. George Fox, founder of the Quakers, apparently preached there in 1672. Revolutionary records describe the thick forest of Fox Woods. By 1900 Foxhurst had become a groomed estate surrounded by several dairy farms. The land is now occupied by the Hunts Point Terminal Market.

John McNamara

Frank, Jerome N(ew) (*b* New York City, 10 Sept 1889; *d* New Haven, Conn., 13 Jan 1957). Judge. Of German Jewish background, he graduated from the University of Chicago (1909) and University of Chicago Law School (1912) and practiced in Chicago. He joined the firm of Chadbourne, Stanchfield and Levy in Manhattan in 1928. One of President Franklin D. Roosevelt's "Brain Trust," he was counsel for the Agricultural Adjustment Administration (1933–35) and then Secretary of the Interior Harold Ickes; appointed to the Securities and Exchange Commission in 1937, he succeeded William O. Douglas as chairman in 1939. President Roosevelt appointed him to the U.S. Court of Appeals for the Second Circuit in 1941. He upheld the contempt conviction of defense lawyers for 11 communists tried under the Smith Act in 1950 (*U.S. v. Sacher*) and the conviction of Julius and Ethel Rosenberg. Overturning the contempt conviction of a union official in 1956, he wrote, "An overzealous prosecutor's heaven may be everyone else's hell." Frank expounded "legal realism" in *Law and the Modern Mind* (1930); other writings include the isolationist *Save America First* (1938), *Confessions of an Ex-isolationist* (1941), *If Men Were Angels* (1942), *Fate and Freedom* (1945), *Courts on Trial* (1949), and *Not Guilty* (1957). He lived at Riverside Drive and 84th Street.

Jeffrey A. Kroessler

Frank, Waldo (David) (*b* Long Branch, N.J., 25 Aug 1889; *d* White Plains, N.Y., 9 Jan 1967). Novelist and critic. He worked for a series of newspapers and magazines, including

the *New York Times,* the *New Yorker,* and the *New Republic*. Influenced by the transcendentalist ideals of Walt Whitman, he launched the literary magazine *Seven Arts* (1916), which ran for only 12 issues, at which point the critic turned to novel writing. Frank is best known for more than 20 works of fiction, essays, criticism, and travel writing.

James E. Mooney

Frankenthaler, Helen (*b* New York City, 12 Dec 1928). Painter. She studied with Rufino Tamayo while attending the Dalton School. After studying at the Art Students League and graduating from Bennington College in 1949 she returned to New York City and belonged to a circle of artists and poets that included Larry Rivers and John Ashbery. In 1952 she painted her acknowledged masterpiece, *Mountains and Sea*. She married the painter Robert Motherwell in 1958 (they later divorced). A member of the second generation of abstract expressionists, Frankenthaler invented the "soak-stain" technique of paint application, applying thinned pigment onto an unprimed, unsized canvas, giving the effect of watercolors, but more vivid. In 1963 she abandoned oil paints in favor of acrylics, working on larger, simpler, and more geometric pieces. The Whitney Museum of American Art held a retrospective of her work in 1969 that solidified her reputation. This was followed by exhibitions at the Metropolitan Museum of Art (1973) and the Museum of Modern Art (1989).

Stephen Weinstein

Frank Leslie's Illustrated Newspaper. First weekly news magazine in the United States, launched in 1855 by Frank Leslie. It covered international, national, and local news, the arts, and sports, often taking a sensational approach to stories of murder and disaster. A folio format provided ample room for both factual and fictional treatments of the lives of the wealthy (and occasionally the poor), often illustrated by lavish wood engravings. The magazine was especially noted for its pictures of the Civil War and Spanish–American War. Sold by Leslie's widow in 1889, it continued under various names until 1922.

Bud Leslie Gambee, *Frank Leslie and His Illustrated Newspaper, 1855–1860* (Ann Arbor: University of Michigan, Department of Library Science, 1964)

See also Leslie, Frank.

Robert Stinson

Franklin D. Roosevelt Boardwalk. Boardwalk in Staten Island bordering South and Midland beaches.

Franklin Furnace. Archive and exhibition space founded in 1976 by the performance artist Martha Wilson. Originally located at 112 Franklin Street in Tribeca, it housed the nation's largest collection of publications produced by artists, encompassing more than 12,000 items dating from 1960 to the present. Among its holdings were early works by Red Grooms, Claes Oldenburg, Jim Dine, and Gilbert and George, as well as publications submitted by artists worldwide whose work is suppressed for political reasons. After the New York City Fire Department closed the organization's headquarters in Tribeca (1990), the archive sought partnerships with institutions around the city to display up-and-coming avant-garde artwork. It merged its collection of post-1960 internationally published artists' books with the Museum of Modern Art in 1993 and became a virtual institution in 1998, shifting its focus to preserving performances and other forms of time-sensitive art through digital media. In 2006, the organization received a grant from the National Endowment for the Humanities to publish online records of the first 10 years of its installments and exhibitions.

Carol V. Wright

Franklin Simon. Firm of women's clothing retailers, formed in 1902 by Franklin Simon (*b ca* 1864; *d* 1934), who had worked for the retail firm of Stern Brothers since 1878. It operated a store at Fifth Avenue and 38th Street and then at 33 West 34th Street, where it remained prominent for decades. Simon enabled his employees to attend classes in his store and offered scholarships to New York University. After his death the firm was sold in 1936 to the Atlas Corporation, which in turn sold it to the City Stores Company in 1947. When this company filed for bankruptcy in 1979, Franklin Simon went into liquidation and its stores in 12 states ceased to operate.

Leslie Gourse, Kenneth T. Jackson

Franklin Square. Name of St. George's Square after 1817.

fraternal organizations. In New York City during the eighteenth and nineteenth centuries, fraternal organizations both secret and open were formed along geographic, ethnic, religious, and political lines. These organizations provided not only an outlet for social activity but often disability and death benefits for members and their families. The city's oldest and most influential fraternal group was the Freemasons, formally organized in 1730 and often an object of mistrust and hostility: a challenge to the Masons appeared on 26 November 1737 as a letter to the editor of the *New York Gazette,* and the famous anti-Masonic social and political movement that spread to the city in 1827 drove the order underground for 10 years. Several offshoots of Masonry had their beginnings in the city, and some became nationwide organizations: these included the Ancient Arabic Order of Nobles of the Mystic Shrine, formed in 1870 by two Freemasons, Walter Fleming and the actor Billy Florence; the Order of the Amaranth, formed in June 1873 by James B. Taylor as a recreational, less ritualistic organization for members of the Order of the Eastern Star, or female Masons; and the Independent Order of Odd Fellows, often regarded as the "poor man's Masons," which opened a lodge in Brooklyn in 1822. Orders based on national, ethnic, and religious origins were organized by Scotsmen (the St. Andrews Society, 1756), Germans (the German Society, 1756, and a secret society known as the German Order of Harugari, 1847), Irishmen (the Friendly Sons of St. Patrick, 1784, and the secret society the Ancient Order of Hibernians, 1836, intended to safeguard Catholic churches from hostile mobs), Englishmen (the St. George's Society, 1786), and free blacks (the African Society, 1795), who were barred from other orders. It has been estimated that 50 black organizations emerged between 1800 and 1860, including the New York African Society for Mutual Relief (1810), the Brooklyn African Woolman Benevolent Society (1831, named after John Woolman, a Quaker from New Jersey), the Abyssinian Daughters of Esther Association (1839), and the Boyer Lodge of Prince Hall Freemasonry (1842). The first racially integrated lodge was the Philomethan Lodge of the Odd Fellows, formed in 1843 by members of the Philomethan Literary Society (itself formed in 1829 by Henry Simpkins and Eli Hazzard and based at its own hall on Duane Street) and chartered by the Odd Fellows' governing body in Britain. Another integrated group, the Independent Order of Good Samaritans and Daughters of Samaria (1847), promoted abstinence from alcohol. In 1848 the 24 black Odd Fellows groups in Brooklyn and Manhattan counted almost 2000 members. Jewish fraternal organizations formed during these years included B'nai B'rith (1843), intended to promote education and improve the image of Jews, the Free Sons of Israel (1849), B'rith Abraham (1859), and the United Order of True Sisters (1846), formed by Henrietta Bruckman. In opposition to the fraternal orders of immigrants stood a virulently nativistic organization called the American Brotherhood (1844).

The period between the Civil War and the Depression marked the heyday of the city's fraternal organizations, which at any one time numbered at least 300. Among the secret societies with branches in the city were the Knights of Pythias (1868) and the National Grange, which had 45 wholesale merchants and sewing machine manufacturers as mem-

bers. In 1866 Charles S. Vivian and a group of actors organized the Benevolent and Protective Order of Elks in the city to circumvent the state's Sunday dry law; the group was chartered in 1868 and gained chapters nationwide. During the last quarter of the nineteenth century and the first quarter of the twentieth, many mutual-aid societies were formed by immigrants, especially by Jews (such as Ahvas Israel, 1890, and the Workmen's Circle, 1900, which in 1918 had 250 branches and 25,000 members). Hundreds of smaller groups known as Landsmanshaftn were organized according to the European and Russian villages from which their members originated: examples include the Independent Grodno Sick Support Society and the Independent Kurlander Benevolent Society, which served perhaps a million New Yorkers before World War I. Greek fraternal organizations in the city included the Brotherhood of Athena (1891), which at its peak had 450 members, and a long-lasting group called the Panhellenic Union, organized in the basement of Holy Trinity Church at 1521–22 East 72nd Street in 1907. Nativist groups such as the Order of the American Union (1873) continued to flourish, and the Ku Klux Klan formed a chapter in the city that held regular meetings at the Chelsea Hotel; the hotel was near the Masonic Temple at 71 West 23rd Street, and the Klan may have infiltrated the Masons, a charge that was heatedly denied at the time. Among the city's other fraternal organizations were the Daughters of the American Revolution (1890), the predominantly Catholic groups the Knights of Columbus (1891) and the Order of Sons of Italy (1905), and the Knights of Liberty (1923), a group opposed to the Ku Klux Klan and led by Andrew J. Padon. In 1929 the city had 351 Masonic lodges.

The Depression was a watershed for the city's fraternal organizations, as the New Deal made the benefits offered by most voluntary associations superfluous. Many organizations established hospitals and foundations as a means of maintaining their sense of purpose. Most of the smaller groups disappeared, and those that lasted had difficulty recruiting new members. In 1930 the Masons lost ownership of their lavishly ornamented Level Club at 253 West 73rd Street, completed in 1927 at a cost of $4.3 million and celebrated by a huge parade up Fifth Avenue; the club was converted into condominiums in 1983. In 1937 the Shriners foreclosed on Mecca Temple, built in 1924 at 131 West 55th Street (later saved from demolition by the city and renamed the City Center of Music and Drama). Fraternal organizations suffered further after World War II, by which time many New Yorkers viewed the rituals practiced by secret societies as old-fashioned. Membership in the Masons declined from its peak of 134,786 in 1957 to 34,765 in 1990 (in 186 lodges), and the Knights of Pythias fared little better: although membership increased briefly when veterans joined after the war, it declined as residents of the city moved to the suburbs, and the Pythians were forced to relinquish what was once an elaborate symbol of their power, the ornate Pythian Building at 135 West 70th Street (built in 1926, remodeled into condominiums in the 1980s). The Boyer Lodge of Prince Hall Freemasonry took part in civil rights struggles in the 1960s and had as members such prominent figures as Adam Clayton Powell, Sr., Adam Clayton Powell, Jr., Arthur Schomburg, Julius A. Archibald, and Percy E. Sutton, but it, too, lost members in the following decades. In the early twenty-first century, service groups such as the New York Rotary Club (1909) and the Lions Club (1928) remained active.

Marc Ferris

Fraunces, Samuel (*b* ?West Indies, *ca* 1722; *d* Philadelphia, 1795). Innkeeper. He moved to New York City in the early 1750s, was granted a tavern license in 1756, and operated taverns there and in Philadelphia over the next 30 years. A member of Trinity Church, he married Elizabeth Dalley and had eight children. He is most often associated with Fraunces Tavern in New York City. First known as the Queen Charlotte (after the young bride of George III), it assumed its proprietor's name after the outbreak of the American Revolution. Fraunces prepared meals in the English style and was renowned for his elegant desserts. He remained in New York City during most of the American Revolution and after independence was cited for his efforts to aid American prisoners of war by Congress, which awarded him $2000. After the Revolution he belonged with his son Andrew to the Columbian Order, or Tammany Society. Appointed steward of President Washington's household in New York City, he followed the president to Philadelphia in 1790. He left him in 1794 to assume the ownership of the renowned Tun Tavern in Philadelphia but died the next year; he was buried in Philadelphia at Christ Church.

Robert I. Goler

Fraunces Tavern. Meeting hall and inn built in 1719 at the corner of Queen Street (now Pearl Street) and Canal Street (now Broad Street). The building was used first as a private home and then as a public house for several decades before being purchased in 1762 by Samuel Fraunces, a West Indian who had moved to New York City from the Caribbean in the early 1750s. First known as the Queen Charlotte (after the young bride of George III), it assumed its proprietor's name after the outbreak of the American Revolution. The tavern was strongly associated with the cause of American independence: it was the site of the initial meeting in 1768 of the New York Chamber of Commerce and of meetings of the Sons of Liberty and the provincial congress. George Washington bade farewell to his officers there in 1783, and in 1785 the building became one of the first to be occupied by offices of the federal government when New York City was the national capital: it housed the Department of Foreign Affairs, the Department of the Treasury, and the Department of War. The tavern increasingly catered to a working-class clientele in the nineteenth century, although the New York Yacht Club did meet there after being organized in 1844. Run down and damaged by fire, the building was purchased in 1904 by the Sons of the Revolution, who rebuilt and restored it in the Colonial Revival style. It reopened in 1907 with a restaurant and the Fraunces Tavern Museum. The museum now occupies four connecting buildings and focuses on the history of New York City in the eighteenth century. The entire block housing the museum is listed on the National Register of Historic Places. In 1975 Fraunces Tavern was the target of a bomb attack that killed four persons, for which responsibility was claimed by the Fuerzas Armadas de Liberación Nacional.

Robert I. Goler

Fraye Arbeter Shtime. Yiddish-language anarchist newspaper, launched in 1890 by the Pioneers of Liberty. It was published on the Lower East Side and chronicled anarchism in the United States and abroad. During Saul Yanovsky's editorship (1899–1919) it ceased to focus on insurgency and instead advocated libertarian schools, unions, and workers' cooperatives. It held annual conferences on anarchism in the city and with *Mother Earth,*

a journal published by Emma Goldman, sponsored a celebration at Carnegie Hall of Peter Kropotkin's 70th birthday in 1912. Eventually it consisted mostly of historical essays and tributes to anarchist heroes, although it continued to provide commentary on contemporary issues. *Fraye Arbeter Shtime* was the longest-lived publication of its kind in the country when it ceased publication in 1977.

David A. Balcom

Fredericksz, Cryn (*fl* 1625–35). Engineer and surveyor. He was engaged by the Dutch West India Company to lay out the settlement of New Amsterdam and moved there in 1625 with diagrams for fortifications, houses, streets, a mill, a church, a school, and a hospital that had been drawn up in the Netherlands. Across from Bowling Green at the southern end of Manhattan he staked out a site for what became Fort Amsterdam, which was completed in 1635 in a style typical of the period; it was flanked by four bastions and had walls made of brick on the inside and battered earth and sod on the outside. His plan called for about a dozen streets stretching about a mile (1.6 kilometers) in total length. The first to be laid out was the Broad Way, which ran about a quarter of a mile (400 meters) to the northern edge of the settlement at Wall Street; Pearl Street marked the eastern boundary, Greenwich Street the western boundary. These streets are nearly all that remains of Fredericksz's plan.

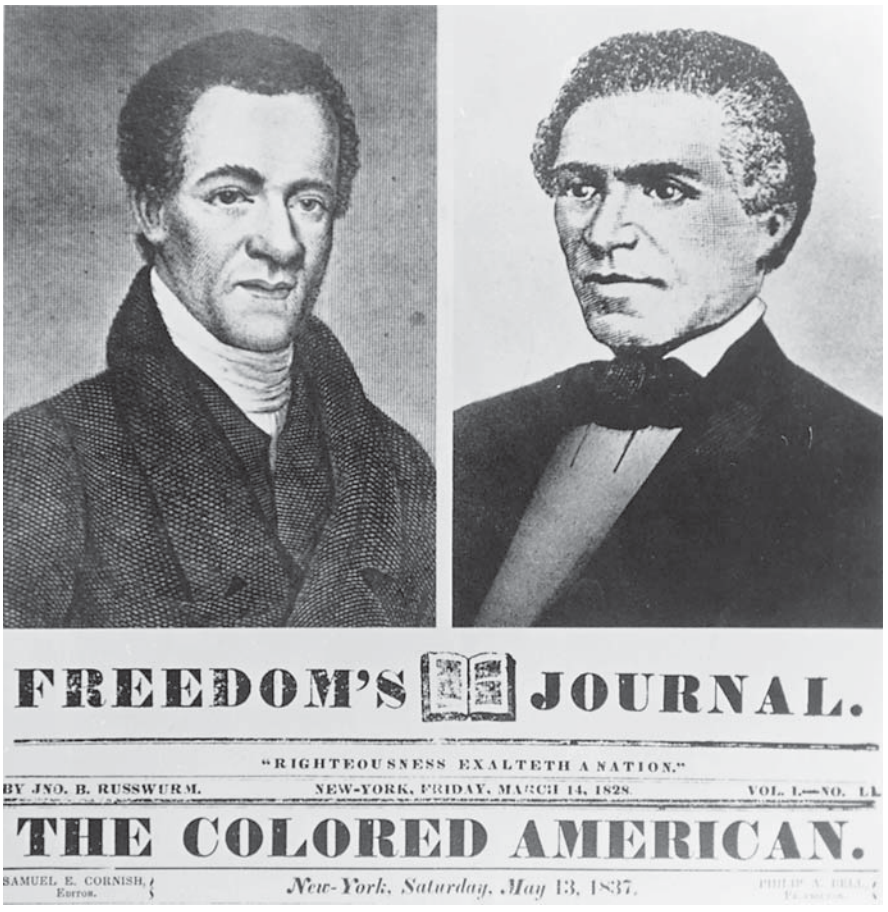
Jonathan Aspell

Freedomland. Amusement park opened in July 1960 on 205 acres (83 hectares) in the eastern Bronx between the Hutchinson River Parkway and the New England Thruway. Advertised as the world's largest outdoor entertainment center and as the city's answer to Disneyland, it was created by C. V. Wood at a cost of $65 million. The park's seven theme areas represented various parts of the United States and were roughly arranged in geographic order. Visitors could ride horse-drawn streetcars in "Little Old New York," climb aboard a stage coach in "The Great Plains," and travel between "Chicago: 1871" and "San Francisco: 1906" in an old-fashioned train. Unsuccessful from the start, the park closed after the 1964 season, citing competition from the 1964 World's Fair in Queens. The site is now occupied by Co-op City and shopping centers.

Gary D. Hermalyn, Benjamin Hemric

Freedom National Bank. Commercial bank formed in Harlem by Dunbar McLaurin in 1964. The first deposits were solicited door to door by McLaurin, who appointed the baseball player Jackie Robinson to the board of directors. The bank sought to end the practice of redlining—that is, denying banking services to residents of certain, usually racially determined, areas—by providing capital to black entrepreneurs. Between 1977 and 1981 assets grew 234 percent, but debts and infighting among the directors led federal regulators to close Freedom National Bank in November 1990.

James O. Drummond



Freedom's Journal. First African American newspaper in the United States. It was launched in New York City as a weekly in March 1827, with John B. Russwurm and the Presbyterian clergyman Samuel E. Cornish as editors. Originally it served as a vehicle for answering the racist attacks on African Americans made by editors of various New York City newspapers. After Russwurm moved to Liberia in 1829, the newspaper ceased publication in March of that year. In May Cornish tried to continue publication under the name the *Rights of All,* but that paper folded in less than a year.

Sandra Roff

Free Expression Policy Project [FEPP]. Organization, founded in 2000, that provides research and advocacy on issues relating to free speech, copyright, and media democracy. Its main areas of interest involve restrictions on expression in publicly funded institutions such as libraries, museums, schools, universities, and arts and humanities agencies; measures including Internet filters or rating systems that restrict access to digital information; inequalities in the intellectual property system such as restrictive copyright laws; widespread issues of media democracy; and censorship of controversial art, information, and ideas directed at adolescents and children. FEPP was founded by Marjorie Heins, a lawyer and First Amendment scholar who formerly directed the Art Censorship Project of the American Civil Liberties Union. FEPP began as a project of the National Coalition against Censorship and later became part of the Brennan Center for Justice at New York University. It became independent in 2007.

Christopher M. Finan

Freeman, Frank (*b* Hamilton, Ont., 1861; *d* Montclair, N.J., 13 Oct 1949). Architect. He lived in Brooklyn and designed a variety of buildings there in the Romanesque Revival tradition during the last decade of the nineteenth century. His skill and versatility were displayed in the Hotel Margaret in Columbia Heights (1889, demolished), the Behr House, 82 Pierrepont Street (1890), the Bushwick Democratic Club (1892, demolished), the Brooklyn Fire Headquarters on Jay Street

Left *John B. Russworm,* right *Samuel E. Cornish, and mastheads of* Freedom's Journal *("Righteousness Exalteth a Nation"), 14 March 1828, and the* Colored American, *13 May 1837*

(1892), the Eagle Warehouse and Storage Company on Cadman Plaza East (1893–94), and the Brooklyn Savings Bank at Pierrepont and Clinton streets (1893–94, demolished).

Marjorie Pearson

Freeman's Journal. Weekly newspaper launched in 1840 by James White and John White and named after a moderate nationalist newspaper in Ireland. It emphasized the rights of Irish Catholics on both sides of the Atlantic and in 1841 was renamed the *Freeman's Journal and Catholic Register*. Bought in 1842 by Bishop John Hughes, it was the official publication of the Catholic Church in New York City until it was sold in 1844 to James A. McMaster. Its circulation rose from 4500 in 1846 to 16,000 by 1854. The editors supported the brand of nationalism promoted by Daniel O'Connell but opposed such extreme nationalist movements as Young Ireland and Fenianism as well as most American reform movements, especially abolitionism. The *Freeman's Journal* ceased publication in 1918.

Kevin Kenny

Freemasons [Masons]. Members of a secret male fraternal organization formed in the seventeenth century by English stonemasons' guilds. They use an elaborate system of visual symbols evoking items associated with stonemasonry, including aprons and compasses. The organization gained wide acceptance throughout the British colonies; the English Grand Lodge appointed Daniel Coxe the first provincial grand master of New York, New Jersey, and Pennsylvania in 1730, and a Masonic branch was formed in New York City in 1739. In 1787 the lodges in New York City and New York State declared themselves independent of their obligations to the British. Robert R. Livingston, grand master of New York State between 1784 and 1801, administered the first presidential oath at Federal Hall on 30 April 1789 to George Washington, a Mason from 1752 who used for the occasion the Bible of the St. John's Lodge no. 1. There were 10 lodges in the city by the end of the eighteenth century, and in 1802 the members began construction of their own building. A wide range of artifacts and prints from the early decades of the republic bearing Masonic images may have contributed to the Classical Revival in the nineteenth-century United States. Suspicions that Freemasonry was a mysterious sect that was above the law were intensified by the abduction and murder in upstate New York in 1826 of William Morgan, who was preparing to publish a report disclosing the secrets of Masonry, and led to the formation of the Anti-Masonic Party in 1828 in Utica, New York. Although membership in Masonic lodges in the city declined by 85 percent during the decade after Morgan's disappearance, Masons continued to occupy powerful positions in politics and society. In 1930 the Masons lost ownership of their lavishly ornamented Level Club at 253 West 73rd Street, completed in 1927 and celebrated by a huge parade up Fifth Avenue; the club was converted into condominiums in 1983. Local membership in the Masons declined after World War II, from a peak of 134,786 in 1957 to 34,765 in 1990 (in 186 lodges). As of 2010 the lodge in Manhattan was located at 71 West 23rd Street. Well-known Masons in New York City have included DeWitt Clinton, John Jacob Astor, Theodore Roosevelt, Irving Berlin, George M. Cohan, Fiorello H. La Guardia, Al Jolson, Harry Houdini, and Paul Whiteman.

Marc Ferris, Robert I. Goler

Frémont, John C(harles) (*b* Savannah, Ga., 21 Jan 1813; *d* New York City, 13 July 1890). Explorer, senator, and businessman. After exploring the West and representing California in the U.S. Senate (1850–51), he moved in 1855 to New York City with his wife, Jessie; they settled at 56 East Ninth Street the following year when he became interested in seeking the presidency of the United States. He was the first presidential nominee of the Republican Party in 1856 but was soundly defeated in the general election by James Buchanan. After the Civil War Frémont bought a brownstone mansion at what is now 21 West 19th Street and invested heavily in railroads; however, poor decisions resulted in the loss of his fortune within a few years. He moved in 1873 to a cottage on Staten Island called the Esplanade, where he wrote his memoirs. From 1878 to 1883 he was governor of the Arizona Territory. Frémont was always seeking to regain his fortune and maintained a residence at 49 West 29th Street in Manhattan until the end of his life.

James Bradley

French. The French presence in New York City dates to the 1620s, following the petition of Jean de Forrest, a French Huguenot who settled in the Netherlands in 1621, requesting permission to establish a settlement in America. The grant was authorized in 1624, and in May a group of French Huguenots arrived in Manhattan, where they reinforced the garrison built by the Dutch. The colony attracted many more Huguenots from the Netherlands, including the first colonial governor, Peter Minuit. Over time an increasing number of French merchants and skilled craftspeople settled in New Amsterdam. Steven de Lancey (born Étienne de Lancy), one of the most successful merchants, acquired enough wealth to build a large home and trading house, now known as Fraunces Tavern; he also presented the city with its first clock. Early progress in the colony was disrupted by conflict among the Netherlands, England, and France, and by the 1740s the English defeated the French and had taken their holdings in North America. The English governors of Manhattan nonetheless continued to welcome religious dissenters from France. Although the French prospered under British rule, many joined the growing movement against it, among them John Jay, Henry Laurens, Elisam Boudinot, Paul Revere, and James Bowdoin. During the American Revolution France supported the American colonists and contributed crucial engineering and military expertise, soldiers, and money; French Americans throughout the colonies also contributed strongly to the effort.

Some emigrated after the French Revolution in 1789, and in 1814 Joseph Bonaparte bought extensive acreage in upstate New York for a residence for his brother, the emperor Napoleon. Between 1816 and 1818 the emperor's nephew Joseph Napoleon built several large houses in New York City for his art collection and to provide a possible refuge for the emperor. In 1839 these holdings became the initial endowment of Fordham University. Unlike their counterparts in upstate New York (in New Paltz and other towns), New England, and Louisiana, French Americans in New York City in the early nineteenth century became assimilated into American society and gave up their language, churches, and schools. Few groups and institutions worked to preserve French culture.

In the city French architects designed several buildings during the nineteenth century. Joseph François Mangin collaborated in the design of City Hall (1802) and designed several other buildings, including the original St. Patrick's Cathedral on Mott Street (1809); Jenika de Feriet built a lavish home in 1824, the Hermitage, just outside New York City in what is now the Bronx. The French architectural influence became even more pronounced during the late nineteenth century, when Richard Morris Hunt returned to the city after studying at the École des Beaux-Arts. His ideas of design were reflected in the exuberant Renaissance style of such public buildings as the New York Public Library (begun in 1895) and Grand Central Terminal (begun in 1903), both designed by the French American architect John M. Carrère. The principles of the École des Beaux-Arts were also visible in private châteaux built in a wide range of styles: François I (the Rhinelander–Waldo mansion [1895], 72nd Street and Madison Avenue), belle époque (the Burden mansion [1905], Fifth Avenue at 91st Street), neo-French classical (the Duke mansion [1911], Fifth Avenue and 78th Street), Louis XVI (the

Frick mansion [1910], Fifth Avenue at 70th Street), and French Renaissance (the Arts Institute [1891], 57th Street). The best-known example of belle époque sculpture is the Statue of Liberty, presented to the United States by France in 1883 in honor of the 100th anniversary of the ending of the American Revolution, designed by Frédéric Auguste Bartholdi, built by French engineers and artists, and installed in 1886. French ideas and styles also had a strong effect on painting and lithography, in part because many studios were led by Americans who had studied in Paris (John Vanderlyn and Samuel F. B. Morse in the 1820s, and later John Singer Sargent and William Morris Hunt, brother of the architect), and in part because several gifted painters from France and French territories settled in the United States (among them John James Audubon, who landed in New York City in 1804, and Anthony Imbert, who in 1824 opened the first lithography studio in Manhattan). During the early twentieth century the techniques of French postimpressionists, Fauvists, and cubists were learned by many American painters and received wide exposure at the Armory Show (1913). A large number of French artists, including Marcel Duchamp, Fernand Léger, and Marc Chagall, taught in the United States during the first half of the twentieth century at such institutions as the New School for Social Research. French musicians, writers, philosophers, and art historians also contributed to the direction of American art during these years.

Authentic French cuisine was introduced in the United States at the French pavilion of the World's Fair of 1939–40. Soon after, Henri Soulé, maître d' at the restaurant of the pavilion, opened a lavish French restaurant called Le Pavillon on East 55th Street that inspired others in the city to open French restaurants as well as cooking schools, notably the French Culinary Institute. Several well-known French Americans have shaped American fashion and especially haute couture, including Coco Chanel, Lilly Daché, and Pauline Trièrge.

The French-speaking community is served by a number of cultural and educational institutions. Two of long standing, the Alliance Française (1898) and the French Institute (1911), merged in 1971; the combined organization (French Institute Alliance Française [FIAF]) later dedicated Florence Gould Hall, an auditorium where French works are often featured. The city is also the place of publication of the weekly newspaper *France-Amérique.* Among those of French origin who have lived for extended periods in New York City are the historian Jacques Barzun, the philosopher Jean-Paul Sartre, and the anthropologist Claude Lévi-Strauss. More than 60,000 people reported French ancestry in 2007.

Abigail Mellen

French, Daniel Chester (*b* Exeter, N.H., 20 April 1850; *d* Stockbridge, Mass., 7 Oct 1931). Sculptor. After achieving national acclaim as a sculptor he became a central figure from 1900 to 1917 in the cultural affairs of New York City, where he made many public sculptures: *Peace* for the temporary Dewey Arch (1899, destroyed); the Richard Morris Hunt Memorial (1901, Fifth Avenue at 70th Street); *Justice, Power, and Study* for the appellate courthouse (1900, Madison Avenue at 24th Street); *DeWitt Clinton, Alexander Hamilton,* and *John Jay* for the U.S. Chamber of Commerce (1902, removed); *Alma Mater* (1906, Columbia University); *Four Continents* for the U.S. Custom House (1907, Bowling Green); *Greek Epic, Lyric Poetry,* and *Religion* for the Brooklyn Institute of Arts and Sciences, where he also supervised the entire sculptural program (1908, Eastern Parkway); *Manhattan* and *Brooklyn* for the Manhattan Bridge (1916, Brooklyn Museum); and *Power and Wisdom* for a temporary victory arch commemorating World War I (1919, destroyed). The first sculptor on the city's Art Commission, he was also a delegate to the Fine Arts Federation, a member of the New York City Improvement Commission formed by Mayor George B. McClellan in 1904, and a trustee and director of the department of sculpture at the Metropolitan Museum of Art. For much of his life he lived both in New Hampshire and in New York City in a house that he bought in 1888 at 125 West 11th Street. Known as the "dean of American sculptors," French expressed the civic aspirations of the elite in blandly earnest public works.

Michele H. Bogart

Sculpture at the U.S. Custom House by Daniel Chester French

French, Fred(erick) F. (*b* New York City, 1883; *d* Hammersly Hills, N.Y., 30 Aug 1936). Real estate developer. Using investment capital from individual investors who purchased equity shares in his projects, he built several apartment buildings and office towers in Manhattan. In 1925 he began work on Tudor City, a complex of 12 buildings containing 3000 apartments and 600 hotel rooms. Situated at 42nd Street near the East River and surrounded by slaughterhouses, electricity generators, and tenement buildings, this was the largest development of its kind in the city at its completion in 1928. In 1934 he built Knickerbocker Village, a housing complex for more than 1600 families financed as a limited-dividend project by the federal Reconstruction Finance Corporation and built on a site cleared of tenement buildings on the Lower East Side; this was one of the country's first urban redevelopment projects subsidized publicly and built and owned privately. French was one of the city's most innovative developers of the 1920s and early 1930s.

Marc A. Weiss

French Connection. Criminal drug cartel in the 1960s and early 1970s, so called from a 1962 Brooklyn case in which the New York City Police Department (NYPD) intercepted heroin hidden in a car shipped from Marseilles, France; arrested the principals, including two French nationals; and seized the heroin before it was sold. In 1972 authorities learned that large quantities of seized heroin from the 1962 and subsequent cases were stolen from the NYPD's property rooms. Approximately $70 million worth of confiscated drugs disappeared back into the streets; the stolen heroin was replaced with white flour. A 1969 book about the 1962 case (Robin Moore, author) was titled *The French Connection,* as was a 1971 Academy Award–winning motion picture starring Gene Hackman, a fictionalized account of the same case.

Andrew Sparberg

French flats. Name for five- and six-story apartment buildings without elevators erected in New York City from the 1860s, such as the Stuyvesant Apartments on East 19th Street (1869). The style of building was a French innovation. By the 1880s the term was applied to buildings of eight to 10 stories with elevators; the city's building department used it for all "first-class" apartment buildings. The name went out of fashion in the 1890s as apartments became common.

Alana Erickson Coble

Fresh Air Fund. Charitable organization that provides two-week summer vacations for children from disadvantaged communities in New York City. Participants are selected on the basis of financial need and are often from

low-income communities that receive public assistance. The fund was formed in 1877 by the Reverend Willard Parsons, a minister at a small parish in Sherman, Pennsylvania, who provided 60 children from New York City tenements with country vacations for the summer. Later the same year he turned management over to the *New York Tribune,* which relinquished control on facing bankruptcy in 1962. The fund became independent in 1967. By 2007 the Fresh Air Fund had provided vacations for more than 1.7 million children between the ages of six and 18. In 2008 private individuals generated 75 percent of the fund's total income. It also offers a Career Awareness Program. The fund has headquarters in midtown Manhattan and operates five camps on Sharpe Reservation, a facility of 3000 acres (1200 hectares) in Fishkill, New York. In 2009 an estimated 10,000 children participated in Fresh Air Fund programs.

Alana Erickson Coble

FreshDirect. Online grocery delivery service based in Long Island City. FreshDirect was started in 2002 by Jason Ackerman, a former investment banker, and Joe Fedele, a cofounder of Fairway Market. The online grocer offers more than 3000 organic, local, and kosher products and prepared foods from New York City chefs. As of 2008 FreshDirect had filled more than six million orders for more than 250,000 customers.

Anne Epstein

Fresh Kills Landfill. Once the largest landfill in the world, Fresh Kills covers 2200 acres (890 hectares) of Staten Island. It was opened in 1948 as part of an effort to fill marshy areas around the city for large-scale public works projects like parks and highways. The landfill was meant to accept waste for only three years, but it quickly became a key part of the city's solid waste disposal plan; by the early 1970s it was receiving half of New York City's garbage. By 1987 close to 29,000 tons were tipped at Fresh Kills every day, and the landfill employed 650 full-time workers. By the mid-1990s it was so large that it was visible from space. In 1995 the Environmental Protection Agency estimated that it was generating almost 2 percent of the world's methane gas. In the twenty-first century that gas is being extracted, bottled, and sold for heating fuel. In March 2001 a barge delivered the last load of trash to the landfill's approximate total accumulation of 110 million tons, and for the first time in its history New York City had nowhere within its own borders to put its garbage. On 12 September 2001 the landfill was reopened for 10 months as the staging area for the search, investigation, and recovery effort that followed the terrorist attacks of the day before. Material left from the investigation has been placed on Fresh Kills' highest point, overlooking Manhattan. That location is slated to become a September 11th memorial when Fresh Kills is transformed into the city's largest park, three times the size of Central Park. The 30-year-long process began in 2003.

Robin Nagle

Fresh Meadows. Housing development in central Queens (2000 pop. 13,366). In 1923 the area became the site of a golf course at the intersection of Fresh Meadow Lane and Nassau Boulevard, planned by Benjamin C. Ribman of Brooklyn, that eventually became the site of major tournaments. On 1 April 1946 land near the intersection of Horace Harding Boulevard and 188th Street was bought by the New York Life Insurance Company for a residential development; Voorhees, Walker, Foley and Smith was the architectural firm and the George A. Fuller Company the general contractor. Construction began in 1946 and was completed in 1949. Called by many a "model urban community," the development was praised by the critic Lewis Mumford as "perhaps the most positive and exhilarating example of community planning in the country." New York Life sold it in 1972 to Harry B. Helmsley for $53 million, and soon afterward a tenants' association maintained that Helmsley had reduced services and was planning to develop the remaining open spaces. Tenants and owners reached a settlement in 1982 and relations became largely amicable. At first the population was almost exclusively white, prompting a discrimination suit in 1983 by the Legal Defense Fund of the National Association for the Advancement of Colored People (NAACP) that was successful. The area gradually become more diverse, with a growing population of blacks, Chinese, Japanese, Koreans, and Indians. Fresh Meadows remains a small town within the city. The Japanese School of New York opened in the neighborhood in 1975 as the city's first Japanese-language day school.

Patricia A. Doyal

Friars Club. Social club. Formed in 1904 by press agents in New York City, it attracted vaudeville, burlesque, and later film and television performers, many of whom could not gain admittance to more elite clubs such as the Players and the Lambs. The club adopted monastic terms for its officers, including its president (the abbot) and vice president (the dean), as well as for its clubhouse (the monastery). It undertook philanthropic works and staged social gatherings, including "frolics," "roasts," man-of-the-year awards, and testimonial dinners. The frolics, held yearly between 1908 and 1929 and featuring performances by such figures as Al Jolson and George M. Cohan, were held in New York City and then taken on tour. The roasts, which began as strictly private affairs, were filmed from the 1970s and broadcast on Dean Martin's television program. On 26 April 1960 Mayor Robert F. Wagner (ii) renamed Times Square "Friars Square" for a week to honor the humanitarian and civic efforts of the club; Duffy Square was similarly renamed for a week in 1974 on the occasion of the club's 70th anniversary. In June 1988 the club voted to admit women as members. In the early twenty-first century the main headquarters were at 57 East 55th Street.

Tina Margolis

Frick, Henry Clay (*b* West Overton, Pa., 19 Dec 1849; *d* New York City, 2 Dec 1919). Industrialist. While still in his 20s, Frick recognized that the Bessemer steelmaking process would greatly increase the demand for coke (a coal product), and with several associates he began to purchase soft-coal lands in western Pennsylvania and to build coke ovens. By the time he was 30 he had become a millionaire. In 1881 he benefited from an exchange of shares in his mines and coke ovens for shares in the iron and steel mills owned by Andrew Carnegie; by 1889 Frick was in charge of the operations of Carnegie Brothers and Company. As president and then chairman of the board of Carnegie Steel (1889–1900) he oversaw the growth of the concern into the largest producer of steel in the world. In 1900 he moved to New York City, where he began building a magnificent mansion at 1 East 70th Street at Fifth Avenue (completed in 1914). The following year he became a member of the board of directors of the U.S. Steel Corporation, formed by J. P. Morgan. An avid collector of painting and sculpture, particularly of the Italian Renaissance, Frick bequeathed his mansion, his art collection, and an endowment of $15 million to the City of New York. The mansion is now the Frick Collection art museum.

Allen J. Share

Frick Collection. Museum on the Upper East Side of Manhattan. Opened in 1935, the Frick contains the collections of the industrialist Henry Clay Frick and is housed in his former mansion at 1 East 70th Street, designed by Thomas Hastings. The exhibitions include European paintings, mainly from the Renaissance to the end of the nineteenth century; important collections of small, classically inspired bronzes; Renaissance and eighteenth-century French furniture; Limoges enamels; prints and drawings; and Chinese

and French porcelains. The museum has paintings by El Greco, Johannes Vermeer, Rembrandt, J.-A.-D. Ingres, Pierre-Auguste Renoir, Titian, Giovanni Bellini, John Constable, Jean Fragonard, Thomas Gainsborough, Frans Hals, William Hogarth, Hans Holbein the Younger, Piero della Francesca, J. M. W. Turner, Jan van Eyck, and James McNeill Whistler. A reference library contains some 750,000 photographs and slides and 174,000 books and catalogues.

George B. M. Harvey, *Henry Clay Frick: The Man* (New York: Charles Scribner's Sons, 1928); *The Frick Collection: An Illustrated Catalogue* (Princeton, N.J.: Princeton University Press, 1968–82); Bernice Davidson, Edgar Munhall, and Nadia Tscherny, eds., *Paintings from the Frick Collection* (New York: Harry N. Abrams, 1990)

Carol V. Wright

Friend, Charlotte (*b* New York City, 11 March 1921; *d* New York City, 13 Jan 1987). Medical researcher. She earned a bachelor's degree at Hunter College in 1944 and a doctorate in bacteriology at Yale University in 1950. While working at the Sloan–Kettering Institute in 1956 she discovered a virus that causes leukemia in mice, a breakthrough in cancer research. She continued her research at the Mount Sinai School of Medicine from 1966 and in 1971 published an important paper on a technique for making cancer cells revert to normal development patterns. A member of the National Academy of Sciences, Friend received many awards and worked to further the interests of women in science.

Barbara J. Niss

Friendship House. Catholic settlement house established in 1938 at 34 West 135th Street in Manhattan by the Russian émigrée Catherine De Hueck. Before settling in New York, De Hueck opened the first Friendship House in Toronto in 1930. It was dedicated to providing aid and education for blacks, and all funding was from donations. The house offered instruction in reading, writing, religion, sports, and art, as well as employment referrals, lectures, and religious instruction. When possible it paid college tuition for black students. Across from the main building De Hueck rented four stores that were used to collect donations, distribute clothing, and provide space for various activities. The organization also supported a youth group, a Catholic lending library, and a reading room. In 1949 Friendship Houses opened in Washington (D.C.), Chicago, Portland (Oregon), and Shreveport (Louisiana). Friendship House in New York City closed in 1957.

Bernadette McCauley

Friends Seminary. Elementary and secondary coeducational private school. Opened in 1786 on Pearl Street in lower Manhattan as the Friends Institute by the New York Monthly Meeting of the Religious Society of Friends, the school moved in 1826 to Elizabeth Street and in 1860 to Stuyvesant Square. In 1964 a new building was added on 16th Street, adjacent to the school and the Friends Meeting House. Although Quakers account for only about 3 percent of the student body and faculty, the educational outlook of Friends Seminary reflects its Quaker heritage, requiring four years of community service, and has a meetinghouse among its facilities.

Richard Schwartz

Fuchs, Klaus [Emil Julius] (*b* Russelsheim, Germany, 29 Dec 1911; *d* Dresden, East Germany, 28 Jan 1988). Physicist. After fleeing Germany in 1933 he earned his PhD in physics at the University of Bristol in England. In 1941 he began working on the British atomic bomb program and two years later came to Columbia University to work on the Manhattan Project. In 1944 he was transferred to the Los Alamos National Laboratory in New Mexico, and by 1950 he was found guilty of leaking information to the Soviet Union about U.S. nuclear weapon capabilities and atomic secrets of the United States and Britain.

Jessica Montesano

Fugazy [Fugazzi], **Luigi V.** (*b* ?Liguria, Italy, *ca* 1839; *d* New York City, 6 Aug 1930). Businessman. He moved to New York City in 1869 and was well established by the time a large number of Italians settled in the city in the late nineteenth century. Fugazy became wealthy and powerful through padrone services, a bank, a steamship agency, and an employment office. He also organized mutual-benefit societies, urged Italians to take part in American politics, and developed ties with Tammany Hall. His son Humbert and grandson William were well known locally as promoters of sporting events.

Mary Elizabeth Brown

Fuller, (Sarah) Margaret (*b* Cambridge, Mass., 23 May 1810; *d* near Fire Island, N.Y., 19 July 1850). Journalist. In her youth she was influenced by the New England transcendentalists. From 1844 she lived in New York City with the family of Horace Greeley and wrote for his newspaper, the *New York Tribune*. Her articles covered a wide range of subjects, including prison reform, immigration, prostitution, slavery, and literature. In 1846 the newspaper sent her to Europe, where she became the first American woman to be a foreign correspondent. She lost her life aboard the steamer *Elizabeth* on her return voyage.

Thea Arnold

Fulton, Robert (*b* Little Britain [now Fulton Township], Lancaster County, Pa., 14 Nov 1765; *d* New York City, 24 Feb 1815). Inventor, engineer, and painter. He grew up in Lancaster and briefly attended school there before turning to drawing, painting, and mechanics, and becoming an accomplished gunsmith. At the age of 17 he went to Philadelphia where he spent four years painting portraits and landscapes. After studying painting in England he became engrossed in the principles of undersea warfare, mechanically propelled ships, and canals. He designed and tested naval weaponry for the French and the British before meeting the American minister to France, Robert R. Livingston of New York City, who agreed to finance his experiments in steamboat technology and contracted with him to construct a steamboat to ply the Hudson River between New York City and Albany, New York. After landing in New York City in December 1806 he constructed the *North River Steamboat* at the shipyard of Charles Brown(e) in Manhattan. On 17 August 1807 the vessel, powered by a Watt steam engine, began service on the Hudson as the first commercially successful passenger steamboat in the world. Eventually he secured a monopoly on steamboat operations in New York State. Fulton also designed a steam naval vessel for the defense of New York Harbor during the War of 1812, as well as other ships and ferryboats. His last home was at 1 State Street. The *North River Steamboat* became known by its

Self-portrait of Robert Fulton after Elizabeth Emmet, ca *1815. Fulton copied Emmet's portrait but added the exploding boat in the background, a reference to the destruction of the brig* Dorthea *by his diving boat off Deal, England, on 15 October 1805*

popular name the *Clermont* only after his death.

Fulton Ferry [Fulton Landing]. Historic district in northwestern Brooklyn lying at the bottom of the bluffs of Brooklyn Heights at the foot of Fulton Street and bounded to the north by the East River, to the east by Main Street, to the south by Front and Doughty streets, and to the west by Furman Street. Transport from the area to Manhattan was offered as early as 1642 by sailboats and rowboats for hire. The Fulton Ferry Company began regular steam ferry service in 1814 and by 1872, steam ferries made 1200 crossings daily. During the nineteenth century the waterfront around the ferry dock became a bustling mercantile center, and huge warehouses were built in the surrounding streets to accommodate commercial transport; there was also industry and a residential section. After the Brooklyn Bridge was completed in 1883 the number of ferry passengers declined and in 1924 service was discontinued. The only ferry service remaining is the New York Water Taxi. Most of Fulton Street was renamed Cadman Plaza West. Many industrial buildings were later converted to housing: the Eagle Warehouse and Storage Company (28 Fulton Street; 1893) is a residential condominium; the building of the Brooklyn City Railroad Company (8 Cadman Plaza West; 1861) houses the Old Fulton Street apartments; and the Empire Stores (53–83 Water Street; built in sections in 1870 and 1885) and the Tobacco Inspection Warehouse (25–39 Water Street) are part of the Empire Fulton Ferry State Park. A converted barge moored at the Fulton Ferry pier is the site of a chamber music series called Bargemusic and offers superb views of the river. The River Café, a popular gourmet restaurant, and the Brooklyn Ice Cream Factory share the address 1 Water Street. Grimaldi's Pizza, a famous pizza parlor, is also located nearby at 19 Old Fulton Street.

Elizabeth Reich Rawson

Fulton Fish Market. Wholesale fish market formerly located on the shore of the East River two blocks south of the Brooklyn Bridge. It originally consisted of stalls in a corner of the Fulton Market (1822) that were used until fish dealers moved across South Street to a shed along the river in 1831. A permanent building was erected on that location, between Beekman and Fulton streets, in 1869. Initially most fish sold there were delivered by fishing schooners and sloops. By the late nineteenth century the use of refrigeration and express railroads allowed fish to be delivered from all parts of the United

Fulton Ferry and South Street, ca *1898. Manhattan terminal of the Fulton Ferry (designed by John Kellum) at lower right; Fulton Fish Market in center; Brooklyn Bridge in background*

Fulton Fish Market

States and Canada and sometimes from abroad. A freshwater fish market developed near Peck Slip, catering primarily to Jewish customers. The market became the largest in the country and one of the largest in the world, and remained so into the 1990s. As the shipping industry moved away from the South Street district and general produce markets moved to the west side of Manhattan, the fish market took over the former Fulton Market west of South Street and most of the old brick buildings in the neighboring blocks. Fishing boats stopped landing their catch at the market in the late 1970s but occasionally tied up there to wait out bad weather. The slip behind the market between Piers 17 and 18 was eliminated in 1985 with the creation of a new Pier 17 accommodating a three-story shopping and eating mall. One of the last working areas of the waterfront in Manhattan and the last important vestige of outdoor wholesale markets until its close in November 2005, the Fulton Fish Market remained busy from midnight until 9 a.m., its streets choked with refrigerator trucks from all over the continent and the vans of local retailers. The city made efforts to move the fish market to other locations for four decades in order to create more modern facilities and end the influence of organized crime. An early plan to move to Hunts Point in the Bronx died in the city's financial crisis of the 1970s. During the 1980s work was begun on a "Fish Port" at Erie Basin in south Brooklyn, but this was also eventually abandoned. More stringent standards for refrigerating and handling fish adopted in the 1990s made the facilities on South Street too costly to upgrade. Finally, a 400,000-square-foot (37,000-square-meter) fully refrigerated indoor facility was built at the Hunts Point Food Distribution Center in the Bronx at the cost of more than $86 million, and the Fulton Fish Market moved to the New Fulton Fish Market at Hunts Point on 14 November 2005. Thirty-seven seafood wholesalers operated there in 2008, supplying retailers, supermarkets, and restaurants around the country. As in the old location on South Street, hours of operation are from midnight to 9 a.m. Two early twentieth-century buildings at the old Fulton Fish Market on the shore of the East River stood empty in 2008, awaiting demolition or adaptive reuse.

Norman J. Brouwer

Fun City. A mildly derisive nickname for New York City, coined and popularized by the newspaper columnist Dick Schaap, who was inspired by a remark made by Mayor John V. Lindsay during a severe transit strike in 1966: "I still think it's a fun city."

Gerald Leonard Cohen

Fund for the City of New York. Charitable organization formed in 1968 by the Ford Foundation. Its major focus is a management information program, under which staff members work with government agencies to improve accountability and assess performance. It also makes grants to advocacy groups and cash-flow loans to nonprofit recipients of government contracts. In the early twenty-first century it continued to promote efforts to improve the functioning of government and nonprofit organizations.

Kenneth W. Rose

furniture. Roughly hewn furniture of cheap construction was made before 1660 in New Amsterdam. In the second half of the eighteenth century the market for furniture expanded from a regional to an international scope. Artisans made chairs, tables, sideboards, and other furniture, largely in the American Chippendale style. Outstanding makers of furniture such as Andrew Gautier, Gilbert Ash, and Thomas Burling enabled the city to surpass Philadelphia in the quality, and probably also in the quantity, of furniture produced. As early as 1795 cabinetmakers shipped 5000 Windsor chairs from the city to the West Indies, and by the 1820s furniture was also being shipped to the southern United States and South America. The growing demand for furniture led to the demise of the traditional system of manufacture, in which a master cabinetmaker engaged in all aspects of production and trade, and to increased specialization: about this time independent firms engaged in chairmaking and upholstering. Growth also led to conflicts between master cabinetmakers and journeymen. In 1802 an organization of masters attempted to issue a new list of rates for piecework, leading to a strike by angry journeymen.

Furniture making reached its height in the city during the first half of the nineteenth century. Shops for the elite produced elabo-

rately carved mahogany pieces that English visitors conceded were superior to the best found in London. The famous shops of Duncan Phyfe and Honoré Lannuier at the beginning of the century attracted skilled workers with high wages, as did that of John Henry Belter in the 1850s. At the same time more than 4000 poorly trained workers known as "botches" assembled cheaply made furniture in auction, or "slaughter," shops. In Little Germany such shops used an extensive division of labor to produce furniture for mass markets. The predominantly German employees of these shops earned $5 to $6 a week, about one-third what workers earned in shops of the first rank.

In the two decades before the Civil War about 85 percent of all furniture made in New York City was sold outside the city, and an increasing amount was sent to the West and California. Few economies of scale existed among manufacturers of either cheap or high-quality furniture: 80 to 100 workers were employed in the best shops, which in the 1860s included those of Edward Hutchings on Broome Street and Alexander Roux nearby on Mercer Street, but often fewer than 50 workers were employed in the many auction shops. In the 1870s workers in auction shops began organized protests against low wages, and by 1873 the German Cabinetmakers' Association had 4000 members, making it the largest German union in the city and enabling it to stand at the forefront of the movement for an eight-hour workday. The slow decline of the furniture industry in New York City began in the 1870s when Cincinnati and later Grand Rapids, Michigan, became major manufacturing centers, depriving the city of its western trade. Although New York City gradually lost the market for cheap furniture, it continued to lead the nation in the manufacture of custom-made and high-grade "imperial" furniture. Small shops remained concentrated in what is now SoHo, where they produced fashionable artistic pieces and employed highly skilled Italian workers who in 1919 could make $4.80 a day, twice the wage of the average worker in the trade. By 1925 the 384 furniture shops in the city employed only 10,402 workers, fewer than in Chicago or Grand Rapids, but the value of furniture produced exceeded that of all other cities at $71.8 million. Despite its tenacity, the industry faced increasing handicaps throughout the twentieth century, especially in the form of rising rents. High-grade work began to leave the city for factories in Grand Rapids and North Carolina (although showrooms were often maintained in Manhattan), and the firms that remained tended to rely on repair work to stay in business. Employment in furniture declined steadily as a proportion of the city's workforce from the 1920s into the early twenty-first century.

furs. The fur trade in New Netherland was conducted by private Dutch merchants until 1615 when a charter guaranteed to the New Netherland Company exclusive fur trading rights in the colony. The Dutch West India Company acquired these rights in 1621. Fur trading required a delicate balance among producers and distributors of wampum (small shell beads that Indians used as money, known as "mother of the beaver trade"), Indian suppliers, and merchants on both sides of the Atlantic, but because peltry was a source of quick profits and a substitute for scarce currency, settlers from many backgrounds scrambled to join the fur trade. Although beaver dominated the market, otter, mink, and muskrat skins were also exported. During the 1650s French and English competition for pelts forced Dutch traders to diversify into other exports; payment to merchants in New Amsterdam took the form of specie, which resulted in the devaluation of wampum and led to bidding wars between Indian suppliers and private traders. The fur trade was again hurt in the late 1660s when a shift in fashion preferences in England and Europe away from beaver hats and collars resulted in a glut of peltry. English merchants responded to these trends by trying to regulate furs. Although some merchants argued that the fur trade should be left open to competition, regulations were intermittently imposed until 1701 when a Treaty of Neutrality with French Canada and the Iroquois made it possible to reestablish an open trade policy.

Disputes in the colony over the fur trade continued over the next few decades, as English merchants dominated the market and tried to regulate it. Many merchants bypassed the New York City market entirely and established direct ties with traders in and around Albany; others, defying the British to the end of the colonial period, traded independently along the Hudson River and smuggled fur pelts across the Canadian border. These offenses were regularly mentioned as a menace to the imperial government in New York City throughout the 1750s and 1760s, even though the fur trade had long since become insignificant to the economy of Great Britain.

By the early nineteenth century New York City was the site of a thriving wholesale fur market. Most operations were small. A key figure in the fur business was John Jacob Astor, a resident of New York City who made attempts beginning in 1808 to control the fur trade in the Far West. He remained active as a trader until 1834. Both the city's wholesale market and a lively retail trade were on the Lower East Side by the end of the century, reflecting the heavy concentration there of German and first-generation eastern European Jewish merchants and fur workers.

Following the uptown move of the garment industry, the fur market moved to a compact area on the perimeter of Chelsea by 1922, occupying the blocks between 25th and 31st streets and between Sixth and Eighth avenues. This district became the locus for a skilled, highly differentiated, and labor-intensive business with a distinct eastern European culture: ethnic restaurants, a synagogue, and the steam baths in the old Pennsylvania Hotel were as much a part of the district as the racks of skins and bolts of silk for linings that moved through the streets. The business was characterized by militant unionism as well. After World War II charges of communist affiliation nearly destroyed the Fur and Leather Workers Union, an offshoot of the Fur Workers' Union (formed in 1849).

The fur business reached its peak in the city during the 1940s and 1950s. Decentralization, manufacturing competition from Asia (notably from Korea and later China), and an aging of the first generation of merchants whose American-educated children were not interested in the fur business caused a sharp decline in the number of shops and workers in the city. Greek merchants appeared to take the place of the Jews. Fur retailers during the 1970s and 1980s sought to broaden the market, seeking in particular to appeal to the new group of young working women by emphasizing relatively low-priced fur coats that were ready made rather than custom made. The effort met with some success, and from 1977 to 1986 retail sales of furs in the United States tripled. By the late 1980s, however, the fur business suffered from a worsening U.S. economy, increasing competition from foreign companies, the highly visible tactics of the animal-rights movement, and the growing popularity of synthetic furs. Between 1979 and 1989 the number of fur manufacturers and wholesalers in New York City declined from 800 to about 300, and employment declined from 3600 to 1900.

Although a distinct fur district is only faintly evident in the twenty-first century, New York City has remained the center of the highly specialized fur industry in the United States. There is no longer any fur manufacturing in the city, nor is there a union presence, but retail sales are strong, trade organizations such as the Fur Information Council of America and the Associated Fur Manufacturers maintain offices in the city, and a number of trade periodicals are still published there. Few Jewish firms are still in business; Greeks and Koreans dominate the trade.

Philip S. Foner, *Fur and Leather Workers Union: A Story of Dramatic Struggles and Achievements* (Newark, N.J.: Nordan, 1950); Thomas Elliot Norton, *The Fur Trade in Colonial New York, 1686–1776* (Madison: University of Wisconsin Press, 1974)

Elaine S. Abelson, Cathy Matson

fusionism. In politics, coalitions of political parties and factions. This became a means of circumventing political machines during the 1840s in New York City, and after the Civil War fusionism became the principal strategy for those who sought political reform. Republicans, reform Democrats, and nonpartisan civic organizations repeatedly united to defeat mainstream candidates (almost always Democrats). Municipal reforms successfully backed by fusion movements included the introduction of the secret ballot, the rescheduling of city elections to odd-numbered years (so as not to coincide with state and national elections), and changes in the civil service. Fusion campaigns elected reform candidates such as Seth Low (1901), Fiorello H. La Guardia (1933), and John V. Lindsay (1965), but fusionists suffered from their rejection of the "spoils system," an inability to maintain party structures, a tendency for lawyers and other professionals within their administrations to tire quickly of governance, the Democratic practice of painting fusionists as elitists hostile to the working class, and the splintering of fusion coalitions by national elections.

Peter Field

F. W. Woolworth Company. Firm of retailers often referred to as Woolworth's. It was formed as a five-and-dime store in 1879 in Lancaster, Pennsylvania, by Frank Winfield Woolworth, who later took on his brother Charles Sumner Woolworth as a partner. A pioneer in retail, Woolworth's was one of the first stores with fixed prices and allowed customers to browse among wares lying out on display instead of keeping all items behind the counter. In 1886 Frank Woolworth moved the company's headquarters to a small office in New York City at 104 Chambers Street in order to cut out wholesalers and deal directly with manufacturers. In 1896 he opened his first store in the city at 17th Street and Sixth Avenue. He planned window displays and designed the red store front himself. In 1911 Frank and Charles incorporated the F. W. Woolworth Company to bring together the 596 affiliated stores. The chain became successful by selling necessary articles cheaply, and when its corporate headquarters moved into the newly erected Woolworth Building in New York City, the tallest building in the world at the time, it had more than 1000 stores in North America. Woolworth's remained in business into the 1990s, by which time it had lost much of its market share to other chain retailers. In 1997 the company began to focus on sporting goods, reinvented its corporate identity as Venator Group, and moved corporate headquarters to 112 West 34th Street. In 2001 the firm changed its name to Foot Locker Inc.

G

Gaelic Athletic Association of Greater New York [NYGAA]. Athletic association. Formed in 1914, it consists of members from 62 clubs that compete in traditional sports. The association arranges and oversees championship matches in Gaelic football, hurling, and camogie (women's hurling), which together are known as the Games of the Gael, and also offers instruction in these games to Irish American youths.

John J. Concannon

Gaelic Park. Park in the Bronx at 240th Street and Broadway. The land was acquired in 1926 by two members of the Gaelic Athletic Association of Greater New York (NYGAA), which in 1928 began using the site for Irish football and hurling events. In the late 1930s the owners went bankrupt, and the land was taken over by the city (it eventually passed to the Metropolitan Transit Authority). John O'Donnell leased the park on behalf of the NYGAA in 1941 and with his family maintained the park's stadium, playing field, bar, and ballroom. After a series of disputes with the association, the family ended its involvement with the park. In 1991 Manhattan College leased the land and has since renovated it to host its lacrosse, soccer, and softball teams. Gaelic Park and its games played an important role in the social life of several generations of Irish immigrants.

George Winslow

Gage and Tollner. Restaurant in downtown Brooklyn, opened in 1879 on Fulton Street by Charles Gage. The following year Eugene Tollner became a partner, and in 1882 it moved to 374 Fulton Street. The restaurant was well known for its varied preparations of oysters, clams, scallops, and lobster and for its interior: the main dining room was 100 feet (30 meters) long and had mahogany tables (seating 220), walled mirrors, brocaded velvet, and gaslit chandeliers of cut glass. Both the interior and exterior were designated landmarks by the city. Gage and Tollner was owned by the Dewey family for 68 years until its sale in 1988 to Peter Aschkenasy. The restaurant closed in 2004 after 125 years of operation.

Stephen Weinstein

Gaine, Hugh (*b* Belfast, Ireland, 1726/27; *d* New York City, 25 April 1807). Newspaper publisher. Although penniless when he arrived in New York City in 1745, he founded and published the *New York Mercury* in 1752 (later called the *New York Gazette*) and became the most successful newspaper publisher in the city before the American Revolution; he also worked as a merchant in cosmetics. A founding member of the Friendly Sons of St. Patrick, he was an original trustee of the New York Society Library, the first lending library in the city.

William McGimpsey

Gallatin, (Abraham Alfonse) Albert (*b* Geneva, Switzerland, 29 Jan 1761; *d* Astoria [now in Queens], 12 Aug 1849). Diplomat and banker. He married Hannah Nicholson, daughter of Commodore James Nicholson, in 1793 and was secretary of the treasury from 1801 to 1814 under Presidents Thomas Jefferson and James Madison. About 1810 he formed a close association with the financier and fur trader John Jacob Astor, and after retiring from service as a diplomat to France (1816–23) and Great Britain (1826–27) and moving to New York City (1827), he was persuaded by Astor to become the first president (1831) of the National Bank of New York City, a predecessor of Manufacturers Hanover. Although the bank remained small, Gallatin exercised great influence in financial matters during the 1830s and was instrumental in encouraging banks in New York City to resume specie payments during the banking crisis of 1837. He maintained a series of residences in the city until 1837, when he settled permanently at 57 Bleecker Street. In several published writings during the 1830s and 1840s he stressed that only gold and silver could serve as acceptable national currencies and that issues of banknotes must be strictly limited. Active in the political, intellectual, and cultural life of the city, he was a founding trustee of New York University (1827), a founder and the first president of the American Ethnological Society (1842), and a president of the New-York Historical Society (1843). He also published extensively on American Indian languages. During the last years of his life Gallatin denounced American participation in the Mexican–American War and urged reconciliation with Great Britain regarding competing claims over the Oregon Territory. He died at the home of his daughter Frances Stevens and is buried at Trinity Cemetery in lower Manhattan.

G. Kurt Piehler

Gallo, Joe (Joseph) [Crazy Joe] (*b* Brooklyn, 7 April 1929; *d* New York City, 7 April 1972). Gangster and racketeer. With his brothers Lawrence and Albert he was part of a prominent Brooklyn organized crime family in the 1950s and was allegedly responsible for the 1957 barbershop assassination of crime boss Albert Anastasia. In 1961 Gallo was convicted of extortion and served 10 years in New York State prisons. Shortly after his parole, he was alleged to have orchestrated the June 1971 Columbus Circle shooting of another crime figure, Joseph Colombo, the leader of the Italian American Civil Rights League. In April 1972, celebrating his birthday with family members and a bodyguard, Gallo was fatally shot at Umberto's Clam House on Mulberry Street in Little Italy, in apparent retaliation for the Colombo shooting; the murder was never solved.

gambling. Betting on shuffleboard, billiards, cards, and other games was common in all social classes in colonial New York City, as it was in Boston, Philadelphia, and Charleston. Often it enlivened gatherings in taverns, coffeehouses, and private homes where people sought diversion from the day's work. In the mid-eighteenth century lotteries were introduced from England and used by churches, public corporations, and the city government to raise money for charitable causes and public works. During the 1790s most forms of securities trading were considered gambling. At this time "policy" became widespread, especially among the poor, who wagered on one to four numbers from a list of 12 in a lottery drawing.

During the 1830s, when the city became the largest in the nation, its rapidly growing and affluent population sought new diversions. The demand for gambling increased despite concerns about public morality heightened by many scandals in lotteries during the first two decades of the nineteenth century and despite bans by the state legislature on lotteries in the 1830s and gambling halls and other public gambling places in the 1840s. Professional gamblers were soon linked to city politics and popular entertainment, thus creating the basis for organized crime. New card games were developed. One of the first was faro, introduced in the city in the 1840s: by placing chips or money on a cloth embossed with a suit of cards, players bet on which card would appear next from a deck turned facedown in a dealing box. Faro was the most popular card game of chance in the city during the nineteenth century because of its speed and because the odds were more favorable to the bettor than in any other card game, even though operators cheated in many ways. From 1835 gamblers opened posh "hells," forerunners of modern casinos, in choice locations along Broadway from 24th Street to the Battery. By the 1860s there were about 100 hells; wealth and connections to government allowed the proprietors to operate quite openly.

The introduction of horse racing, baseball, and boxing provided opportunities for gamblers, who built racetracks, helped to arrange matches, and offered betting services. John Morrissey, a boxer popular among Irish workers, helped to build the first major racetrack in the United States at Saratoga Springs, New York (1864), and became the most important gambler in the city. Shortly after the Civil War he developed the first off-track betting system in the city, in which results from Saratoga were relayed by telegraph to a partner's "poolroom"; eventually fans could bet on sporting events anywhere in the country and receive the results almost immediately. Off-track betting and bookmaking were developed during the 1870s and soon became commonly operated around the city.

Although gambling was technically illegal the city's gamblers conducted their business openly, shielded from arrest by their money, political influence, and tight organization. Some professional gamblers formed ties with the heads of political machines, such as Big Tim Sullivan, a leader of Tammany Hall who was elected to the U.S. Congress and the state senate; others held political office in the wards where they maintained their operations. The public's acceptance of gambling encouraged shrewd entrepreneurs. Between 1909 and 1920 Arnold Rothstein built a gambling empire and became nationally known after allegedly rigging the outcome of the World Series of 1919. About this time some of the first prominent black gamblers in the city made their careers during the transformation of Harlem into a predominantly black neighborhood. Jose Enrique Miro, William Brunder, Big Joe Ison, and others introduced numbers games there in the 1920s, in which players bet on a single randomly generated number between zero and 999 and got paid 600 times their bet if the number "hit." Black numbers operators rose to political prominence. Several whites, including Dutch Schultz, also made money in Harlem by taking black operators as partners.

In the mid-twentieth century gambling was changed by the introduction of the telephone and the legalization of some forms of betting. By taking bets over the telephone, bookmakers made betting more convenient and obviated poolrooms and other public venues where they risked arrest. In 1939 voters ratified an amendment to the state constitution to legalize parimutuel betting at racetracks, which was taxed by the state. The revenues were so great that the city also levied a tax on track betting after World War II. The state legislature gradually undercut the municipal tax, prompting the city to seek other ways of earning income from gambling. After a decade of debate, off-track betting was introduced in 1971 but failed to produce as much revenue as expected; surcharges on winnings imposed later decreased payoffs and led bettors to continue betting with illegal bookmakers. In 1966 the legislature introduced a state lottery, which led to the decrease in the prevalence of numbers betting and became one of the largest in the nation after the state made drawings more frequent, introduced a range of games, and increased the value of prizes.

In the early twenty-first century underground casinos and card rooms continue to operate, as does the occasional three-card monte dealer on the street. Churches and other nonprofit groups also raise money by holding large-scale bingo games and raffles, which although illegal are tolerated by the authorities.

gangs. The first street gangs in New York City were formed at the end of the eighteenth century by journeymen and apprentices free of their masters' control outside their workshops. These single young men organized loosely structured groups associated with neighborhoods, streets, and trades. Gangs harassed pedestrians and sometimes fought with each

other over territory. By the Jacksonian period there were many gangs, attracting members from the trades least affected by industrialization and sometimes from volunteer fire companies. Such groups as the Chichesters, composed mainly of apprentice and journeymen butchers, survived for many years and maintained a hierarchical membership of older leaders and young followers. Gangs were especially popular on the Bowery, where gang members built self-esteem by taking part in pursuits outside the workplace such as brawling, carousing, going to the theater, and target shooting. Many wore long sideburns (called soap locks) and distinctive clothing, emblems of the male culture of the Bowery that became widely known through stories about the "B'hoy," a character depicted in the penny press and the popular theater. As neighborhoods in the city became divided along class lines, gangs congregated in saloons that increasingly became political as well as social institutions. During elections their allegiance was sought after by officeholders; they stole ballot boxes, intimidated supporters of rival candidates, and voted "early and often." Violence escalated during the 1840s as economic depression and an influx of Irish immigrants spurred a power struggle between native-born and immigrant groups. Gangs such as the Spartan Association, led by the radical Democrat Mike Walsh, fought with fists, clubs, and guns.

Irish immigrants changed the structure of gangs. When they moved to the city they often transferred to the gangs their allegiance to factions and secret societies in Ireland. In Irish working-class wards such gangs as the Dead Rabbits defended their neighborhoods against outside forces ranging from temperance advocates to rival gangs like the nativist Bowery Boys. But gangs also fed conflict within communities, and during the mid-nineteenth century neighborhoods were often divided according to unstable alliances that sometimes erupted into violence.

After the Civil War Tammany Hall united many gangs into political clubs run by district leaders. At the same time gangs became increasingly segregated by age, as district leaders sponsored "social clubs" for teenagers. Gangs remained tied to their ethnic groups but also became efficient political tools, frequently providing a link among politicians, gambling, and prostitution. By the turn of the twentieth century adult gang members were often small-time organized-crime figures engaged in citywide racketeering. Increasingly, gangs exacerbated class conflict within ethnic communities: during strikes over unionizing the garment trades on the Lower East Side, local *shtarkes* (sluggers) were hired by both Jewish manufacturers and union organizers.

During the Progressive era reformers identified gang membership as a form of juvenile delinquency. Similar analyses were made in the 1950s, when conflicts among white, black, and Latin American gangs aroused widespread concern, and the popularity of gangs was attributed to economic deprivation, psychological disorders, and a breakdown of social institutions. Widespread violence between black and Latin American gangs declined during the 1960s, a decline variously attributed to youth politics, the military draft, and drug addiction. Gang violence resumed in the early 1970s, when it spread from the South Bronx to the other boroughs. In 1975 the police identified 275 gangs with 11,000 members; estimates in the mid-1980s ranged from 4300 to 40,000 members.

In 1994 a Gang Task Force was formed to help deal with the problem of gangs in city jails. The Gang Intelligence Task Force came into being in 1996 to collect information and monitor gang members; it then became the Gang Intelligence Unit and subsequently the Intelligence Unit. In the twenty-first century the New York City Police Department succeeded in reducing gang violence, and gangs in the city were less powerful than they were in Los Angeles, Chicago, Houston, and other large U.S. cities. Some of the gangs in the early twenty-first century were the Ghost Shadows; the Jamaican Posse; and Sex, Money, Murda.

Gansevoort Farmers' Street Market. Open-air farmers' market established in 1884, covering a little more than 2 acres (0.8 hectare) and bounded to the north by Little West 12th Street, to the east by Washington Street, to the south by Gansevoort Street, and to the west by West Street. Its use was restricted by law to farmers and gardeners, most of whom drove to the city daily from Long Island and New Jersey to sell their produce to peddlers and retailers. In 1887 the city widened Gansevoort Street to allow more vendors in the area. By 1926, with property in the area gaining in value, the city moved to close the farmers' market, and the transformation of the area into a meatpacking and meat distribution center began. In the twenty-first century the old market is part of the larger MEATPACKING DISTRICT in the city.

Suzanne R. Wasserman

Garbo [Gustafson]**, Greta (Lovisa)** (*b* Stockholm, 18 Sept 1905; *d* New York City, 15 April 1990). Actress. While studying acting in Stockholm, she met the Swedish director Maurice Stiller, who took her to Hollywood in 1925; there she signed a contract with Metro–Goldwyn–Mayer. After appearing in silent films she gave memorable performances in the film version of Eugene O'Neill's *Anna Christie* (1930), *Ninotchka* (1939, her first comedy), *Grand Hotel* (1932), and *Camille* (1936), for which she won the New York Film Critics Award. After retiring in 1941 Garbo remained largely in seclusion in New York City. She lived at 2 Beekman Place (in the 1930s), the Ritz Tower, and the Campanile, 450 East 52nd Street. Garbo was known for her glamorous appearance and husky voice.

Leslie Gourse

García Rivera, Oscar (*b* Mayaguez, Puerto Rico, 6 Nov 1900; *d* Mayaguez, 1969). Politician. The first Puerto Rican elected to public

Gansevoort Farmers' Street Market

office in the continental United States, he moved to New York City in 1925. Initially, he worked for the Boorum and Pease Binder factory and then in the City Hall Postal Office. An active participant in the Postal Clerk's Union of America, he promoted union membership and advocated for better working conditions. He earned an undergraduate degree from Columbia University and received a law degree from St. John's College in 1930, among the college's first graduating class. With backing from the American Labor Party, the Republican Party, and the City Fusion Party he challenged Tammany Hall and was elected a state assemblyman from Manhattan in 1937, representing the 17th Assembly District. In public office until 1940, he supported civil rights legislation, civil service reform, child labor reform, workers' rights, and hot meals in public schools. He provided pro bono service for those in need of legal counseling in Puerto Rican neighborhoods and worked to increase voter registration, educational programs, and labor reform. In 2002 the East Harlem "Hellgate" post office was renamed the Oscar García Rivera Post Office.

Garden Bay Manor. Neighborhood in northwestern Queens, bounded to the north by 19th Avenue, to the east by 81st and 82nd streets, and to the south by Grand Central Parkway; it is the easternmost part of Ditmars and abuts the Marine Air Terminal. The name was coined by the original developers. Most of the apartments are in the garden style.

Vincent Seyfried

Garfield, John [Garfinkle, Jacob Julius] (*b* New York City, 4 Mar 1913; *d* New York City, 21 May 1952). Actor. He grew up on Rivington Street on the Lower East Side; then moved to Brownsville, Brooklyn; and finally settled in the Bronx. He was placed in a school for difficult children and was introduced to boxing to channel his aggression and to speech and drama classes to help with his stammer. In 1932 he made his Broadway debut and two years later joined the Group Theatre. He was one of the first actors to set up his own production company and was noted for his progressive thinking when he insisted that Canada Lee, a black actor, be featured in his famous film *Body and Soul* (1947). He also stared in *Four Daughters* (1938) and *The Postman Always Rings Twice* (1946). He is considered the predecessor of "Method" actors like Marlon Brando and James Dean.

Jessica Montesano

Garibaldi, Giuseppe (*b* Nice, France, 4 July 1807; *d* Caprera, Italy, 2 June 1882). Soldier, political leader, and founder of modern Italy. New York City was a brief stop in Garibaldi's global military and political career. Escaping the Roman republic's collapse in 1849, he slipped into the United States via Staten Island on 30 July 1850. He lived and worked with the compatriot and inventor Antonio Meucci at the latter's candle works until resuming his original profession, seafaring. He sailed for Peru in 1851, returned to New York in 1853, and left the United States permanently that November for England. In 1888 New York City's Italian American community placed Giovanni Turini's statue of Garibaldi in Washington Square Park. His home on Staten Island, which is now the Garibaldi–Meucci Memorial Museum, 420 Tompkins Avenue, is part of the Garibaldi Memorial, which was dedicated in 1907 to mark 100 years since his birth.

Mary Elizabeth Brown

Garinagu [Garifuna, singular]. Afro-Caribbean people forcibly exiled to Belize, Honduras, Nicaragua, and Guatemala during the late eighteenth century. According to immigration records the Garinagu may have arrived in New York City as early as 1925. After World War II Garinagu men, working for the U.S. Merchant Marines, migrated with their families in large numbers. The peak period of migration was the 1960s, following amendments to the U.S. Immigration and Nationality Act and the devastation caused by Hurricane Hattie in Central America. By the early twenty-first century more than 10,000 Garinagu, mainly from Honduras, had settled in areas of Brooklyn, Manhattan, and the southern Bronx, where they interact with African American and Latino populations yet maintain their unique Garifuna language and traditional family ties.

Emilyn L. Brown

garment district. Section of Manhattan dominated by the garment industry, located in the 30s between Madison and Eighth avenues. The area took shape during the late nineteenth century and soon became the country's leading center of garment production. Initially concentrated in tenements on the Lower East Side, the garment business gradually moved north and west as garment manufacturers were driven by law from residential buildings into lofts and increasingly required fancy showrooms for marketing. The district centered on Madison Square by 1910, but the garment trades were forced out by the Fifth Avenue Association during the following decade as the area became fashionable for shopping. In 1920 two sites along Seventh Avenue between 36th and 38th streets were developed by the Garment Center Realty Company, an association of 38 large manufacturers of women's clothing, which soon revitalized an area formerly known as the Tenderloin. By 1931 the garment district had the largest concentration of apparel manufacturers in the world and lay in the heart of Manhattan near hotels, the main retail district, and important railroad terminals in an area bounded by 42nd Street, Sixth Avenue, 30th Street, and Ninth Avenue. Traffic crowded Sixth, Seventh, and Eighth avenues, and along the side streets trucks delivered material and loaded finished garments carted through traffic on hand trucks by "push boys." At noon thousands of workers, mostly im-

Handcarts and clothing racks on Seventh Avenue, early 1990s

migrants from eastern and southern Europe, made their way through the streets to local cafeterias and lingered to smoke before resuming work at one o'clock. After World War II the garment district remained essentially in place, though by the 1980s a large amount of production had returned to lower Manhattan, especially to Chinatown and the Lower East Side.

Allen J. Share

garments. The shift from custom-made to ready-made clothing in the United States during the Industrial Revolution was stimulated by the growth of the middle class and a large increase in foreign-born labor. As the chief port of entry for immigrants to the United States, New York City became the nation's leading center of garment production by the mid-nineteenth century. Irish and German workers entered the garment trade in the 1840s; Germans introduced the practice of home manufacturing to the garment industry. Aided by Elias Howe's invention of the sewing machine in 1846, apparel was the fastest-growing industry in New York City from 1830 to 1860; in 1858 it employed 32,000 workers.

Most German Jewish immigrants who settled in New York City in the mid-nineteenth century went to work in the thriving second-hand clothing trade of Chatham Street, in an area popularly called Jerusalem. They were less common than many other immigrant groups in the prestigious ready-made trade of the Bowery and lower Broadway. Women predominated in the ready-made trade, men (who were usually paid more) in the custom trade. By the 1870s technology and immigration brought about the displacement of both women and skilled men: unskilled male newcomers readily learned to use the foot-powered sewing machine, and men were more adept than women at handling a newly invented heavy cutting knife (1875) that supplanted conventional shears. Women were further displaced in the 1870s by men from Germany and Austria-Hungary who worked for substandard wages. Women who remained in the late nineteenth century worked in three kinds of shops: the inside shop, operated by a manufacturer using his own employees; the home shop, where workers assisted by family members assembled goods brought home from the factory; and the outside shop, operated by a contractor who received an assignment from a manufacturer and used either factory or home labor.

Unregulated industrial homework in unsanitary conditions became characteristic of lower Manhattan, among not only Germans but also Irish and Italians. Contractors enjoyed a competitive advantage because the cost of home labor was minimal. Despite long hours, filth, and low pay, newcomers from Europe often worked additional time so that they could afford to send for family members still in Europe. Economic distress and religious persecution of Jews in Russia during the early 1880s led to a flood of immigrants into New York City; most were working in the garment trade soon after their arrival and were sympathetic toward unionism and socialism.

The first wave from southern Italy, known as *contadini,* or peasants, immigrated in the 1880s. Italian men with experience in the garment trades frequently found work in custom tailoring; those without experience became sewing-machine operators and pressers. By 1900 Italian women who were experienced home manufacturers monopolized home garment finishing in New York City, making four to five cents an hour; single Italian women were more likely to work outside the home than those who were married. The Italian sewing-machine operators and pressers were nonunionized and charged little, enabling them to become the leading ethnic group in the needle trades by the 1930s.

Jews from Russia and Poland who immigrated after 1903 to escape pogroms were more highly skilled than their predecessors. Many were members of the Jewish Labor Bund, formed in 1897 to promote socialism and cultural nationalism. Working conditions worsened with the development of the "task" system, under which teams of workers employed by a contractor were paid not by the hour but for a set amount of work, which nevertheless was to be completed within a specified time. Contractors often added to the daily workload, and the workday could last as long as 18 hours. The influx of immigrants spurred marked growth between 1880 and 1900, particularly in women's apparel: employment rose from 11,696 to 83,739. In the 1880s alone makers of women's apparel increased by 226.2 percent, makers of men's apparel by 117.8 percent.

Led by cutters of ladies' garments, Jewish garment workers in New York City began to organize unions during the 1880s. Socialist intellectuals formed the United Hebrew Trades to promote unionism, and by 1900 representatives of seven unions formed the International Ladies' Garment Workers' Union (ILGWU). In the following year the United Cloth Hat and Cap Makers of North America was formed at a convention. During its first decade the ILGWU struggled for survival, but during 1909–10 it was revitalized by successful strikes of shirtwaist workers and cloak makers; the cloak makers' walkout ensured the adoption of the "Protocol of Peace," which provided for the resolution of disputes between labor and management and the protection of workers' health. In 1911 a fire at the Triangle Shirtwaist Company in Greenwich Village took 146 lives, shocking the public and persuading the state legislature to enact 36 new labor laws within three years. The victory of the cloak makers in 1910 encouraged fur workers to organize a strike in 1912 that led to the founding the following year of the International Fur Workers' Union of the United States and Canada. In 1914 Jewish and Italian workers in the men's clothing trade withdrew from the United Garment Workers of America and formed the Amalgamated Clothing Workers of America.

Garment workers' unions were riven by conflicts during the 1920s, as communists challenged socialists for control of the needle trades. By the 1930s the communists won over

the furriers. Extortion and racketeering were widespread in the garment industry during the first half of the twentieth century, and organized-crime figures worked for both labor and management. Among the best known were Benjamin "Dopey Benny" Fein, Jacob "Little Augie" Orgen, Arnold Rothstein, Louis "Lepke" Buchalter, and Jacob "Gurrah" Shapiro. Neither Thomas E. Dewey, the special prosecutor during the 1930s, nor other prosecutors in later years were able to eliminate the criminal element.

In addition to enjoying a ready pool of immigrant workers, the garment industry in New York City benefited from the proximity of textile mills in Massachusetts, New Jersey, and upstate New York. The industry prospered and moved uptown, following the growth of the city and new transportation patterns; gradually a new garment center took shape on the West Side, extending north from 34th to 40th streets and west from Sixth to Ninth avenues. Apparel manufacturers moved into buildings with showrooms. In the 1920s women began wearing dresses rather than skirts and blouses, a change that increased the importance of merchandising and gave rise to the jobber, who designed garments to be manufactured under contract and later sold them to retailers. In the knit outerwear trade, jobbers were sometimes called converters, a term that in the industry as a whole usually referred to those who obtained raw fabric for conversion into finished products. Apparel firms also depended on credit, especially to produce seasonal lines; among the more important lenders were factors, or "textile bankers," who used accounts receivable as security to finance manufacturing. Although merchandise continued to be sold in Manhattan, the availability of highways and trucks made it feasible to move production to cheaper locations in Brooklyn, New Jersey, and Connecticut. The city's share of the nation's employment in women's apparel declined from 62 percent in 1914 to 41 percent in 1939. The federal government banned industrial homework in 1942.

After World War II new production sites were set up in the South, Southwest, and West. Unskilled labor in these areas manufactured low- and medium-priced garments and new lines of casual wear. Easy-care finishes and improved cotton fabrics revolutionized the industry. Garment firms consolidated, making the small firm an anachronism. From the 1950s the quest for cheap labor moved much garment production to Hong Kong, South Korea, Taiwan, mainland China, and Japan, and later to Africa, eastern Europe, and Latin America. Meanwhile Jews and Italians in the industry were displaced by blacks and Puerto Ricans. After the Immigration Act of 1965 ended quotas based on national origin, the apparel trade attracted large numbers of Dominicans and Chinese: manufacturing expanded greatly in Chinatown, and by 1985 more than 16 percent of the city's garment workers were Chinese.

A large pool of exploitable, undocumented immigrants, stiff competition from imports, and lax enforcement of labor standards because of budget cuts brought about a return of the sweatshop in the 1970s and 1980s. In 1984 the U.S. Department of Labor rescinded its ban on homework in six of the nation's seven apparel-related industries. Women's clothing was the exception. In 1987 there were an estimated 3000 sweatshops and 30,000 home apparel workers in New York State. By 1990 low-priced imports controlled 60 percent of the domestic market. Although apparel remained a leading manufacturing industry in New York City, in 1993 it employed only 86,000 workers, 53,600 fewer than in 1980.

The Garment Industry Development Corporation, established in 1984 by labor and management with municipal and state funds, assists garment manufacturers in New York City with marketing, management education, and training programs. It sometimes works in cooperation with the Fashion Institute of Technology, opened in 1944 to train workers and managers. The continued vitality of this enterprise is borne out by prominent designers and companies with headquarters and some production in the city: among them are Bill Blass, Oscar de la Renta, Marc Jacobs, Donna Karan, Ralph Lauren, Nicole Miller, and Vera Wang. In 2007 companies based in New York City accounted for annual sales of $47 billion and maintained 5400 showrooms.

Manufacturing, however, continued to decline: garment industry employment in the city fell by 39.6 percent between 2001 and 2005. The terrorist attacks on the World Trade Center of 11 September 2001 had a devastating effect on manufacturing in Chinatown. One hundred of more than 250 factories in the area in 2000 disappeared, and Chinatown's share of garment manufacturing was halved to less than 10 percent by 2005. Rising rents and real estate values, as well as imports and police security restrictions, compounded the difficulties. By the early twenty-first century there were only 1900 apparel manufacturing jobs in Chinatown and 22,900 in New York City.

Robert D. Parmet

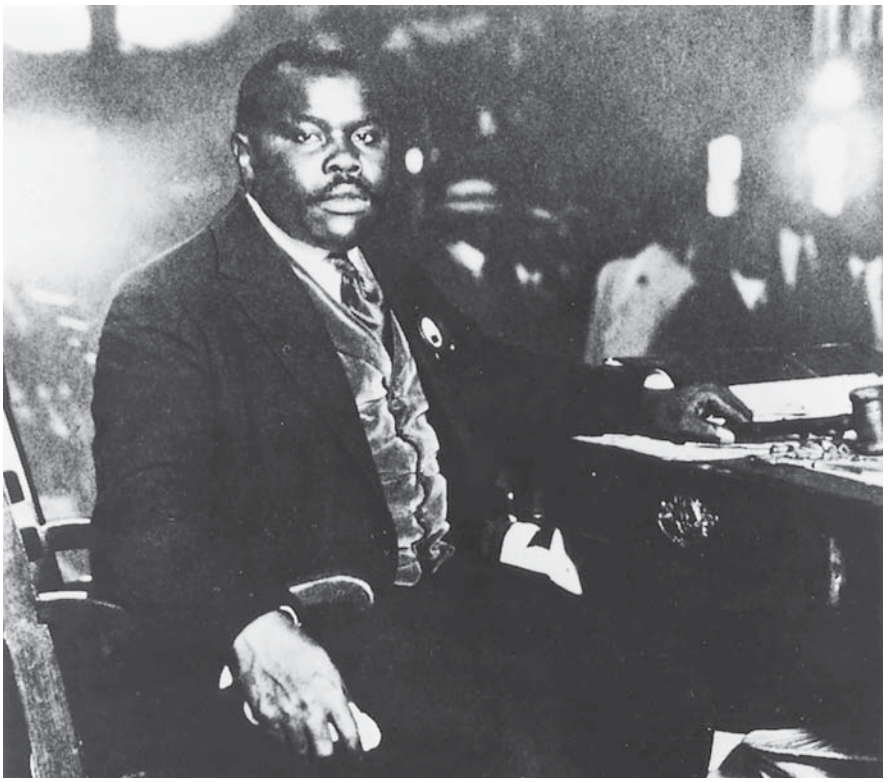
Garnet, Henry Highland (*b* New Market, Md., 23 Dec 1815; *d* Monrovia, Liberia, 13 Feb 1882). Abolitionist. Born into slavery, at age nine he fled his owner's plantation with his father, mother, and older sister. The family eventually settled in New York City, where Garnet found work as a cabin attendant aboard a ship. In 1829 his sister was captured by slave hunters and then detained by local authorities and tried as a fugitive slave (she was released after several days). To avoid capture he hid at a friend's home on Long Island, where he remained for two years as an indentured farm laborer. He later studied at African Free School no. 1, on Mulberry Street, and at the High School for Colored Youth. Garnet completed his education in 1840 at the Oneida Institute in Whitesboro, New York, and became a minister and political activist. At the Negro Convention of 1843 in Buffalo, New York, he delivered a speech addressed to slaves in the South, declaring, "Let your motto be resistance! resistance! resistance!" Soon the most important and militant black abolitionist in New York City, Garnet was known internationally by 1850, made speeches throughout the northern and western states, and traveled to Europe as a representative of the abolitionist movement. After joining the United Presbyterian Church of Scotland he worked as a missionary in Jamaica from 1852 to 1855 and in 1856 became pastor of the Shiloh Presbyterian Church in New York City, where he eulogized such abolitionist martyrs as John Brown, held antislavery meetings, and urged blacks to support the Liberty and Free Soil parties, stressing in his sermons that slavery would not be ended by moral suasion alone. His strong support for the Civil War inspired hundreds of blacks from the city to enlist in the Union army; he himself recruited blacks for the army and became a chaplain for black troops. At President Abraham Lincoln's invitation he delivered a speech before the U.S. House of Representatives on 22 September 1864, the second anniversary of the Emancipation Proclamation. Garnet returned to the Shiloh Presbyterian Church after the war and in 1881 accepted an appointment as the U.S. diplomatic minister to Liberia.

Thelma Foote

Garth, David (Lawrence) (*b* Brooklyn, 5 March 1930). Political consultant. He worked in television in the late 1950s as a sports producer and in 1960 co-chaired the Adlai Stevenson campaign committee for the Democratic presidential nomination with Eleanor Roosevelt. In 1965 he was the principal adviser to John V. Lindsay's successful mayoral campaign, in which he used television, radio,

and other media to great effect: his election techniques are widely regarded as having inaugurated the modern era of political campaigning in New York City. He then became one of the city's most successful and sought-after political media strategists, leading Lindsay's successful reelection campaign (1969) as well as the mayoral campaigns of Edward I. Koch (1977, 1981, 1985, 1989) and Rudolph W. Giuliani (1993). Garth was also the media strategist in Governor Mario M. Cuomo's unsuccessful campaign for a fourth term in 1994. His firm, the Garth Group, is at 1 West 67th Street in Manhattan.

James Bradley



Garvey, Marcus (Mosiah) (*b* St. Ann's Bay, Jamaica, 17 Aug 1887; *d* London, 10 June 1940). Black nationalist. After travel in Central America and a year in England, Garvey settled in 1914 in Kingston, Jamaica, where he formed the Universal Negro Improvement Association (UNIA). A devout Catholic and a disciple of Booker T. Washington, he sought to instill black pride through industrial training of the sort offered by the Tuskegee Institute and through Christian missionary work in Africa. He moved to the United States in 1916 and the following year settled in Harlem, where he formed a branch of UNIA that proved short-lived. In June he gave a fiery speech at a rally for the Colored Liberty League that gained him prominence. Over the next two years the emphasis of his politics changed from racial accommodation to black pride and Africanism, and UNIA became a powerful group with hundreds of chapters in the United States and Africa. To finance his movement and encourage black enterprise he formed a shipping firm, the Black Star Line, which launched its flagship, the *Frederick Douglass,* in November 1919 and acquired two other ships in 1920. That same year he undertook a plan to have black Americans colonize Africa and began negotiations with the government of Liberia. In the years following he sent funds as well as equipment and engineers to that country. By 1922 UNIA was foundering, the Black Star Line was being mismanaged and was soon to be bankrupt, and the Liberian government withdrew its colonization agreement. Garvey was then sent to prison on federal charges of mail fraud that were undeniably motivated by politics. After his release in 1927 he was deported to Jamaica.

Greg Robinson

Gashouse District. Former name for a neighborhood on the East Side of Manhattan, bounded to the north by 27th Street, to the east by the East River, to the south by 14th Street, and to the west by Park Avenue South. A number of gas tanks were built near the East River in 1842; they leaked and emitted a foul stench that pervaded the area, which was initially populated mostly by Irish immigrants. A group of young toughs known as the Gashouse Gang terrorized the neighborhood until order was imposed by a police officer known as Clubber Williams. Germans and Jews moved in after the Civil War, Italians during the late nineteenth century. The popular culture of the district and the sashaying antics of its young women inspired Safford Waters's tremendously popular song "The Belle of Avenoo A" (1895). Several hospitals were built in the area: the Lying-In Hospital for indigent women (1822; later converted into luxury housing but maintaining a small museum), Columbus Hospital on 19th Street (1892; initially patronized by Italian immigrants and known as the Cabrini Medical Center [closed in 2008]), Willard Parker Hospital for Contagious Diseases, the New York Post Graduate Medical School and Hospital, and the New York Skin and Cancer Hospital. Most of these facilities were later replaced by the Beth Israel Hospital complex. During and after World War I Slovaks moved to the neighborhood, which was considered part of the Lower East Side. Most residents lived in old-law tenements; public baths on 23rd Street and Avenue A were the only bathing facilities for many. Lodging sponsored by the city for homeless men stood on 25th Street, and the first building of the American Society for the Prevention of Cruelty to Animals opened on 24th Street. The northern end of the neighborhood was the site of the largest enclave of Armenians in New York City. Some gas tanks remained in operation until after World War II. In 1947 and 1948 the tenements east of First Avenue, along with the remaining gashouses, were replaced by Stuyvesant Town and Peter Cooper Village. The working-class character of the neighborhood changed as the housing was upgraded during the 1970s and 1980s. The northern section of the area became largely Indian in the late 1980s.

Harriet Davis-Kram, Andrew Sparberg

Marcus Garvey at Liberty Hall in Harlem, 1920

gas lighting. System of public lighting introduced in New York City in 1823. The New York Gas Company was initially given exclusive rights to lay gas pipe in the streets of Manhattan below Grand, Sullivan, and Canal streets, but as the city grew, so did the gas franchises and gas lines, and by 1847 contracts had been awarded for lines stretching up to 42nd Street. Over the course of the nineteenth century, franchises vied for control of the New York City market, and in 1884 the New York, Manhattan, Harlem, Metropolitan, Municipal, and Knickerbocker gas light companies combined to form the Consolidated Gas Company of New York, now known as Consolidated Edison.

Elizabeth L. Bradley

gated communities. Residential enclaves that are enclosed with gates and sometimes have guardhouses. Although such communities are common in the American South and West, they are rare in the New York City area, unless one argues that apartment buildings with 24-hour door attendants are essentially gated communities. Those of the more traditional variety in New York City include Breezy Point in Queens, and Sea Gate, Bay Front Estates, and Mill Harbor condominiums in Brooklyn. There are dozens of such communities in the city suburbs, including two that are famous—Llewellyn Park in West Orange, New Jersey, and Tuxedo Park in Rockland County, New York.

Kenneth T. Jackson

Gates, Frederick Taylor (*b* Maine, N.Y., 2 July 1853; *d* Phoenix, 6 Feb 1929). Philanthropic administrator and businessman. As the administrator of John D. Rockefeller's philanthropic endeavors he helped to advance medical research and strengthen colleges of medicine in the United States during the opening decades of the twentieth century. He envisioned, planned, and organized the Rockefeller Institute for Medical Research and was president of its board of trustees from 1901 until his death. Gates was also the chairman of the General Education Board of the Rockefeller Foundation (1905–12) and director of the foundation (1907–17).

Allen J. Share

Gates, Horatio (*b* Essex, England, 26 July 1727; *d* New York City, 10 Jan 1806). General. After serving as an officer in the British army for 25 years, he moved to Virginia in 1772. Asked by George Washington to serve as an officer in the Continental army at the outbreak of the American Revolution, Gates was the commanding general at the Battle of Saratoga in upstate New York. There his stunning defeat of 10,000 British troops under the command of General John Burgoyne marked the turning point in the war and made him a national hero; some members of the Continental Congress wanted him to succeed Washington as the head of the entire American army. In 1790 he moved to New York City from his estate in Virginia and married the daughter of a wealthy merchant. Their home in the city, set on an estate of 90 acres (36 hectares), stood at what is now 24th Street and Second Avenue. At the end of the 1790s he opposed the Federalist hold on local politics, and in 1800 he won a seat in the state assembly as a Democratic Republican with the backing of the Tammany Society. Gates is buried in an unmarked grave at Trinity Cemetery.

James S. Kaplan

Gates, John Warne (*b* near Turner Junction, Ill., 8 May 1855; *d* Paris, 9 Aug 1911). Financier and speculator. During the 1880s he made a fortune in the manufacture of barbed wire, and through various mergers he formed the American Steel and Wire Company (later Republic Steel), which was eventually sold to J. P. Morgan and the U.S. Steel Trust. Known to New Yorkers as "Bet a Million" Gates, he won and lost millions of dollars in the stock market and the commodity exchanges. He generally tried to rig deals in his own favor but did not always succeed. He also wagered thousands of dollars on horse races and card games and in casinos; purportedly he once bet on which raindrop would be the first to trickle down a windowpane. When in New York City Gates lived in a lavish suite at the Waldorf-Astoria.

George A. Thompson, Jr.

Gateway National Recreation Area. Recreation area created in 1972 under the auspices of the National Park Service, one of the first areas of its kind designated in a large metropolitan region. It is composed of 26,000 acres (10,530 hectares) distributed among three units: Jamaica Bay and Breezy Point in southeastern Brooklyn and southern Queens (bordering John F. Kennedy International Airport), the shoreline of eastern Staten Island, and Sandy Hook in New Jersey. In its eastern section lies the Jamaica Bay Wildlife Refuge, accessible by Cross Bay Boulevard. Opened in 1953 by Robert Moses and Herbert Johnson, the recreation area attracts more than 300 species of nesting and migrating birds to 9155 acres (3708 hectares) of protected wetlands; the site also sustains a butterfly garden. The area includes Floyd Bennett Field in Brooklyn, the first municipal airfield in the city; Fort Tilden in Breezy Point; the Rockaway Naval Air Station; and the playing fields and oceanfront beach of Jacob Riis Park. The section of the recreation area in Staten Island overlooks Lower New York and Raritan bays and encompasses Great Kills Park (originally an Algonquin site, now a recreational fishing area), Crookes Point (a habitat for plants and small animals), and Miller Field (formerly a hydroplane airport for the U.S. Air Corps). Sandy Hook features Sandy Hook Lighthouse, the oldest operating lighthouse in the United States (originally built to protect the outer harbor and regulate the shipping lanes); Fort Hancock; ocean dunes; and a rare holly forest. The recreation area conducts programs in historical and environmental education.

Rachel Shor

Gayle [née McCoy]**, Margot** [Sarah Margaret] (*b* Kansas City, 14 May 1908; *d* New York City, 28 Sept 2008). New York's "queen of cast-iron architecture" and advocate of landmarks preservation. In 1945 she moved to New York City and took a job as a scriptwriter at the Columbia Broadcasting System (CBS), where her interest in public clocks developed. In 1953 Gayle was named the public relations director for the City Department of Commerce and joined the Democratic Party effort as state committee woman and Manhattan district leader. In 1957 she organized the Village Neighborhood Committee to restore the clock at the Jefferson Market Courthouse and to save the monument, which is now a public library, from the auction block. In 1961 the courthouse officially became a landmark, and in 1965 Gayle helped establish the Landmarks Preservation Commission, in direct response to the demolition of Penn Station. Around 1968 Gayle turned her attention to cast-iron buildings and became known for carrying around a magnet to illustrate the presence of iron in a building's structure. In 1970 she founded the Friends of Cast-Iron Architecture in an effort to save SoHo from the freeway plan, which failed in 1971. Two years later SoHo was designated as the SoHo Cast Iron Historic District. Between 1975 and 1992 Gayle wrote a weekly column for the *Daily News*. She worked with such New York icons as Jane Jacobs, E. E. Cummings, and Lewis Mumford, while also forming the Friends of the City's Historic Clocks and the Victorian Society of America. She lived on the Upper East Side until her death.

Cecilia Magnusson

Gay Men's Health Crisis [GMHC]**.** Not-for-profit, volunteer-supported, and community-based organization dedicated to supporting people with acquired immune deficiency syndrome. It was formed in 1981 by six gay men, including the author Larry Kramer. The same year, the organization established the first AIDS hotline using a volunteer's answering machine. The first GMHC offices were located in the Chelsea neighborhood on West 22nd Street in Manhattan. The New York City AIDS Walk, first held in 1986, has benefited GMHC for more than 20 years and is the largest private AIDS fund-raising event in the world, raising more than $5.8 million in 2006. GMHC continues to provide social services and legal assistance to those infected with the human immunodeficiency virus (HIV) or AIDS as well as acting as a leader in developing comprehensive prevention education programs. The organization serves more than 15,000 men, women, and families who are living with or are affected by HIV/AIDS in New York City, and advocates for scientific, evidence-based public health solutions for hundreds of thousands of people worldwide.

Anne Epstein

Gaynor, John P(lant) (*b* Ireland, 1826; *d* San Francisco, 1889). Architect. He moved to the United States in 1849, opened an office in Brooklyn in 1851, and established himself as a designer of commercial buildings with cast-iron facades in New York City in 1856–62. The best known of these was erected in 1856 at 490

Broadway for the retailer E. V. Haughwout. Like the Halsey Building (1856, demolished) on Fulton Street in downtown Brooklyn, it was patterned after Andrea Sansovino's library in Venice. The iron components of Haughwout's and Halsey's buildings were cast by Daniel Badger's Architectural Iron Works and illustrated in its catalogue.

Marjorie Pearson

Gaynor, William J(ay) (*b* Oriskany, N.Y., 2 Feb 1848; *d* on shipboard, 10 Sept 1913). Mayor and judge. In 1873 he settled in Brooklyn, where he worked as a journalist before becoming a lawyer and entering public affairs. Known as a reformer, he won election as a justice of the state supreme court in 1893 and reelection in 1907. During his terms he made contributions to libel and slander law and won respect for his protection of individual rights. In 1909 he won the Democratic mayoral nomination with the support of Charles F. Murphy, the boss of Tammany Hall, in response to citywide calls for reform. After winning a three-way election he formed a moderately progressive government. Soon after gaining office he appointed a number of officials without connections to Tammany Hall, eliminated "no-show" positions, and instituted fiscal reforms. After barely escaping an assassination attempt in August 1910, he became irascible and engaged in serious feuds; the rest of his term was marked by corruption in the police department and unsuccessful efforts to obtain a new city charter and win municipal ownership of the subways. Denied renomination by Tammany Hall in 1913, Gaynor declared his candidacy for reelection with support from reform groups but soon fell ill and died. He is remembered as one of the city's most independent mayors.

Robert F. Wesser

Gay Rights Bill. Bill amending the city's Human Rights Law that prohibits discrimination in housing, employment, and public accommodations on the basis of sexual orientation. A similar bill introduced before the City Council on 6 January 1971 by council members Carter Burden and Eldon Clingan was the first of its kind proposed in the United States. Before its eventual passage the bill was defeated in committee every year except 1974, when it became the first bill in the history of the City Council to pass out of committee and be defeated by a full vote of the council. The measure was reintroduced each year before being redrafted by Thomas B. Stoddard. It passed on 20 March 1986 by a vote of 21 to 15; following testimony on behalf of the community by leaders Stoddard and Virginia Apuzzo, it was signed into law on 2 April by Mayor Edward I. Koch.

Lee Hudson, Joan Nestle

gays. Because of its huge population, New York City in the late nineteenth century provided a degree of anonymity that allowed a gay subculture to develop, chiefly within a large population of transient, unmarried men who often lived in unsupervised rooming houses and maintained few ties to their families. By the 1890s gay life was centered on the Bowery, Manhattan's largest working-class entertainment district; several saloons and dance halls popular among gays there were called "degenerate resorts." By the 1920s there were a number of gay enclaves. The best known was in Greenwich Village, where speakeasies and tearooms attracted gays from Brooklyn, the Bronx, Queens, and Staten Island and from the rural United States, as well as heterosexuals wishing to observe gay culture. Among the most popular gathering places in the mid-1920s were Paul and Joe's restaurant on Sixth Avenue and the Black Rabbit, a speakeasy on MacDougal Street run by Eva Kotchever, a lesbian from Poland; these closed after attacks by neighbors and the police.

Harlem was also an important center of gay life, especially during Prohibition. Such clubs as Smalls' Paradise and the Clam House were popular, as were smaller speakeasies unknown to heterosexuals. Gay black social clubs organized the city's largest drag (transvestite) balls, some of them held in the Savoy Ballroom and the Rockland Palace. The largest of these balls was the Hamilton Lodge Ball, which at the height of its popularity in the 1930s attracted 8000 participants and observers. Several figures of the Harlem Renaissance were prominent in the community. There was also an enclave in Times Square, little known by heterosexuals, where gay theater workers met in tearooms, restaurants, and streets. By the time of World War II the men's bar at the Astor Hotel (Broadway and 47th Street) was known nationally by gay sailors as a place to meet gay civilians while passing through the city. Many composers, poets, and playwrights drawn to the city by its cultural offerings became central figures in the gay world.

During World War II men on their way to Europe discovered gay culture in New York City, and afterward many returned to the city to settle. Gay bars opened, and enclaves formed on the East Side and West Side and in Brooklyn Heights and Jackson Heights; an especially large one developed along the Third Avenue elevated line, near the "bird circuit," a strip of bars that included the Golden Pheasant and the White Swan. As gays became more numerous and visible, they also came under more frequent attack by political leaders and the police: during the decade after the war, thousands of men were arrested on homosexual charges each year, and most gay bars remained in operation only a short time before being closed by the police or the state liquor authority, which prohibited bars and restaurants from serving homosexuals. Resistance to such measures was organized by a few gays and lesbians during the 1950s. A local chapter of the Mattachine Society formed in 1955 was the largest gay-rights organization in the United States by 1960. Under the leadership of Dick Leitsch, its president from 1965, the group adopted a militant stance: it defended men who had been arrested on morals charges by maintaining that they had been entrapped, and protested against the policing of gay bars. With the support of favorable court rulings, the group achieved considerable success by 1967.

Gay bars nonetheless continued to be raided by the police. After a riot broke out in June 1969 when patrons and passersby resisted a raid on the Stonewall Inn on Christopher Street, the Gay Liberation Front was organized by young activists. The group was soon superseded by the Gay Activists Alliance and Radicalesbians, which led demonstrations against Mayor John V. Lindsay and institutions considered hostile to gays, including the American Psychological Association (which classified homosexuality as a psychological disorder). The Lambda Legal Defense Fund and the National Gay Task Force were formed in 1973 in New York City to promote gay rights and became prominent nationwide. Groups in the city fought for a municipal gay-rights bill to protect gays and lesbians against discrimination in housing and employment; bills were introduced annually from 1971, but one was not passed until 1986 and not until 2002 were the protections extended explicitly to transgender individuals. Gay institutions prospered during the 1970s as the threat of police harassment diminished. Bars, discothèques, and bathhouses increased in number and operated openly; and gay choruses, athletic leagues, political associations, theater companies, and other organizations were formed. The gay press also flourished in the 1970s and 1980s: periodicals issued in the city included *Come Out!* (1969), *Christopher Street* (1976), and *New York Native.* The New York City Lesbian and Gay Community Services Center, opened in a renovated school building on West 13th Street in 1984, provided offices for several major organizations and meeting facilities for more than 200 others.

During these years the gay community was ravaged by AIDS, a lethal illness identified in the early 1980s. At first most victims were gay men and the disease was largely ignored, but as the number of deaths rose, the country panicked. In response to discrimination against people with AIDS, gays turned increasingly to activism. When the city was slow to allocate funds for such services as AIDS education, a group of men including the

playwright Larry Kramer formed the Gay Men's Health Crisis (GMHC) in 1981 to press for more government services, support those stricken by the disease, and distribute condoms and educational materials in bars. The crisis exacerbated violence against gays, whom many blamed for the epidemic. In response to several vicious attacks in 1980 the New York City Gay and Lesbian Anti-Violence Project was formed by a group in Chelsea. Under the leadership of David Wertheimer (1985–89) it expanded its staff, organized programs to help the police and social workers respond to assaults against gays, and made "queer bashing" a public issue for the first time. At the same time older organizations, including the Lambda Legal Defense Fund, grew rapidly. Virulent attacks by the press (particularly the *New York Post*) on gays and people with AIDS in the mid-1980s led to the formation of the Gay and Lesbian Alliance against Defamation (GLAAD) in 1985.

The AIDS crisis, the conservative policies of President Ronald Reagan, and the decision of the U.S. Supreme Court to uphold anti-sodomy laws in *Bowers v. Hardwick* (1986) inspired increased activism and widespread support for organizations devoted to AIDS and gay issues. After the Gay Rights Bill was passed in New York City in 1986, gays demanded rights commensurate with those accorded to heterosexuals, including joint health insurance, visitation rights, and housing rights. Although the rate of infection with AIDS decreased in the late 1980s as gays became educated about preventive measures, the disease continued to ravage the community: 10,000 New Yorkers had died of it by 1987 and 20,000 by 1991. The crisis led to a resurgence of militant gay organizations, among them the AIDS Coalition to Unleash Power (ACT UP), formed by Kramer in 1987, and several of its offshoots, such as Queer Nation, which organized "kiss-ins" and "queer nights" at clubs frequented by heterosexuals, led marches on the homes of accused gay bashers, and distributed militant gay literature throughout the city.

A few successes were achieved during the early 1990s. The New York State Court of Appeals ruled in *Braschi v. Stahl Associates* (1989) that the right of succession to a rent-controlled apartment accrued to the longtime partner of a gay man who had died, as it would have to a legal spouse; at the urging of activists the state then extended similar rights regarding rent-stabilized apartments. In 1993 gay couples were granted the right to register with the city as domestic partners, and demands for domestic partner benefits were confirmed in January 1994. Gay voters played a crucial role in David N. Dinkins's narrow victory in the mayoral election in 1989 and also helped to elect a number of sympathetic judges and other public officials. Deborah Glick, the first openly lesbian state legislator, was elected from a district that included Chelsea and Greenwich Village in 1990, and Tom Duane, a well-known activist, became the first openly gay candidate elected to the City Council in 1991. In 2006 Christine Quinn became the first openly gay speaker of the New York City Council.

GE. See General Electric.

Geddes, Norman Bel [Geddes, Norman Melancthon] (*b* Adrian, Mich., 27 April 1893; *d* New York City, 8 May 1958). Designer. After noticing a 1918 magazine article in which Otto H. Kahn was quoted saying that millionaires should give money to support struggling artists, Geddes sent the prominent banker a telegram asking for enough money to move him and his family from Los Angeles to New York City, where he wanted to work in theatrical design. He received $400 the next day. In New York, Kahn secured a position for Geddes at the Metropolitan Opera where he supervised the design of costumes and scenery for about 100 productions and became known for his innovative stage lighting. Beginning in 1927 he focused his efforts on industrial design, designing commercial products such as vacuum cleaners, yachts, automobiles, and trains; he also received commissions for the Futurama exhibit of General Motors at the World's Fair of 1939–40, the Hayden Planetarium (1935), and about 30 theaters worldwide. Geddes wrote an autobiography, *Horizons* (1932). He died of a heart attack in the University Club at 1 West 54th Street in Manhattan.

James E. Mooney

Gehrig, (Henry) Lou(is) (*b* New York City, 19 June 1903; *d* New York City, 2 June 1941). Hall of Fame baseball player. He was born of German descent at 309 East 94th Street in the Yorkville neighborhood of Manhattan and attended the High School of Commerce and then Columbia College, where he played briefly for the Lions. Signed by the Yankees in 1923, he played 2130 consecutive games beginning on 1 June 1925 (a major league record); his durability as a player earned him the nickname the "Iron Horse." His career ended in 1939 when he was found to have the incurable degenerative disease amyotrophic lateral sclerosis (now often called Lou Gehrig's disease). He retired after a now famous farewell speech at Yankee Stadium on 4 July 1939 (now Lou Gehrig Appreciation Day) when he told his tens of thousands of adoring fans that he regarded himself as the "luckiest man on the face of the earth." Later he was appointed to the New York City Parole Commission and served on it during the last months of his life. His last home was at 5204 Delafield Avenue in Fieldston in the Bronx. Most observers agree that Gehrig was the greatest first baseman in the history of baseball and that along with Babe Ruth, he was part of a one-two punch that has never been rivaled. His funeral was at Grace Episcopal Church in Riverdale; he is buried at Kensico Cemetery in suburban Westchester County.

Geisel, Theodor Seuss. See Dr. Seuss.

Geneen, Harold (Sydney) (*b* Bournemouth, England, 22 Jan 1910; *d* New York City, 21 Nov 1997). Business executive. He moved to the United States in 1911, took U.S. citizenship in 1918, and graduated from New York University in 1934. After serving in executive positions at Raytheon, Bell and Howell, and Jones and Laughlin, he became president in 1959 of International Telephone and Telegraph Corporation (ITT). For the next two decades he oversaw an aggressive policy of diversification that transformed the quiet telecommunications company into a wide-ranging conglomerate: among the firms it acquired were Avis (automobile rentals), Sheraton Hotels, and Hartford Insurance. One of his most controversial initiatives was an attempted takeover in 1965 of the American Broadcasting Company (ABC), which was blocked by the federal government. Geneen resigned as president and chief executive officer of ITT in 1972 but stayed on the board until 1977.

Robert Schoenberg, *Geneen* (New York: W. W. Norton, 1985)

Owen D. Gutfreund

General Electric [GE]**.** Industrial and financial conglomerate. Initially known as the Edison Electric Light Company, it was formed in 1878 in suburban Menlo Park, New Jersey, by Thomas Edison to support research on incandescent lighting and was funded by J. P. Morgan. It opened a power station on Pearl Street in Manhattan in 1882, the first functional one in the country, and enjoyed success producing lamps and other electrical supplies. In 1892 it ceased to be controlled by Edison, whose bankers arranged a merger with a competitor, the Thomson–Houston Company of Lynn, Massachusetts. Renamed the General Electric Company, the firm became the largest of its kind; its most important rival

was the Westinghouse Electric Company. General Electric opened the first industrial research laboratory in the country in 1900, in the backyard barn of scientist Charles Steinmetz, and diversified by developing new products and buying other firms (it eventually made aerospace products and sold real estate). In 1956 it moved its headquarters from Schenectady, New York, to a famous art deco skyscraper at 51st Street and Lexington Avenue that bears its name (the GE Building). The firm maintained its headquarters at 570 Lexington Street until August 1974, when it moved its corporate offices to suburban Fairfield, Connecticut. Under the direction of John F. Welch in the 1980s it concentrated its efforts in technology, services, and manufacturing. In 1986 it bought RCA (including the National Broadcasting Company [NBC], the leading television network at the time) and 80 percent of the firm of Kidder, Peabody, which it liquidated in 1994. In 2001 Welch named Jeffrey Immelt as his successor. In 2002 the company acquired the Telemundo Communications Group Inc., and in 2004 it merged with Vivendi Universal Entertainment, resulting in the company NBC Universal, with General Electric owning 80 percent of it. In 2009 GE and the media company Comcast agreed to a joint venture in which Comcast would gain a 51 percent share of NBC Universal.

Peter A. Coclanis

General Slocum. An excursion vessel that burned on 15 June 1904, resulting in the worst disaster in New York City in the twentieth century and one of the worst in all of maritime history. Named for a Civil War general, the ship was launched in Brooklyn in 1891. Built of wood, it could accommodate 2500 passengers on three open decks. Its coal-fired boilers, built in Hoboken, New Jersey, turned two side paddle wheels. On the day of the fire the vessel had been chartered to take the congregation of St. Mark's German Lutheran Church on its annual picnic outing to the northern shore of Long Island. The church, on East Sixth Street just east of Second Avenue, was in the thriving community known as Kleindeutschland, which surrounded Tompkins Square on the Lower East Side. The *General Slocum* departed from the East Third Street pier at 9:40 a.m. and began moving up the East River past Blackwell's (now Roosevelt) Island. At 9:56 a.m. fire was discovered under the door of a forward cabin. Captain William Van Schaick, 68 years old, who in the preceding year had been given an award for safely transporting 35 million passengers, did not learn of the fire for at least seven minutes. By that time the ship had entered the treacherous waters of Hell Gate; because of a strong tide under its stern, a stiff breeze over its bow, and rocks on either side, there was no room to maneuver. Flames enveloped the forward part of the ship, and the half-rotted canvas fire hoses burst under the force of water. Most of the 1331 passengers onboard were women and children unable to swim. The captain realized that he would need to beach the vessel to save passengers, but because of the racing current and the rocks below, he decided to continue northward for another 1.5 miles (2.4 kilometers) to North Brother Island.

General Slocum Memorial (1906), 2009

Although the ship was equipped with more than 2500 life jackets, they proved useless because the canvas had rotted and the cork filler had crumbled. Meanwhile, the intense heat kept dozens of nearby vessels from getting sufficiently close to assist. Fewer than 15 minutes after smoke was first seen, the *General Slocum* lay a smoldering wreck on North Brother Island, and at least 1021 people were dead. The funerals lasted more than a week, and one of the processions from St. Mark's Church to the Lutheran Cemetery in Queens involved 156 hearses and stretched for almost a mile.

An investigation revealed that the Knickerbocker Steamboat Company, owner of the *General Slocum,* had never replaced the original lifebelts and hoses and that the first mate had not trained the crew in emergency procedures. The exact cause of the fire was not determined. Captain Van Schaick was convicted of neglect of duty and sentenced to 10 years in prison, but he was pardoned by President William Howard Taft after three and a half years at Sing Sing. Kleindeutschland did not recover. Partly as a result of the tragedy, its German residents moved uptown to Yorkville on the Upper East Side, Jewish families replaced them, and St. Mark's Church became an Orthodox synagogue. An organization of survivors of the *General Slocum* inaugurated an annual commemoration at the Lutheran Cemetery in Queens.

General Society of Mechanics and Tradesmen. Organization formed in 1785 in New York City by 22 artisans to promote the political and financial interests of craftspeople in the United States. Its members fought for protective tariffs and formed the Mechanics Bank to help meet the credit needs of artisans. The society also built a series of impressive meeting halls and established a reputable school and a widely used apprentices' library. To ambitious members such as Stephen Allen the organization offered opportunities for public service that led to political careers. The General Society of Mechanics and Tradesmen currently remains active at its landmark building at 20 West 44th Street, purchased in 1899 with the help of Andrew Carnegie. Having experienced a renaissance at the beginning of the twenty-first century, it modernized its library and organized its archives.

Howard Rock

General Theological Seminary. Episcopal seminary at 175 Ninth Avenue (near 21st Street) in Manhattan, formed by John Henry Hobart, Theodore Dehon, and William White and sponsored by the church's general convention; founded in 1817, it is the oldest Episcopal seminary in the United States. Classes began with two professors teaching six students at St. Paul's Chapel in the spring of 1819. In 1820 the classes were moved to New Haven, Connecticut, and St. Mark's Library was opened in New York City by John Pintard. The first graduation was held in 1822, and the seminary then moved back to New York City.

The first professor of biblical languages at the seminary was Clement Clarke Moore, who taught from 1821 to 1850 and donated the current site, known as Chelsea Square, that became the campus by 1827; the first building, now known as the West Building, was erected in a Gothic Revival style between 1832 and 1836. During the 1830s and 1840s the campus was the American center of the Oxford Movement, which called for the revival of High Anglican traditions. A number of graduates of the seminary formed churches west of the Mississippi River. The seminary received permission to grant degrees in 1869 and conferred the Bachelor of Sacred Theology degree from 1876. Under Eugene Augustus Hoffman, a dean (1879–1902) and major benefactor, it expanded rapidly, adding the quadrangle, most of the grounds, and the library and other buildings and establishing professorships and endowments. It awarded

the doctorate from 1881 and honorary degrees from 1885. By the end of Hoffman's tenure there were nearly 150 students and 13 full-time faculty members. The Chapel of the Good Shepherd (1885–88), a monument to the Hoffman family, was built in an English Collegiate Gothic style with a bell tower 161 feet (50 meters) tall and bronze doors designed by J. Massey Rhind; it was consecrated by the presiding bishop John Williams on 31 October 1888.

The seminary continued to expand after the turn of the twentieth century. In 1926 it introduced a tutorial system to supplement classroom instruction. The main front building was added in 1960. Women were admitted as full-time students in the Master of Divinity program in the autumn of 1971. Student marriages during the academic year were allowed from the autumn of 1972; in the same year the faculty issued a statement supporting the ordination of women, the first by an Episcopal seminary in the United States. Over faculty objections the trustees voted in 1978 to sell a Gutenberg Bible donated by Hoffman. After considering several alternatives, they voted in 1982 not to move the seminary to a new site, and extensive renovations were undertaken in the 1990s. From the 1950s into the 1990s the average enrollment ranged from 140 to 160. By the mid-1990s about 7000 students had enrolled since the school began.

In addition to the three-year Master of Divinity program, the General Theological Seminary offers a two-year Master of Arts program, a Master of Sacred Theology program, and a Doctor of Theology program (with a specialty in Anglican studies); it also operates the Center for Christian Spirituality, the Center for Jewish–Christian Studies and Relations, and a summer school. St. Mark's Library has more than 240,000 volumes. Its rare-book vault was damaged by fire in September 1993, but the library is still known as the finest theological library in the Episcopal Church. Under the leadership of Ward Ewing (dean from 1998), the Desmond Tutu Education Center was opened on 11 September 2007 in the context of a major international conference on "Reconciliation at the Roundtable."

Boggs, *Through the Gates into the City: A Metropolis, a Seminary and a Chapel* (New York: General Theological Seminary of the Episcopal Church, 2007)

J. Robert Wright

General Trades' Union. Citywide organization formed in 1833 by delegates from nine trades. It was responsible for a surge of militancy in labor between 1833 and 1836. The union espoused first the moderate criticisms of corrupt, greedy aristocrats by Ely Moore, a politician connected with Tammany Hall, then by 1835 the more pointed attacks of the chair maker John Commerford on "capital," which by his definition included not only aristocrats but also master artisans. Commerford's views were shared by many journeymen delegates, and even sympathetic small masters were denied membership in the council. Delegates were elected by the many craft unions formed in the mid-1830s, which also set up complex procedures and ad hoc committees to approve and govern strikes, ensure democratic debate and participation, handle grievances, and collect funds. One of the union's achievements was sponsoring parades and lively public celebrations of Independence Day. Female craftworkers were not accepted as equals by many members, who hoped that their own efforts against exploitation would allow women to return to domestic life; nonetheless, some journeymen pledged support to women on strike. Although the union shared with the Locofoco Democrats a hostility to the Second Bank of the United States, it abstained from formal endorsements and maintained political independence to avoid the kind of demise suffered by the Workingmen's Party in 1829–30. The General Trades' Union reached the height of its influence during a wave of strikes in 1836 but disbanded when the trade union movement was ravaged by the panic of 1837 and the subsequent depression.

Iver Bernstein

gentrification. The process of older neighborhoods being renovated and rebuilt, followed by more affluent people moving in and usually forcing older, less affluent residents to leave. This is the reverse of the prevailing process of urban neighborhood change, which involves the sequential reuse of residential housing by progressively lower income groups. As older neighborhoods become more rather than less attractive to outsiders—either because of a new appreciation for prewar construction, proximity to mass transit, or lower crime rates—families with more financial resources than the current inhabitants move into an area and bid up the price of renting or buying real estate. In New York City after 1970—in neighborhoods like the Upper West Side, Chelsea, the meatpacking district, Park Slope, Fort Greene, SoHo, and Bedford–Stuyvesant—gentrification became a common, even predominant, experience as the suburbs lost status relative to the city. In the early twenty-first century, as the region recovered from the terrorist attacks of 11 September 2001 and as more professional families chose to remain in the city even after they had children, recent college graduates who could not afford Manhattan's priciest precincts began to flock to Harlem north of Central Park or Fort Greene and Williamsburg in Brooklyn, where they could find cheaper rents, a dynamic street life, and numerous entertainment options. Older residents of such areas felt pushed out by the newcomers.

Kenneth T. Jackson

geographical features. New York City's geographical features of general interest include its highest and lowest natural points and its land area, which varies from year to year depending on erosion, dredging, and development.

The city's total land area is approximately 303 square miles (785 square kilometers), the exact area varying with annual landfill and erosion. Queens makes up nearly one-third of that, at 110 square miles (285 square kilometers), with Brooklyn the second largest borough at 72 square miles (187 square kilometers), followed by Richmond (Staten Island) at 56 square miles (144 square kilometers), the Bronx at 42 square miles (109 square kilometers), and Manhattan, the smallest borough, at 23 square miles (60 square kilometers). The landmass is just one-fourth the size of New York Harbor, whose area of approximately 1200 square miles (3108 square kilometers) consists of the lower Hudson; the Harlem and East rivers; the Upper and Lower Bay; and the bays, kills, canals, and creeks that drain into them. The total length of the shoreline is approximately 1000 miles (1609 kilometers, or the approximate straight-line distance from New York to Savannah, Georgia), of which about 650 miles (1046 kilometers) is navigable waterfront. The natural, average depth for most of New York Harbor before dredging was approximately 20 feet (6.1 meters). Beginning in the early 1800s the city and federal governments have almost always been at work creating and maintaining some 240 miles (386 kilometers) of deep-water channels by dredging to the depth of the largest vessels, ranging from 30 feet (9.1 meters) to 50 feet (15.2 meters) in the early twenty-first century.

The city's highest natural point is at the top of Todt Hill in Staten Island. At 409.8 feet (125 meters) above sea level, it is the highest spot on the Atlantic Coast of the United States south and west of Maine. Outside Staten Island, the highest natural point in the city is the 284.5-foot hilltop in the Fieldston section of the Bronx, near Grosvenor and Iselin avenues and 250th Street. Manhattan's highest point is a matter of dispute. For many years it was believed to be in Fort Tryon Park, near the flagpole, at an elevation above sea level of 260 feet (79 meters). In fact, it is in Bennett Park, the site of the Revolutionary War

compound called Fort Washington, at 183rd and Pinehurst streets. A schist outcropping there peaks at 265 feet (80.7 meters). The highest point in Queens, at 258.2 feet (78.7 meters), is in the Glen Oaks neighborhood on a busy service road on the parkway's south side, near the Towers Country Club. Brooklyn's highest point is in the northeast corner of Green-Wood Cemetery, above the intersection of 20th Street and Seventh Avenue, at an elevation of 220 feet (67.1 meters). The lowest natural point in the city's history very likely was the bottom of the freshwater pond called the Collect, with a maximum depth of 60 feet (18.2 meters). The Collect was filled in by 1811 and the site is now a park on Centre Street near Foley Square. Humans have dug as deep as 800 feet (244 meters) below sea level to build tunnels for transit and water supply in the city.

John Rousmaniere

geology. The New York City area owes its unique and diverse history to the geological processes that for more than a billion years have reshaped and altered its physical environment. Among the evolutionary phenomena that have changed the face of the North American continent were the formation and subsequent destruction of ancient mountain ranges (orogenies), their simultaneous erosion and sedimentation, and the shifting and colliding of the continental landmasses that changed the shape, direction, and size of its waterways. In more recent geologic times the forces of glaciation have altered the landscape dramatically while revealing evidence of its former geologic history.

1. Features

The Manhattan prong, a narrow projection extending down the east side of the Hudson Valley to the southern tip of Manhattan, dates to the time of the Grenville Orogeny (1000 million B.P.). Most of the rocks of New York City are generally believed to date from two later mountain-building events, the Taconian Orogeny of the Ordovician period (500 million to 430 million B.P.) and the Acadian Orogeny of the Devonian period (395 million to 345 million B.P.). During these events great compressive force bearing on accumulated sediments caused deep strata of rock to be tilted, folded, and raised; the result in the metropolitan area was a bedrock of igneous and highly metamorphosed rocks that now supports the skyscrapers of Manhattan. Before metamorphosis, successive sedimentary layers of such materials as graywacke sandstone, chert, dolomitic limestone, and sandy shale accumulated.

The topography of New York City results primarily from the different rates of erosion of rock formations that differ in hardness, and secondarily from the effect of the glaciers on what are now Brooklyn and Queens. There remain in New York City three basic formations of rock from the ancestral mountains, arranged in layers overlying the sediments presumed to date from before the Grenville Orogeny and tilted to the southwest along an axis roughly parallel to Long Island. The oldest formation is Fordham gneiss, named for its prominent distribution in Fordham. It is composed largely of quartz, orthoclase feldspar (in which quartz is found in distinct bands, sometimes with bands of hornblende), and biotite mica. Fordham gneiss is readily recognizable by its light to very dark gray color, displaying folded and distorted bands of foliation planes (layering). It is believed that the gneiss dates from the Precambrian period (more than 1000 million to 570 million B.P.). The second formation is known as Inwood marble, or Inwood dolomite, for the area at the northern tip of Manhattan where

Geological map and sections of Manhattan, 1898

it has many prominent outcrops. It overlies the Fordham gneiss and may therefore be assumed to be a younger formation. Composed primarily of calcium and magnesium carbonate, the marble is almost white and coarsely grained, but prolonged weathering often causes it to disintegrate. Unlike the gneiss, it is unfoliated. Before metamorphosis Inwood marble was probably a dolomitic sandstone. Because Inwood marble is much less hard than gneiss, it is more vulnerable to erosion and appears only in low-lying areas, its height having been reduced far more quickly; it is visible at ground level in the flat plain of Harlem and as far north as Spuyten Duyvil. The third formation, and the youngest, is the predominant one on Manhattan Island: the ubiquitous mica schist of the Manhattan formation (see MANHATTAN SCHIST). Light gray in color but weathering to a blackish brown, it is easily recognizable by its tiny, glistening flakes of muscovite mica as well as widely distributed bands of foliation. It is composed almost entirely of quartz and plagioclase feldspar. Mica schist is highly durable and has long been a favored building material, as may be seen from such structures as the older buildings of City College of New York. Outcrops of the schist are widely distributed in Central Park, along Riverside Drive, at Coogan's Bluff (overlooking the site of the former Polo Grounds), in the Fort George and Fort Tryon ridges, in Inwood Hill Park (where schist and Inwood marble are interlayered with bands of hornblende schist), and along the Cross Bronx Expressway near the Harlem River and Alexander Hamilton Bridge.

Where the Fort George and Fort Tryon ridges merge at about 181st Street to form the Manhattan Ridge, the spine of mica schist continues south, past St. Nicholas Heights to about 125th Street, where it dips suddenly under the Manhattan Valley and rises again as Morningside Heights. The ridge then slopes gently down to the surface at 96th Street; on its west side outcrops are evident in Riverside Park as far south as 72nd Street. No further exposures of mica schist occur south of Central Park, although the formation is not far beneath the surface except at Washington Square, where it plunges several hundred feet before rising again near Chambers Street to about 40 feet (12 meters) below the surface. Above this bedrock is a conglomeration of loose boulders, gravel, sand, clay, soil, and former vegetation called regolith, much of it left behind by the later glaciers.

During the late Paleozoic period (250 million B.P.) the topography of what is now New York City was undergoing dramatic changes, as the Earth's crust drifted slowly but constantly across the surface of the planet. During the Mesozoic era (225 million to 65 million B.P.) the Atlantic continents drifted together to form a gigantic landmass named Pangaea in 1915 by the German meteorologist Alfred Wegner, who based his theory on the complementarity of the coastlines of the Atlantic continents and the similarity of rock formations on either side of the ocean (to the extent of containing some of the same fossils). When the continents again moved apart, the Earth's crust was uplifted, while other tectonic plates sank beneath the sea to create deep ocean trenches. The uplifted sediments slowly eroded and over time were steadily deposited to form the backbone of what are now the shoreline beaches. The beaches of Brooklyn, Queens, and the rest of Long Island well illustrate the deposition of sands and gravel of beaches eroded upland, as well as the effects of wave action and glaciation.

In Van Cortlandt Park in northern Bronx there is yet another rock formation, the Yonkers granite, an igneous rock that was formed below the surface by intense heat. It intruded into the Fordham gneiss as super-hot magma and slowly cooled without being exposed to the atmosphere, until erosion did its work. Resembling gneiss and frequently called granitic gneiss, it is composed of quartz, mica, and a pink feldspar called microcline. Another small formation that intruded into the Fordham gneiss is Ravenswood grandiorite. Of varying shades of gray, it contains quartz, feldspar, and hornblende, with garnets giving it a mottled appearance. It is found in an area of 6 square miles (15.5 square kilometers) of Ravenswood in northwestern Queens along the East River.

One of the more unusual rock formations distributed widely on Staten Island is serpentinite, a rock that when exposed to the atmosphere has a reddish-brown hue caused by iron oxide. This colorful rock was much favored by the Indians, who used it to carve the bowls of their pipes. A dramatic light green outcrop of serpentinite, directly across the Hudson from midtown at a bluff called Castle Point on the campus of the Stevens Institute of Technology in Hoboken, was described in 1609 in the journal of Henry Hudson's first mate, Robert Juet, as a "mountain that resembled a silver myne"; there is a small, similar outcrop along 11th Avenue in the West 50s of Manhattan.

Manhattan is marked by a series of faults, which are fractures caused by the movement of one mass of rock against another. The fault lines are easily recognizable as valleys that cut across the ridges of mica schist and form deep depressions or hollows. Examples include a fault at Dyckman Street that bisects the Manhattan Ridge, and another that runs parallel to 155th Street. The most prominent fault is near the Lorillard snuff mill in the New York Botanical Gardens, where the Bronx River once carved its way through the faulted rocks to create a narrow gorge.

The topography of New York City underwent important changes in late geological times during the Ice Age. Beginning about 1.5 million B.P., during the Pleistocene epoch, the Earth's climate cooled and glaciers were eventually formed that covered much of the northern hemisphere. On the North American continent the ice sheet extended as far south as the lower Midwest, covering northern Pennsylvania and New Jersey and reaching the Atlantic seacoast at what is now New York City. Four ice sheets advanced and retreated during the Pleistocene epoch; the Wisconsin was the most extensive and moved in a series of brief advances and retreats for about 60,000 years, covering all the area now making up New York City. The Wisconsin had a thickness of 2000 feet (600 meters) and carried with it giant boulders, rocks, gravel, sand, and particles of clay, which it left in a deposit called till. So immense were its powers that it deposited huge rocks from the New England Upland on Long Island. In Central Park the force of the glacial advance is evident from the many boulders scattered throughout, some weighing many tens of tons; these boulders, called erratics, remained after the ice withdrew. The action of the glacier also affected the huge outcrops of mica schist, which were gouged by other rocks dragged by the glacial ice and worn smooth by fine particles of sand. A huge outcrop of mica schist adjacent to the carousel in Central Park was rounded by the grinding effect of the overriding ice mass, giving it a steep, rough "down-glacier" side and a smoothly polished and striated "up-glacier" side. Other vestiges of the ice sheet are deep, steep-sided indentations called kettles that were formed when enormous chunks of ice broke off from the glacier, became buried by the till, and then melted; occasionally the kettles would fill with runoff or rainwater and become ponds. In Queens many kettles varying in depth from a few feet to more than 100 feet are prominent features of Alley Pond Park, Forest Park, and Highland Park.

Of the many remnants of the last Ice Age, about 12,000 to 14,000 B.P., the most visible is the Harbor Hill moraine, a continuous ridge of boulders, gravel, and sand marking the southernmost limit of the advance of the Wisconsin Ice Sheet. It extends the entire length of Long Island, forming a line of prominent bluffs and hilly terrain from Orient Point along the northern shore through Nassau and Queens counties, where the moraine forms the heads of Hempstead Harbor, Manhasset Bay, Little Neck Bay, and Flushing Bay. The moraine derives its name from the highest elevation on Long Island (391 feet, or 120 meters), at Harbor Hill, near Roslyn. The ridge, or terminal moraine, then marks the route of the Grand Central Parkway and passes through Alley Pond, Cunningham, and Forest parks. It forms a very visible escarpment in Highland Park, near the border of Brooklyn and Queens, providing a commanding view of its outwash plain as far as Jamaica Bay, 5 miles (8 kilometers) to the east. This level stretch of coastal lowland was formed by

rushing streams of melting ice pouring from the glacier, which deposited a thick layer of stratified and sorted sediments. In Brooklyn the moraine follows Bushwick Avenue, Eastern Parkway, Crown Heights, Prospect Park, Park Slope, and Bay Ridge; near the Verrazano–Narrows Bridge it crosses into Staten Island, where it rises 410 feet (125 meters) at Todt Hill, the highest point on the Atlantic Coast between Maine and Florida, before crossing into New Jersey and then northern Pennsylvania. One dynamic event caused by the terminal moraine during the Late Pleistocene blocked the Narrows as well as the exit flows of many rivers, causing extensive parts of Manhattan and Queens to be submerged under two new lakes. Lake Hudson, which was situated approximately along the present Hudson River as far north as Haverstraw and may have been joined to Lake Hackensack near Elizabeth, New Jersey, inundated the lowland sections of Manhattan Island. Connected to it was Lake Flushing, which engulfed broad areas of northern Queens and Nassau County. These lakes remained for thousands of years, long enough for about 8 feet (2.4 meters) of glacial clay to accumulate in sections of Manhattan Island, where extensive clay deposits now overlay strata of sand and gravel in the Harlem and Inwood lowlands. Peat beds also were deposited in the postglacial sands of lower Manhattan. The postglacial climate created a swampy environment that supported many varieties of flora and fauna; paleontologists have unearthed the trunks of several common juniper trees from the late Pleistocene epoch in lower Manhattan; the skeletons of wooly mammoths, giant bison, saber-toothed tigers, hairy tapirs, a ground sloth, a giant mastodon, and a prehistoric horse (discovered in 1926 during excavations for the Independent Subway at 134th Street and St. Nicholas Avenue); and human remains and artifacts radiocarbon-dated to 3690 B.P.

In the postglacial period the North Atlantic coastline became tilted downward, with the shoreline southeast of New York City uplifting and the shoreline northeast subsiding. As a result the sea submerged the valleys of many coastal rivers, which became known as drowned valleys; among these were the valleys of the Delaware, the Connecticut, and the Hudson, which once extended eastward into the Atlantic Ocean, 120 miles (193 kilometers) to the edge of the Continental Shelf. The Hudson, a fjord or estuary rather than a river, remains tidal as far as Troy, 140 miles (225 kilometers) north of New York City. As a result of the glaciers many of the city's other waterways are also estuaries, including the East River, the Harlem River, Spuyten Duyvil, the Kill van Kull, and the Arthur Kill, as is Long Island Sound, which was once a river flowing easterly.

The many miles of New York City shoreline are continually altered by the ocean, in a recurring cycle of erosion and deposition. Because the downward slope of the coastal plain is gradual, the sands build up quickly to form an underwater bar parallel to the shoreline. Over time the bar rises above the surface, forming a barrier beach or barrier island. Behind this barrier the trapped seawater becomes a lagoon, which water flows into and out of through tidal inlets. An example of such a lagoon is Jamaica Bay, which over the years became for the most part a saltwater marsh that is now a refuge for sea birds. The bay contains a number of marshy islands called hassocks, formed by the buildup of sand, and its tides are governed by Rockaway Inlet; Rockaway Peninsula and Atlantic Beach nearby are barrier beaches developed over many years.

Annual weather cycles strongly affect the buildup and erosion of the barrier beaches. Violent winter storms and occasional autumn hurricanes attack the shore and erode the beach, interrupting the normal cycle in which beach sands are deposited and washed away, and at times even breaching the barrier beaches and carving new tidal inlets into the lagoon. Because the line of breakers runs from northeast to southwest and therefore approaches the beach obliquely, sand picked up by the backwash of the surf is moved southwest when it is redeposited. This action, called beach drifting, accounts for the yearly movement of hundreds of thousands of cubic yards of sand toward the western end of each barrier beach and has been only partially stemmed by the construction of huge rock jetties along the Rockaway and Coney Island beaches.

2. Scholarship

A number of scientific institutions in New York City have made important contributions to the study of geology. Research in geology at Columbia University began in its School of Mines (est. 1864), where the faculty included the noted paleontologist John Strong Newberry. After the department of geology dissociated from the School of Mines, Columbia continued to produce many eminent geologists, including the structural geologist Walter Bucher, the geomorphologists Armand Lobeck and Arthur Strahler, the igneous petrologist S. J. Shand, and Rhodes Fairbridge, widely known for his study of changes in sea level. The Lamont–Doherty Earth Observatory (est. 1949) in Palisades, New York, affiliated with Columbia, was important in developing the theory of plate tectonics in the early 1960s and assembling distinguished scientists such as Bruce Heezen and Marie Tharp, topographers of the ocean floors; Maurice Ewing, a geophysicist and the director of Lamont during the development of plate tectonics; and Lynn Sykes, a geophysicist and seismologist whose work on transform faults in the late 1960s helped to validate the theory of plate tectonics. Another important institution in the city is the American Museum of Natural History, known for its resources in mineralogy, meteoritics, and paleontology. Among those associated with the museum is Niles Eldredge, a paleontologist who with Stephen J. Gould developed the theory of punctuated equilibrium in 1972. The Geological Section of the New York Academy of Science, established in 1827, remains an important forum for professional geologists.

Gerard R. Wolfe (§1), Frank Morrow (§2)

George, Henry (*b* Philadelphia, 2 Sept 1839; *d* New York City, 29 Oct 1897). Economist and reformer. After leaving school in Philadelphia at age 14, he learned typesetting and in 1858 moved to San Francisco, where he worked as a reporter and writer and at times lived in poverty. In his book *Progress and Poverty* (1879) he posited that tragic human deprivation was widespread because a few rich landowners were reaping an ever-increasing profit from the natural bounty of the land, the fruits of human labor, and invested capital, a situation he believed was contrary to natural law. The book was the most influential American economic treatise of the nineteenth century and made him internationally known. His single-tax movement sought the "abolition of all taxes on industry and the products of industry" as well as consumers and advocated the financing of government by a heavy tax on land. At the time, the prospect of relying on a land tax alone was feasible: spending by localities and states was already financed overwhelmingly by property taxes, and the system could have been restructured to shift the tax burden from buildings and other manufactured assets to land. George also wished to abolish the tariff as an obstacle to free trade. In 1880 he moved to New York City because of its importance in national affairs. He lectured in Ireland, England, Scotland, and Australia, where he championed human freedom and condemned oppressive government, socialism, monopoly, corruption, and the misery caused by industrialization in U.S. cities. His book *Protection or Free Trade* (1886) articulated his view of the benefits of international free trade for human well-being. In 1886, at the urging of labor leaders, he waged an independent campaign for the mayoralty of New York City. His candidacy was opposed by Tammany Hall and Catholic

leaders (Edward McGlynn, a priest who outspokenly supported him, was directed to remain silent and was later excommunicated for disobeying), but he enjoyed considerable support among the Irish, who were impressed by his backing of the Irish Land League and of American labor rights. After a bitter campaign during which George's views were often misrepresented, the Democratic candidate, Abram S. Hewitt, received 90,552 votes, George 68,110, and the Republican candidate, Theodore Roosevelt, 60,435, in what is often considered the most dramatic mayoral election of the nineteenth century in New York City. Although George's followers believed that the election was rigged, fraud could not have accounted for the large differences in the votes tallied.

In 1887 George launched a weekly newspaper called the *Standard* (published at 25 Ann Street) and with several labor unions formed the United Labor Party. After abandoning plans to build a national labor party, he helped form local clubs in support of the single-tax movement. During the presidential campaigns of 1884, 1888, and 1892 he supported Democratic candidates and had some success in spreading his views about the benefits of free trade. He also advocated that churches take a more active role in reducing poverty. Although his health was poor and his book *The Science of Political Economy* unfinished, in 1897 he agreed again to seek the mayoralty of New York City. The campaign proved exhausting, and he died four days before the election; the funeral procession was the longest since that of Abraham Lincoln. Most academic economists of George's day disagreed with him, but in the late twentieth century there was a renewed interest in his views among economists. George lived at various addresses in Manhattan and Brooklyn and maintained an office at 16 Astor Place (from May 1886).

George Cromwell Recreation Center. See Cromwell Recreation Center.

Georgetown. Neighborhood in southeastern Brooklyn, lying north of Mill Basin and bounded to the north by Avenue K and Bergen Avenue, to the east and south by Avenue N, and to the west by Ralph Avenue. It was developed in the mid-1960s as Georgetowne Greens, a suburban community with a shopping center and other amenities. Initially it covered a large tract of landfill at Ralph Avenue and Avenue L; the streets were paved and had curbs and sidewalks, and the housing consisted of two-family houses with brick fronts standing on large landscaped lots with driveways. Developers lost interest in the venture after Mayor John V. Lindsay proposed to build Harborville, a Mitchell–Lama housing project of 900 units on an adjacent lot of 32 acres (13 hectares) owned by the city. The proposal was defeated after intense local protest and forestalled further development of Georgetowne Greens, where the existing houses were sold. Developers bought the remaining land and built attached and semidetached three- and four-family houses. As of the early twenty-first century the neighborhood was middle class with large Italian and Jewish populations. The main commercial district is the Georgetown Shopping Center on Ralph Avenue between Avenues K and L.

George Washington Bridge. Steel cable, double-decked bridge spanning the Hudson River between 179th Street in Manhattan and Fort Lee, New Jersey. Designed by Othmar H. Ammann and built and operated by the Port of New York Authority, it opened in 1931

George Washington Bridge, looking toward New Jersey from Manhattan, 2009

as the longest suspension bridge in the world. The span connects Westchester County and New England to New Jersey and the rest of the United States; it is the only bridge across the Hudson in New York City. In 1922–25 Ammann led a campaign for a vehicular bridge at 179th Street; his efforts were crucial in persuading the Port Authority to undertake the project and to hire him as bridge engineer. Influenced by the Brooklyn Bridge, he planned to sheathe the towers in granite, but as the Depression cut into the agency's revenues, Ammann agreed to leave the steelwork exposed. The graceful silhouette of the George Washington Bridge belies its enormous weight. Designed to carry light-rail and vehicular traffic, the bridge has a main span of 3500 feet (1068 meters) and is constructed of 141,000 tons of steel. The upper deck of the bridge is suspended 212 feet (64.6 meters) above the Hudson River from four cables, each 4 feet (1.2 meters) in diameter; the cables are strung through the tops of the towers and fastened to huge anchorages in Fort Washington Park in New York City and the Palisades in New Jersey. The lower level of the bridge, also designed by Ammann, was added in 1962 to accommodate the increase in traffic crossing the Hudson, which in the early twenty-first century exceeds 54 million (eastbound) vehicles each year. The architect and designer Le Corbusier once described the bridge as the most beautiful in the world.

George Washington Bridge Bus Station. Bus station opened in January 1963 at Broadway and 178th Street in Manhattan by the Port of New York Authority to replace several small terminals near 168th Street and Broadway. Its construction coincided with the addition of a lower deck on the George Washington Bridge and new expressway connections to the bridge, to which the station is connected by ramps. The station is used primarily by people commuting between Manhattan and suburban Bergen and Passaic counties (in New Jersey) and Rockland County (in New York); the facility has underground links to the 175th Street subway station for service to midtown and lower Manhattan. The station has never been as popular as the Port Authority Bus Terminal, but its proximity to local bus services makes it useful for travelers destined to or from upper Manhattan and the Bronx. On a typical weekday, approximately 15,000 passengers and 730 buses flow in and out of the station; in 2008, approximately 7.5 million passengers were accommodated on about 332,000 bus trips.

Andrew Sparberg

German American Bund. Anti-Semitic organization headquartered in New York City that flourished between 1936 and 1939 with about 8000 to 10,000 members, most of them immigrants. It distributed anti-Semitic tracts, held rallies and parliamentary exercises throughout the Northeast, and opened a compound, Camp Nordland, in Sussex County, New Jersey. Its leader, Fritz Kuhn (1896–1951), was a devotee of Adolf Hitler who encouraged German Americans to protect themselves against the sort of discrimination they had experienced during World War I by embracing anti-Semitism, German ethnic supremacy, and American patriotism. Investigations by government officials led the city commissioner to issue subpoenas in 1939 to the entire membership, including Kuhn and all known local leaders, as well as two tailors who had supplied the group's military uniforms. The German American Bund ceased operations after Kuhn was imprisoned for embezzlement, and its headquarters in the city were shut down by the federal government on 16 December 1941.

Jacqueline Lalley

Germania Life Insurance Company. Original name of the Guardian Life Insurance Company of America.

Germans. German immigrants were present in New Amsterdam during its earliest years of settlement. Peter Minuit, who established the colony in 1626, was himself a native of the German town of Wesel am Rhein. Among those who followed him were Johann Ernst Gutwasser, the settlement's first Lutheran minister (1656–59), and the merchant Jacob Leisler, who arrived in 1660. In 1710 about 150 of the nearly 2150 Palatine Germans who fled to America during the War of the Spanish Succession settled in Manhattan. One of those who stayed was the young John Peter Zenger, who later became well known as a printer and publisher. In the 1790 census there were 2500 Germans; the city had two German Lutheran churches, a German Reformed church, a Moravian church, and a German Society. The first German neighborhood and commercial center in New York City took shape during the 1820s southeast of City Hall in the area extending from Pearl Street to Pine Street.

By 1840 more than 24,000 Germans lived in the city, and during the following 20 years a mass transatlantic migration brought another 100,000 who were fleeing land shortages, unemployment, famine, and political and religious oppression. In the 1840s new German immigrants settled in an area east of the Bowery and north of Division Street in the 10th and 17th wards. It extended to within sight of the East River along Avenue D in the 11th ward and reached the river in the 13th. Known variously as Kleindeutschland, Dutchtown, Little Germany, and Deutschlandle, the neighborhood was the major German American center in the United States for the rest of the century, with more than one-third of the city's German American residents. Other German American neighborhoods took form directly across the East River in Williamsburg (connected to Kleindeutschland by ferries at Houston Street and Grand Street) and across the Hudson in Hoboken, New Jersey. In 1860 there were more than 200,000 Germans in New York City, accounting for one-quarter of the city's total population and making it the first large immigrant community in U.S. history that spoke a foreign language. Natural increase and the arrival of 70,000 immigrants expanded the city's German population to more than 370,000 by 1880 when New York would have ranked as the third largest city in the German Empire. New German settlements were established in Yorkville around Third Avenue and 86th Street and across the East River in Queens, where Steinway and Sons built a piano factory and company town in the 1870s. The southern part of Kleindeutschland, which had older buildings and was more crowded, was resettled by more recent Jewish immigrants from central Europe by the 1880s and became known as the Lower East Side.

Germans were more religiously diverse than most immigrant groups. The early German settlers, who were predominantly Calvinists, were later joined by Lutherans and in the nineteenth century by Catholics from southwestern Germany. Catholics and Jews formed their own subcommunities within the city's German neighborhoods. Adherents of free thought, an outgrowth of the German Enlightenment, ranged from crusading atheists to members of small congregations with beliefs similar to those of Unitarians; freethinkers had their own churches, Sunday schools, "anti-revivals," and holidays and were well known for the social events they organized for nonreligious Germans in the city. Germans were also active in the Ethical Culture Society of New York, formed in 1876 by Felix Adler, which continued the German tradition of free thought into the twenty-first century. Religious intolerance was strong among the city's German Protestants during the 1840s and 1850s, when some of them joined American nativist movements that agitated against immigrants and Catholics. Some German American Catholics were equally fervent, denouncing Martin Luther and the Protestant "heresy" on the 400th anniversary of his birth (1883). The struggle between the German Reformation and Counter-Reformation was less intense in New York City than in Germany because of the secularism of the city's artisans, intellectuals, and merchants. Many of the more religiously inclined Germans either fled the city for the churches of Brooklyn or headed for more congenial settlements in the Midwest. This secularism also tended to mute anti-Semitism among Germans. Although some

Germans in Brooklyn attacked a Jewish funeral procession in 1849, other instances of anti-Semitism in New York City were rare until the 1930s. German Jews were in fact integrated into the larger German society on all social levels, from the criminal gangs to the financial elite.

Those who emigrated from the fragmenting German states during the mid-nineteenth century often arrived in Manhattan with little national identity. Differences in dialect, politics, cuisine, and other aspects of regional culture left many unable to identify with immigrants who were from other parts of Germany. Kleindeutschland was made up of smaller neighborhoods of Swabians, Bavarians, Hessians, Westphalians, Hanoverians, and Prussians, and immigrants generally married within their subgroups. Voluntary associations were organized around hometown loyalties, sometimes unintentionally but in most cases purposefully (as Landsmannschaften). In 1862 the Swabians held a regional festival known as the Cannstätter Volksfestverein, an event that gave rise to other ethnic institutions such as a weekly newspaper in the Swabian dialect and *Volksfestvereine* organized by Bavarians (1874), Plattdeutschen (1875), and even Liechtensteiners. These regionally based networks promoted ethnic identities that competed with a larger German American identity well into the 1920s.

Regional ties were the basis of many associations, but they could not account for the multitude of businesses, sickness-and-death-benefit societies, social clubs, political organizations, and other groups that formed when Germans banded together. Fraternal orders such as the Freemasons, the Druids, the Independent Order of Odd Fellows, the Foresters, and the Redmen were joined by German American orders like the Hermannssöhne, the Harugari, the Vereinigte Deutscher Bruder, and B'nai B'rith. By the early 1870s the Harugari alone had 62 lodges with almost 7000 members in the metropolitan area. Among the most conspicuous German associations in the city were singing societies, which held concerts and sponsored large choral festivals. The Deutscher Liederkranz and the Arion Gesangverein became elite clubs after the Civil War; other German choral groups were identified with middle- and working-class Germans in the city. German musicians predominated in the New York Philharmonic Orchestra and provided it with most of its directors, including Leopold Damrosch, an early director of the Männergesangverein Arion. Damrosch soon founded the Oratorio Society, became the director of the Philharmonic, and rescued the failing Metropolitan Opera by introducing a full season of German repertory. Under the direction of his son Walter Damrosch and the management of Heinrich Conried, the Metropolitan became one of the world's greatest opera companies, with a staple of German operas and a largely German audience. Many of the cultural organizations received support from German business leaders, notably Otto H. Kahn, one of the leading philanthropists of the period.

German immigration led to the establishment of many breweries. George Ehret, who opened the Hell Gate brewery in 1866, was the largest brewer in the United States in 1879; the eighth-largest was Jacob Ruppert, also of New York City. In 1877 Manhattan had 78 breweries and Brooklyn had 43. Germans often congregated at beer halls, beer gardens, saloons, and other places where beer was sold. Some of the halls had stages where German theater was performed, and many had meeting rooms that were used by singing societies, lodges, clubs, unions, and political organizations. The large and often elaborately decorated beer halls were the pride of the German neighborhoods. When the city grew too hot for indoor entertainment during the summer, many Germans enjoyed picnics and festivals near suburban Hoboken, New Jersey, and at an elaborate beer garden in Jones's Wood. May festivals as well as music, gymnastic, and sharpshooting festivals attracted tens of thousands of celebrants during the mid-nineteenth century. The most prominent sponsor was Turngeminde, an organization formed by radical artisans. Strengthened and radicalized by an influx of exiles after the failed revolution of 1848, the group organized the Turnverein to promote physical conditioning, German culture, nationalism, and the abolition of slavery.

In the nineteenth century Germans formed numerous socialist political associations, including the Workers' League, the Kommunisten Klub, the First International, and the Socialist Labor Party. Germans were also prominent in the labor movement, and under their leadership in 1872 the New York Eight Hour League organized a strike of more than 100,000 workers. Germans later helped to form the American Federation of Labor, in which Adolph Strasser and Samuel Gompers were prominent, and the Knights of Labor. Although thousands of Germans joined radical unions and socialist organizations, in electoral politics they remained firmly in the Democratic Party. German American politicians like Anton Dugro, Philipp Merkle, and Magnus Gross formed their own organizations within the party, at first allied with Captain Isahia Rynders's faction in support of Mayor Fernando Wood. When Wood fell out with Tammany Hall and set up his own organization, the Germans remained loyal to him and were the key to his electoral victory in 1858. The abolitionist cause did draw German radicals into the Republican Party in the late 1850s, and a few remained in the party until the end of the century, but an anti-German riot in 1857 by the Metropolitan Police, sponsored by Republicans, weakened German ties to the party.

The undisputed leader of the German Democrats by the early 1860s was Oswald Ottendorfer, owner of the popular newspaper the *Staats-Zeitung*. During the next 30 years he led a number of coalitions dedicated to reform and opposed to Tammany Hall. His German Democratic Union Party helped to elect Mayor Charles Godfrey Gunther in 1863. After the organization of William M. "Boss" Tweed eclipsed the German Democrats in the late 1860s, Ottendorfer formed a German independent citizens' organization in the campaign against the Tweed Ring in 1871. Although he helped William F. Havemeyer to win the mayoralty in 1872, Ottendorfer was defeated when he himself sought it in 1874 and his German reform party collapsed.

The German population in New York City reached 748,882 in 1900, partly as a result of consolidation. There were also 133,689 Austrians in the city, almost all of German ethnicity. Although many institutions remained in Kleindeutschland into the early twentieth century, Yorkville surpassed the old neighborhood in importance, and Astoria in Queens and New Jersey grew increasingly popular, especially among the American-born and the prosperous. Deaths among German-born immigrants and the migration of their children to the suburbs reduced the population of German Americans in the city to 584,838 by 1920, but the numbers again increased when about 98,500 Germans fled the economic and political disorder of their country between the end of World War I and 1930.

Germans continued to shape the city's politics for many years. A local chapter of the National German-American Alliance (1901) was especially influential. The strength of the German American community in the city was undermined during World War I as George Sylvester Viereck and other Germans who advocated neutrality were labeled enemy agents and subjected to governmental repression. German-language courses were eliminated from the public schools and German-language works from the Metropolitan Opera; hamburgers became "liberty sandwiches" and sauerkraut became "liberty cabbage." German immigrants sought to restore their sense of ethnic pride during the interwar years, but these efforts were soon disrupted by the Nazi movement and another round of wartime hostility. German Americans made their activities less conspicuous; associations still met and Steuben Society parades were still sponsored, but active assertions of German culture and attempts at collective political action were stifled. The Turnverein became a meeting place for American Nazi activists in the 1930s and was affiliated with a front organization of the German American Bund. The close ties among Germans between Jews and Christians was ruptured by an anti-German boycott organized by Jewish war veterans and by an anti-Jewish boycott that followed.

In the mid-twentieth century many refugees of World War II settled in the metropolitan area, especially in Washington Heights in Manhattan, but they increasingly chose to live outside the city. The end of mass migration and a move to Long Island and New Jersey helped bring about the decline of Yorkville as a German American center in the 1960s and 1970s, leaving Astoria as the only neighborhood in New York City with an identifiable German presence in the 1980s. In 2000 there were approximately a quarter of a million New Yorkers of German ancestry.

German Society of New York. Immigrant aid society formed in 1784 as a social organization and led by Baron von Steuben in 1785–94. It began to assist German immigrants in the 1830s and from 1843 arranged free medical care, helped to find friends and relatives, and provided employment services; it also published the pamphlet *Ratgeber für Auswanderer* (1833) and fought for equitable immigration laws. The president of the society became a member of the state Board of Commissioners of Emigration in 1847. The society continues to provide services for German immigrants into the twenty-first century.

Stanley Nadel

Gerritsen Beach. Neighborhood in southeastern Brooklyn, lying near Marine Park on a peninsula and bounded to the north by Avenue U, to the east by Gerritsen Avenue, to the south by Plum Beach Channel, and to the west by Shell Bank Creek and Knapp Street; it is bisected from west to east by the Gotham Avenue Canal. The neighborhood was named for Wolfert Gerrittsen, who in the early seventeenth century built a house and mill on Gerritsen Creek (now part of Marine Park); the mill was destroyed by fire about 1931. Until the early twentieth century the area remained undeveloped except for a few squatters' bungalows at the foot of Gerritsen Avenue. The firm of Realty Associates began building a middle-class summer resort there in 1920, and the southwest corner of Gerritsen's Meadow was soon covered by one-story bungalows with peaked roofs and no backyards. The popularity of this first venture spurred further growth. Some bungalows were made suitable for year-round habitation, two-story houses with backyards were built, and within a decade there were 1500 houses. Gerritsen Avenue is the main thoroughfare, and the population has long been mostly of Irish, German, and Italian descent. The area north of the canal, called New Gerritsen by local residents, is lined with stores and brick houses. The area south of the canal retains the character of a small fishing village and is a popular station for party boats. The volunteer fire department, which began operation in 1921 when the population began to grow, has headquarters at 32 Seba Avenue and may be the only remaining organization of its kind in Brooklyn. In the early twenty-first century Gerritsen Beach remains a tightly knit community of working-class families, many of whom have lived in the area for generations.

Elizabeth Reich Rawson

gerrymandering. The process of drawing the boundaries of election districts in unconventional shapes in order to achieve a favorable outcome for one party or group in an election. District lines are changed to spread out opposition votes among many districts or to concentrate minority votes within a limited number of districts. The New York State Constitution requires that districts be redrawn every 10 years; the majority leaders of both houses control this process. Several politicians in recent years have presented legislation that would give minority parties more power in the redistricting process. In New York City those who support reform in the redistricting process argue that it would increase competition in elections, allowing a wider variety of issues to be addressed. A number of politicians and community leaders, however, support gerrymandering on the grounds that creating districts that group minorities gives them better political representation.

Gershwin, George [Gershvin, Jacob] (*b* Brooklyn, 26 Sept 1898; *d* Beverly Hills, Calif., 11 July 1937). Composer, brother of Ira Gershwin. The son of Jewish immigrants from Russia, Gershwin grew up on the Lower East Side of Manhattan. He was educated in New York City public schools and received only rudimentary training in music. After two years at the High School of Commerce, he dropped out and found work at age 16 as a song plugger in Tin Pan Alley. After a summer orchestration class at Columbia University, Gershwin began private music lessons. When he was 19 he wrote his first successful song, "Swanee" (1919) (lyrics by Irving Caesar). His next song, "I'll Build a Staircase to Paradise" (included in George White's *Scandals* of 1922), was his first collaboration with his brother Ira, who wrote the lyrics with Buddy DeSylva. The brothers were notable for their musical inventiveness and sophisticated lyrics including *Lady, Be Good!* (1924), which features the song "Fascinating Rhythm." In 1931 he wrote *Of Thee I Sing,* with scripts by George S. Kaufman and Morrie Ryskind and lyrics by Ira Gershwin. It was hugely popular and became the first musical to win Pulitzer Prize. His *Rhapsody in Blue* (1924) premiered at New York's Aeolian Hall. He also wrote *Concerto in F* (1925) for piano and orchestra, *An American in Paris* (1928), and the opera *Porgy and Bess* (1935). Gershwin's reputation rests on his skillful melding of popular and classical genres. He drew on the conventions of European concert music, the Jewish folk tradition, the music of Tin Pan Alley and Broadway, and elements of ragtime, jazz, and blues; his works are marked by syncopated rhythms, chromatic harmonies, and singable melodies. New York City inspired many of his works, including a one-act opera, *121st Street* (1925), and the songs "I'm Something on Avenue A" (1925), "Harlem River Chanty" (1925), "New York Serenade" (1928), "Harlem Serenade" (1929), "New York Rhapsody" (1931), "Union Square" (1933), and "There's a Boat Dat's Leaving Soon for Old New York" (1935). Gershwin died in 1937 from complications following surgery to remove a brain tumor. Thousands lined the street outside his funeral at Temple Emanu-El at 65th Street and Fifth Avenue in Manhattan. Mayor Fiorello H. La Guardia was a pallbearer. Gershwin is buried in Mount Hope Cemetery in suburban Hastings-on-Hudson, New York.

Gershwin, Ira [Gershvin, Israel] (*b* New York City, 6 Dec 1896; *d* Beverly Hills, Calif., 17 Aug 1983). Lyricist, brother of George Gershwin. Born at the corner of Hester and Eldridge streets, he attended Townsend Harris High School and City College. His first successful musical was *Lady, Be Good!,* a collaboration with his brother that opened at the Liberty Theatre on 1 December 1924. He wrote lyrics for many other songwriters, among them Harold Arlen ("Let's Take a Walk around the Block," 1934) and Vernon Duke ("I Can't Get Started," which was included in Florenz Ziegfeld's *Follies* of 1936). With Kurt Weill he collaborated on *Lady in the Dark* (1941), which played for 467 performances at the Alvin Theatre, and on *The Firebrand of Florence* (1945), Weill's only failure on Broadway. He moved to California in 1936 but retained strong ties to New York City and wrote several works set there, including the play *Park Avenue* (1946), as well as lyrics for the film *The Barkleys of Broadway* (1949), with Fred Astaire and Ginger Rogers. Among Gershwin's residences in the city were 91 Second Avenue (in 1910), 316 West 103rd Street (from 1926), 125 East 72nd Street, and 33 Riverside Drive.

Robert Kimball and Alfred Simon, *The Gershwins* (New York: Atheneum, 1973)

Marc Ferris

Gertz. Firm of retailers. In 1911 Benjamin and Ida Gerts began selling candy and newspapers from a small shop at 162-10 Jamaica Avenue in Jamaica, Queens, that became successful during World War I. In the 1920s they expanded their sales to include stationery and desk equipment for offices. Their business developed into a chain of stores known as B. Gertz, and in 1933 they constructed a five-story building on the site of the original store. After Benjamin Gerts's death in 1933, his four sons and a son-in-law took over the business, which grew during the Depression until it was sold in 1941 to the Allied Corporation by the brothers, the last of whom died in 1957. No members of the family took part in operating the seven stores that remained. The store in Jamaica closed in 1981. Gertz was renamed Stern's in the last step of a merger of two divisions of the Allied Stores Corporation on 1 March 1983.

Leslie Gourse

Gibbons v. Ogden. U.S. Supreme Court case of 1824 (22 U.S. 1) that determined the unconstitutionality of a steamship monopoly sanctioned by the state of New York. In 1798 the New York State Legislature had granted exclusive steamboat rights between New York City and New Jersey to Robert Fulton and Robert Livingston, giving the two men control over licensing other boat operators. In 1813 they licensed Aaron Ogden to run a ferry service between New York City and New Jersey. Facing competition from a rival ferry service authorized by the federal government and run by Thomas Gibbons, Ogden successfully filed for a state injunction that barred Gibbons's ferry from New York waters. Gibbons appealed the decision of the state court all the way to the Supreme Court, which ruled in his favor on the basis of its interpretation of article I, section 8 of the Constitution, or the commerce clause. The Constitution, according to the Court led by Chief Justice John Marshall, gave Congress complete control over all interstate commerce. Coupled with other decisions by the Marshall Court, the ruling strengthened the power of federal over state government. The issue of state versus federal power held vast implications for the development of national infrastructure and the debate on slavery. The ramifications of the ruling also led to the further development of the Port of New York and a rapid national increase in steamboat commerce and travel.

David White

Gibran, (Gibran) Kahlil [Khalil] (*b* Bcharre, Lebanon, 6 Jan 1883; *d* New York City, 10 April 1931). Poet and painter. He settled in Boston with his mother and siblings in 1895 and moved in 1911 to New York City, where he took up residence in the Studio Building at 51 West 10th Street. In 1914 he had his first exhibition of paintings at the Montross Galleries; he became known for his portraits of Sarah Bernhardt, William Butler Yeats, and John Masefield. Gibran wrote in both Arabic and English for the city's flourishing Syrian press. In 1920 he joined with 10 other Syrian-Lebanese émigré writers to form the literary circle al-Rabitah al-Qalamiyya (the Pen League), which greatly influenced Arabic poetry. His first book was *The Madman: Parables and Poems* (1918); he is best known for *The Prophet* (1923), which by the turn of the twenty-first century had sold 11 million copies. Gibran wrote of love, beauty, and the problems of life with a mystical, philosophic vision that proved immensely appealing. He lived in the Studio Building until his death.

Ashbel Green, Paula Hajar

Gibson, Althea (*b* Silver, Clarendon County, S.C., 25 Aug 1927; *d* East Orange, N.J., 28 Sept 2003). Tennis player. She grew up in New York City, learned to play tennis at public courts on 155th Street in Harlem, and began playing amateur tennis in the 1940s. With help from the boxer Sugar Ray Robinson, she became the black girls' singles tennis champion of New York State at age 15. In 1950 Gibson was the first African American allowed to play in both the American and English championships and later the first African American player to be generally recognized as a world champion. In 1957 and 1958 she won both the American singles championship at Forest Hills and the English championship at Wimbledon; she also played on the team that won the Whiteman Cup. Upon her return to New York City after winning Wimbledon in 1957, Gibson was greeted with a ticker-tape parade and an official welcome at City Hall. She was named the Associated Press Female Athlete of the Year in both 1957 and 1958 and retired soon thereafter. Her autobiography, *I Always Wanted to Be Somebody,* was published in 1958. The following year she played exhibition tennis matches in conjunction with the Harlem Globetrotters basketball team. During these years she lived on Central Park West; later she became a professional golfer and moved to suburban East Orange, New Jersey, where she cofounded the charitable Althea Gibson Foundation to help urban youth develop tennis and golf skills and became involved with New Jersey state athletics.

Leslie Gourse

Gibson, Charles Dana (*b* Roxbury [now in Boston], Mass., 14 Sept 1867; *d* New York City, 23 Dec 1944). Illustrator. He entered the Art Students League at age 16 and studied there for two years. Initially unsuccessful in finding employment, he was engaged by the editor John Ames Mitchell to work for *Life* in 1886, and for 30 years his works appeared in the magazine weekly. In 1890 he developed a character known as the Gibson Girl, a chic young woman representing a late nineteenth-century ideal of American womanhood; he introduced a companion for her, Mr. Pipp, in 1898. Many of his drawings for the magazine were published in elegant collections, and in 1903 he charged $1000 for each drawing. Gibson had quarters in the Carnegie Studios and was president of the Society of Illustrators.

giglio. A tapering, multi-tiered tower, lifted and carried through the streets by about 125 men as part of four related feasts celebrated by Italian Catholics in Greater New York. The name is Italian for lily. The feast has its roots in written texts and oral legends about St. Paulinus (354–431) that relate the story of his imprisonment for the sake of the people of Nola in Campania, Italy, and his welcome with lilies when he returned. The giglio is derivative of the gigantic, ephemeral structures paraded in the civic and religious pageants and spectacles of Europe during the Renaissance and the Counter-Reformation. Immigrants from Nola introduced the feast to New York City in 1903 in Williamsburg, Brooklyn. The feast in East Harlem of St. Anthony of Padua was begun in 1918 by immigrants

from Brusciano, near Nola. Similar ones for St. Paulinus were begun in Astoria and Fairview–Cliffside, New Jersey, in the 1930s. The feast in Harlem was last held in 1971 and later moved to Pelham Bay. The giglio is constructed of brightly painted papier-mâché attached to a wooden lattice frame. In 1966 an aluminum frame was introduced in Brooklyn. Giglio builder Romualdo Martello (1903–88) was known for his technical innovations and the sheer beauty of his designs. The annual Williamsburg celebration is considered one of the most spectacular religious festivals in the United States.

Joseph Sciorra

Gilbert, Cass (*b* Zanesville, Ohio, 24 Nov 1859; *d* Brockenhurst, England, 17 May 1934). Architect. He studied at the Massachusetts Institute of Technology for a year and traveled in Europe before moving to New York City, where he worked as a draftsman for McKim, Mead and White for a year; he then moved to Minnesota and after becoming successful there opened an office in New York City. He won a competition to design the U.S. Custom House at Bowling Green (1907). Among his next commissions were the Union Club and the Woolworth Building on Broadway, which incorporated terra-cotta facing in a neo-Gothic style over a steel frame and attracted public attention that helped to secure his election as president of the American Institute of Architects in 1908. In New York City he later designed the U.S. Courthouse and the New York Life Insurance Building; his design for the George Washington Memorial Bridge called for masonry covering steel piers and was rejected because of its expense. A president of the National Academy of Design and the National Institute of Arts and Letters and a founder of the Architectural League of New York, Gilbert worked without partners throughout his career. The largest collection of his materials is held by the New-York Historical Society. His memoirs, *Cass Gilbert: Reminiscences and Addresses,* were published in 1935.

James E. Mooney

Gilbert, C(harles) P(ierrepont) H. (*b* New York City, ?1861; *d* Pelham Manor, N.Y., 25 Oct 1952). Architect. He designed many opulent residences for wealthy New Yorkers and popularized the château-like François I style and the mansarded beaux-arts style from the 1890s to the 1920s. Among his clients were Isaac Fletcher (2 East 79th Street, 1897–99), F. W. Woolworth (Fifth Avenue and 80th Street, 1899, demolished), Joseph R. Delamar (233 Madison Avenue, 1902–5), and Felix Warburg (1109 Fifth Avenue, 1906–8). With the architect J. A. Stenhouse, Gilbert designed a house for Otto H. Kahn (1 East 91st Street, 1913–18). He also designed a group of lavish houses at Riverside Drive and 72nd Street (1899–1901).

Marjorie Pearson

Gilder, Richard Watson (*b* Bordentown, N.J., 8 Feb 1844; *d* New York City, 18 Nov 1909). Editor. Brought up in Flushing, he was an associate editor of *Scribner's Monthly Magazine* from 1870 to 1881 and the editor of *Century Illustrated Monthly Magazine* from 1881 to 1909. He published Mark Twain, Henry James, and William Dean Howells, along with many other important but lesser-known figures. His reputation for being overly Victorian and priggish, partly due to his having rejected Stephen Crane's *Maggie: A Girl of the Streets* on the grounds that it was not in good taste, is belied by his longtime editorial and personal support of Walt Whitman. Gilder was the secretary of a committee to raise funds for construction of the Washington Square Arch. As the chairman of the New York Tenement House Commission in 1894 he revealed that Trinity Church owned slums. His first home at 103 East 15th Street was a popular meeting place for artists, writers, and intellectuals; in 1888 he moved to 13 East Eighth Street. Between 1875 and 1885 Gilder also published 16 volumes of poetry.

George A. Thompson, Jr.

Gillespie, Dizzy [John Birks] (*b* Cheraw, S.C., 21 Oct 1917; *d* Englewood, N.J., 6 Jan 1993). Trumpeter, composer, and bandleader. In 1937 he moved to New York City, where he performed in Teddy Hill's Orchestra. Two years later he was playing in Cab Calloway's big band (1939–41), which put him at the vanguard of a new style, bop, in informal sessions at Minton's Playhouse, on West 118th Street. In 1943–44 he led a small group at the Onyx, on 52nd Street, also known as Swing Street, and then toured with the singer Billy Eckstine's bop big band, which included the alto saxophonist Charlie Parker. In 1945 the two made the first mature bop recordings and performed at New York Town Hall. Although not as accomplished a musician as Parker, Gillespie redefined the speed and harmonic sophistication of jazz trumpeting and composed several definitive bop themes. He also became known for his inimitable appearance (usually sporting sunglasses, a beret, and a goatee, with his trumpet bent upward at a 45-degree angle) and for his antic behavior (though he avoided drugs, the downfall of Parker and many other boppers). After an unsuccessful attempt to form a big band, he resumed leading small groups. His second big band, the Dizzy Gillespie Orchestra (1946–50), established Afro-Cuban jazz, a blend of big-band orchestration, bop improvisation, and three rhythmic streams: swing, bop, and Afro-Cuban. Later he mainly led small groups, but he also toured with the Giants of Jazz, which included the pianist Thelonious Monk (1971–72), and when finances allowed he worked again with big bands, such as the United Nations Superband (from 1988). With Al Fraser he wrote *To Be, or Not . . . to Bop: Memoirs* (1979). Until his death he performed at such New York clubs as Monroe's Uptown House, the Village Gate, and the Blue Note. He is buried in the Flushing Cemetery in Queens.

Barry Kernfeld

Gilmore, Patrick S(arsfield) (*b* Ballygar, Ireland, 25 Dec 1829; *d* St. Louis, 24 Sept 1892). Bandmaster. After a successful career in Boston, he moved to New York City in 1873 to assume leadership of the 22nd Regiment Band of the New York National Guard, a 65-piece ensemble that he transformed during the next 20 years into the nation's only touring brass band. Gilmore began a series of concerts on Saturday evenings at the 22nd Regiment Armory on 14th Street, and in May 1875 he leased and remodeled the Hippodrome, where he conducted celebrated daily concerts in spring and autumn that occasionally attracted 10,000 spectators; the venue became popularly known as Gilmore's Concert Garden. He was renowned for concerts that incorporated church bells, anvils, cannon, and hundreds of musicians. Toward the end of his career, he gave regular performances at Manhattan Beach. His last concert in the city was on 30 May 1892. Gilmore lived at 61 West 12th Street in Manhattan. Among his best-known compositions is "When Johnny Comes Marching Home Again" (1863).

Marwood Darlington, *Irish Orpheus: The Life of Patrick S. Gilmore, Bandmaster Extraordinary* (Philadelphia: Olivier–Maney–Klein, 1950)

Marc Ferris

Gilpin's Gold Room. Original name of the New York Gold Exchange.

Gilroy, Thomas F(rancis) (*b* Sligo, Ireland, 3 June 1839; *d* Queens, 1 Dec 1911). Mayor. He played a central role in the revival of Tammany Hall under John Kelly and Richard Croker in the years after William M. "Boss" Tweed fell from power. In 1892 Gilroy was elected mayor in an agreement with Democratic merchants who favored the presidential candidacy of Grover Cleveland. Like other Tammany leaders of the time, he advocated limited city government, low taxes, and public improvements. In 1894 Gilroy declined to seek reelection when merchants who had supported him two years earlier shifted to "reform." After watching Croker consolidate his control over Tammany Hall, he retired

from politics in 1897 to concentrate on his real estate and banking investments.

David C. Hammack

Gilsey House. Hotel opened in April 1871 on Broadway at 29th Street. An elaborate structure of seven stories designed in a Second Empire style by Stephen Hatch for the developer Peter Gilsey, it was built of marble and cast iron from Daniel D. Badger's foundry. The hotel closed in 1911, and the building became used for light manufacturing. In 1980 it was converted into luxury cooperative apartments and is now a city landmark.

Margot Gayle

Gimbel's. Firm of retailers. It was operated in New York City from 1909 by two sons of Adam Gimbel, a peddler from Bavaria who in 1842 had opened a store in the frontier territory of Vincennes, Indiana; the brothers opened stores in Milwaukee (1887) and Philadelphia (1894) before building a lavish store in 1910 in Herald Square, one block from Macy's. Under the direction of Bernard Gimbel (1885–1966), a grandson of the founder, the firm became well known for its forceful advertising and promotion and particularly for its fierce competition with Macy's. Discounters eventually made Gimbel's unprofitable, and in 1986 its outlets at 86th Street and Lexington Avenue and at 33rd Street and Sixth Avenue were sold to real estate developers by BAT Industries, the British parent company of the firm. The Herald Square site later became a vertical shopping mall.

Leslie Gourse

Ginsberg, (Irwin) Allen (*b* Newark, N.J., 3 June 1926; *d* New York City, 5 April 1997). Poet and activist. He graduated from Columbia University in 1948. In 1956 he published *Howl and Other Poems,* the first of more than 40 books of poetry that made him a central figure in the beat movement in New York City, along with Jack Kerouac, William S. Burroughs, and Herbert Huncke. A dedicated antiwar activist and spokesman for the counterculture in the 1960s, he campaigned for homosexual rights in the 1970s. His book *Fall of America* won the National Book Award in 1972, and in the same year he was elected to the American Academy and the Institute of Arts and Letters. In 1986 he joined the faculty of Brooklyn College. Ginsberg died in 1997 of liver cancer and complications of hepatitis. He is buried in a family plot in Gomel Chesed Cemetery, one of a number of Jewish cemeteries near the city lines of Elizabeth and Newark, New Jersey. Best remembered today for his combination of poetry and political activism, Ginsberg is honored annually by the Howl Festival of Arts in the East Village. Several collections of his poetry and photographs have been published since his death.

Graham Hodges

Ginsburg, Ruth Bader (*b* Brooklyn, 15 March 1933). Supreme Court justice. Born Joan Ruth Bader, she graduated from Cornell University in 1954. She attended Harvard Law School and later transferred to Columbia Law School, where she graduated tied for first in her class in 1959. She became a law clerk to Judge Edmund L. Palmieri of the Southern District of New York. Between 1961 and 1963, Ginsburg worked for the Columbia Law School Project on International Procedure, a project dedicated to comparative law. She taught at Rutgers University Law School from 1963 until 1972, when she became the first woman to earn tenure at Columbia Law School. In 1972 she became the first director of the American Civil Liberties Union's Women's Rights Project. In that capacity, she argued six cases before the U.S. Supreme Court, advocating heightened scrutiny of legal classifications based on gender. In 1980 President Jimmy Carter appointed Ginsburg to serve on the U.S. Court of Appeals for the D.C. Circuit. In 1993 President Bill Clinton appointed Ginsburg to the U.S. Supreme Court. Among her most prominent opinions on the Court was her majority opinion in *United States v. Virginia* (1996), which struck down the Virginia Military Institute's male-only admissions policy.

Frank Scaturro

Giovannitti, Arturo (*b* Campobasso, Italy, 7 Jan 1884; *d* Bronx, 31 Dec 1959). Writer and political leader. After moving to the United States at age 17 he studied theology, traveled throughout the country, and later preached the "propaganda of the deed" for the Italian Socialist Federation and the Industrial Workers of the World; he was also the editor of *Il Proletario* from 1911. After taking part in the mill strike in Lawrence, Massachusetts, he was charged with murder in the death of a striker but was acquitted in November 1912. While awaiting trial he wrote the book *Arrows in the Gale,* which included "The Walker," his best-known poem. A charismatic figure, he formed the Anti-Fascist Alliance (1923) and was an organizer for the International Ladies' Garment Workers' Union and a member of the Italian Labor Education Bureau. A collection of his poetry was published in 1962.

George J. Lankevich

Girl in the Red Velvet Swing. See Nesbit, Evelyn Florence.

Girl Scouts of the USA. Organization for girls formed in 1912 in Savannah, Georgia, by Juliette Gordon Low (1860–1927), intended to instill confidence and character in girls and to encourage them to become involved in their communities. The first troop was formed in New York City in the following year, and the organization moved its headquarters to 17 West 42nd Street in Manhattan in April 1916. A local chapter, the Girl Scout Council of Greater New York, was established in 1940. In 2008 this chapter had 21,085 members and more than 1700 community-based troops, along with a Girl Scout Service Center in each borough. The national headquarters of the Girl Scouts are at 420 Fifth Avenue.

James Bradley

Girls' High School. Original name of Wadleigh High School.

Gish, Lillian (*b* Springfield, Ohio, 14 Oct 1893; *d* New York City, 27 Feb 1993). Actress. She won a small part in the stage production of *Convict's Stripes* in Ohio (1902) before moving to New York City, where she danced in a production featuring Sarah Bernhardt in 1910. She appeared in silent films directed by D. W. Griffith, among them *Birth of a Nation* (1915), *Broken Blossoms* (1919), and *Orphans in the Storm* (1922). Renowned for her delicate beauty, she agreed to make six motion pictures for $1 million, a record for the time; she also had a distinguished career on Broadway in such productions as Chekhov's *Uncle Vanya* (1930), *Hamlet* (1936), and Ted Mosel's *All the Way Home* (1960). Among her last films was Robert Altman's *A Wedding* (1978). For many years she lived at 430 East 57th Street.

Janet Frankston

Giuliani, Rudolph (Rudy) W(illiam Lewis) (*b* Brooklyn, 28 May 1944). Mayor. He attended Catholic schools in Long Island and Brooklyn. At Manhattan College he considered entering the priesthood but instead went to New York University Law School, graduating in 1968. After working as a law clerk and an assistant U.S. attorney, he changed his registration in 1975 from Democrat to Independent and took a job as associate deputy attorney general in the administration of President Gerald R. Ford. He left in 1977 to work in private practice. He changed his party registration again in December 1980 to Republican and in 1981 was named an associate attorney general of the United States. He first came to national attention after being appointed U.S. attorney for the southern district of New York in 1983, from which office he aggressively

pursued prominent Wall Street figures for insider trading. He also won several highly charged political corruption cases involving politicians close to then New York City Mayor Ed Koch.

In 1989 Giuliani ran for mayor of New York City as a Republican against Manhattan Borough President David Dinkins, who had unseated three-term Democratic incumbent Ed Koch in that party's primary and was running to be the city's first black mayor. The election was the closest in city history, with Giuliani losing by just 47,080 votes out of 1,899,845 cast. Running again in 1993 Giuliani eked out a margin of 53,367 votes, aided by several racially charged incidents under Mayor Dinkins. Giuliani was the first Republican mayor to take office since John Lindsay in 1965. His first term was marked by a turnaround in the city's fortunes: the crime rate fell and welfare rolls were reduced. Taxes and city payroll were both cut even as revenue rose. He also successfully took on organized crime at the Fulton Fish Market, at the Javits Center, and in commercial solid waste removal. Contentious relations with his own appointees, however, hampered the term; most notably, Police Commissioner William Bratton left his position after a 1996 *Time* magazine cover story gave Giuliani the credit for the drop in crime, and Schools Chancellor Ramon Cortines resigned following several years of personally charged criticism from the mayor.

In 1997 Giuliani easily won reelection against Democratic Manhattan Borough President Ruth Messinger, becoming the first Republican to win a second term as mayor since Fiorello H. La Guardia in 1941. The crime rate and welfare rolls continued to decline, but his popularity also declined significantly, in part because of a series of high-profile incidents involving the police and excessive force. Giuliani also partially undid the city payroll and spending reductions of his first term. In 1999 he considered a 2000 run against Hillary Clinton for the U.S. Senate but decided against it in the midst of a series of personal disclosures, including his diagnosis of prostate cancer and his impending divorce. Giuliani's popularity and reputation were revived, however, by his response to the terrorist attacks of 11 September 2001. He emerged as the face of New York City's resilience, leading *Time* to dub him "America's Mayor." He oversaw the early days of the cleanup, and although prohibited by term limits from running for a third term as mayor, he used his renewed popularity to endorse Republican mayoral candidate Michael Bloomberg, which proved crucial in Bloomberg's narrow victory.

After leaving office Giuliani founded a security consulting business, acquired and later sold an investment banking firm, and joined the Texas-based law firm Bracewell and Patterson, renamed Bracewell and Giuliani when he became a partner. In 2008 Giuliani ran unsuccessfully in the Republican presidential primary, losing to Republican Senator John McCain.

Fred Siegel, Harry Siegel

Glackens, William James (*b* Philadelphia, 13 March 1870; *d* Westport, Conn., 22 May 1938). Painter. He was trained in drawing at the Pennsylvania Academy of Fine Arts in Philadelphia before moving to New York City, where he worked as an illustrator for *McClure's Magazine,* the *New York World,* and the *New York Herald.* After traveling to Paris in 1895 Glackens began to dabble in oil painting that depicted contemporary life and soon became a regular participant in the Pennsylvania Academy's annual exhibit. He became a cofounder of the group of painters later known as the Ashcan School or The Eight, which included Robert Henri, John Sloan, George Luks, Everett Shinn, Ernest Lawson, Maurice Prendergast, and Arthur B. Davies. Influenced heavily by the impressionist style he encountered in Europe, Glackens concentrated on painting urban life as a social commentary on modernism within the city. According to Glackens, he "sought beauty and found it where conventional eyes saw ugliness."

James E. Mooney

Glad Tidings Tabernacle. Pentecostal church at 416 West 42nd Street, formed in 1907 by Marie Burgess (1880–1971). It was led by Burgess until 1909, when she was joined by her husband, Robert Brown (1872–1948). The tabernacle affiliated with the Assemblies of God Church in 1916 and in 1921 moved to 325 West 33rd Street. It sponsored missions throughout the city, evangelical rallies, and a radio ministry. Marie Burgess Brown remained the pastor until her death. In the twenty-first century Glad Tidings Tabernacle was located at 20 Murray Street.

William C. Kostlevy

Glaser, Milton (*b* 26 June 1929). Graphic designer. He attended Manhattan's High School of Music and Art and graduated from Cooper Union in 1951. After a Fulbright Scholarship in Bologna, Italy, he returned to Manhattan and in 1968 founded *New York Magazine* with Clay Felker where Glaser served as president and design director until 1977. In 1974 he opened Milton Glaser, Inc., a design firm, at 207 East 32nd Street. In 1976 New York State commissioned him to design a logo for it and the famous "I ♥ NY" was created. Since 1961 he has been an instructor and board member at the School of Visual Arts, and in the early twenty-first century is on the Board of Directors at Cooper Union.

Jessica Montesano

Glass, Philip (*b* Baltimore, 31 Jan 1937). Composer. He studied at the Juilliard School in the late 1950s and worked in Paris and India with Ravi Shankar and Allah Rakha in the mid-1960s. Soon he composed his first musical productions for the theater. When he returned to New York City in 1966 he moved into a loft on Bleecker Street and formed the Philip Glass Ensemble, a group of instrumentalists and singers that performed at art galleries and museums. In 1974 he gave his first major concert of his own works in the United States at Town Hall. *Einstein on the Beach,* a collaboration with the performance artist Robert Wilson, was staged at the Metropolitan Opera in 1976; the premiere of *Akhnaten* was given at the New York City Opera in 1984. His music, often considered minimalist, is repetitive, harmonically static, and highly rhythmic. He has also produced rock concerts. During the 2007–8 season, the Metropolitan Opera produced *Satyagraha* (1980), the New York City Ballet performed *Glass Pieces* (1983), with music by Glass and choreography by Jerome Robbins, and Glass and his ensemble performed *Powaqqatsi* (1988) at Brooklyn's Prospect Park.

Barbara L. Tischler

glassmaking. The first glassmaking operation in New York City was that of Evert Duÿcking, which opened as early as the mid-seventeenth century and probably manufactured window glass. Other glasshouses made windowpanes and bottles. Fine glass tableware was made from 1820 by Richard and John Fisher and John L. Gilliland, who opened the Bloomingdale Flint Glass Works (also called the New York Glass Works), a factory known for its plain and cut flint and colored glass until it closed in 1840. Brooklyn became the local center for fine glass production after Gilliland formed his own firm in 1823, the Brooklyn Glass Works (later the Brooklyn Flint Glass Works); it specialized in richly cut and colored glass, lamps, and chandeliers as well as pressed glass and made the globes for the city's gaslights. With Boston and Pittsburgh, New York City was one of the country's primary centers for glassmaking by the 1830s. The first important stained-glass studio was that of William Jay and John Bolton in Pelham, New York: its windows for St. Ann and the Holy Trinity Church (1843–48) in Brooklyn were one of the first extensive programs of stained glass in the country. The Brooklyn Glass Works became known internationally after winning a medal at London's Crystal Palace Exposition of 1851. From about 1860 the number of factories in the city declined as glassmaking factories were opened elsewhere,

The Bloomingdale Flint Glass Works of John and Richard Fisher near the Hudson River on West 47th Street, ca *1837*

especially west of the Allegheny Mountains near abundant sources of coal. Christian Dorflinger, one of the city's best-known glassmakers, opened a factory in White Mills, Pennsylvania. The Brooklyn Glass Works was taken over by Amory Houghton and his son and moved to Corning, New York, in 1868.

After 1865 glass factories in Brooklyn turned to the manufacture of decorative globes and shades for lamps. After Dorflinger retired, his works in Greenpoint, which employed immigrants and stressed handwork, changed ownership several times. It remained in operation until the 1940s as part of the Gleason–Tiebout Company and was known for the innovative etching techniques used for its light fixtures. During the second half of the nineteenth century the city's stained-glass makers became the foremost in the country. As the demand rose for stained glass in churches, public buildings, and private homes, the number of studios increased, many of them opened by German and English craftspeople, among them Charles Booth. Most made windows from sheets of colored glass that were painted with enamels and fired to achieve shading and modeling. In the late 1870s Louis Comfort Tiffany invented marbleized glass with gradations of color, texture, and density that could be used to achieve details with little or no paint. He bought sheets of colored and opalescent glass from various sources in and near the city, including the Thill and Heidt glasshouses in Brooklyn, until he built his own factory in Corona in 1893; there he developed vessels blown from his marbleized glass known as Favrile that made him internationally known. The glass industry became increasingly mechanized owing to a number of technological advances and was centered in enormous factories requiring large amounts of capital. Their size alone made them unsuitable for the densely populated city, and the number of glassmaking firms in Brooklyn declined from 12 in 1880 to six in 1909 and four in 1919.

After a period of decline, interest in glassmaking revived in 1962, when technology was introduced to allow the production of glass in small studios. In 1977 the New York Experimental Glass Workshop opened in Manhattan as the city's first studio devoted to glassmaking; it was eventually renamed UrbanGlass and moved into the former site of the Strand Theatre at 647 Fulton Street in Brooklyn, where artists continued to work and teach in the early twenty-first century.

Alice Cooney Frelinghuysen

Glatshteyn, Yankev (*b* Lublin, Poland, 20 Aug 1896; *d* New York City, 19 Nov 1971). Writer and critic. He arrived in New York City in 1914 and joined with Aaron Glanz (A. Leyeles) and N. B. Minkoff in establishing the Inzikhistn (Introspectivists), a modernist literary circle that dominated the American Yiddish avant-garde during the 1920s and 1930s. Best known as a poet, he was celebrated for his linguistic virtuosity, formal daring, and vivid imagery. Glatshteyn wrote 10 volumes of poetry over five decades in addition to several novels and many essays on Yiddish and world literature.

Jeffrey Shandler

Gleason, Jackie [Herbert John] (*b* Brooklyn, 26 Feb 1916; *d* Fort Lauderdale, Fla., 24 June 1987). Actor. He performed on Broadway as a young man and began a film career with a part in *Navy Blues* (1941). Gleason later won awards for his roles in the motion pictures *The Hustler* (1961) and *Gigot* (1962). On television he became well known for portraying comic characters in such series as *The Life of Riley* and *Cavalcade of Stars;* his best-known role is that of Ralph Kramden, a bus driver from Bensonhurst (Brooklyn), in *The Honeymooners,* a hit series during the 1950s that was filmed at the Adelphi Theater on 54th Street. Gleason won a Tony Award in 1959 as best actor for his performance in *Take Me Along.*

James E. Mooney

Gleason, Teddy [Thomas William] (*b* New York City, 8 Nov 1900; *d* New York City, 26 Dec 1992). President of the International Longshoremen's Association (ILA). He left school in the seventh grade and as a teenager followed his father and grandfather onto the docks. Over the years he worked as a checker, billing clerk, dockhand, truck loader, and timekeeper. By 1932 he was dock superintendent. During the Depression he was blacklisted by stevedoring companies and steamship lines because of his union activities. To support his family, he worked in a sugar factory during the day and sold hot dogs at Coney Island at night. He was elected president of the ILA in 1963 and served six consecutive four-year terms, retiring in 1987. In 1963 Gleason opposed the proposal by the administration of President John F. Kennedy to sell surplus wheat to the Soviet Union; he relented when it was agreed that half of the grain ships would be American. When the administration of President Lyndon Johnson reneged on the deal, Gleason began a dockworkers' boycott of the Soviet-bound wheat, which he called off after eight days. He was responsible for winning a guaranteed annual income that allowed hundreds of union members to collect $32,000 a year for doing no work after containerization eliminated their jobs.

Frank Dyer

Glendale. Neighborhood in west central Queens, bounded to the north by railroad

tracks (Montauk division, Long Island Rail Road), to the east by Woodhaven Boulevard, to the south by cemeteries, and to the west by Fresh Pond Road. It originally consisted of farms and was developed in 1869 by John C. Schooley, a real estate agent from Jamaica, who reportedly named it after his birthplace in Ohio. He laid out streets and sold lots priced at $300 and measuring 25 by 100 feet (8 by 30 meters). The South Side Railroad was extended to the area in 1867 and opened a station at 73rd Place. Development increased after Myrtle Avenue on 23 May 1893 was given service by steam dummy (a horsecar or trolley car powered by a small steam engine). Until World War I farms were sold and laid out in blocks of row houses and one-family houses. Family shops opened along Myrtle Avenue, which from the 1890s until about 1920 was enjoyed for its picnic parks. After 1905 silk ribbons, matches, and airplanes were manufactured in the area, and in the 1920s studios there produced silent films. A large German population in the 1930s worked in local breweries and textile factories. The largest employer in the 1940s was Atlas Terminal, a large group of factories. In the 1980s the neighborhood attracted a number of immigrants from Romania, Yugoslavia, and Poland, as well as from China and the Dominican Republic. In the early twenty-first century the neighborhood remained a generally middle-class, tightly knit community.

Vincent Seyfried

Glenn L. Curtiss Airport. Original name of La Guardia Airport.

Glen Oaks. Neighborhood in eastern Queens, bounded to the north by Grand Central Parkway, to the north and east by Nassau County, to the south by Hillside Avenue, and to the west by Grand Central Parkway and the Creedmoor Psychiatric Center. Some areas have a postal address in Floral Park or Bellerose. Part of the town of Flushing, the area was the site of William K. Vanderbilt's estate, of which 167 acres (67 hectares) were bought in 1923 by the Glen Oaks Golf Club; the clubhouse stood on the highest point in Queens. In 1944 the Gross–Morton Company bought 175 acres (70 hectares) along Union Turnpike and with a $24 million Federal Housing Authority loan built Glen Oaks Village, a garden apartment complex of 2904 units in 134 two-story buildings in the colonial style. Unlike earlier garden apartment complexes, Glen Oaks has garages and parking behind the buildings. Many of the original residents were veterans of World War II. A shopping center was erected in the same style on Union Turnpike. Originally rental property, the complex became a cooperative in 1981. The 400-unit Parkwood Estates, another garden apartment complex, was built in the 1950s, as were dozens of one- and two-family houses. North Shore Towers, three apartment buildings of 33 stories each, was built between 1971 and 1974 on the remaining portion of the golf course. In addition to Creedmoor, the neighborhood is the site of Long Island Jewish and Hillside hospitals and the Queens County Farm Museum. The Glen Oaks branch of the Queens Borough Public Library opened in 1956 and has collections in Gujarati, Hindi, Malayalam, and Urdu.

Jeffrey A. Kroessler

Glickman, Marty [Martin] (*b* Bronx, 14 Aug 1917; *d* New York City, 3 Jan 2001). Sportscaster. A star football and track performer at Syracuse University, he was chosen for the U.S. Olympic team for the 1936 games in Berlin. On the eve of the 400-meter relay, Glickman and teammate Sam Stoller were replaced in the event, told by team officials that because they were Jewish, a victory would embarrass the Nazi hosts and Hitler. In 1998 the president of the U.S. Olympic Committee, citing "great evidence of anti-Semitism" in the Berlin games, presented Glickman with a plaque "in lieu of the gold medals" he was not able to win. Meanwhile, Glickman became a sportscaster and had a long and distinguished career, best known as the voice of the New York Knicks and the New York Giants. He also was the voice for the New York Jets, did pregame and postgame shows for the Brooklyn Dodgers and the New York Yankees, and was the announcer for Yonkers raceway. Glickman is enshrined in the Basketball Hall of Fame, the American Sportscasters Hall of Fame, and the New York Sports Hall of Fame.

Frank Dyer

Globe and Commercial Advertiser. Daily evening newspaper. It was launched on 9 December 1793 by Alexander Hamilton and others as a Federalist organ called the *American Minerva,* with Noah Webster as its editor. On 2 October 1797 it changed its name to the *Commercial Advertiser,* becoming known for its muckraking style in the late nineteenth century and the early twentieth under the editor Henry J. Wright. It was renamed the *Globe and Commercial Advertiser* on 1 February 1904 and was commonly known and sold by newsboys as the *Globe*. In 1923 it was bought by the newspaper magnate Frank Munsey, who merged it a week later (on 4 June) with the *Sun*.

Michael Green

God Box. See Interchurch Center.

Goddard, Paulette [Levy (Levee), Pauline Marion Goddard] (*b* Queens, 3 June 1911; *d* Ronco, Switzerland, 23 April 1990). Actress. After beginning her career in New York City with a part in the revue *No Foolin'* (1926), she moved to Hollywood in 1931 and played bit parts in various films until Charlie Chaplin cast her in *Modern Times* (1936). She became one of the most popular film stars of the 1940s and appeared in more than 40 films, including *The Cat and the Canary* (1939), *The Great Dictator* (1940), and *Hold Back the Dawn* (1941). In the 1950s her popularity waned and she performed only rarely. A longtime friend of New York University and its former president John Brademas, Goddard bequeathed her entire estate of more than $20 million to the institution.

Sara J. Steen

Goddard Institute for Space Studies. Government institute at 112th Street and Broadway, founded in 1961 by Robert Jastrow; it is affiliated with the National Aeronautics and Space Administration (NASA). The institute is based in New York City because of its close links to local colleges and universities (notably Columbia University and the City University of New York), as well as to four high schools. Its research emphasis is on atmospheric science, especially global warming. In the early twenty-first century about 160 people worked there.

Godfrey, Arthur (Morton) (*b* New York City, 31 Aug 1903; *d* New York City, 16 March 1983). Television and radio personality. He received his first radio training on a submarine while in the U.S. Navy from 1920 to 1924. Following his discharge he worked a range of jobs and joined the Coast Guard in 1927, appearing on the radio for the first time in Baltimore. Godfrey freelanced and worked for the National Broadcasting Company in Washington, D.C., in the 1930s before moving to New York City in 1941. In 1945 he began airing his own half-hour morning show for Columbia Broadcasting System radio and gained national attention for his emotional live coverage of President Franklin D. Roosevelt's funeral procession. He got started on television in 1948 with *Arthur Godfrey's Talent Scouts,* a program that helped launch the careers of emerging entertainers like Tony Bennett and Lenny Bruce, and *Arthur Godfrey and His Friends*. Sometimes introduced as "the Old Redhead," Godfrey became nationally famous; his trademarks included inventing his own sales pitches, joking about his sponsors' products, and sometimes playing the ukulele on air. Lung cancer forced Godfrey to retire in 1959; his surgery was front-page news across the country. He attempted a comeback in the 1960s but failed to regain his former popularity.

Ben Silk

Godkin, E(dwin) L(awrence) (*b* Moyne, Ireland, 2 Oct 1831; *d* Brixham, England, 21 May 1902). Writer and editor. After receiving his education in Ireland and England he worked for two years from 1853 as a war correspondent in the Crimea. He then moved to New York City where he became the editor of the weekly journal the *Nation* and made it one of the most respected publications of its kind. With Carl Schurz he edited the *New York Evening Post* from 1881, becoming the editor in chief when Schurz withdrew. He was sympathetic to the Mugwumps, Republicans who opposed political machines and mistrusted organized labor. In a style marked by a keen sense of humor he wrote on Tammany Hall and many other subjects and was highly influential in the press. Godkin retired in 1900. Among his published writings are *Problems of Modern Democracy* (1896) and *Tendencies of Democracy* (1898).

James E. Mooney

Goethals Bridge. Steel cantilevered bridge spanning the Arthur Kill between Howland Hook in Staten Island and Elizabeth, New Jersey. Designed by the engineer Alexander Waddell and named for the Panama Canal's chief engineer, General George W. Goethals, it opened to traffic on 29 June 1928, the same day as the Outerbridge Crossing (also designed by Waddell). The two bridges provided the first crossings for motor vehicles between Staten Island and the mainland. The structure has a span of 672 feet (205 meters), a length of 7109 feet (2168 meters), and a clearance above water of 135 feet (41 meters). For many years it carried little traffic, but since the opening of the Verrazano–Narrows Bridge in 1964, which provided a direct route from New Jersey to Long Island, it has been heavily trafficked and construction of a twin span near the Goethals has been considered.

Rebecca Read Shanor, Jameson W. Doig

Goethe-Institut. German cultural institute. Located at 1014 Fifth Avenue, the Goethe-Institut has a gallery, library, book center, and program center. One of the smallest museums in New York City, it hosts cultural exchange programs, helps connect Americans with German resources both in the United States and in Germany, and has courses for learning or teaching German. The Goethe-Institut New York is the regional coordinator of the 10 institutes in North America. In the twenty-first century it continues to operate the gallery and expand its cultural programs.

Jessica Montesano

Goetz, Bernhard Hugo (*b* New York City, 7 Nov 1947). Vigilante. He became famous for a widely publicized act of vigilantism that occurred on 22 December 1984 involving Goetz, a 37-year-old Caucasian electronics engineer, and four African American youths who asked him for money aboard the No. 2 subway near the Chambers Street station. Goetz drew a handgun, for which he did not have a license, and fired at the youths, hitting all four. Indicted for attempted murder, he became the focus of an international debate over self-defense and public safety. Although many observers believed he was a hero who had fought back against urban crime, others saw him as a depraved vigilante, possibly motivated by racism, whose use of force was disproportionate to the danger he faced. At a celebrated trial in June 1987 Goetz was acquitted of attempted murder, found guilty only of illegal possession of a handgun, and sentenced to a year in prison and five years' probation. He served eight months at Rikers Island. One of the four youths, Darrel Cabey, was paralyzed and brain-damaged as a result of the shooting. Cabey filed a civil suit against Goetz and in April 1996 was awarded $43 million in damages; Goetz filed for bankruptcy. Goetz later turned to politics, running unsuccessful campaigns for mayor in 2001 and public advocate in 2005. Some Goetz supporters continue to honor him for bringing attention to urban crime and lowering the New York City crime rate.

Robert Sanger Steel

Goethals Bridge, 1937

Gold, Michael [Granich, Itzok] (*b* New York City, 12 April 1893; *d* San Francisco, 14 May 1967). Journalist and essayist. The son of poor immigrants, he grew up on the Lower East Side and attended New York University and Harvard University briefly before working for *The Masses*. Between 1914 and 1917 he published his first articles in *The Masses* and was also associated with the Provincetown Players. To protect himself during the Red Scare of 1919–20 he adopted the name Michael Gold after a Civil War veteran whom he admired. In 1920 he became an editor of the *Liberator,* which was formed after the federal government suppressed *The Masses*. He was the editor from 1928 to 1933 of the *New Masses,* a publication devoted to proletarian literature, which he defined as literature written by workers and dealing with workers' issues (he considered most other kinds of literature to be crippled by bourgeois idealism). From 1933 Gold was a columnist for the newspaper the *Daily Worker* (1924–57). His best-known work was *Jews without Money* (1930), an account of life on the Lower East Side.

Kevin Kenny

Gold and Stock Telegraph Company. Firm incorporated in August 1867 at 18 New Street to promote the first stock ticker, adapted from the printing telegraph invented by Edward Calahan and installed in 1868 at the New York Stock Exchange. Initially the firm served only brokers from the New York Stock Exchange, but it soon expanded its business to other exchanges throughout the United States. The Western Union Telegraph Company acquired the firm in May 1871 and continued to operate it as a subsidiary. It controlled most of the important printing telegraph patents and well into the twentieth century was the leading supplier of market reports and private-line printing telegraphs, which provided communication for banks, linkages between courthouses and lawyers' offices, and private lines connecting homes, offices, and factories. Gold and Stock Telegraph ceased operations in 1962.

Paul Israel

Goldberg, Rube [Reuben Lucius] (*b* San Francisco, 3 July 1883; *d* New York City, 7 Dec 1970). Cartoonist. Born into a prosperous family, he moved to New York City in 1907 to work as a sports cartoonist for the *Evening Mail*. He produced widely syndicated single-frame cartoons and comic strips; his strip *Boob McNutt* ran for 20 years. When his popularity diminished in the 1930s, he turned to political cartooning with a conservative slant. Goldberg's best-known cartoons depict machines that use absurdly complicated means to accomplish simple tasks; his contraptions incorporate dripping water, falling coconuts, bursting balloons, and startled monkeys. He won the Pulitzer Prize for editorial cartooning in 1948, and the National Cartoonists Society created an award called the Reuben in his honor. Goldberg lived in the Brentmore, at 88 Central Park West, until 1963; his last home was at 169 East 69th Street.

George A. Thompson, Jr.

Golden Gloves. See New York Golden Gloves.

Goldman, Emma (*b* Kaunas, Lithuania, 27 June 1869; *d* Toronto, 14 May 1940). Anarchist. She joined the radical movement in New York City in 1890 and dominated it until her deportation in 1919. From 1903 to 1913 she lived at 210 East 13th Street, where in 1906 she began publishing *Mother Earth,* a journal of political and cultural articles far ahead of their time. A believer in the emancipation of women physically and intellectually, she was perhaps best known as an advocate of birth control and sexual relations outside marriage. She was arrested for criticizing militarism and opposing American entry into World War I, for which she was imprisoned on Ellis Island. With hundreds of other immigrants deemed "dangerous radicals," she was deported to the Soviet Union. A critic of the Bolshevik regime, she wandered through Europe for the rest of her life. In exile she continued to speak out for anarchist causes.

Martha Foley

Goldman Sachs. Firm of investment bankers. It began as a firm of dealers in commercial paper formed in New York City in 1869 by Marcus Goldman, a German immigrant. Samuel Sachs became a partner in 1882, and by 1885 the firm was given its current name. A brokerage was added in the 1890s, and after 1900 the firm underwrote securities, primarily in consumer goods. Sidney J. Weinberg became a partner in 1927 and a senior partner in 1930. Under the direction of Gustave L. Levy, who joined the firm in the 1930s, the trading department undertook risk arbitrage. There were 13 partners by the mid-1940s. During the 1990s, under the leadership of Robert Rubin and Stephen Friedman, the firm bought a 50 percent stake in Rockefeller Center before selling its shares to Tishman Speyer in 2000. Goldman Sachs went public in 1999, and senior partner Henry Paulsen become chairman and CEO. The most successful firm of its kind, Goldman Sachs maintains more than 30 offices around the world. Its divisions specialize in investment banking, fixed-income and equities securities sales, trading and arbitrage, investment management, currency and commodities, and a broad range of other financing and investment services.

The firm's headquarters at 85 Broad Street were damaged in the terrorist attacks of 11 September 2001, and city officials subsequently pressed for the firm to open offices in the new Freedom Tower. In April 2005, however, Goldman Sachs announced that it would build its own $2 billion, 43-story headquarters in the last open commercial site in Battery Park City, assisted by $1.6 billion in tax-exempt Liberty Bonds from the state and the city. This financial incentive composed almost 20 percent of the federal government's $8 billion tax-free financing slated for New York City's post-9/11 redevelopment. Public response to the plan's financing was critical, although proponents noted that Goldman Sachs's presence near Ground Zero was essential to the area's future. In return for financing, the firm agreed to keep 9000 of its employees and significant trading operations in lower Manhattan and to create 4000 new jobs by 2019. During the global financial crisis that began in 2007, Goldman Sachs received billions of dollars in federal loan guarantees without which it might not have remained solvent.

Mary E. Curry

golf courses. In the late 1990s there were 16 golf courses in New York City, of which 14 had 18 holes and two had nine holes (the number of courses was up to 21 a decade later). The first municipal golf course in the United States, at Van Cortlandt Park, was designed by Tom Bendelow in 1895. Another of his designs, Forest Park Golf Course, opened the following year in Queens and became known for its rugged terrain. In the Bronx, Mosholu Golf Course (1914) opened in Van Cortlandt Park, and Pelham Bay Golf Course (1921) and Split Rock Golf Course (1928) opened at Pelham Bay Park, where they shared an art deco clubhouse. Two private clubs, Clearview Golf Course (1925) and Douglaston Golf Course (1927), were developed in Queens by Willie Tucker, and a Spanish-style clubhouse at Douglaston was designed by Clifford Wendehack, the well-known clubhouse architect of the 1920s. The three public courses in Staten Island are Silver Lake Golf Course (1927); La Tourette Golf Course (1928), which has a par of 72 and is considered the city's most challenging course; and South Shore Golf Course (1929). The clubhouse at La Tourette, once a residence, is a municipal landmark. La Tourette, Silver Lake, Split Rock, Dyker Beach Golf Course in Brooklyn (1928), and Kissena Park Golf Course in Queens (1933, the city's shortest course at 4642 yards [4245 meters], with a par of 64) were developed by the architect John R. Van Kleek. The city's longest course, Marine Park Golf Course (6736 yards [6159 meters]), was designed in Brooklyn in 1962 by Robert Trent Jones. The Towers private golf course is open only to residents of the North Shore Towers in Queens, and the Richmond County Country Club course in Staten Island is also private. A nine-hole course on Governors Island for military personnel stationed there closed in 1996. There are also two "pitch and putt" courses (in Flushing Meadows–Corona Park and Gateway National Park). In the 1980s the Department of Parks and Recreation turned the operation of golf courses over to outside operators. In 2000 Mayor Rudolph Giuliani added $13 million to the city's budget for installing better irrigation on the courses and other improvements.

Christina Plattner

Golfus, Emil R. See Abel, Rudolf.

Gompers, Samuel (*b* London, 27 Jan 1850; *d* San Antonio, Tex., 13 Dec 1924). Labor leader. He immigrated to the United States in 1863 and settled in New York City, where he worked as a cigar maker. In 1873 he organized the United Cigarmakers, which joined the Cigar Makers' International Union as Local 144 in 1875. As the head of the union's constitutional committee during the 1880s he introduced several measures that helped revitalize the organization. Conflicts between the Cigar Makers' International Union and the Progressive Cigarmakers arose in the 1880s and culminated in the formation of the

Samuel Gompers

American Federation of Labor. Elected president of the federation, Gompers endorsed the mayoral candidacy of Henry George, launched by a coalition of unions in 1886, and was an adviser to the Social Reform Club, which promoted workers' compensation, union labels, and collective bargaining. While testifying at state assembly hearings on production in tenements and conditions in sweatshops, he urged legislators to enact stricter factory codes. In his later years he spoke at several rallies organized by garment workers and helped settle disputes involving teamsters (1910), furriers (1912), and transit workers (1916). Gompers wrote *Seventy Years of Life and Labor: An Autobiography* (1925). He lived at 371 East Fourth Street.

Ronald Mendel

Good Government Clubs. Organizations formed in the 1890s by the City Club of New York at the behest of the reformers Edmond Kelly and R. Fulton Cutting. Their aim was to mobilize the city's business and professional communities against Tammany Hall, which derided their members as "goo-goos." There were 24 clubs by 1894, when they were influential in securing the election of the fusion mayoral candidate William L. Strong.

Bernard Hirschhorn

Goodhue, Bertram Grosvenor (*b* Pomfret, Conn., 28 April 1869; *d* New York City, 23 April 1924). Architect. He moved to New York City in 1884 to work in the firm of Renwick, Aspinwald and Tucker. He formed a partnership with Ralph Adams Cram and Frank W. Ferguson, moving with them to Boston in 1891 and returning to New York City to run the firm's office there from 1903 to 1913. With Cram and Ferguson he designed St. Thomas Church at Fifth Avenue and 53rd Street (1905–13), his best-known neo-Gothic work. He also oversaw the design of the Church of the Intercession at the Trinity Cemetery on Broadway (1910–14). Tension within the firm, especially with Cram over the construction of the Cathedral of St. John the Divine, led Goodhue to open his own firm in 1914 in the Jackson Building on 47th Street, which he ran as an atelier. There, apprentices including Clarence Stein, Raymond Hood, and Wallace K. Harrison helped design such distinctive churches as St. Vincent Ferrer on Lexington Avenue (1914–18). A member of the Century Club from 1911, he won the commission for St. Bartholomew's Church on Park Avenue (1917–19), which incorporated a memorial portal commissioned by the Vanderbilts and designed by Stanford White. Goodhue blended neoclassical and modern styles in later designs, such as that for Convocation Tower, an office tower and religious complex planned for Madison Square; presentation drawings by Hugh Ferriss were shown at the 36th Annual Exhibition of the Architectural League of New York in 1921.

Richard Oliver, *Bertram Grosvenor Goodhue* (Cambridge, Mass.: MIT Press, 1983)

Edward A. Eigen

Goodhue, Jonathan (*b* Salem, Mass., 21 June 1783; *d* New York City, 24 Nov 1848). Commission merchant and shipping magnate. He arrived in New York City in 1807 and organized Goodhue and Company, a commission house on South Street. In 1813 he married Catharine Rutherford Clarkson, member of a prominent New York City family, and moved to 33 Whitehall Street in Manhattan. With Pelatiah Perit, who joined the firm in 1819, he used his commercial connections to the British banking house of Baring Brothers to gain control of the famous Black Ball Line of packet ships to Liverpool in 1834. Goodhue was an adherent of the Whig Party and a leader of the free trade movement. Like other prominent merchants he was a director of several banks and insurance companies and a supporter of humanitarian causes.

Elaine Weber Pascu

Goodman, Benny [Benjamin David] (*b* Chicago, 30 May 1909; *d* New York City, 13 June 1986). Clarinetist and bandleader. He first played in New York City in 1928 with Ben Pollack at the Park Central Hotel and with Red Nichols and His Five Pennies. As a studio musician he took part in recording sessions, radio broadcasts, and other performances, including Broadway productions of George Gershwin's *Strike Up the Band* (1927) and *Girl Crazy* (1930). Goodman formed a big band in 1934 that soon attracted a wide audience and helped broaden the popularity of jazz. He used arrangements by other bandleaders, including Fletcher Henderson, and engaged such well-known players as the trumpeters Bunny Berigan and Harry James, the drummer Gene Krupa, and the pianist Jess Stacy; with the addition in 1936 of the pianist Teddy Wilson and the vibraphonist Lionel Hampton, his quartet became the first racially mixed group in popular music. He often performed in the Manhattan Room of the Hotel Pennsylvania. An appearance at the Paramount Theater in March 1937 led to such chaos by more than 21,000 enthusiastic fans that the event became known as the Paramount Riot. Goodman's performance at Carnegie Hall on 16 January 1938 demonstrated the adaptability of dance music to the concert hall. That same year he recorded Mozart's Clarinet Quintet with the Budapest Quartet and commissioned Béla Bartók to write *Contrasts.* In 1947 Goodman commissioned clarinet concertos from Aaron Copland and Paul Hindemith. For many years he maintained an apartment at 200 East 66th Street.

Loren Schoenberg

Goodyear, Charles (*b* New Haven, Conn., 29 Dec 1800; *d* New York City, 1 July 1860). Inventor. Best known for inventing vulcanized

Charles Goodyear's rubber goods store (left) near the intersection of Grand Street and East Broadway, ca *1878*

rubber, he carried out some of his most important experiments in New York City. After encountering rubber for the first time in 1834, he moved to New York City to conduct experiments, working at various times on Bank Street and in Staten Island. After a number of failures he left the city in 1837, but he returned in 1840 for about a year to refine his successful sulfur-and-heat process later known as vulcanization. Goodyear spent little time in the city thereafter.

Robert Friedel

Goose Creek. Former fishing colony in southwestern Queens, lying along the cross-bay railroad line on the northernmost island in Jamaica Bay. It began as a few fishers' shacks built on piles along the shore and was first served by the railroad in 1888. About this time it became known for its weakfish, and in 1899 there were six clubhouses, two saloons, and a hotel. By 1903 there were more rowboats for hire than at any other fishing station in the bay, and Goose Creek was frequented by anglers from other parts of the city who traveled there by train to spend the day. Fishing and the harvesting of shellfish were stopped by the gradual pollution of Jamaica Bay, especially after a sewage treatment plant opened in Jamaica in 1914; angling was banned by the city in 1916. Although the fishing stations ceased to operate, the railroad continued to stop on schedule until the end of the summer of 1932.

Vincent Seyfried

Goosepatch. Name formerly applied to New Brighton.

Gorham Manufacturing. Firm of silversmiths, formed in 1865. Its predecessor was a silver manufactory opened in 1831 by Jabez Gorham (1792–1869). Based in Providence, Rhode Island, the firm opened wholesale showrooms in Maiden Lane in Manhattan in 1859 and adopted the English sterling standard of .925 fine silver in 1868. It aggressively marketed its sterling and electroplated wares, ecclesiastical goods, and bronzes through trade catalogues, retail and wholesale showrooms in Manhattan, and exclusive retail distributors nationwide. The firm moved its salesrooms to Broadway and 19th Street in 1883. Later it commissioned the firm of McKim, Mead and White to design a building at 390 Fifth Avenue for its retail operation, which moved there in 1905. In 1929 the retail store merged with Black, Starr and Frost to become Black, Starr and Frost–Gorham (from 1940 Black, Starr and Gorham). The combined shop operated at various addresses until 1962.

Deborah Dependahl Waters

Gorky, Arshile [Adoian, Vosdanig] (*b* Khorkom, Vari Hayotz Dzore, Armenia, 15 April 1904; *d* Sherman, Conn., 21 July 1948). Painter. A refugee from the massacre of the Armenians during World War I, he settled in New York City in 1925 and became an instructor at the Grand Central School of Art in 1926. His masterly early work *The Artist and His Mother,* painted in the city between 1926 and 1936, is based on a photograph taken in Armenia. Originally influenced by Paul Cézanne and Pablo Picasso, he later became involved with the surrealists; the rich fluidity of line and complexity of association in his mature works is in part due to their influence. In 1935 Gorky joined the mural division of the Federal Art Project of the Works Progress Administration. In addition to works executed for the project, he painted the mural *Man's Conquest of the Air,* installed at the World's Fair of 1939–40 and now lost. In 1945 he had a show at the Julien Levy Gallery in New York City, for which the surrealist André Breton wrote an essay titled "The Eye Spring: Arshile Gorky." Under stress from medical and emotional problems, Gorky took his own life.

Jordan and Robert Goldwater, *The Paintings of Arshile Gorky: A Critical Catalogue* (New York: New York University Press, 1982)

Mona Hadler

gospel music. Style of vocal music having its roots in the expressive singing and impassioned call-and-response of the Sanctified and Spiritualist black Pentecostal churches. Its earliest exponents came to prominence in Chicago and Philadelphia in the 1930s. During these years a number of gospel groups performed regularly in New York City, including three from Virginia: the Selah Jubilee Singers, the Norfolk Jubilee Singers, and the Golden Gate Jubilee Quartet, who cultivated a secular following and performed at such venues as Barney Josephson's Café Society. Sister Rosetta Tharpe introduced gospel at the Cotton Club in 1939. By the 1940s several leading gospel soloists had moved to New York City, of whom one of the best-known was Clara Hudman Ghelston Brock, better known as "the Georgia Peach," a powerful contralto who originally performed with male quartets; unlike most female vocal soloists, who were Pentecostal, she was a Baptist. As the Church of God in Christ became the largest black Pentecostal denomination, its local branches became the leading venues for gospel concerts. The best-known was Washington Temple in Brooklyn; the wife of its pastor, Bishop F. D. Washington, was the gospel singer Madame Ernestine B. Washington, known as "the Songbird of the East." A forceful performer with a gritty voice, she exemplified the spiritual power of the Sanctified Church. Other soloists who performed at Washington Temple were two evangelists from Texas, Madame Emily Bram and Sister Jessie Mae Renfro. Another important figure, Madame Marie Knight, came to prominence at a Spiritualist church and performed for 10 years in a duo with Tharpe. Gospel soloists such as Madame Washington were eclipsed in popularity during the 1950s by male and female gospel groups, who usually wore choir robes and were accompanied by pianos and organs. The outstanding groups in the city included the Daniels Singers (led by Becky Moss Burroughs), Professor Charles Taylor and the Gospel All Stars (led by Ella Mitchell), and the Herman Stevens Singers (led by Dorothy McLeod). In later decades choirs of 50 and more became the major performing ensembles. Several were based in Manhattan and Brooklyn, among them the Washington Temple Choir, led by Timothy Wright.

The city also became known for elaborate gospel concerts staged in local churches. In 1951 Mahalia Jackson sang gospel at Carnegie Hall, and in 1961 Langston Hughes's *Black Nativity,* with Marion Williams and Professor Alex Bradford, became the first gospel musical to be presented Off Broadway. Later musicals included *Your Arms Too Short to Box with God* (1976) and *Mama I Want to Sing* (1980). Between 1954 and 1969 the Apollo Theater frequently presented gospel "caravans," weeklong concert series that became legendary. The enthusiastic audiences at the Apollo effectively transformed the venue into a church: programs sometimes ran so long that the intervening films had to be canceled, and nurses were on hand to minister to overwrought members of the audience. Among the performers who evoked the strongest responses were the Clara Ward Singers (led by Williams), the Soul Stirrers (led by Sam Cooke), the Davis Sisters (led by Ruth Davis), the Pilgrim Travelers (led by Kylo Turner), the Caravans (led by Inez Andrews and Shirley Caesar), the Nightingales (led by Julius Cheeks), the Raspberry Singers (led by Carl Hall), and the Swan Silvertones (led by Claude Jeter), as well as Bradford and the Reverend James Cleveland.

gospel tourism. Tourism to African American churches during regular worship services, mainly in Harlem. Since the 1980s foreign tourists (predominantly from Europe and Japan) have attended worship services at many Harlem churches on organized bus tours or in

small groups. Tourists are drawn variously by an affinity for gospel music, curiosity about black American worship, or media representations of each. The phenomenon grew steadily throughout the 1990s, and by 2008, 1000 tourists were coming to Harlem in buses each Sunday morning, filling pews in several dozen churches. Some, such as First Corinthian Baptist Church and Abyssinian Baptist Church, receive more than 100 such visitors weekly.

Rowan Moore Gerety

Gotham. Popular nickname for New York City meaning "goat town" (Anglo-Saxon). Washington Irving applied the term to New York City in his satirical piece *Salmagundi* (1807). One legend has it that fifteenth-century residents of the village Gotham in Nottinghamshire, England, successfully feigned insanity to avoid paying taxes to King John. Hence Gotham came to mean "wise fools." Although Irving seems to have used the name sardonically to suggest a city of self-important but foolish people, the pejorative connotations were gradually lost.

Gotham Book Mart. Former bookshop in Manhattan, opened by Frances Steloff on 3 January 1920 at 128 West 45th Street. It moved in 1923 to 51 West 47th Street and in 1946 to 41 West 47th Street, where it remained until 2006. It emphasized twentieth-century literature and had an inventory of 250,000 new, used, and out-of-print books and some 50,000 magazines. Singled out for its uniqueness by literary figures such as Arthur Miller and John Updike, it was called the most celebrated bookshop in New York City by the *New Yorker* in 1988. Nonetheless, the business fell upon hard times, and in July 2003 the Gotham Book Mart's building was sold for $7.2 million to Boris Aranov, owner of the adjacent building. In an effort to keep the store going, friends of Gotham owner Andreas Brown, who had bought the business and the building from Steloff in 1967, leased Brown a building at 16 East 46th Street in 2004. Brown could not keep the business profitable, however, and it closed in 2006.

Gotham Court. "Model tenement" opened in 1850 by the Quaker philanthropist Silas Wood to provide housing for the poor. Situated in Manhattan on the block bounded to the north by Oak Street, to the east by Roosevelt Street, to the south by Cherry Street, and to the west by New Bowery (now St. James Place) and Franklin Square, the complex consisted of two rows of six tenements, each of five stories, standing back to back and facing two mews at 34 and 38 Cherry Street. Each of the 144 apartments in the complex was divided into a living room of 14 by 10 feet (4 by 3 meters) and a bedroom of 14 by 7 feet (4 by 2 meters). Shortly after it was occupied, the complex became notorious for overcrowding, filth, and crime. During the 1890s it was criticized by such reformers as Jacob A. Riis, and in 1895 Gotham Court was demolished under the Tenement House Law. The Governor Alfred E. Smith Houses now occupy the site.

Gotti, John (*b* Bronx, 27 Oct 1940; *d* Springfield, Mo., 10 June 2002). Organized crime boss. He grew up in Sheepshead Bay, Brooklyn, and dropped out of school in eighth grade. His early crimes included hijacking, bookmaking, and burglary. In 1967 the Federal Bureau of Investigation arrested him and his accomplices while they were trying to steal a truck from John F. Kennedy International Airport. His headquarters were in the Ravenite social club on Mulberry Street in Manhattan's Little Italy and in the Bergin Hunt and Fish Club in Queens. Dubbed the "Dapper Don" by the press, Gotti became infamous when he took over the Gambino crime syndicate in 1985 by having its leader, Paul Castellano, murdered in front of Sparks Steak House on East 46th Street in Manhattan. Several juries, on account of juror intimidation, bribery, and the use of police informants, failed to convict him of serious charges three times between 1987 and 1990. He was finally convicted in 1992 on a number of charges, including Castellano's murder, with the help of testimony from fellow mobsters and police audiotapes on which he bragged about ordering the murder; he was sentenced to life in federal prison. He died in prison of throat cancer after 10 years.

Jesse Drucker

Gottlieb, Adolph (*b* New York City, 14 March 1903; *d* New York City, 4 March 1974). Painter. He grew up in New York City and during the early 1920s studied at the Parsons School of Design and the Art Students League. In 1935 he helped to form The Ten, a group dedicated to expressionist and abstract art. He was a leading figure in the abstract expressionist movement, also called the New York School, especially in its early stages during the 1940s; with Mark Rothko and Barnett Newman he publicly articulated its major

themes in 1943 in a letter to Edward Alden Jewell, a critic for the *New York Times.* Gottlieb lived mainly in Brooklyn until 1956 and did not associate closely with other abstract expressionists. His best-known works are *Pictographs* (1941–51), *Grids and Imaginary Landscapes* (1951–57), and *Bursts* (1957–74).

Eileen K. Cheng

Gottschalk, Louis Moreau (*b* New Orleans, 8 May 1829; *d* Rio de Janeiro, 18 Dec 1869). Pianist and composer. After 1853 New York City was his home. A virtuoso, Gottschalk attracted popular and elite audiences. As America's first composer honored in Europe and North and South America, he wrote romantic works and also compositions inflected with African American and Afro-Caribbean folk themes, anticipating the birth of ragtime decades later. His works include *Bamboula* (1846–48), *The Banjo* (1854–55), *The Last Hope* (1854), and *A Night in the Tropics* (1858–59). He died at age 40 after contracting malaria on his travels in South America. He is buried in Green-Wood Cemetery.

Gould, Jay [Jason] (*b* Roxbury, N.Y., 27 May 1836; *d* New York City, 2 Dec 1892). Financier and speculator. After moving to New York City he worked briefly as a leather merchant at 39 Spruce Street during 1859–60. He speculated and invested in railroads, and in 1860 he formed the brokerage house of Smith, Gould and Martin on Wall Street. With Daniel Drew and Jim Fisk he battled Cornelius Vanderbilt during the late 1860s to control the Erie Railroad, which he pillaged with the connivance of the railroad directors Peter B. Sweeny and William M. "Boss" Tweed. After the death of Fisk and the overthrow of the Tweed Ring, Gould lost control of the railroad in 1872, and he then used a fortune estimated at $25 million to invest in railroads in the West. He later owned the newspaper the *New York World* (1879–83) and the New York Elevated Railroad Company. On his death his fortune was estimated at $77 million. Despite his wealth Gould was shunned by fashionable society: he was blackballed by the New York Yacht Club, and Mrs. William Astor excluded him from her celebrated "400" list of those invited to be a part of her circle.

government and politics. The government of New York City is older than that of the United States and of most other American jurisdictions. Its political history has been spirited, contentious, and convoluted, encompassing such diverse figures as DeWitt Clinton, William M. "Boss" Tweed, Theodore Roosevelt, Fiorello H. La Guardia, and Nelson A. Rockefeller.

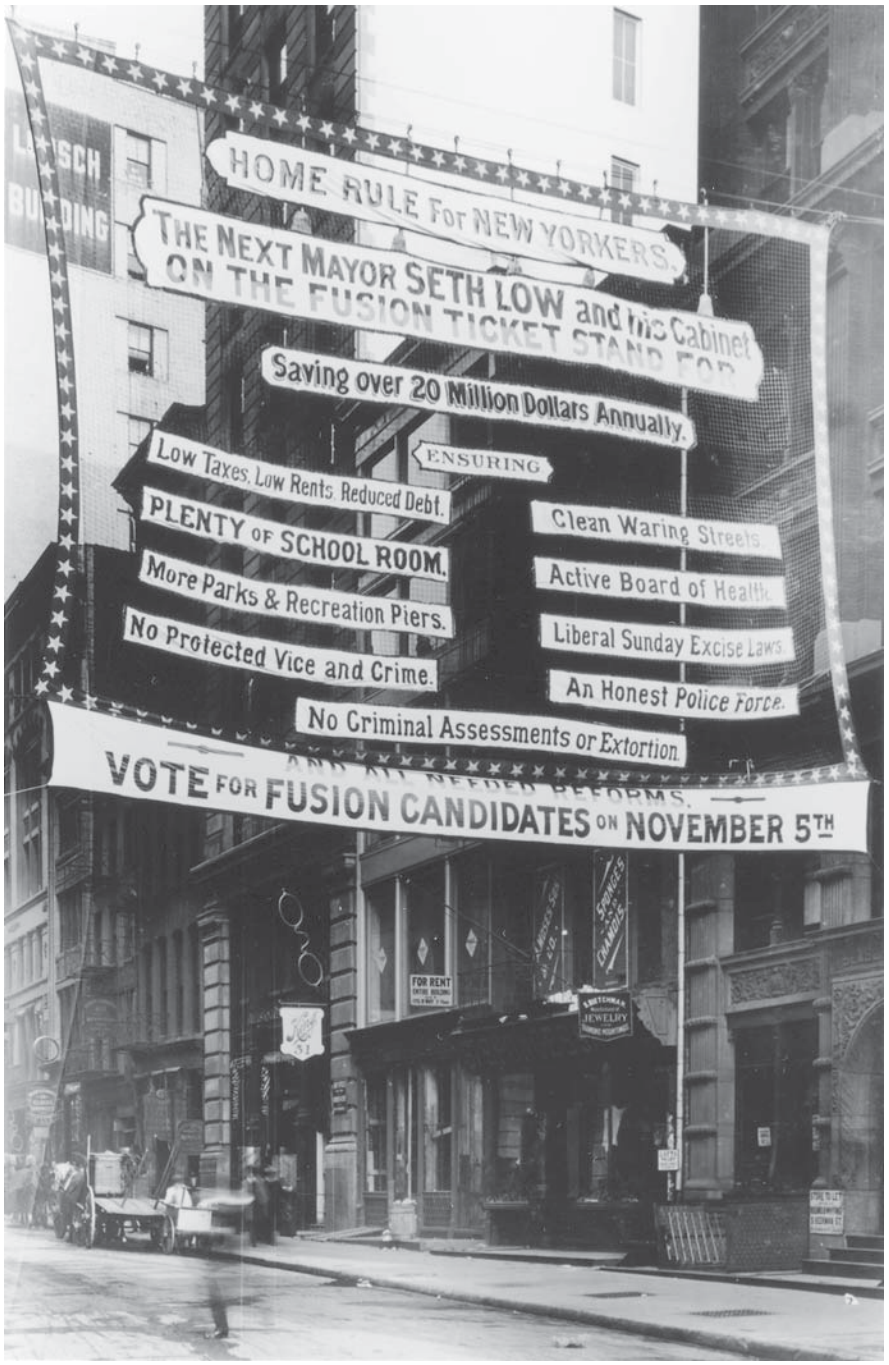
English. In 1665 the first English governor, Richard Nicolls (1664–68), issued the Duke's Laws, setting forth legal and governmental codes promulgated by the Duke of York, named proprietor of the colony by his brother Charles II. They made no provision for an elected assembly, which would have been dominated by the Dutch. Municipal government consisted of a mayor, four aldermen, and a sheriff appointed by the governor. In 1686 Governor Thomas Dongan (1682–88) granted a revised charter that divided the city into six wards: the North, East, West, South, and Dock wards, and an Out ward of farms to the north. The charter also called for a common council composed of a mayor and a recorder appointed by the governor, as well as an alderman and an assistant alderman elected from each ward. These officers also served as advisers to the Mayor's Court. The recorder provided legal counsel to the Mayor's Court as well as to the council, over which he presided when the mayor was absent. The colony of New York was divided into 12 counties in 1683, of which four and part of a fifth make up the modern New York City: New York (Manhattan), Kings (Brooklyn), Richmond (Staten Island), Queens, and southern Westchester (the Bronx).

When in 1685 the Duke of York ascended to the throne as James II, New York became a royal colony whose governor and 12-man advisory council were thereafter appointed by the king. The governor worked and lived in a fort at the southern tip of Manhattan (named successively Fort James, Fort William, Fort Anne, and Fort George), where British troops were stationed to provide for the city's defense. In addition, the Admiralty, the Treasury, and the War Office each had areas of jurisdiction in the colony. As a major port New York City was vulnerable to attacks by the French and the Spanish, and cannon were mounted in the area now known as the Battery. In 1696 the city's commerce came more directly under the aegis of the Board of Trade and the Treasury, which were empowered to enforce the Navigation Acts.

After England's Glorious Revolution of 1688–89 New Yorkers divided into supporters and opponents of Jacob Leisler, a militia captain chosen to lead the colony in the power vacuum created by the absence of Lieutenant Governor Francis Nicholson. In 1691 King William and Queen Mary named Colonel Henry Sloughter governor and instructed him to hold elections for a permanent legislative assembly. The 18 men elected met at a tavern until they acquired a chamber at City Hall in 1704. Throughout the colonial period New York County was allotted four representatives, whereas each of the other counties sent no more than two. City and colony politics were highly partisan, with factions forming around economic interests, religious groups, and leading families. About one-third of the assemblymen belonged to patrician families and one-third to the upper middle class; the rest were small farmers, shopkeepers, and artisans. Only merchants were elected to the assembly from the city during the colonial years. They used their influence to establish legislative standards for the quality and packing of flour, beef, pork, wood products, and skins produced upriver. Assemblymen customarily resided in their own districts. They were expected to be men of property and standing, but because land was available and status fluid they were socially more diverse than their counterparts in England. The vote was extended to men 21 years of age and older whose land was valued at £40 or produced 40*s*. in annual income, or who held freemen's status in New York City or Albany. Electoral participation exceeding 50 percent of the eligible voters was rare until the 1760s.

In 1696 the king created the Lords Commissioners of Trade and Plantations, also called the Board of Trade. This select group of administrators had broad power to monitor colonial trade, advise the king on the appointment of colonial governors, examine and occasionally disallow provincial laws, write instructions for incoming governors, and propose legislation for the colonies. Merchants in New York City sent representatives to England and encouraged fellow merchants in London and Bristol to protest decrees harmful to colonial trade. They also collaborated with influential friends in England to circumvent decisions of the Board of Trade, which gradually lost power to the secretary of state.

The eighteenth century often saw the governor and the colonial assembly compete for preeminence. Some royal governors, including Benjamin Fletcher (1692–98), Edward Hyde (1701–8), Viscount Cornbury (1702–8), William Cosby (1732–36), and George Clinton (1743–53), deemed the colonies lesser branches of the empire ("twigs belonging to the main Tree," according to Cornbury). They firmly enforced the trade laws and pressed the assembly for defense appropriations. Like the Whig governors Richard Coote, Earl of Bellomont (1698–1700), Robert Hunter (1710–19), and Henry Moore (1765–69), they also cultivated the support of a local "court party" to which they awarded patronage, land grants, judicial positions, and provisioning contracts.



Leaders in the city were often members of prominent families, including the DeLanceys, Morrises, Philipses, Beekmans, Livingstons, and Van Cortlandts. After 1730 elections were frequently contested by members of rival families, generating popular participation as ordinary voters found themselves in a position to choose between elite candidates. Merchants and the wealthy dominated both the mayoralty and the Common Council, which monitored the movement of visitors, regulated markets and set the price of bread, and sought to control such persistent problems as free-roaming hogs. The Common Council also included a number of artisans and shopkeepers, whose presence broadened city government and spurred public interest in elections.

In 1731 Governor John Montgomerie put into effect the last city charter of the colonial period, which provided for a seventh ward, Montgomerie, to the northeast. The charter prescribed few other changes and remained in effect until 1776, when the city fell to the British.

2. Federal Period to World War II

At the end of the American Revolution municipal authority was centered in the Common Council, which represented a small electorate of property owners. For several years the state appointed and removed mayors whenever party control changed: Major Richard Varick was removed after 12 years in office when control changed in Albany in 1803; DeWitt Clinton was removed from office in 1809 but returned the next year. The city's growth and complexity stimulated efforts to create a system more responsive to popular will and freer from interference by the state legislature. In 1804 members of Tammany Hall persuaded the legislature to enfranchise men who rented property and to adopt the paper ballot; by the 1820s the legislature removed all property qualifications for white men. The Common Council gained authorization to select its own mayor in 1821, ending the removal of mayors at the whim of the legislature. In 1830 the state fundamentally altered Montgomerie's charter by dividing the Common Council into a board of aldermen and a board of assistant aldermen and by making the mayor a distinct official with the power to veto actions of the council. A state constitutional amendment enhanced the mayor's independence in 1833 by providing for his direct popular election. When the first mayoral election was held in 1834, more than 35,000 voters took part.

In the 1840s the Common Council organized a professional police force, improved the paving and lighting of streets, completed the Croton water system, and expanded social services. To administer these and other municipal functions 10 city departments were formed in 1849 that were eventually subdivided into bureaus, of which all but the police department were led by elected officials. Voters chose from an overwhelming number of candidates because the amended charter rescheduled city elections to the same time as state and national elections. This confusion benefited ward caucuses, which elected delegates for party conventions. Ward meetings were small and easily manipulated by ambitious politicians, a point later emphasized by Theodore Roosevelt when he charged that

Campaign banner for Seth Low in Maiden Lane, 1891

two-thirds of the ward meetings were held in saloons and discouraged the involvement of respectable men. In 1853, after the corruption of the council had earned it the nickname the "Forty Thieves," the state enacted a new charter that restructured the municipal legislature into two distinct boards of aldermen and councilmen. Twenty-two aldermen were elected from the wards and 60 council members were elected by districts drawn to counter the influence of wards. The new charter further restrained the aldermen by giving the mayor a veto over legislation, eliminating the aldermen's role as city judges and transferring the council's control of the police to the mayor and two other elected officials.

In 1857 the state legislature issued a charter to separate municipal and state elections by moving those for municipal offices from November to December. The charter empowered the mayor to appoint city inspectors and the heads of the street department and the Croton Aqueduct; the finance and law departments remained under the comptroller and corporation counsel, both elected. Other measures in the charter of 1857 exposed the long partisan conflict between the strong Democratic forces of the city and the Republicans in the state legislature. As a check on the city, the state transformed the county Board of Supervisors, which consisted of the mayor and city officials, into an independently elected body made up of an equal number of Republicans and Democrats. The charter also merged the police forces of New York City, Brooklyn, and their suburbs into one department to be appointed by a state commission. These measures encouraged Mayor Fernando Wood in 1861 to propose that New York City secede from the state and establish itself as a "free city." Subsequent mayors protested the state's tendency to meddle in city affairs through state-appointed commissions for fire, park, and public health. To resist interference by the state, Tammany Hall consolidated its influence over the city's immigrant population, especially the Irish, who were once excluded from the organization. Politicians aligned with Tammany Hall began to establish power bases in elected posts such as those of county sheriff and city chamberlain, an office created in 1832 to oversee the city's surplus funds. By the late 1860s Tammany Hall, led by William M. "Boss" Tweed, induced the legislature by means of bribes to enact a new charter that abolished the state commissions and returned police and other municipal functions to the city. Despite its tainted origins the charter brought about a favorable reorganization of city government by establishing 10 executive departments to manage parks, public health, buildings, the police force, and other services, and gave the mayor the power to appoint the heads of these departments. The charter strengthened the mayor's veto power, which could now be overridden only by a three-fourths vote of the council; at the same time his authority was limited by the terms of the council offices, which were longer than his own. In the charter the legislature also unified the government of the city and county by abolishing the New York County Board of Supervisors, on which Tweed himself had sat since its formation in 1857.

After the fall of the Tweed Ring the legislature signed a new charter in 1873 that replaced the bicameral council with a board of aldermen: six of its 21 members were elected. In addition the charter created the Board of Estimate and Apportionment, consisting of the mayor, the president of the Board of Aldermen, and two other officials. Responsible for reviewing the budgets of city departments, the board eventually became a powerful influence in both the executive and the legislative branches of government. The charter was amended in 1884, when the state extended its civil service law to the city, eroding the control of Tammany Hall over patronage. These changes did not prevent the return to power of Tammany Hall, first under John Kelly (1872–86) and then under Richard Croker (1886–1902). To win important elections Tammany Hall often aimed to satisfy an influential minority of reform-minded Democrats

"The Canvass of a 'Swell' Candidate for Political Honors in a Tenement District," from Frank Leslie's Illustrated Newspaper, *19 November 1881*

sympathetic toward business. Threatened by a coalition of Republicans, reformers, and angry workers in 1886, it engineered the election of Abram S. Hewitt, a wealthy businessman and reformer. In the 1880s the legislature passed 390 acts concerning the city, a number that was sharply reduced after a constitutional amendment in 1894 gave the mayor the power to veto such acts.

In 1896 the legislature responded to the demands of business leaders and reformers to consolidate Manhattan, Brooklyn, Queens, the Bronx, and Staten Island into Greater New York. When the new charter took effect in 1898, each of the five counties became a borough of the new city: the population of New York City more than doubled, to nearly 3.5 million, in large part because Brooklyn had grown into the fourth largest city in the United States since its incorporation in 1834. Although much of the middle class in Brooklyn was resistant to consolidation, its business leaders believed that the change would promote development and reduce taxes. Seth Low, the Republican mayor of Brooklyn in the early 1880s, was eventually elected mayor of the consolidated city. The charter of 1897 preserved the power of the boroughs by allowing each of them to elect a president responsible for local administration of streets and other public works. Although officials such as sheriffs, judges, clerks, and registrars continued to work for the county, most positions were taken over by the new city government. Legislative power was centered in a two-house municipal assembly, and judicial functions in a municipal court of 23 districts. The mayor (whose term was extended from two years to four) retained a strong veto, which could be overridden only by a five-sixths vote of the assembly; the mayor also retained control over the executive departments, except for the finance department, which continued to be led by an independently elected comptroller. The charter weakened the mayor by barring him from a second consecutive term. The Board of Estimate and Apportionment, which prepared an annual budget for the city that could be decreased but not increased by the municipal assembly, acquired the power to control the granting of franchises to public services. Reformers hoped that consolidation would make the government more efficient and dilute the power of Tammany Hall. Greater efficiency was at least partly realized, but the influence of Tammany Hall persisted: the first mayor elected after consolidation was Robert A. Van Wyck, a tool of Tammany Hall who led one of the most corrupt administrations in the city's history. The legislature amended the charter in 1901 to reduce the mayor's term from four years to two and to increase the power of the borough presidents by giving them a prominent place on the Board of Estimate. Another amendment at this time transformed the bicameral assembly into a single board of aldermen with 73 members (reduced to 67 in 1916 and 65 in 1921). The first mayor to be affected by the shortened term was Low, a reformer who led one of the city's most effective administrations. When Low sought reelection in 1903, he was defeated by George B. McClellan, who enjoyed the backing of Charles Francis Murphy (the leader of Tammany Hall from 1902 to 1924) and Big Tim Sullivan (a powerful ward boss on the Bowery). Under McClellan civil service was extended to most city employees.

Tammany Hall during the Progressive era nominated reform Democrats for important offices, including Mayors William J. Gaynor (1910 until his death in 1913) and John Purroy Mitchel (1910–17). By the 1920s it was led by Mayor James J. Walker, who with the district leaders of Tammany Hall forged what they called a "practical democracy" dedicated to aiding the poor and the common people. An indirect result of his efforts was state legislation supported by Governor Alfred E. Smith and Senator Robert F. Wagner that improved housing and working conditions and in the process laid the foundation for a partnership between the state and the city. The charter of 1901 survived for more than 30 years with only one major change: an amendment to the state constitution in 1923 that formed a new, two-house municipal assembly, consisting of the Board of Aldermen and the borough presidents. Among the assembly's expanded powers was that of making amendments to the city charter that were not in conflict with the state constitution. Fiorello H. La Guardia, the Fusion Party candidate, defeated Tammany Hall in 1933 and as mayor from 1934 to 1945 initiated profound changes in the politics and government of the city. Backed by federal money provided under the New Deal, La Guardia carried through an ambitious program of public works that won him as much support from business and labor as Tammany Hall had commanded earlier. His "little New Deal" assigned many of the functions of government to permanent entities staffed by professionals, such as new college campuses (which later became the City University of New York) and municipal hospitals. In 1936 reformers crafted a new charter, which was notably clearer and shorter than that of 1901. It further augmented the power of the mayor, who was now allowed to appoint a deputy mayor in charge of routine executive duties. The charter abolished the office of city chamberlain and replaced the Board of Aldermen with a smaller, unicameral council. It also established a city planning commission charged with drafting a master plan for the city, preparing public works programs, and issuing zoning guidelines. Amendments to the charter could be made by petition of 50,000 qualified voters. Tammany Hall was weakened considerably by these measures, as well as by the adoption of proportional representation in the City Council in 1937 (which benefited minority parties at the expense of the Democrats), and by the further growth of the merit system. The length of the mayor's term reverted again to four years with the adoption of the charter of 1936.

3. After World War II

After 1945 the Democratic organizations in the Bronx and Brooklyn played an increas-

Members of the U.S. House of Representatives Elected from Districts All or Partly within the Current Boundaries of New York City

William Floyd (Democratic Republican) 1789–91 (Brooklyn, Queens, Staten Island)

Compiled by James Bradley

ingly important role in the political process. The 1945 mayoral election was won by William O'Dwyer, a former judge and district attorney in Brooklyn. Formed at a time when Tammany Hall was under the sway of the organized-crime figure Frank Costello, his administration was marked by graft and corruption. When O'Dwyer resigned in the first year of his second term to become ambassador to Mexico, Vincent R. Impellitteri succeeded him as acting mayor. In a special election held in 1951 Impellitteri failed to win the support of the Democratic organization, which regarded him as incompetent, but won election as an independent. He was unable to win the organization's support for a full term in 1953: the head of Tammany Hall, Carmine DeSapio, designated instead Robert F. Wagner, the borough president of Manhattan. Wagner's victories in 1953 and again in 1957 strengthened the Democratic organization. During his tenure he recognized and negotiated with municipal employees' unions, and with Robert Moses he used federally funded urban renewal and public housing programs to reshape the city. Wagner perceived the growing importance of black voters and the strength of the reform movement in the Democratic Party, and he repudiated DeSapio when he sought reelection in 1961. County leaders who believed that Wagner's indecisiveness and a number of minor scandals made him a liability supported Arthur Levitt in the Democratic primary, but Wagner won a bitter primary with support from the municipal employees' unions and political advice from Alex Rose (head of the Liberal Party) and J. Raymond Jones (the black district leader from Harlem whom he later helped to defeat DeSapio to become New York County Democratic Party leader); after defeating Louis Lefkowitz, the Republican candidate, in the general election, he replaced all the Democratic county leaders except Charles A. Buckley of the Bronx. Despite his accomplishments Wagner failed to build a political base beyond the regular Democratic organizations, in part because he concentrated on consolidating support from the public employees' unions and securing federal funds for constituencies who had traditionally supported him; the increasing militancy of the civil rights movement and protest in the neighborhoods also undermined his power. In 1965 expenditures driven to some extent by the wage demands of municipal employees rose faster than revenues, causing the first of several increasingly difficult fiscal crises in the city. Wagner announced that he would not seek a fourth term when private polls showed that he could not win.

In Wagner's place the Democrats nominated the city comptroller, Abraham Beame, who had come up through the Brooklyn county party organization; the Republicans sought to revive the alliance of liberal Republicans and reform Democrats that had elected La Guardia by nominating Representative John V. Lindsay; angered by the nomination of Lindsay, William F. Buckley, Jr., offered himself as the nominee of the Conservative Party. With support from Governor Nelson A. Rockefeller, Alex Rose, and the garment unions, Lindsay won the election with 43.3 percent of the vote. In office he employed policy analysis and modern management tools, supported new neighborhood-based city agencies, and expanded the budget with state and federal aid; he was buffeted, however, by community protests, strikes by public employees, conflict over community school decentralization, and chronic fiscal difficulty. In attempting to win reelection in 1969 he lost the Republican nomination to a conservative, John J. Marchi; in the general election Marchi competed for the same votes with the Democratic candidate, Mario Procaccino, also a conservative, and Lindsay won by a narrow margin as the nominee of the Liberal Party with support from city employees (who had received generous wage settlements), liberal Democrats, Jews, blacks, and Puerto Ricans. The election of 1969 marked the decline of the political club and the increasing importance of the candidate and

was one of the first elections in which television and political consultants played a dominant role.

In the early 1970s New York City faced a large budget deficit that was aggravated by increased borrowing and a sharp downturn in the economy. Lindsay declined to run for a third term in 1973 and was succeeded by Beame, the city's first Jewish mayor. By 1975 the financial crises finally led bankers to refuse to extend further credit to the city. The state formed two new agencies, the Municipal Assistance Corporation and the Emergency Financial Control Board, to restructure the city's debt and exert control over budgets and wage settlements. To stabilize finances the state agencies caused the city to reduce its payroll by 60,000 employees, obtained increased aid from the state, secured loan guarantees from the federal government, and persuaded the custodians of public employees' pension funds to invest in municipal bonds. Charter reform in 1975 gave formal status to community boards (developed by Wagner in the 1950s when he was borough president of Manhattan). In 1977 Beame was viewed as a weak candidate for reelection, even though he retained backing from the county Democratic organizations, and in the primary election he drew many opponents, including Representative Herman Badillo, Percy Sutton (former borough president of Manhattan), Mario M. Cuomo, and Representative Edward I. Koch, a reform Democrat from Greenwich Village who advocated fiscal discipline and emphasized his support for the death penalty and his opposition to public unions. Koch narrowly finished first, won a runoff election against Cuomo, and won the general election by soliciting support from minority leaders and from the county Democratic organizations.

In his reelection victories in 1981 and 1985 Koch redefined the Democratic political base along more conservative lines by assembling a coalition of white Catholics and Jews as well as a few Latinos and blacks. A steady improvement in the city's economy also strengthened his position. During his third term he was politically damaged by corruption in city agencies (uncovered by U.S. Attorney Rudolph W. Giuliani) and by racial antagonism, which many observers thought he worsened with undiplomatic and sometimes hostile comments about various black leaders. The economic downturn of 1989 also threatened the city's budget, which had doubled since the beginning of his tenure. The success of the Democratic presidential candidate Jesse Jackson in New York City during a primary election in 1988 enabled Koch's opponents to coalesce around David N. Dinkins, borough president of Manhattan, who had close ties to both black regular Democrats and the white reform movement. Dinkins defeated Koch in the Democratic mayoral primary in 1989 with nearly unanimous support from black voters (who had replaced Jews as the largest

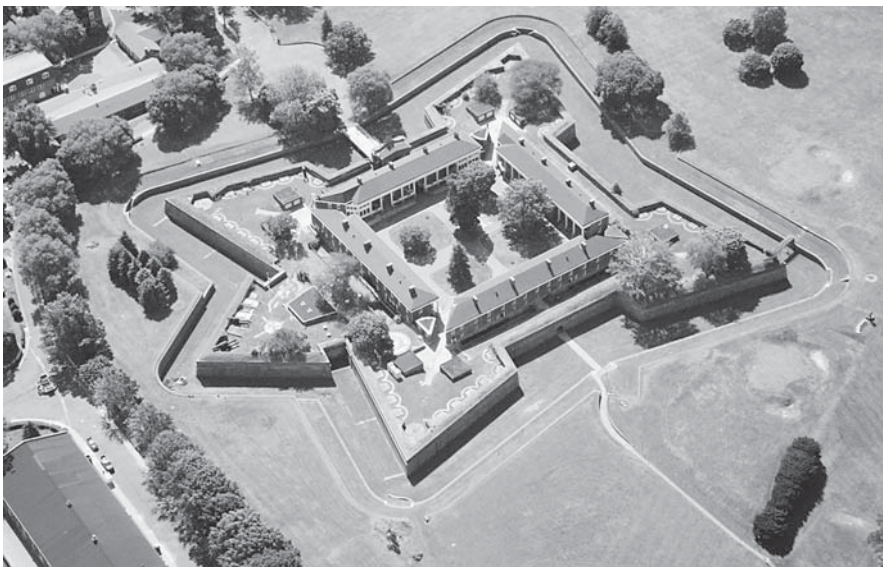
component of the Democratic electorate), the municipal employees' unions, and white reform Democrats. The Republican and Liberal candidate, Giuliani, attracted many defectors among Democratic voters, but Dinkins narrowly won the general election with support from black voters, Latin Americans, white liberals, and a minority of white ethnic Democrats to become the first black mayor in the city's history. The election took place at a time when the charter was being amended yet again, in response to a decision by the U.S. Supreme Court that effectively abolished the Board of Estimate. The new charter transferred some of the board's powers to the mayor (such as that of granting contracts) and others to the City Council (such as those concerned with land use). Dinkins's success as a candidate was quickly overshadowed by a renewed fiscal crisis, conflict between blacks and Koreans in Flatbush and between blacks and Orthodox Jews in Crown Heights, and a perception of increasing street crime.

In 1993 Giuliani again challenged Dinkins for the mayoralty, this time narrowly prevailing and overwhelmingly won reelection in 1997 against the liberal Democratic candidate, Ruth Messinger, who had been Manhattan Borough President. The Giuliani years were marked by changes in policing practices that reduced violent crime in the city, although that period was also marked by several instances of police brutality, including the assault on Abner Louima, a Haitian immigrant, in the 70th Precinct of Brooklyn. The Giuliani administration also reduced welfare caseloads and required able recipients to work for their benefits. Although the late stage of his administration was marked by health problems and a nasty and public divorce, many lauded his leadership of the city in the wake of the attacks of 11 September 2001 on the World Trade Center. Those attacks occurred on the day when the Democratic mayoral primary was slated to choose a nominee between the white liberal Mark Green, a former public advocate, and Fernando Ferrer, Bronx Borough President and the city's senior Puerto Rican elected official. Although Ferrer received strong support from African American leaders and ran first in the delayed primary election, he did not clear the 40 percent hurdle. Running to Ferrer's right, Green managed to win a close runoff to face a newcomer, Republican Michael R. Bloomberg, a recently converted Democrat who had built Bloomberg Communications into a multibillion-dollar corporation. With Democratic voters deeply divided over Green's nomination and voters' concern for restoring the city's economy and security following the events of 9/11, Bloomberg spent his own funds to narrowly win the 2001 mayoral election with an electoral coalition reminiscent of those which supported Mayors Giuliani and Koch.



Mayor Bloomberg proved to be a highly able steward of the city, which enjoyed economic recovery, continued declines in the crime rate during his first administration, and less racial animosity than had characterized the Giuliani administration. He also introduced many technological innovations, such as a 311 telephone system to improve citizen access to public services. In 2005 he prevailed easily over Democratic nominee Ferrer, once more spending a record amount in his victory. The second Bloomberg administration was characterized by mayoral control over the New York City public school system, many zoning and development decisions designed to promote market rate housing and office construction, and an innovative effort to reduce poverty. The mayor was thwarted by the state legislature, however, over introducing congestion pricing to the Manhattan traffic system. After the two-term limit of the city charter was extended in 2008, Bloomberg ran in 2009 for a third term, citing that the city required a leader with experience in finance and business because of the financial crisis and recession of 2008–9; he won the election on 3 November 2009.

Governors Island. An island in Upper New York Bay. It is a half-mile (1 kilometer) southeast of Manhattan and across Buttermilk Channel from Brooklyn; it covers 172 acres (69 hectares) of land and is legally part of Manhattan. Known as Pagganck by local Canarsee Indians, it was sighted by Giovanni da Verrazano in 1524, and in 1624 it was the site of the original settlement of the Dutch West India Company. The newcomers moved to Manhattan in 1625. In 1637 Wouter van Twiller, the second governor general of the company, reportedly bought the island from the Indians for two axe heads, a string of beads, and some iron nails. The name was changed to Nooten Eylandt (Nut Island), and in 1664 under British occupation, they changed it transliterally to Nutten Island. In 1698 the colonial legislature set the island aside "for the benefit and accommodation of His Majesty's governors" (hence the island's name), whereupon Lord Cornbury had a villa in the Georgian style built as his official residence. At the outbreak of the American Revolution

Fort Jay, 2009

Governors Island, 2009

in 1776, patriots led by General Israel Putnam fortified and held the island until it was bombarded by British Admiral Richard Howe's warships. It then remained in British hands until 1783.

Construction was begun on Fort Jay after peace was restored in 1794. Work on the fort proceeded slowly, even with the voluntary participation of students from Columbia College; it was finally completed in 1808. In anticipation of another war with England, an imposing semicircular fort of red sandstone called Castle Williams was built from 1807 to 1811 under the direction of Colonel Jonathan Williams, chief of the Army Corps of Engineers; however, no shot was ever fired at an enemy from its three tiers of cannons. The island was officially part of New York State until 1800 when it was acquired by the federal government. During the Civil War the island became a recruiting depot and Castle Williams became a prison for Confederate officers. A headquarters and an administrative center for the U.S. Army were installed after the war.

In the 1890s, dredging from the excavation of the Fourth Avenue Subway (now the Lexington Avenue line) and the Brooklyn–Battery Tunnel was used to enlarge the island, adding 103 acres (41.7 hectares). On 20 September 1909 Wilbur Wright took off from Governors Island in his *Flyer* for a flight around the Statue of Liberty and Grant's Tomb. In the following year Glenn Curtis landed on the island after a successful flight in three segments from Albany, New York, to win a prize of $10,000 offered by Joseph Pulitzer, publisher of the *New York World*. The island performed several vital functions during World War I as a training center for pilots, as the post that carried out the seizure of all German ships in the harbor (the first overt American action of the war), and as a supply depot and major point of embarkation for troops bound for France. On 30 June 1966 the army turned the island over to the Coast Guard for use as the headquarters of the Eastern Area and of the Third Coast Guard District, whose primary duties were operating a training center and a base for search-and-rescue operations, providing aids to navigation, performing safety inspections, supervising ice-breaking operations, and organizing drug interdiction. The population of the island at that time was approximately 1600 members of the U.S. Coast Guard and their families. The Coast Guard closed its facilities and all personnel were relocated in 1996.

Since the departure of the military, the northern part of island has been designated as both a National Historic Landmark and a New York City historic district. Similarly designated are five buildings: the Governor's House (completed 1708, formerly the post commander's residence), Fort Jay, Castle Williams, South Battery (1812; formerly the officers' club), and the Admiral's House (1840, formerly the commanding general's house). Within the tree-lined historic district are fine examples of pre–Civil War arsenal buildings, Civil War–era housing, Victorian and Romanesque Revival residences, and early twentieth-century neoclassical architecture. When it closed officially in 1966, Governors Island was the oldest continuously operated military post in the United States.

In 1988 the island was the venue for a meeting between President Ronald Reagan and Soviet Premier Mikhail Gorbachev. In 2003 the Governors Island Preservation and Education Corporation, an agency overseen by the city and state, was designated to take responsibility for the planning, redevelopment, ongoing operations, and promotion of tourism, conferences, and cultural arts facilities for 150 acres (61 hectares) of the island. The remaining 22 acres (9 hectares) were assigned to the National Park Service to be the Governors Island National Monument. A number of plans have been put forward for possible use of the island. Governors Island is open to the public from May to October.

Gowanus. Neighborhood in northwestern Brooklyn, bounded to the north by Baltic Street, to the east by Fourth Avenue, to the south by 14th Street, and to the west by Smith Street. The area was settled by the Dutch about 1640. The population increased sharply with the construction in the 1840s of the Gowanus Canal, which provided jobs for most residents. In the late nineteenth century it was a busy if sometimes rowdy neighborhood: in a section 12 blocks long on Smith Street were 23 taverns and many rooming houses catering to transients, mostly sailors and laborers. In the twentieth century the neighborhood calmed. Smith Street, the principal commercial thoroughfare, was lined with family shops and large furniture outlets, notably J. Michaels (founded 1886). A small Italian enclave lay to the east of the canal around Carroll Street, centered at Our Lady of Peace Roman Catholic Church and known until 1993 for Monte's Venetian Room, an Italian restaurant. Landmarks in the neighborhood include the tallest subway viaduct in New York City (on the F line at Smith and Ninth streets, with a clearance above the canal of 87.5 feet [26.7 meters]) and the Carroll Street Rail Bridge (1889), one of the few retractile bridges remaining in the United States. As of the early twenty-first century Gowanus remained a hub of industry and manufacturing, while its namesake canal struggled in recent years with environmental problems and the consequences of the decline of the shipping industry.

Georgia Fraser, *The Stone House at Gowanus* (New York: Witten and Knitner, 1909)

John J. Gallagher

Gowanus Canal. Artificial waterway in Brooklyn, extending from Hamilton Avenue to Douglass Street. A creek running roughly the same course, named for Gouwane, sachem of the Canarsees, was enlarged in the late 1840s by Edwin C. Litchfield. By 1884 the creek had been transformed into an industrial watercourse 5700 feet (1870 meters) long and 100 feet (30 meters) wide, with a depth in high water to 15 feet (4.5 meters). The canal greatly aided the commercial and residential development of Red Hook. By the late nineteenth century the canal was lined with industrial

Gowanus Canal, 2009

enterprises, including coal, lumber, brick, and stone yards; foundries; paint and ink factories; electroplating shops; flour, plaster, and paper mills; and an early purveyor of household heating and cooking gas (groups of young hoodlums who preyed on the many sailors and other transients in the area became known as the gashouse gangs). The canal was called an open cesspool by the *Daily Eagle* (14 July 1893). Because tides were ineffective in ridding the northern end of the channel of pollutants, a flushing tunnel 6250 feet (1905 meters) long was built connecting it to Buttermilk Channel. The canal declined during the early 1960s with the move toward containerized shipping. The flushing tunnel was inactive for several years and then restored to operation in 1989, at which time the canal was only a partly used waterway lined with stone, gravel, and concrete yards; some foundries; and petroleum storage facilities. Volunteer organizations such as the Urban Divers Estuary Conservancy (founded in 1998) and the Gowanus Dredgers Canoe Club (founded in 1999) used the canal for recreational purposes. In the early twenty-first century the Gowanus Canal Community Development Corporation, a nonprofit neighborhood preservation organization, was working on the revitalization of the Gowanus Canal area. In 2010 it was designated a Superfund clean-up site, with anticipated costs of $300 million to $500 million for the 10-year project.

John J. Gallagher, Matthew Kachur

Goya Foods. Firm of food importers formed in 1936 as Unanue, Inc., on Duane Street in lower Manhattan by Don Prudencio Unanue and his wife, Carolina Casal, Spanish immigrants from Puerto Rico. Initially it imported only Spanish olives, olive oil, and canned sardines for sale in bodegas throughout the city, but it soon offered dozens of other products, including beans, rice, coffee, condiments, spices, and frozen foods. It started using the name Goya for its foods in 1936 and bought its first factory in Brooklyn in 1958. Its foods became popular outside the Latin American community and were introduced in supermarkets and specialty stores. As competition increased the firm undertook aggressive advertising campaigns, adopting the motto "Si es Goya, tiene que ser bueno" ("If it's Goya, it has to be good"). In the early twenty-first century Goya Foods offered more than 1000 products, which were distributed from centers in Seville, Chicago, Miami, Tampa (Florida), Secaucus (New Jersey), and Bayamon (Puerto Rico). Owned and operated entirely by the Unanue family, the firm in 2005 had sales of more than $750 million and employed 2500 workers. Goya's headquarters have been in suburban Secaucus, New Jersey, since 1974.

James O. Drummond

G. P. Putnam's Sons. Firm of book publishers. Its origins may be traced to a partnership between John Wiley and George Palmer Putnam; when the two partners separated in 1848, Putnam took over the literary titles and established a firm under his own name at 155 Broadway. After nearing bankruptcy Putnam reopened the firm with his son George Haven Putnam in 1866 as G. P. Putnam and Son, which became G. P. Putnam's Sons in 1872 after two more of Putnam's sons joined the firm and Putnam himself died. Highly regarded during Putnam's lifetime, the firm moved to 200 Madison Avenue in 1961. With the purchase of Berkley Publishing in 1966 the firm acquired a mass-market paperback subsidiary. G. P. Putnam's Sons was itself taken over by the Music Corporation of America (MCA) in 1975, and the British publisher Penguin Group, part of Pearson PLC, purchased Putnam's in 1996.

Eileen K. Cheng

Grace, William R(ussell) (*b* Cove of Cork [now Cóbh], Ireland, 10 May 1831; *d* New York City, 20 March 1904). Businessman and mayor. Soon after moving to Peru in 1851, he entered the guano trade with the firm of Bryce Brothers, in which he was a partner by 1854. He moved his headquarters to 110 Wall Street in Manhattan in 1866 and founded his own firm, W. R. Grace and Company. In the following years he built a fortune from trade between North America and the western coast of South America. He soon joined with other reform Democrats in challenging Tammany Hall, the Manhattan Democratic political machine. Grace became the first Catholic mayor of New York City in 1880 and was reelected in 1884.

Lawrence A. Clayton

Grace Church. Episcopal church on Broadway and 10th Street, occupied from 1846 by a congregation organized in 1808 at Broadway and Rector Street. The building is a graceful structure of white limestone designed by James Renwick, Jr., in a decorated Gothic Revival style. Its entrance is framed by a handsome memorial porch, and its eastern chancel window is filled with English stained glass. The rectors of the church have been influential in the branch of American Episcopalianism known as the Low Church. Under the rector Henry Codman Potter (1868–83) a magnificent marble spire was added to the church, and Grace Memorial House was built as a nursery. In keeping with Potter's desire to minister to the poor, Grace Chapel at 132 East 14th Street was rebuilt in 1876 and used as a community center offering English-language classes and other educational programs for immigrants. Potter's successor, William R. Huntington (1883–1909), retained Potter's emphasis on community work by running a mission house on the Lower East Side and expanding the operation on 14th Street into what became known as Grace Chapel Settlement. In 1977

Grace Church, 2009

Grace Church was designated a National Historical Landmark. In the early twenty-first century the church continued its charitable tradition: it maintained a shelter for homeless men on the side of the church facing Fourth Avenue as well as several missions overseas.

Peter J. Wosh

Gracie, Archibald (*b* Dumfries, Scotland, 25 June 1755; *d* New York City, 11 April 1829). Merchant. He arrived in New York City in 1784 and in the following year married Esther (Hetitia) Rogers, sister of the prominent merchants Moses, Nehemiah, and Henry Rogers. He established a firm in Virginia before settling permanently in New York City in 1793. A leading commission merchant and shipowner, he served on the directing boards of banks and insurance companies and was a close associate of Alexander Hamilton and Rufus King. He was also a vice president of the Chamber of Commerce (1800–25) and president of the St. Andrew's Society (1818–23). In 1798 he purchased property at Horn's Hook, near what is now East 88th Street, where he constructed his summer home, Gracie Mansion. Delays in collecting spoliation claims for shipping losses incurred during the Napoleonic Wars led to his financial ruin and the sale of the mansion in 1823. It became the official residence of New York City mayors during the administration of Fiorello H. La Guardia.

Elaine Weber Pascu

Gracie Mansion. The mayor's official residence, overlooking the East River at 88th Street and East End Avenue in Carl Schurz

Park. Built in two phases between 1799 and 1811 at Horn's Hook as the country home of Archibald Gracie, probably by the carpenter Ezra Weeks, it was one of several residences in upper Manhattan that afforded refuge from the noise and disease of the city. Among the many visitors were Washington Irving and Napoleon's brother, Joseph Bonaparte. Gracie sold the house in 1823. In 1853 land adjacent to the house was subdivided into lots; the land surrounding the house was designated a city park after Avenue B (now East End Avenue) was extended northward to East 83rd Street in 1876. The house remained a private residence until it was taken over by the parks department in 1896, which used it until 1923. It housed the Museum of the City of New York from 1924 to 1932. After being restored by the city, the house reopened as a museum in 1936. At the urging of the parks commissioner Robert Moses, it became the official mayoral residence in 1942. Susan Wagner, wife of Mayor Robert F. Wagner, lobbied to create an addition to the house for receptions and dinners. Designed by architect Mott B. Schmidt, the Wagner wing was completed in 1966, after Susan Wagner's death. Mayor Edward I. Koch established the Gracie Mansion Conservancy in 1981, which initiated a major restoration during 1983–84. In 2002 Mayor Michael R. Bloomberg, who lived elsewhere, restored the house and used it for ceremonies, meetings, and tours.

Mary Beth Betts

Gracie Square. Neighborhood on the Upper East Side of Manhattan (2000 pop. *ca* 27,000), lying along East End Avenue (Avenue B) in Yorkville and bounded to the north by 92nd Street, to the east by the East River, to the south by 79th Street, and to the west by York Avenue (Avenue A). It was once the site of the country estates of the Astor, Gracie, Rhinelander, and Schermerhorn families. Except for a few small developments such as Henderson Place (1882) and City and Suburban Homes (1901–13), the area consisted of brownstones, tenements, and light industry until luxury apartment buildings were erected in the 1920s; the Chapin and Brearley schools also opened about this time. Construction began on East River Park in 1876 (renamed Carl Schurz Park in 1911). The elevated John H. Finley Walk was built over the FDR Drive in 1941. Since 1942 the mansion of Archibald Gracie (1799) has been used as New York City's official mayor's residence. The parabolic-arch-shaped Municipal Asphalt Plant (1944), which stands at the northern edge of the neighborhood, was incorporated as a recreational facility into the Asphalt Green Sports and Art Center in 1982. The population is affluent; well-known residents have included Vincent Astor, Madame Chiang Kai-shek, Robert Moses, and Gloria Vanderbilt.

Val Ginter

graffiti. Form of art, or vandalism, produced by writing names, numbers, or other images on various types of property, often public. Little attention was paid to graffiti in New York City until 1970, when a Greek American teenager from Washington Heights named Demetrius (last name unknown) wrote "Taki 183," his nickname and street address, or "tag," on hundreds of subway cars and walls throughout the city. Although it was not the first such display, thousands of people saw his tag, and soon scores of other teenagers were imitating it. In 1971 the *New York Times* reported in the article "Taki 183 Spawns Pen Pals" that removal of tags cost 80,000 total hours of labor and $300,000 in that year alone. By 1972 there was a flourishing subculture based on this activity, with its own jargon, informal organizations, and rules of conduct. "Bombings," a term used to describe the covering of as many surfaces as possible, began occurring across the city and especially the subway system; the budget of the New York City Transit Authority for removing graffiti rose from $250,000 in 1970 to more than $1 million a few years later. As soon as trains went back into service clean, they were bombed again, mocking the effort to obscure the graffiti and creating a sign of official failure. An anti-graffiti media attack was planned with the slogan "Make your mark in society, not on it."

The problem became so acute that in 1972 City Council president Sanford Garelik proposed a monthly "Anti-Graffiti Day" during which New Yorkers could volunteer to clean up graffiti. RCA Records canceled a full-page advertisement for an album by Lou Reed in the *Village Voice* that had drawn complaints from the Metropolitan Transportation Authority (MTA) and the Parks, Recreation, and Cultural Affairs Administration for its depiction of a man spray-painting Reed's name on a subway car. The MTA experimented with several cleaning solvents such as DWR (Dirty Word Remover) and Klout; they either proved ineffective or were so corrosive that subway car manufacturers threatened to void their warranties unless use of the solvents was discontinued. In October 1972 Mayor John V. Lindsay formed the city's first anti-graffiti task force, and a new law banned the carrying of open spray paint cans in public facilities without a permit, increasing the maximum fine from $25 to $500 and the maximum prison term from 10 days to three months. The MTA reported that graffiti could be seen on nearly all 7000 cars in the subway system. Official reports linked increases in crime to graffiti, and increased arrests did not seem to deter graffiti writers.

During the 1970s there was some support for the notion that graffiti was street art. Hugo Martinez, a sociology student at City College, formed United Graffiti Artists (UGA) in 1972 to promote graffiti as an art form. The first exhibition of members' work was held in December at Eisner Hall at City College, and by early 1973 many intellectuals considered such

Graffiti on a building in Long Island City, Queens, 2008

work "radical chic." Members of the UGA showed 20 canvases at the Razor Gallery in SoHo and won commissions from Twyla Tharp to paint backdrops during performances of her production *Deuce Coupe.* In autumn of 1973 the Museum of Modern Art held a slide show of murals painted on buildings (with their landlords' permission). To the disgust of many, Norman Mailer published a meditative essay on the creative power of graffiti, "The Faith of Graffiti," in 1974. At the height of the graffiti art movement such members of the UGA as "Phase2," "T-Rex 131," and "Bama" commanded as much as $3000 a canvas. The National Organization of Graffiti Artists was formed in July 1974 by Jack Peslinger, a director of Off-Broadway theater, but its members never achieved the financial success of their counterparts in the UGA. Interest in graffiti art declined after 1975, when the art season opened with an exhibition of such work at the Artist Space in SoHo. In October 1977 the Transit Authority erected an enormous subway car wash in the Coney Island yard that for an annual cost of $400,000 drenched cars in a solution of petroleum hydroxide. Known by graffiti artists as the "final solution," the "buff," and the "orange crush" (for the defoliant Agent Orange), the wash was effective in quickly removing graffiti from the cars.

Interest in graffiti art surged during the 1980s. Keith Haring and Jean-Michel Basquiat (then known as Samo) became widely known; Haring's work at that time sold for as much as $350,000. Several films explored ties between graffiti art, hip-hop music, and inner-city culture. David Ahearn's film *Wild Style,* featuring the graffiti artist Lee Quinones and the musician and artist Fred Brathwaite (also known as Fab Five Freddy and later as Freddy Love), opened to critical acclaim in March 1983 as part of the New Directors / New Film Series at Lincoln Center. In 1984 Henry Chalfant, long a supporter of graffiti art, helped to produce the documentary *Style Wars* for the Public Broadcasting System. Timothy Hutton played the lead role in *Turk182* (1985), a commercial motion picture about a graffiti artist. In 1980 the Transit Authority launched its "graffiti enhancement program," in which more than 200 painters were employed to cover graffiti on subway cars with quick-drying white paint; graffiti artists simply painted over the white surfaces, and the program was declared a failure in the autumn of 1980.

Mayor Edward I. Koch, an outspoken opponent of graffiti, introduced a $1.5 million program to build fences and provide guard dogs for the Corona Yard in September 1981. In 1982 the MTA was given $22.4 million to fence in all train yards. Razor wire atop the fencing replaced the use of guard dogs, which had drawn criticism for being excessive and brutal. The city's anti-graffiti policies were called into question by the arrest on 15 September 1983 and subsequent death of Michael Stewart, an alleged graffiti artist. The incident generated accusations of police brutality (Stewart was black, the arresting officers white).

In 1984 Transit Authority chairman David Gunn ordered all cars with graffiti removed from service, and during his tenure the amount of graffiti in the subways decreased quickly. A 1985 law banned sales of spray paint and broad-tipped markers to minors, with a fine of $500. During the same year $6.3 million was awarded to transit workers with health problems stemming from exposure to fumes from cleaning solvents. But in the 1990s the Transit Authority reported an increase in the amount of graffiti on its trains, the number of "hits" having doubled in 1990 to 46,000, and the anti-graffiti task force was reconvened after a hiatus of 18 months. The authority spent $1.4 million replacing scratched plastic windows between January 1990 and June 1992, and in 1992 it announced a plan to spend $24.3 million to equip all buses and subway cars with scratch-resistant glass. It also explored such strategies as issuing night-vision goggles to the transit police, while community groups used video cameras to catch graffiti artists in the act. As the city became more orderly and as crime declined after 1992, graffiti became far less visible in the five boroughs. In June 2006, however, the Brooklyn Museum and the Martinez Gallery mounted a show of graffiti artists.

Graham, Martha (*b* Allegheny, Pa., 11 May 1894; *d* New York City, 1 April 1991). Dancer and choreographer. She grew up in southern California and from 1916 trained under Ruth St. Denis and Ted Shawn. In 1923 she moved to New York City, where she initially danced in the exotic dance tradition of her mentors but quickly developed an independent style stripped of ornamentation. During the early 1930s she founded a dance company for women and formalized her dance techniques of contraction and release to classical themes. Her early works of choreography, *Lamentations* (1930) and *Primitive Mysteries* (1931), were characterized by a stark simplicity, structural tautness, and mythic overtones. In 1926 she opened a studio on Fifth Avenue between 12th and 13th streets, where she worked closely with the accompanist and composer Louis Horst, her intellectual adviser and the publisher of the journal *Dance Observer.* During the summers of 1936–41 she taught dance with Doris Humphrey, Hanya Holm, and Charles Weidman at the Bennington College School of Dance in Vermont; there she met the classically trained dancer Erick Hawkins, who became the first male member of her company. At the same time she provided choreography for several distinctly American works, including *Frontier* (1935; sets by Isamu Noguchi), *American Document* (1938; featuring Hawkins), *Letter to the World* (1940), and *Appalachian Spring* (1944; featuring Hawkins and Merce Cunningham, music by Aaron Copland), in which she explored the roots of the American cultural experience and drew on her deep interest in religion and psychology. After 1944 Graham continued to work in the three dance styles that she explored early in her career: the abstract, the mythic, and the American. She continued in particular to explore themes derived from Greek mythology and Freudian psychology. More than 40 of her dancers became choreographers and company directors, notably Hawkins, Cunningham, Sophie Maslow, and Anna Sokolow.

Graham–Windham Services to Families and Children. Child welfare organization formed in 1977 by the merger of the Graham Home and Windham Children's Services. Established in 1806 by Isabella Graham, it is the oldest nonsectarian child-care agency in the United States. It has helped an estimated 6000 children and families each year through adoption programs, foster boarding homes, group homes, family day care, preschool and day-care centers, a family service center, a mental health clinic, and a residential campus and school. In the early twenty-first century its headquarters are at 33 Irving Place.

Phyllis Barr

Gramercy Park. Neighborhood on the East Side of Manhattan, bounded to the north by 23rd Street, to the east by Third Avenue, to the south by 18th Street, and to the west by Park Avenue South. Dutch settlers once called the area Krom Moerasje (little crooked swamp); the name was changed to Gramercy by the English. The land was bought from a descendant of Peter Stuyvesant, Samuel Ruggles, who drained the swamp, laid out streets in an English style around a private park (1831; Lexington Avenue between 20th and 21st streets), and offered 66 lots for sale. The park was opened to Union soldiers during the draft riots of 1863, the only occasion when nonresidents were allowed inside. Some of the first residents included Valentine Mott, the chief medical officer of the Union army and the founder of Bellevue Hospital and New York University Medical School; George Templeton Strong; and James Harper, mayor, whose ornate "mayor's lights" still adorn his former residence at 4 Gramercy Park West. Some of the oldest luxury apartments in the city were built in 1884 at the southeast corner of the park

4 Gramercy Park West, home of Mayor James Harper from 1847 to 1869

(they were advertised as French flats to distinguish them from tenements). Residents and Republican legislators defeated several proposals by the city after 1890 to cut a road through the park, and by the 1920s many of the original townhouses had been replaced by high-rise apartment buildings. Lexington Avenue between 14th and 20th streets was renamed Irving Place for Washington Irving, who never lived in the area but often visited a nephew who lived at Lexington Avenue and 17th Street.

The neighborhood became less fashionable after the extension of the Third Avenue elevated line (26 August 1878) and the onset of the Depression in the 1930s. From the 1940s many of the remaining nineteenth-century townhouses were remodeled and converted into apartments, and several became private clubs, including 16 Gramercy Park (the Players, formed by Edwin Booth), 15 Gramercy Park (the National Arts Club, once owned by Samuel J. Tilden), and 3 Gramercy Park (the Nederlander Club). A Quaker meetinghouse on Gramercy Park South became the Brotherhood Synagogue. Many artists, writers, and performers lived in the neighborhood, including George Bellows, Robert Henri, Eugene O'Neill, O. Henry, David Graham Phillips, Ida Tarbell, Nathanael West, and Ludwig Bemelmans; other well-known residents have included Theodore Roosevelt; Eleanor Roosevelt, who was baptized at Calvary Episcopal Church at the northwestern edge of the park; Stanford White, who lived where the Gramercy Park Hotel now stands; and Elsie de Wolfe, who with White developed the field of interior design and lived in the Washington Irving house (southwest corner of 17th Street and Irving Place). The neighborhood again became fashionable from the 1970s onward into the twenty-first century; the park remains private and looks much as it did in the early nineteenth century.

Harriet Davis-Kram

Gramercy Park Hotel. Hotel located at 2 Lexington Avenue on the north side of Gramercy Park. Designed by Robert T. Lyons and built by the famous developer brothers Bing and Bing, it opened in 1925. The site had been the home of architect Stanford White. The hotel's bar was infamous as a watering hole to artists, writers, and musicians. Several notable people have been associated with the hotel, including Humphrey Bogart, who was married there; S. J. Perelman, who lived there; and Babe Ruth, who frequented the bar. In 2003 the hotel was sold to designer Ian Schrager, who redid it with artist Julian Schnabel as a luxury boutique hotel; the lobby exhibits modern art by artists such as Andy Warhol, Jean-Michel Basquiat, and Richard Prince.

Gramercy Park Hotel, 2009

Jessica Montesano

Grand Army Plaza (i). Oval plaza constructed in 1870 by Frederick Law Olmsted and Calvert Vaux as an approach to Prospect Park in Brooklyn, which they designed. Originally called Prospect Park Plaza, it was renamed in 1926 in honor of the Civil War's Union army. The plaza is the site of a triumphal arch 80 feet (24 meters) high designed by John H. Duncan (1892). The arch is adorned with a four-horse bronze chariot group (1898) and sculptures on its southern facade (1901), both by Frederick MacMonnies. A fountain was designed by Egerton Swartwout north of the arch in 1932, and a bust of President John F. Kennedy by Neil Estern was installed in 1965. In between stands the Bailey Fountain, completed in 1932 and adorned with bronze figures of Neptune and Tritons. The perimeter of the plaza is lined with apartment buildings.

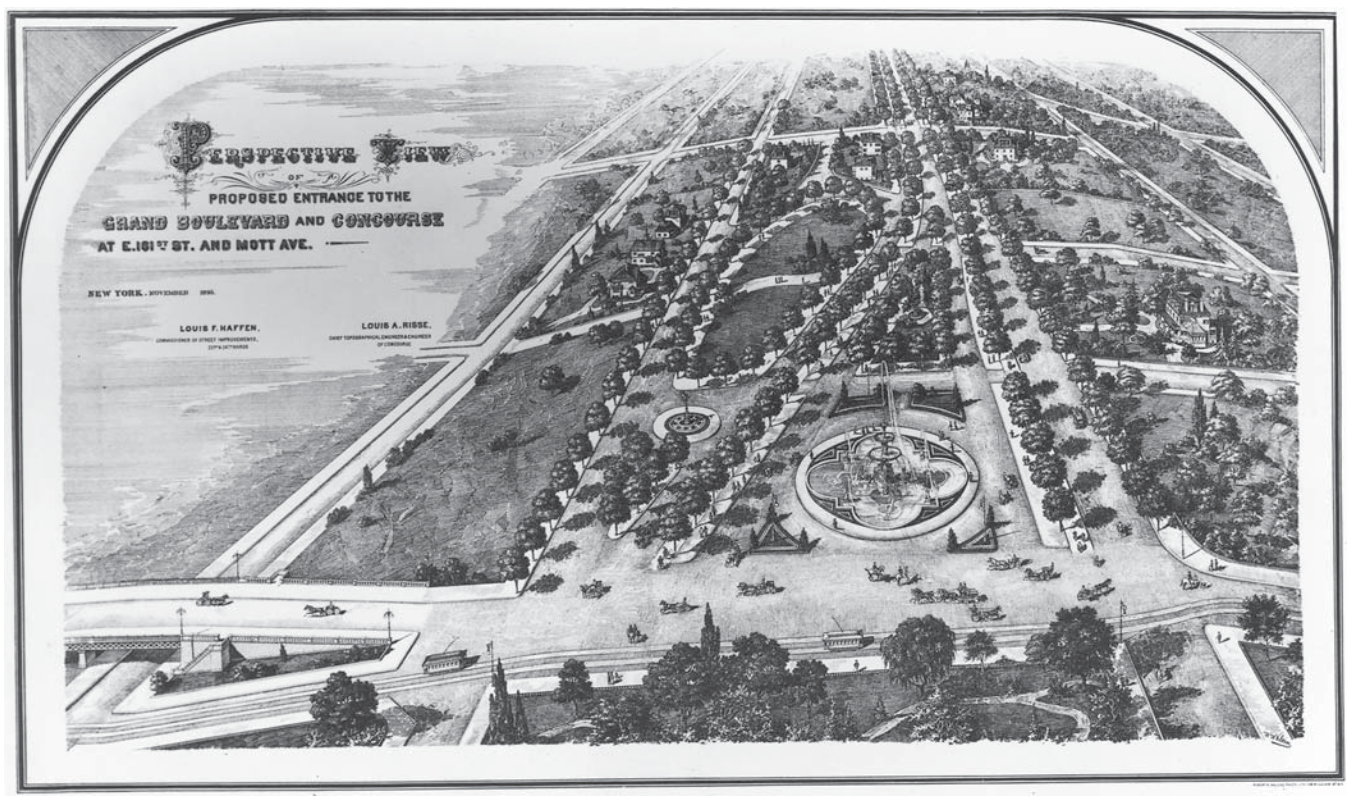
Elliott B. Nixon, Stephen Weinstein

Grand Army Plaza (ii). Plaza at the southeast corner of Central Park, between 58th and 60th streets, bisected by Central Park South. Its southern half includes the Plaza Hotel (1907). The northern half features a statue of General William T. Sherman by Augustus Saint-Gaudens (1907).

Ben Silk

Grand (Boulevard and) Concourse. Thoroughfare in the western Bronx, and by extension the streets on either side of it. It extends for 4.5 miles (7.5 kilometers) between 138th Street and Mosholu Parkway, and north of 161st Street it has 11 lanes with a total width of 182 feet (55 meters), two tree-lined dividers, and broad sidewalks. It was conceived by the engineer Louis Aloys Risse in 1870 and built between 1902 and 1909. An important innovation was the use of grade separations at the major cross streets, which allowed the traffic on the street to flow unimpeded by directing the crosstraffic beneath it through underpasses. The concourse extended only as far south as 161st Street until 1927, when it came to include a newly widened portion of Mott Avenue. It

Grand Army Plaza (i), ca *1905–10*



soon became the main parade route for the borough, the site of its government, and the axis of an important shopping and entertainment district. Elegant apartment buildings were erected that offered cross ventilation, large rooms, and uniformed door attendants and attracted the wealthiest inhabitants of the Bronx. Among those who lived in the area were Mayor Joseph V. McKee, the opera singer Roberta Peters, the popular singer Eydie Gorme, the comedian Milton Berle, the baseball players Babe Ruth and Charlie Keller, the filmmakers Stanley Kubrick and Garry and Penny Marshall, and the novelist E. L. Doctorow. After World War II the population aged; children of local residents moved to the suburbs and in time were replaced by middle-class blacks and Latin Americans. Many synagogues were converted to churches; one became the Bronx Museum of the Arts. By 1990 a perceptible number of Koreans and Cambodians had moved to the area near Fordham Road. Notable buildings along the Grand Concourse include Public School 31 (1899) at 144th Street, the Bronx General Post Office (1937) at 149th Street, the Mario Merola Bronx County Building (1934) at 161st Street, and the Edgar Allan Poe Cottage (circa 1812) at Kingsbridge Road.

Grand Central Terminal. Major railroad terminus in midtown Manhattan. From the earliest days of railroads in New York City locomotives hauled their cars as far into the city as was allowed, and with them came noise and dirt. In 1854 the Common Council forbade their operation south of 42nd Street, a boundary well north of the settled part of the city, and horses were used to haul the cars to their destinations farther downtown. By 1869 Cornelius Vanderbilt controlled all the railroads into the city, and he engaged the architect John B. Snook to design a "head house" at Fourth Avenue and 42nd Street, which opened in 1871 as Grand Central Depot. The facility was never successful: it was in a constant state of rearrangement and enlargement, trains could exit only in reverse, and despite its name the depot was really in the hinterlands, an area that the city's horsecar lines had reached only recently. Shortly after the depot was built, Vanderbilt began to lower the many tracks below street level, first in a roofed-over deep cut and then in a tunnel that began at 96th Street and fanned out at 57th Street to a width of 41 tracks on the upper level and 26 on the lower.

In 1889 the city demanded that the railroads either electrify their operations or move out

Perspective view of the proposed entrance to the Grand Boulevard and Concourse, East 161st Street and Mott Avenue, 1895

Grand Central Terminal, 1930s

Grand Central Terminal, 2009

of the city altogether. A proposal to build a new depot was advanced by William Wilgus, the chief engineer responsible for submerging the tracks and electrifying the lines as far north as Mott Haven in the Bronx. He also proposed to raise revenues by selling and leasing the air rights over the tracks, between Madison and Lexington avenues from 42nd to 50th streets, to allow for the construction of office and apartment buildings. A limited competition for the design was won by the firm of Reed and Stem, which devised a system for separating automobile, pedestrian, train, and subway traffic by using ramps to route Park Avenue around the terminal on viaducts. Whitney Warren of the architectural firm of Warren and Wetmore designed the beaux-arts facade at 42nd Street as a triumphal triple archway facing south, allowing for a dramatic approach from Park Avenue. Sculpture is integral to the design rather than ornamental: above the entrance, monumental statues of Minerva, Mercury, and Hercules in a pediment nearly 50 feet (15 meters) tall surround a clock with a diameter of 13 feet (4 meters). The interior of this terminal is dramatic: behind the main waiting room at the south entrance is the Main Concourse, a vast, vaulting space 120 feet (36 meters) wide, 375 feet (114 meters) long, and 125 feet (38 meters) high, surmounted by a blue ceiling painted to resemble a starlit sky. At the west end a grand staircase allows visitors to descend to the lower level; among the concessions there is the Oyster Bar, a popular restaurant that serves more than 1000 dozen oysters a day.

Because Grand Central Terminal is situated on a prime parcel of midtown real estate, its architectural integrity has occasionally been threatened by commercial development schemes. One advanced in 1960 would have divided the waiting room into four horizontal stories, with bowling alleys on the upper three. Soon after this proposal was put forward, Grand Central Terminal was designated a landmark. This status came to be resented by the owner, the Penn Central Railroad, because it empowered the Landmarks Preservation Commission to reject such proposals as one to build a 54-story tower over the waiting room. A suit to have the landmark status revoked failed on the grounds that the city had the right to protect its architectural heritage.

In the 1990s several major restoration projects cleaned up decades of grime from the station and revitalized it. Layers of dirt were removed from the ceiling, allowing an astrological mural originally made in 1912 and replaced in the 1930s to be seen again. More than 100 retail stores and restaurants were created. A new access area, Grand Central North, was added in 1999, connecting it to 47th and 48th streets.

Grand Central Terminal, owned by the Metropolitan Transportation Authority, has 44 platforms with 67 tracks, covering 48 acres (19.4 hectares). It has 10 underground stories with infrastructure. A planned expansion in 2011 would connect it to the Long Island Rail Road, which currently goes to Penn Station, and would add more tracks. The terminal houses the Metro-North Commuter Railroad, which connects the city to the New York counties of Westchester, Putnam, and Dutchess and Connecticut counties of Fairfield and New Haven. It also is a terminus for numerous subway lines. More than 125,000 commuters and half a million pedestrians pass through it daily.

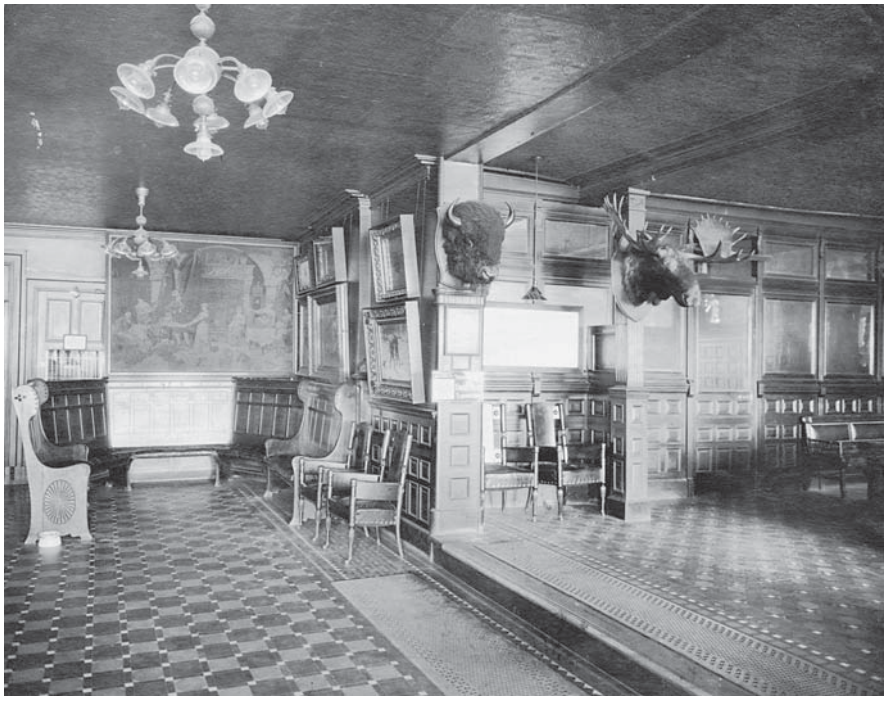
Grand Hyatt. Hotel on 42nd Street in Manhattan, immediately to the east of Grand

Central Terminal. Opened as the Hotel Commodore (1919; Warren and Wetmore, architects), it continued in operation under its original name until 1976, when co-developers Donald Trump and the Hyatt Corporation used the structural shell of the building to create the Grand Hyatt. The new hotel opened in 1980 as a luxury convention hotel with 1400 rooms. It has a facade of reflective glass sheathing and a space-frame cocktail lounge that forms a canopy over the main entrance. The hotel underwent a $65 million renovation in 2004 and 2005, which included the redesign of 1311 guestrooms; the addition of amenities such as wireless, high-speed Internet access; and the construction of several new meeting spaces, including the new Manhattan Ballroom at the lobby level.

May N. Stone

Grand Prospect Hall. Reception hall designed by Ulrich J. Huberty and built in 1892 by entrepreneur John Kolle as a "temple of music and amusement." Located at 263 Prospect Avenue in Park Slope, Brooklyn, the 140,000-square-foot (13,006-square-meter) French Renaissance–style palace is four stories high with a grand ballroom and garden space. It was the first commercial building in Brooklyn to have electric lights. Victorian society once held court there; in the early twenty-first century it can be rented for weddings and other celebrations.



Jessica Montesano

Grand Union Hotel. Hotel on the southeast corner of Park Avenue and 42nd Street. Designed in 1872 by the architect Edward Schott, its exterior had a mansard roof and reflected the Second Empire style of the Grand Central Depot across the street. The hotel was run on the European plan (in which meals are not included in the price of a room), and its restaurant became popular with politicians. The hotel closed on 2 May 1914 and was demolished for construction of the Interborough Rapid Transit subway and the Pershing Square Building.

Val Ginter

Graniteville. Neighborhood in northwestern Staten Island, lying between Port Richmond and Bulls Head and bounded to the north by Forest and East Richmond avenues, to the east by the Martin Luther King Expressway, to the south by the Staten Island Expressway, and to the west by South Avenue. Once known as Bennett's Corners and then as Fayetteville, it was renamed for quarries operated from the 1840s to about 1896 to extract trap rock from the geological formation that includes the Palisades. From about the turn of the twentieth century until the 1940s there were many Italian and Greek dairy and truck farms in the area. The largest local employer until the end of World War II was the Unexcelled Fireworks Company, which made munitions in a plant consisting of 167 buildings; the Weissglass Dairy stood at the northwestern edge of the neighborhood along Forest Avenue. The land is covered by town houses and one- and two-family houses along new streets. Moore Catholic High School stands at the southern edge of the neighborhood. Baron Hirsch Cemetery, one of two large Jewish cemeteries in the borough, contains 50,000 graves and covers 80 acres (32 hectares) of land along Richmond Avenue, the major north-south thoroughfare. Little of the original grass and marshlands remains for development or conservation.

Harlow McMillen

Interior of the Grand Union Hotel

Grant, Hugh J(ohn) (*b* New York City, 1852; *d* New York City, 3 Nov 1910). Mayor. The son of a West Side Democratic tavern keeper, he attended public schools, spent two years at Manhattan College, studied in Germany for a year when he was 16, and then returned to the city to attend St. Francis Xavier and Columbia Law School. Rising through Irish American fraternal organizations, he avoided an 1882 scandal involving bribes from streetcar operators and became the sheriff of New York County in 1885. Tammany support and Mayor Abram S. Hewitt's reputation for bigotry against Irish and other immigrants helped him win the race for mayor in 1888; he won reelection in 1890. Grant favored limited government, low taxes, and public investment in streets, sewers, water lines, and fire stations. He also sought to have the city build a harness racetrack. He did not seek reelection in 1892. Defeated by William L. Strong in an 1894 attempt to regain office and having lost control of Tammany Hall to Richard Croker, he left politics in 1897 to focus on real estate investments.

David C. Hammack

Grant, Madison (*b* New York City, 19 Nov 1865; *d* New York City, 30 May 1937). Lawyer and political activist. He attended private schools in New York City and received a BA from Yale College (1887) and an LLB from Columbia Law School (1890). He lived on Park Avenue and spent most of his life in the city, where he helped to form the New York Zoological Society (1895), of which he was secretary (1895–1924) and president (1925–37). One of the most influential nativists of his time, he sought to restrict immigration on the basis of ethnicity. Through his writings he promoted the idea that immigrants from southern Europe were inferior to those from northern and western Europe and would destroy the country by eroding cultural values and reducing national achievement; he was especially hostile toward Jews. As vice president of the Immigration Restriction League from 1922 he played an important role in the passage of the Immigration Act of 1924, which reduced the number of immigrants allowed to enter the country while increasing the proportion from northwestern Europe. Grant's published writings include *The Passing of the Great Race* (1916), *The Founders of the Republic on Immigration, Naturalization and Aliens* (with C. S. Davison, 1928), *The Alien in Our Midst* (with Davison, 1930), and *The Conquest of a Continent* (1933).

Walter Friedman

Grant, Ulysses S(impson) [Hiram Ulysses] (*b* Point Pleasant, Ohio, 27 April 1822; *d* Mount McGregor, N.Y., 23 July 1885). Commander of the Union armies in the Civil War and 18th president of the United States. He graduated from the U.S. Military Academy at West Point in 1843 and won repeated victories in the West before President Abraham Lincoln made him commander of all Union armies during the Civil War. He became the country's first full general in 1866 and secretary of war in 1867. He was elected president in 1868 and again in 1872. He moved to New York City permanently in 1881. After an initial stay in the Fifth Avenue Hotel, Grant purchased a brownstone house at 3 East 66th Street and invested his money in the banking firm of Grant and Ward, a partnership formed between Ferdinand Ward and the former president's son, Ulysses, Jr. Ward turned out to be a swindler who engaged in fraudulent practices that caused the collapse of the firm in May 1884, leaving Grant in substantial debt. Soon afterward, Grant decided to write his memoirs to support his family but several months later was diagnosed with inoperable cancer of the throat. Grant moved with his family to a cottage at Mount McGregor, New York, in the Adirondacks about five weeks before he died. He nonetheless finished his memoirs, *Personal Memoirs* (1885–86), and they remain one of the most widely acclaimed works of its genre and restored the Grant family's wealth. Grant was buried in New York City on 8 August 1885. Grant's Tomb, a national memorial at Riverside Drive and West 122nd Street, occupies a site donated by Mayor William R. Grace and houses the remains of Grant and his wife, Julia Dent Grant.

Frank Scaturro

Grant City. Neighborhood in southeastern Staten Island (2009 pop. *ca* 4800), lying at the foot of Todt Hill and bounded to the west and north by Richmond Road and Jefferson Avenue, and to the east and south by Hylan Boulevard. Until after the Civil War the area was known as Frenchtown for its French population; it was renamed for President Ulysses S. Grant by a builder, John C. Thompson. About the turn of the twentieth century hotels and picnic grounds were clustered around the station of Staten Island Rapid Transit at the center of the neighborhood. Semler's Hotel (1910) was a local landmark until it was demolished in 1965 and replaced by the Grant City Apartments, a complex of 305 units on Lincoln Avenue. Ballfields were added before World War I. Many houses in the ranch and Cape Cod styles were built after World War II; they account for much of the housing, along with older houses built after the Civil War and bungalows from the turn of the twentieth century. In the early twenty-first century Grant City remained a closely knit residential community where small family stores and businesses line the streets near the railroad station.

Harlow McMillen

Grant's Tomb. Monument near the intersection of Riverside Drive and West 122nd Street in Manhattan, the final resting place of President Ulysses S. Grant and his wife, Julia Dent Grant. As the result of an offer to the family from Mayor William R. Grace, the remains of President Grant were at first placed in a temporary vault in Riverside Park. The Grant Monument Association, formed shortly after Grant's death in 1885, raised about $600,000 from more than 90,000 donors for the construction of a permanent tomb on the site of the vault. The association adopted a design proposed by the architect John H. Duncan, which was influenced by such famous mausoleums as those of Mausolus at Halicarnassus, Hadrian, and Napoleon, as well as the Garfield Memorial. On 27 April 1897, the 75th anniversary of Grant's birth, the tomb was dedicated in a ceremony attended by his widow and President William McKinley. The state of New York declared the day a holiday, and about one million people witnessed the dedication proceedings. Julia Grant was interred beside her husband in 1902. For many years Grant's Tomb was one of the most celebrated buildings in the nation, and it remained unsurpassed in popularity among the city's attractions through World War I. The Grant Monument Association continued to administer the site until 1959, when it was taken over by the National Park Service. During the years that followed, the monument was afflicted with desecration and neglect. These conditions came to public attention during the 1990s, and the federal government conducted a restoration of the monument in time for its centennial in 1997. The monument is a neoclassical granite structure 150 feet (45 meters) tall. Among its elaborate features are Doric columns, a domed rotunda, and allegorical relief sculptures symbolizing aspects of Grant's life. On the exterior of the structure two figures representing Victory and Peace support Grant's epitaph, "Let Us Have Peace." The interior of the tomb is made of Lee and Carrara marble from Italy; within its center crypt are twin sarcophagi containing the remains of Grant and his wife. Grant is the only president buried in New York City, and his tomb is the second-largest mausoleum in the western hemisphere.

Frank J. Scaturro, *President Grant Reconsidered* (Lanham, Md.: University Press of America, 1998)

Frank Scaturro

Grapevine. Nineteenth-century tavern where the popular expression "I heard it through the grapevine" reputedly originated. Housed in a wooden 1830s structure at the corner of Sixth Avenue and West 11th Street, the Grapevine was a popular gathering place for Greenwich Village artists, actors, and politicians. The building was demolished in 1915.

Valerie Paley

graphic design. New York City became the capital of graphic design in the United States just before 1900. For many years it was virtually an anonymous activity, practiced by printers as an extra service to their customers and by art service studios. In 1914 the American Institute of Graphic Arts (AIGA) was formed in the city. The New York Art Directors Club,

Grant's Tomb (designed by John H. Duncan), 2009

formed in 1921, became the largest organization of editorial and advertising art directors in the United States. The term *commercial art* was introduced about this time to refer to a wide range of graphic arts and crafts, including typography, advertising design, and package design. In the 1950s and 1960s the field of graphic design grew with extraordinary speed, owing partly to the need of large corporations to forge distinctive identities.

In part because of its many magazines, book publishers, and advertising agencies, New York City also became the home of a large number of graphic design firms. Some of these firms offer a wide range of design services, while others specialize in such areas as corporate annual reports and retail packaging. Among the firms of longest standing are those of Milton Glaser, the Pushpin Group, Chermayeff and Geismar, Pentagram, Vignelli Associates, and Gipps, Balkind and Frankfurt; important younger firms include Smollan Carbone, Drentell Doyle, Doublespace, and Alex Isley Associates. The AIGA issues the quarterly critical journal the *AIGA Journal of Graphic Design,* and several trade publications are based in the city, notably *Print* (bimonthly), *U&lc* (Upper and lower case; published by the International Typeface Company), *Art Direction, Graphic Design U.S.A.,* and *Graphis.* Many schools and workshops in New York City offer training in the graphic arts, including the Art Students League on 57th Street, the National Academy of Design on Fifth Avenue, the Robert Blackburn Printmaking Workshop at 55 West 17th Street, the Pratt Institute in Brooklyn (offering undergraduate and graduate degrees in advertising and graphic design), the School of Visual Arts, the Parsons School of Design, Cooper Union (which houses the Herb Lubalin Study Center for training in typography), and the Fashion Institute of Technology, a branch of the State University of New York that offers courses in communication arts and advertising. Graphic design exhibitions are mounted at the Herb Lubalin Study Center and the galleries of the AIGA, the International Typeface Company, the School of Visual Arts, the Art Directors Club, the Shirley Goodman Resource Center at the Fashion Institute of Technology, the Museum of American Illustration (maintained by the Society of Illustrators), and Parsons The New School for Design.

Steven Heller

Grasmere. Neighborhood in southeastern Staten Island, bounded to the north by the Staten Island Expressway, to the east and south by Hylan Boulevard, and to the west by the tracks of Staten Island Rapid Transit. It lies at the southern end of Clove Valley and is bisected from north to south by Clove Road and from west to east by Fingerboard Road. During the nineteenth century the area was the site of Sir Roderick Cameron's estate, and it was named for the village in the Lake District in England. The Durkee Manufacturing Company made marine hardware from the 1920s to 1951 in a plant on Clove Road. An estate of the Goggi family on Hylan Boulevard became the Academy of St. Dorothy in 1932. Two privately owned ponds are surrounded by houses on rolling land: Brady's Pond, the only freshwater pond within the city limits fit for swimming, and Cameron's Pond. Nearby, the Stonegate Condominiums were built on Fingerboard Road, as were the Elb Gardens apartments on Clove Road. The *Staten Island Advance,* the only daily newspaper in the borough, opened a publishing plant on Fingerboard Road in 1960. The Carmelite Sisters in 1973 opened the Carmel Nursing Home, the only Roman Catholic nursing home in the borough. Staten Island Rapid Transit has a station in Grasmere. In the early twenty-first century the neighborhood had a growing condominium market that was supported by the area's close proximity to the Verrazano–Narrows Bridge, which links Staten Island to the rest of the city.

Harlow McMillen

Grasso, Dick (Richard A.) (*b* Jackson Heights, N.Y., 1946). Businessman. Chairman and chief executive of the New York Stock Exchange from 1995 to 2003, he was involved in a 1999 controversy when he met at the exchange with members of the Revolutionary Armed Forces of Colombia (FARC), which is considered a terrorist organization. In 2003 the exchange board voted him out of his position after another controversy over his nearly $190 million compensation package. In 2004 Attorney General Eliot Spitzer sued him for repayment of the package; four years later, the appellate court ruled in Grasso's favor.

Jessica Montesano

Gravesend. Neighborhood in southern Brooklyn (2000 pop. 77,691), adjacent to Bensonhurst, Coney Island, and Sheepshead Bay; bounded (roughly) on the north by Avenue P, the east by Coney Island Avenue, the south by the Belt Parkway, and the west by Stillwell Avenue. One of the six original towns of Kings County, Gravesend was the only colonial American settlement founded by a woman, Lady Deborah Moody, who in 1643 led a group of English religious dissenters to the community she planned around a square bisected by McDonald Avenue and Gravesend Neck Road. A formal patent dated 19 December 1645 granted the shareholders autonomy to govern and worship; Gravesend thus became an early haven for persecuted Quakers. Although Gravesend is home to the oldest surviving cemetery in New York City (established circa 1650), its name has no relation to burial grounds: either Lady Moody named it for Gravesend, England (which means "at the end of the grove"), or Willem Kieft, director general of New Netherland when the town was founded, suggested it be named for his birthplace, s'Gravenzande (which means "count's strand" in Dutch).

Gravesend, 2009

The area remained mostly farmland until the period 1862–79, when five steam railroads (later electrified) opened to serve nearby racetracks and the resort hotels on Coney Island. The city of Brooklyn annexed Gravesend in 1894, which led to the extension of streets and public amenities; this in turn spurred drastic development. The bulk of the neighborhood's building stock was completed by 1930, and until the early 1990s it housed a population almost exclusively Italian American. Recent immigrants have come from Mexico, Central and South America, Asia, the Middle East, and countries of the former Soviet Union. A large Syrian Jewish enclave is centered on Ocean Parkway.

Joseph Ditta

Gray, Spalding (*b* Barrington, R.I., 5 June 1941; *d* New York City, *ca* 10 Jan 2004). Actor, screenwriter, and playwright. After studying literature at Emerson College in Boston, he moved to New York City in 1967 to work in underground theater. Along with Elizabeth LeCompte he created a trilogy of semiautobiographical plays called *Three Places in Rhode Island,* which ran at the Performing Garage from 1975 to 1978. Out of this process Gray began to develop solo monologues, the first of which was *Sex and Death to the Age 14.* His collaboration with LeCompte led to their founding in 1975 the Wooster Group, an experimental theater company. Gray appeared in several movies; his experiences in Southeast Asia working on the 1984 film *The Killing Fields* inspired the monologue *Swimming to Cambodia* (1984), which won an Obie Award and was later made into a 1987 film with the same title. In June 2001 he suffered severe injuries in a car crash. After the accident Gray experienced bouts of depression, and in January 2004 he disappeared. On 7 March 2004 police pulled his body from the East River; investigators determined his death was most likely a suicide. In 2005 his final monologue

was published with the title *Life Interrupted: The Unfinished Monologue.*

Sarah Wansley

Graziano, Rocky [Barbella, Thomas Rocco] (*b* New York City, 1 Jan 1921; *d* New York City, 22 May 1990). Boxer. He grew up on the Lower East Side and began boxing professionally in 1942 while absent without official leave from the army. Graziano's boxing style was that of a street brawler, and his pugnacious, hard-hitting technique and ability to take a punch captivated the public and made him one of the most popular champions ever. He is best known for his three middleweight championship fights with Tony Zale. He lost the first bout held at Yankee Stadium in 1946, won the rematch in Chicago on 16 July 1947, and lost the rubber match in 1948. After retiring in 1952 with a record of 67 wins, 10 losses, and six draws, he became a television comedian and wrote his autobiography, *Somebody Up There Likes Me*. In 1991 he was inducted into the International Boxing Hall of Fame.

Steven A. Riess

Great Atlantic and Pacific Tea Company [A&P]. Firm of food retailers. Formed as a partnership in 1859, it initially had one tea shop on Vesey Street but later became the first major chain of grocery stores in the country and the largest enterprise of its kind in the world, operating more than 15,000 stores by 1929. For many years it was controlled by the Hartford family, and although it declined somewhat after World War II, it remained the largest retailing firm in the country until 1965. After suffering a number of setbacks in the late 1960s and 1970s, it was bought in 1979 by a German firm, the Tengelmann Group. In 1986 it bought the Shopwell–Food Emporium and Waldbaum grocery chains. In the mid-1990s A&P was the largest grocery chain in New York City and the fourth-largest in the country. A&P was losing money in the late 1990s and turned unprofitable at the turn of the twenty-first century. In 2008 A&P bought Pathmark, which made it the number-two grocery retailer in the New York City metropolitan area as well as in Philadelphia.

Greater Bethel African Methodist Episcopal Church. Denominational church commissioned in 1819 by Richard Allen, founder of the Bethel African Methodist Episcopal (AME) church in Philadelphia. After the first annual AME conference in New York (1820), William Lambert, former trustee with AME Zion in New York City, formed Greater Bethel AME in a converted schoolhouse in lower Manhattan. Greater Bethel and other AME churches expanded rapidly over the next few decades, and with the advent of the Civil War they provided direct aid to southern blacks, funded educational facilities, and established missions in the Caribbean and Africa. The church moved to the southeast corner of Malcolm X Boulevard and West 123rd Street in 1901 into the landmarked building that formerly housed the Harlem Library (1981–92; Edgar K. Bourne, architect).

Emilyn L. Brown

Greater Central Baptist Church. Located at 2152 Fifth Avenue, it ministers to a well-established, largely African American congregation in central Harlem.

Sharon Wilkins

Greater New York. Term that had a specific meaning in the late nineteenth century and gradually acquired a more general one. In the years before and immediately after the consolidation of New York City in 1898, it referred to the five boroughs of the city as newly defined: the Bronx, Brooklyn, Manhattan, Queens, and Staten Island. Over the years the term came to acquire a broader sense, connoting also the nearby suburbs of Westchester County, Long Island, New Jersey, and Connecticut. Greater New York was defined as a

Front (left) and back (right) of promotional material for the Great Atlantic and Pacific Tea Company

31-county region in three states with a population of more than 22 million as of 2000.

Kenneth T. Jackson

Greater New York Hospital Association.

Nonprofit organization formed in 1904 as an advocacy group for hospital superintendents in New York City. After it absorbed the Hospital Conference of the City of New York and the Hospital Council of Brooklyn in 1937 it became the sole voice of nonprofit hospitals in the city. Among its first projects in this new role was an effort to obtain more funds from the city to provide care for indigent patients. In the twenty-first century it represents nearly 300 hospitals in the metropolitan area and supports research and education, particularly in the areas of finance, health economics, and organization and management.

Brian Greenberg

Greater New York Savings Bank. Savings bank incorporated in Brooklyn in May 1897 by a group of business leaders led by Charles J. Obermayer. Its name referred to the forthcoming consolidation of New York City. The bank first occupied quarters in Park Slope at Seventh Avenue and First Street, which it soon outgrew. It merged with the Guardian Savings Bank in 1908, City Savings Bank of Brooklyn in 1964, and Flatbush Savings Bank in 1970. It became publicly owned in 1987 and later opened four branches on Long Island. It was located at One Penn Plaza in 1997, when it was purchased for $293 million by the Astoria Federal Savings and Loan Association.

Stephen Weinstein

Great Fire. The fire of 16–17 December 1835 caused more damage to property than any other event in the history of New York City. It destroyed more than 20 square blocks of mostly wooden buildings bounded by Wall and Broad streets, Coenties Slip, and the East River. Every fire company in Manhattan and many from Brooklyn, Long Island, New Jersey, and other areas responded to the alarm, but their efforts were hampered by inadequate water supplies, primitive equipment, and bitterly cold temperatures that froze water pipes and leather fire hoses. Most of the fire was subdued on 18 December by 1900 firefighters, including 400 from Philadelphia. Losses in the pier, warehouse, and commercial districts were estimated at $20 million to $40 million; the volume of claims forced 23 of the 26 fire insurance companies in the city to declare bankruptcy. The Great Fire led to demands for the reorganization of the volunteer force or its replacement with a paid one, and for the introduction of horse-drawn engines equipped with steam pumps. The cause of the fire was never determined.

Donald J. Cannon

Great Kill. Name used until the 1880s for a neighborhood in Manhattan, bounded to the north by 57th Street, to the east by Sixth Avenue, to the south by 35th Street, and to the west by the Hudson River. It was named for a river of the same name that flowed from the Hudson into Manhattan along what is now West 41st Street. The Dutch word *kille* means riverbed. The river running through the area was 4640 meters long. From the early eighteenth century to the late nineteenth the area was the site of the Great Kill Farm, a large estate owned by various members of the Hopper family. William F. Havemeyer lived near what is now Columbus Circle during the 1850s and 1860s. By the 1880s the Great Kill had been filled in and apartment buildings had replaced many houses.

James Bradley

Great Kills. Neighborhood in southeastern Staten Island (2009 pop. *ca* 26,000), occupying 2.5 square miles (6.5 square kilometers) bounded to the north by Arthur Kill Road, to the east by Corbin Avenue, to the south by Great Kills Harbor, and to the west by Robinson Avenue. Great Kills Park and Crookes

View of the Great Fire of 1835 from the top of the Bank of America, Wall and William streets

Point form a hook of land that shields most of the harbor from the Atlantic Ocean. The shoreline area was known as Clarendon and the inland area as Newtown until the two were combined under the name Gifford's, after the local commissioner and surveyor of roads Daniel Gifford; the current name was adopted in 1865. The neighborhood was relatively unaffected by the opening in 1964 of the Verrazano–Narrows Bridge and remains spacious, with mostly middle- and upper-middle-class homes. Sycamore Street and its environs are covered by zoning laws that limit the size of new buildings and the construction of town houses. Amboy Road is a main commercial street, with many restaurants and stores.

Stanford M. Forrester

Great Migration. Long-term movement of blacks from the South to the urban North. It transformed New York City and other northern cities between 1900 and the mid-twentieth century. Earlier, relatively small groups of blacks had settled in southern Manhattan and in midtown in neighborhoods such as the Tenderloin district, San Juan Hill, and Hell's Kitchen. Beginning in the 1890s, however, they began moving north in larger numbers, and in Manhattan they soon concentrated in west and central Harlem, moving the city's black population from 60,666 in 1900 to approximately 327,000 by 1930. While southerners made up most of the migrants, the islands of the Caribbean also contributed to the growth of New York City's black population, especially the British islands of Barbados, Jamaica, and Trinidad, and in 1930 one-sixth of the city's black population was foreign born.

By 1905 black migrants began to settle in Harlem, which offered a soft housing market in an uptown neighborhood designed and built for middle-class whites. Over the next 20 years the existing black population joined thousands of newcomers in Harlem, which became the nation's largest black urban center and its most famous cultural mecca. Other neighborhoods in the southern Bronx and the Bedford–Stuyvesant section of Brooklyn also opened up to black migrants. What had been in the nineteenth century a largely marginalized population in New York City emerged by the 1930s as a powerful force in the city's political, economic, and cultural life.

Gilbert Osofsky, *Harlem: The Making of a Ghetto, Negro New York, 1890–1930* (New York: Harper, 1963); James N. Gregory, *The Southern Diaspora: How the Great Migrations of Black and White Southerners Transformed America* (Chapel Hill: University of North Carolina Press, 2005)

Jared Day

Great North Side. See North Side.

Greatorex [née Pratt]**, Eliza** (*b* Manor Hamilton, Ireland, 25 Dec 1820; *d* Paris, 9 Feb 1897). Painter and etcher. She moved to New York City about 1840 and soon after married the musician Henry W. Greatorex. After his death in 1858 she began to produce oil paintings, drawings, and etchings and became known for scenes of New York City. One of her most successful series of etchings was *Old New York from the Battery to Bloomingdale* (1875). In 1869 she became the first woman elected an associate of the National Academy of Design.

Wendy Shadwell

Great Road. See Boston Post Road.

Great Square. See Delancey Square.

Great Trees. Unusually beautiful, strange, or old trees nominated by city residents. The first Great Tree search was conducted by the Department of Parks and Recreation in 1985. An updated guide was published in 2000 that included 105 specimens, such as a 150-foot tall Tulip tree in Riverdale with a room-sized hollow space in its trunk.

Kate Lauber

Greeks. New York City is the home of one of the largest Greek communities in North America. The first Greek immigrant to New York City on record was Basil Constantin, who settled in the city in July 1844. By 1855 several Greek merchants in the city imported currants and exported cotton and wheat as part of international trading firms. They also acted as representatives of the Greek government: Demetrius N. Botassi, who moved to New York City in 1856, was the Greek consul general for more than 58 years. Perhaps the first Greek student in New York City was Christodoulos M. L. Evangelides, who graduated from Columbia College in 1836; welcomed into the homes of prominent New Yorkers, he was the subject of a poem by William Cullen Bryant. In 1857 the Peleponnesos opened as the first Greek restaurant in the city and the forerunner of a business in which thousands of Greek immigrants eventually distinguished themselves. In 1880 the Greek population of the city was nevertheless only 69. The first of many Greek flower shops opened in 1885.

Until about 1910 most Greek immigrants were men from rural areas. Those who were married sent for their wives and children from Greece when they felt financially secure; the unmarried often brought brides back from Greece. Some young Greek boys seeking to immigrate to the United States fell victim to an exploitative practice similar to that maintained by the Italian *padrones*: systematically recruited by go-betweens in Greece who arranged for their passage in return for a period of work as bootblacks or peddlers, once in the United States young Greeks were often crowded into unsanitary living conditions and forced to work long hours at low wages in order to discharge their obligation.

Strong family ties, fervent Greek nationalism, hard work, and upward mobility became characteristic of Greek immigrants of New York City. They worked at the docks, sold flowers and fruit, and shined shoes. Their community was concentrated in lower Manhattan around Madison and Fulton Streets, where men shared single rooms. Greeks entered the American middle class rapidly; for the most part they did not choose careers as wage earners but instead quickly sought to open shops or buy pushcarts. In 1873 a former sailor named Hatzikiris saved enough money to form the Greek-American Confectionery Company, which eventually supplied candy to retailers throughout the East Coast. Worsening economic conditions in Greece caused the number of immigrants to increase sharply after 1891: there were 15,979 Greek immigrants to the United States between 1890 and 1900, of whom at least 1309 settled in New York City, and by some estimates nearly one in four Greek males between ages 15 and 45 immigrated to the United States between 1900 and 1915. In 1891 about 450 members of the Brotherhood of Athena (the first Greek fraternal society in the city) raised funds to establish the Church of the Holy Trinity, the first Greek Orthodox church in the city and only the third in the United States. Through the efforts of Solon Vlasto, president of the Brotherhood of Athena, on 6 April 1893 the Greek flag was flown in honor of Greek Independence Day over City Hall and over Reiner Hall (475 Pearl Street), from which a crowd of 300 Greeks marched to Broadway by way of Chambers Street. This was the beginning of the grand Greek Independence Day Parade, which has become an annual event along Fifth Avenue and was televised, live, for the first time in 2007. Vlasto also launched the Greek-language newspaper *Atlantis* in 1894 (it began daily publication in 1904 and remained in operation until 1972), which maintained a politically conservative stance to which the *National Herald* offered a liberal alternative from 1915. From 1904 a number of shipping lines scheduled service from the southern Greek port of Patras to New York City.

A survey of Manhattan businesses owned by Greeks in 1909 recorded 151 bootblack parlors, 113 florists, 107 lunchrooms and restaurants, 70 confectioneries, 62 retail fruit stores, and 11 wholesale produce dealers. In 1911 there were at least 24 Greek fraternal organizations in the city, and the first Greek-language parochial school opened in the Bronx. By one estimate the Greek population of New York City was 20,000 in 1913; in 1920 the figure for the United States was more than 400,000. Unlike other immigrants the Greeks did not live in concentrated ethnic quarters or ghettos but were scattered throughout the

boroughs, with some areas of concentration near the original settlement at Madison Street on the Lower East Side, along Sixth Avenue in the West 30s, along Second and Third avenues in the 20s and 30s, and in Brooklyn. After World War I most Greek immigrants settled along Eighth Avenue between 14th and 45th streets. The English language spoken in the city combined with the Greek language of the immigrants to produce something of a dialect during the period of mass immigration. Early Greek-language films and sound recordings were made in New York City, and radio programs were first broadcast in the 1930s.

Like other immigrants from southern Europe, Greek Americans suffered from the nativist movements of the interwar period. Their long Greek names and heavily accented English made them identifiable targets for employment discrimination and other forms of prejudice. Greek business owners were hurt when their competitors spread rumors accusing them of dishonesty and of operating establishments with unsanitary conditions. The Greeks of New York City fought back through their fraternal and business organizations, stressing to their members the importance of assimilation, American values, and U.S. citizenship. Greek immigrants enrolled in English-language and civics courses in record numbers so that they might send for relatives still in Greece. In New York City in the 1920s Greeks joined the fur and hotel workers' unions in significant numbers and became active in the labor movement. The Depression years were the high points of Greek American labor and communist activity, an activity that steadily declined after World War II. The federal census of 1940 recorded 53,300 Greek Americans living in New York City, of whom 53.6 percent had been born in Greece. Between 1948 and 1965 special refugee legislation allowed about 70,000 Greeks to enter the United States, supplemented by thousands of professionals seeking higher education or having a specialty that was in demand. In New York City, unlike in other American cities, immigrants continued to outnumber the children of immigrants. The steady flow of new immigrants strengthened the ethnic character of the community but did not weaken the tendency toward assimilation. The Maidman Playhouse Off-Broadway became the first Greek theater in New York City in 1963. Between 1966 and 1971 about 15,000 Greek immigrants settled in the United States each year under new legislation that favored prospective immigrants with relatives already living in the United States. The number eventually stabilized at about 9000 a year and remained at this level to the end of the 1980s. Although a large number of Greeks also moved illegally to New York City during this period, most eventually found their way into the mainstream and became productive citizens.

After 1965 Astoria in Queens became the dominant center of Greek immigrant settlement in New York City and the home of the largest number of Greek-owned shops and community organizations, including a Greek-American Homeowners Association. A sizable number of Greek Americans also settled in Washington Heights in Manhattan and Bay Ridge in Brooklyn. In all these neighborhoods Greek immigrants often bought two-family houses with apartments that they could rent out to tenants. Immigration in the 1970s and 1980s differed in several important respects from that of earlier years: entire families often immigrated together, and immigrants were better educated, better off financially, and more familiar with urban life than their forerunners had been. Many Greek immigrants opened restaurants offering Greek food and music aimed at customers who were not Greeks but rather members of other ethnic groups. They also popularized the gyro sandwich, which found its way into restaurants throughout the city. By the 1990s few Greek immigrants Anglicized their names. Increased opportunity and a higher standard of living in Greece decreased the number of immigrants to the United States during the late 1980s, a trend clearly in evidence in Astoria. Many children of older immigrants left New York City for the suburbs of Long Island, where Greek churches reported marked increases in membership.

Greek organizations in New York City remained dedicated to fraternal, professional, educational, social, and religious purposes. The Hellenic American Neighborhood Action Committee (1972) provides services to youth, immigrants, and the elderly, including health services, employment counseling, family counseling, and English-language instruction; it receives public funds and maintains offices throughout the city. More than 100 hometown and regional organizations maintain ties to a particular Greek village or region and distribute newspapers and newsletters throughout the country. New York City is also the headquarters of the Greek Archdiocese of North and South America. In addition to the *National Herald,* now the only Greek-language daily newspaper with a national circulation, there are several local Greek weeklies and the monthly Greek-language magazine *Nea Iorke* (1947). New York City remains a capital for the production of Greek films, music recordings, and radio and television programs. In politics, history was made in 2000 with the election of Michael N. Gianaris to the New York State Assembly 36th district, which includes Astoria. Although George Delis had been appointed district manager of Community Board One (one of 59 community boards, it is involved in land use, budgeting, and service deliveries) in 1977 and held this position for 30 years, the Gianaris race was the first time that a Greek American was elected to public office in New York City.

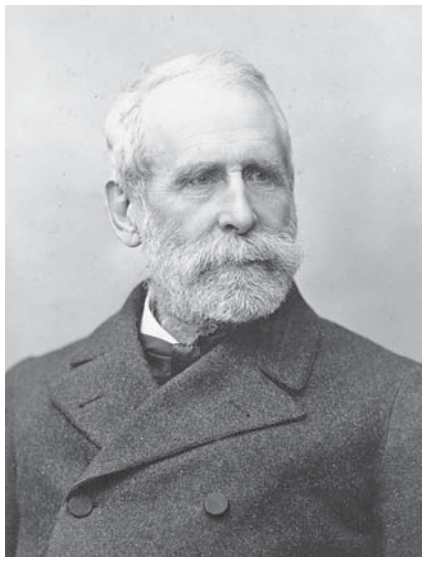
Constantine G. Hatzidimitriou

Greeley, Horace (*b* Amherst, N.H., 3 Feb 1811; *d* Pleasantville, N.Y., 29 Nov 1872). Newspaper editor and political leader. He moved to New York City in 1831 and took lodgings at 168 West Street in Greenwich Village, where he lived until 1832. He began his career as an editor for the *New Yorker* in 1834 but soon turned to political pursuits. At the request of such Whig leaders as Thurlow Weed, in 1838 he began to edit the *Jeffersonian,* a weekly newspaper in Albany, New York. He then edited the *Log Cabin,* the leading Whig newspaper of the presidential campaign of 1840. In 1841 he launched the *New York Tribune,* the first daily Whig newspaper in New York City. Its editorial and financial success enabled Greeley to influence public opinion nationwide and disseminate his political views, which were an amalgam of Whig tenets and social radicalism. He was a staunch advocate of protectionism, abolitionism, and the Homestead Act. He also called for reform at the local level, and his social and political activism was linked to his experiences in the city. He lived at 63 Barclay Street during 1842–43, in a house on the Upper East Side between 48th and 49th streets from 1844 to 1850, and at 35 East 19th Street from 1850 to 1853. His opposition to nativism threw him into conflict with the conservative faction of the city's Whig organization. The poverty and suffering that he saw aroused his sympathy for the plight of laborers, leading him to endorse such measures as workers' cooperatives and unions, the 10-hour workday, and Associationism, an American version of Fourierism.



As the Civil War undermined his credibility, he was criticized especially for hesitating to support President Abraham Lincoln's reelection in 1864 and for pursuing peace activities during the last two years of the war. He gradually lost control of the *Tribune,* and his influence in national politics declined as competition from other newspapers increased. In 1872 he received the presidential nomination of the Liberal Republicans and was soundly defeated by General Ulysses S. Grant after a vituperative and abusive campaign. He returned to the *Tribune,* of which he had only nominal control, and died shortly afterward at a sanatorium. Many prominent political figures, including Grant and Salmon P. Chase,

attended his funeral in New York City. Statues of Greeley stand in Herald Square and outside City Hall, as well as in suburban Chappaqua in Westchester County, where he maintained a weekend and summer home.

Eileen K. Cheng

Green, Andrew Haswell (*b* Worcester, Mass., 6 Oct 1820; *d* New York City, 13 Nov 1903). Lawyer, public official, and preservationist. Admitted to the bar in 1844, he practiced law with Samuel J. Tilden. He served on the Board of Education for six years beginning in 1855 (including three as president) and was president and comptroller of the Central Park Commission from 1857 until 1871 (when he assumed emergency duties as city comptroller during a fiscal and political crisis that was occasioned by the machinations of William M. "Boss" Tweed and that eventually led to Tweed's imprisonment). It was largely at Green's initiative that the state legislature granted to the commission the authority to revise the plan of the city west and north of the park. In 1868 he recommended in a report issued by the commission that the many municipalities and unincorporated areas in southern Westchester, Kings, Queens, and Richmond counties be consolidated with Manhattan to form a single municipality comprising what are now the five boroughs. After making many requests to the legislature over the following 20 years, he was appointed president of the Consolidation Inquiry Committee, and as a member of a new commission consisting principally of the mayors of the affected municipalities he helped to draft the Consolidation Law in 1895, which was enacted in 1897 and took effect on 1 January of the following year. Although best known as the father of consolidation he also played an important role in the formation of the New York Public Library, chartered in 1895 when the library bequeathed by Tilden was combined with the existing Astor and Lenox libraries: as an executor of Tilden's estate he negotiated a settlement with the heirs according to which the new institution received $2 million, and he successfully argued that the new library should have a circulation department in addition to a reference department. He remained a trustee of the library to the end of his life. As a preservationist he worked to safeguard City Hall, the Palisades, and Niagara Falls; was a commissioner of the Niagara Reservation during its first 20 years (the last 15 as its chairman); and persuaded the state legislature in 1895 to form the American Scenic and Historic Preservation Society, which he later led. He was fatally wounded by a deranged gunman at Park Avenue and 40th Street.

Seymour Durst

Green [née Robinson]**, Hetty** [Henrietta Howland] (*b* New Bedford, Mass., 21 Nov 1834; *d* New York City, 3 July 1916). Financier. The only child of a wealthy New Bedford whaling family, she was taught business and finance by her father and grandfather from an early age. In 1865 her father and maternal aunt died, leaving Green an inheritance of nearly $10 million, some of which she did not receive until the resolution of a trial in 1871 concerning her alleged falsification of her aunt's will, a battle that she eventually lost after five years in court. Green lived in and around New York City and spent her professional life managing and increasing this inheritance, making herself almost certainly the wealthiest woman in the United States. She invested millions in real estate and corporate and municipal bonds, established herself as a money lender, and acquired vast property holdings when loans failed to be repaid. Green added to her fortune in the panic of 1907, lending to corporations when banks all but stopped making loans. She received widespread media coverage; newspapers reported changes in her interest rates and published editorials about her. The majority of this coverage was critical; newspapers called Green the "Witch of Wall Street" and often described her as greedy and stingy. She is remembered as much for these qualities as for her financial prowess; the *Guinness Book of World Records* declared her the "World's Greatest Miser." Indeed, she and her two children moved between boarding houses in New York and New Jersey and received medical aid from free clinics rather than pay for health care. Unlike her fellow Gilded Age tycoons, Green never publicly donated money to charity. She left her family an estate valued at more than $100 million upon her death.

Ben Silk

Greenbelt. Group of seven public parks in Staten Island, covering about 2500 acres (1000 hectares) near the center of the borough. The land was acquired by the city in stages beginning in 1964. Robert Moses planned to clear it to make way for a freeway between the Outerbridge Crossing and the Verazzano–Narrows Bridge. In 1982 the city formally designated the park under its current name. The park is primarily a nature preserve that supports a large number of plant and animal species, including more than 50 species of birds. It has about 28 miles (45 kilometers) of trails. Beneath its upland hills, near the entrance of Reed's Basket Willow Swamp Park, is an ancient formation of serpentinite bedrock that is covered by stones, boulders, clay, and sand left by the Wisconsin glacier. The Greenbelt offers programs in environmental science and is a popular venue for hiking and bird-watching.

Ben Silk

Greenberg, Clement (*b* New York City, 16 Jan 1909; *d* New York City, 7 May 1994). Art critic. Born in the Bronx, he attended the Art Students League in 1925 before obtaining a bachelor's degree from Syracuse University; from 1936 he worked as a civil servant in New York City. He began writing art criticism for the *Partisan Review,* where he was editor from 1940 to 1942 and published his seminal pieces "Avant-Garde and Kitsch" (1939) and "'American Type' Painting" (1955). From 1942 to 1949 he was art critic for the *Nation;* he also wrote for *Arts Digest* and the *New Leader* and was an editor at *Contemporary Jewish Record* (later *Commentary*) from 1944 to 1957. His relationship with the *Nation* soured after he wrote a letter accusing editor Julio Alvarez del Vayo of writing Soviet propaganda; editor-in-chief Freda Kirchwey refused to print the accusation, and the *New Leader* ran the letter instead, resulting in a libel suit. Greenberg was known for his support of abstract expressionists in New York City, including Jackson Pollock and Barnett Newman, and for his theory of modernism, which advocated the precedence of formal elements such as colors and shapes over representational subjects. He became one of the most influential postwar American art critics; he wrote the monographs *Joan Miró* (1948), *Matisse* (1953), and *Hans Hofmann* (1961) and published an anthology of his criticism, *Art and Culture* (1961). In the late 1960s Greenberg's ideas fell out of fashion. Although he never regained the dominance he once held over the art

world, his criticism remained significant into the early twenty-first century. *Collected Essays and Criticism,* a four-volume compilation of his work, was published from 1986 to 1993.

Kate Lauber

Green Book. Pocket-sized, paperback directory published annually by the New York City's Department of Citywide Administrative Services. It was first published in 1918 and was known as the Green Book because of the color of its cover; it became officially known as the Green Book in 1984. In more than 500 pages it lists addresses and telephone numbers of officials and government agencies; describes commissions, boards, committees of the City Council, terms of office, departmental responsibilities, and court jurisdictions; and provides a brief chronology of important dates in the city's history, as well as such facts about the city as the assessed value of its property and a timetable for its budget.

Eric Wm. Allison

green buildings. Buildings that use more resource-efficient and sustainable modes of construction, maintenance, and operation. New York City's first comprehensive green building project was a series of renovations to the historic Schermerhorn Building at 380 Lafayette Street in 1992. The Department of Design and Construction (DDC) formed the Office of Sustainable Design (OSD) in 1997. The city's first green construction project was a renovation of the Natural Resources Defense Council building in 1998. The next year, 4 Times Square, developed by the Durst Corporation and designed by Fox and Fowle architects, became the first green skyscraper in North America. That same year the OSD published DDC's *High Performance Building Guidelines,* which helped introduce sustainable design to the entire city. The planned Freedom Tower; World Trade Center Office Towers 2, 3, and 4; and World Trade Center Memorial and Memorial Museum are set to achieve Leadership in Energy and Environmental Design (LEED, the Green Building Rating System) Gold certification. In 2005 the city enacted Local Law 86, requiring most city-owned and city-funded buildings to achieve LEED Silver certification. As of 2010 New York City maintained dozens of residential, commercial, and educational green buildings.

Jessica Montesano

Greenfield. Name applied to Parkville in Brooklyn until 1870. The opening of the Coney Island Plank Road between Brooklyn and Coney Island in 1850 led to the development of the area in the following year, along with that of the adjacent neighborhood of Windsor Terrace. The land was purchased in 1851 and 1852 from the Tredwell and Ditmas families by the United Freeman's Association (freed slaves) and totaled about 114 acres (46 hectares). William Taylor built the first house in the area on Foster Avenue in 1852. Streets were laid out at an angle to the north-south grid; the first houses were built in 1853. The oldest section lies between Windsor Terrace and Kensington and consists mainly of frame houses and six-story apartment buildings constructed in the early twentieth century.

Stephen Weinstein

Greenfield, Elizabeth Taylor (*b* Natchez, Miss., ?1817; *d* Philadelphia, 31 March 1876). Classical musician. Born into slavery, she became a prominent, and most likely the first, African American singer to appear on the classical music stage in New York City, where she made her debut at Metropolitan Hall on 31 March 1853. Dubbed the "Black Swan" by journalists, she was nearly laughed off the stage by a hostile and outraged white audience, who were prevented from rioting only by the presence of a massive turnout of police. Her insistence upon performing in a hall where "colored" people were not allowed in turn evoked public criticism from a group of African American clergymen, who asked that she perform again free for black music lovers who had been excluded. Reviews, generally unfavorable, focused on the unusually broad range of her untrained voice, which covered more than three octaves. Reviewers' primary objection was to the lower notes, which were found "unfeminine." Greenfield went to England for more training but ran out of money and had to return to the United States. She opened a studio in Philadelphia, where she was active in the local music scene until her death.

A Brief Memoir of the "Black Swan," Miss Elizabeth Greenfield, the American Vocalist (London: 1853)

Jean Ashton

Greenmarket. Farmers' markets program run by New York City's Council on the Environment operating in each of the five boroughs. The first two markets opened in 1976 at 59th Street and Second Avenue and at Union Square Park on 14th Street and Broadway. During the 1980s Union Square Park was refurbished with the market as its focal point, making it one of the most recognizable markets of the initiative, a distinction it retained in the early twenty-first century, when the program operated 45 markets citywide, including 27 in Manhattan and 10 in Brooklyn. The market at Union Square attracts thousands of customers daily and is open year round. Some markets operate seasonally or only one day per week with low volume. All the vendors are producers of their own farmed goods.

David White

Greenpoint. Neighborhood in northwestern Brooklyn covering a triangular parcel of 946 acres (383 hectares) and bounded to the north and east by Newtown Creek, to the south by the Brooklyn–Queens Expressway and North Seventh Street, and to the west by the East River. The Dutch acquired the area in 1638 from Keshaechqueren Indians and named it for a grassy expanse that extended into the East River. By the early nineteenth century it was a farming area sparsely populated by the descendants of Pieter Praa, a Dutch Huguenot. Neziah Bliss, an ironworker who moved to the area in 1832, soon surveyed lots and in 1838 opened a turnpike to Astoria and Williamsburgh. Between 1840 and 1860 the neighborhood became an industrial center. Two ferry lines during the 1850s offered the first convenient access to the East Side of Manhattan. Flourishing industries included printing, pottery, petroleum and gas refining,

Greenpoint, 2009

glassmaking, and iron making. Shipbuilding developed along the East River: leading firms included the Continental Iron Works, which built the ironclad ship the *Monitor* of Civil War fame, and the Astral Oil Works, founded by Charles Pratt and merged with the Standard Oil Company in 1874. Streets were named for people, places, and items important to industry. Most of the population was Dutch, English, or Irish until the 1880s, when immigrants from Poland, Russia, and later Italy settled in the area to work in the factories and warehouses lining Kent Avenue, West Street, and Newtown Creek. According to tradition the neighborhood was the place of origin of the dialect known as Brooklynese (a distinction also ascribed to Flatbush). To provide workers with decent housing Pratt built the Astral Apartments on Franklin Street between India and Java streets in 1886 alongside rows of brick houses that lined Milton and Noble streets west of Manhattan Avenue. During the first half of the twentieth century shipbuilding, manufacturing, and warehousing gradually diminished, and the industries of Greenpoint declined after World War II. During the 1950s there was a marked increase in the number of Poles, who made the neighborhood the center of the city's Polish community and accounted for about half of all the immigrants who settled there in the 1980s. Others came from Puerto Rico, Guyana, the Dominican Republic, Colombia, Ecuador, China, and Pakistan. Two bridges, Kosciuszko and Pulaski, honor Polish heroes.

The main commercial district of Greenpoint lies along Manhattan Avenue, and restaurants and bakeries serve kielbasa, Polish dumplings, and flan. The oldest church is the Episcopal Church of the Ascension (1853). The Church of the Transfiguration (Russian Orthodox), dominated by onion-shaped cupolas, stands at North 12th Street and Driggs Avenue; the Church of St. Stanislaus Kostka (Roman Catholic) on Humboldt Street has the largest Polish congregation in Brooklyn. In the northern section Italians annually take part in a 10-day celebration of the Feast of Our Lady of Mount Carmel, in which men compete for the honor of carrying a tower called the *giglio* through local streets. McCarren Park stands on the former site of the Bushwick Creek between Berry and Leonard streets; Monsignor McGolrick Park on Nassau Avenue contains a monument commemorating the *Monitor*. Among famous Greenpointers are actors Mae West and Mickey Rooney and author Henry Miller. The McCarren Pool, which closed in 1984, was a site of popular concerts until 2008; the New York City Parks Department has said it will rebuild it. The neighborhood's industrial past reappeared in 1978 when oil that had been leaking since the 1940s and 1950s was found in Newtown Creek; the spill is considered to be the nation's largest. Cleanup of the area continues into the twenty-first century. Growth resulted in residential conversion of industrial buildings in 1986 and the rezoning of the waterfront in 2005.

Greenpoint-Williamsburg: An Industrial Study (New York: Department of City Planning, 1987)

Stephen Weinstein, John Manbeck

Greenpoint Glass Works. Glass factory established on the Brooklyn waterfront in 1860. Christian Dorflinger (1828–1915), a French immigrant, operated several smaller factories before buying the Greenpoint property on Commercial Street near Newtown Creek. There he erected a plant with four times the capacity of his previous glassworks. He built dock facilities for receiving raw materials and shipping finished products, and in accord with French tradition built housing for the elite glassblowers whom he brought from France. The successful firm had a reputation for quality and efficiency, with products ranging from kerosene lamp chimneys to Mary Todd Lincoln's table service for the White House. By the mid-1860s Dorflinger had left Brooklyn for Pennsylvania. The factory was leased to various firms, which continued under the Greenpoint Glass Works name while manufacturing decorative vases and globes and chimneys for oil, gas, and electric lights. In 1905 the Gleason–Tiebout Company, makers of glass for gas and electric lighting, bought the property.

Cathy Alexander

Green Point Savings Bank. Savings bank opened on 11 January 1869 and originally situated at the corner of Franklin and Oak streets, moving several times before building its own headquarters on the corner of Manhattan Avenue and Calyer Street in 1907. After buying the Home Savings Bank in 1931 it became one of the most successful savings banks in the city, and by 1990 was its second-largest. The bank was acquired by North Fork Bancorporation in 2004.

William L. Felter, *Historic Green Point* (New York: Green Point Savings Bank, 1918)

James Bradley

Greenridge. Neighborhood in south central Staten Island, lying near the intersection of Arthur Kill Road and Richmond Avenue. The area was once called Marshland and in colonial times was a Huguenot settlement, where the Huguenots built their first church in America (it was burned down by Native Americans). In 1776 during the Revolution, the English army's 17th Lancers made camp at this location. The name changed to Greenridge in 1876. It consisted mostly of fields and woods until one- and two-family houses were built in the 1960s. Al Deppe's, a popular restaurant from the 1920s to the 1960s, once drew patrons from throughout the borough. At the intersection of Arthur Kill Road and Richmond Avenue is the Greenridge Plaza Shopping Center. The Staten Island Mall is across the Fresh Kills Bridge on Richmond Avenue and Richmond Hill Road.

Harlow McMillen

Greenwich House. Social service agency and arts organization located on Barrow Street in Greenwich Village. It opened in 1902 to serve the then primarily immigrant population. Social reformers such as Mary Kingsbury Simkhovitch, Jacob A. Riis, Carl Schurz, and Felix Adler joined together to improve living situations and ease the transition into American society in what was the most densely populated neighborhood in Manhattan. As a settlement house, the agency focused on housing initiatives and on creating New York City's first neighborhood association, the Greenwich Village Improvement Society. Greenwich House also started music and pottery schools, with its arts curricula being molded by such varying names as Eleanor Roosevelt, Jackson Pollock, and Kirk Douglas. In 1921 the house opened a nursery school. In 1942 an after-school program began, and 20 years later an outpatient drug-counseling center was established. In the early twenty-first century Greenwich House continued to serve more than 7500 people per year through programs ranging from its Parole Treatment Program to the AIDS Mental Health Project.

Anne Epstein

Greenwich Village. Neighborhood, also referred to as "the Village," in lower Manhattan (2000 pop. *ca* 100,000), bounded to the north by 14th Street, to the east by Fourth Avenue and the Bowery, to the west by the Hudson River, and to the south by Houston Street (though its whose borders have been blurred by the ever-growing SoHo and NoHo neighborhoods). The area was once a marshland studded by a few hills that was known as Sapokanican to the Canarsee Indians who camped and fished there; it fed a meandering trout stream called the Manetta (an Indian term meaning "devil water"; later known as Minetta Brook). By the 1630s Dutch settlers had advanced 2 miles (3 kilometers) north into the remote province, then called Noortwyck, to clear pastures and plant crops. Wouter van Twiller, second director general

of New Amsterdam, found the fertile basin bordering Minetta Brook ideal for cultivating tobacco, and he claimed extensive acreage near it for his personal plantation, Bossen Bouwerie ("farm in the woods"). After the English conquest of New Amsterdam in 1664 the settlement evolved into a country hamlet, first designated Grin'wich in records of the Common Council in 1713. Richmond Hill, a three-story colonnaded mansion built by Major Abraham Mortier in 1767, exemplified the stylish architecture of the rural estates. Freed African slaves also farmed parcels of land in this sparsely populated district, establishing an independent community near what are now Minetta Lane and Thompson Street that endured to the end of the nineteenth century.

Greenwich Village survived the American Revolution as a pastoral suburb. Commercial activity after the war was centered near the edge of the Hudson, where fresh produce markets drew traffic from downtown. Sightseers attracted by its salutary climate and seeking to escape the commotion of the city often traveled the length of Greenwich Street. In the 1780s the city purchased on the site of a drained swamp at what is now Washington Square Park a parcel of 8 acres (3 hectares) for use as a potter's field (closed in 1826) and public gallows. At the foot of Christopher Street stood Newgate Prison from 1797 to 1829. Efforts to preserve the crooked colonial lanes were mounted as early as the second decade of the nineteenth century, when a coalition of residents prevailed on the Common Council to modify the grid plan of 1811. As a result much of the district was exempted from the rigid symmetry that dictated the development of Manhattan north of Houston Street. The comparative seclusion of the area began to erode during yellow fever and cholera outbreaks in 1799, 1803, 1805, and 1821. Those seeking refuge fled north to the wholesome backwaters of the West Village (one of the oldest quarters of Greenwich Village, bounded by Greenwich Avenue, Christopher Street, and West Street), triggering the construction of temporary housing as well as banking offices. During an especially virulent epidemic in 1822 many who had intended to remain in the area only temporarily chose instead to settle there permanently, increasing the population fourfold between 1825 and 1840 and spurring the development of markets and businesses. Speculators subdivided farms, leveled hills, rerouted Minetta Brook, and undertook landfill projects.

Blocks of neat row houses soon accommodated middle-class merchants and tradespeople. From 1820 a more affluent residential development emerged to the east near Broadway; rows of imposing, marble-trimmed town houses lent dignity to the newly planned blocks of Bond and Great Jones Streets, LeRoy Place (on Bleecker Street west of Broadway), and Lafayette Place, which encompassed the uniform elegance of Colonnade Row. Another fashionable area of redbrick town houses developed around Washington Square Park at the foot of Fifth Avenue. The crowning addition to this urban plaza was a triumphal arch of Tuckahoe marble designed by Stanford White, erected in 1892. New York University erected buildings on the east side of Washington Square starting in 1836; and the neighborhood soon became the site of art clubs, private picture galleries, learned societies, literary salons, and libraries, including the large Astor Library (1854) on Lafayette Place. Fine hotels, shopping emporia, and theaters also proliferated along Broadway between Houston Street and 14th Street. At the close of the nineteenth century, German, Irish, and Italian immigrants moved into Greenwich Village to work at the breweries, warehouses, and coal and lumber yards near the Hudson. As the housing stock deteriorated, older residences were subdivided into cheap lodging hotels and multiple-family dwellings or were demolished for higher-density tenements. Plummeting real estate values and incomes and the shabbiness of the area prompted nervous retailers and genteel property owners to move uptown.

Greenwich Village at the turn of the twentieth century was a quaintly picturesque and ethnically diverse backwater. By the beginning of World War I it was widely known as a bohemian enclave with secluded side streets, low rents, and a tolerance for radicalism and nonconformity. Although most residents were members of the conservative working class or of a vestigial upper class, attention increasingly became focused on artists and writers noted for their boldly innovative work: books and irreverent "little magazines" were published by small presses, art galleries exhibited the work of the avant-garde, and experimental theater companies blatantly ignored the financial considerations of Broadway. In 1913 residents of the neighborhood figured prominently in the Paterson Strike Pageant and the Armory Show. A growing awareness of its idiosyncrasies helped to make Greenwich Village an attraction for tourists, who could easily reach Washington Square by the Fifth Avenue Coach Line, and Sheridan Square after it became a station of Interborough Rapid Transit in 1917–18; the neighborhood became still more accessible after Seventh Avenue South was cut through and Sixth Avenue was extended south of Carmine Street. Entrepreneurs provided amusements ranging from evenings in artists' studios to bacchanalian costume balls that they promoted as "pagan romps," as well as candlelit tea rooms, novelty nightclubs, bizarre boutiques, counterfeit artists' garrets, and burlesque revues. During Prohibition local speakeasies attracted patrons from uptown. The insularity of the neighborhood was further eroded by a number of public works projects, including subway excavations in the West Village and the widening of older streets to accommodate more traffic. Decrepit row houses were remodeled into "artistic flats" for the well-to-do, and rents increased during the 1920s by 140 percent and in some cases by as much as 300 percent. In 1926–27 luxury apartment towers began to be built at the northern edge of Washington Square.

The stock market crash of 1929 halted new construction. A number of steps were taken to alleviate the hardships caused by the Depression. The Washington Square Outdoor Art Show was inaugurated in 1932 to exhibit and promote sales of the work of local artists and continued to be held semiannually. Society sculptor Gertrude Vanderbilt Whitney opened a museum dedicated to modern American art on West Eighth Street in 1931. The New School for Social Research, on West 12th Street since the late 1920s, inaugurated the University in Exile in 1933. Urban renewal in Washington Square South resulted in the demolition of many nineteenth-century structures and helped to inspire a movement for historic preservation. A plan by Robert Moses to carve a roadway through Washington Square was defeated in the early 1950s, as were aggressive efforts to expand by New York University.

Greenwich Village was a center for the Beat movement in the 1950s (see Beats). Writers, painters, actors, musicians, and dissidents, many from San Francisco, moved into the southern and eastern portions of the neighborhood. Galleries became concentrated along Eighth Street, coffeehouses on MacDougal Street, and storefront theaters on Bleecker Street, and "happenings" and other unorthodox artistic, theatrical, and musical events were staged at the Judson Memorial Church on Washington Square South. In 1955 the weekly newspaper the Village Voice emerged as a champion of the city's growing Off-Broadway theater. Efforts at historic preservation were strengthened by "down-zoning" changes enacted in 1961 (the same year Jane Jacobs's *The Death and Life of Great American Cities,* one of whose protagonists was Greenwich Village, was published) and by the designation in 1969 of a contiguous Greenwich Village historic district that protected more than 2035 structures and encompassed most of the West Village from Sixth Avenue to Hudson Street. A large homosexual community centered at Christopher Street benefited from the tolerance of local residents but was also subject to occasional harassment by the police. A confrontation between the police and patrons of the Stonewall Inn on Christopher Street in 1969 culminated in a riot known as the Stonewall Rebellion, which is regarded as having marked the beginning of the nationwide movement for gay and lesbian rights.

In the 1970s and 1980s Greenwich Village became a rallying place for antiwar protesters (where several safe houses used by the Weather Underground were located) and for activists mobilized by the AIDS epidemic, which struck

the neighborhood with particular force. The neighborhood's St. Vincent's Catholic Medical Center (170 West 12th Street), founded in 1849, was one of the first hospitals to address the AIDS crisis in the 1980s and has since had one of the more renowned treatment centers for human immunodeficiency virus in the nation.

Preservationists helped to halt construction of a new highway, Westway, and enlisted public support for protecting the waterfront, exempted from earlier landmark designation. Many old commercial buildings, such as the Manhattan Refrigerating Company and Bell Laboratories, were converted into residences. The neighborhood also gained notoriety as an outpost of the city's drug and music culture, home to such institutions as Jimi Hendrix's Electric Lady sound studios, which opened in 1968 at 52 West Eighth Street. Despite the presence of this provocative culture, Greenwich Village remained an attractive residential neighborhood for professionals and families. Tourists continued to patronize the neighborhood's bars, discothèques, art galleries, bookshops, and Italian groceries, as well as the Joseph Papp Public Theater on Astor Place, and to take part in walking tours sponsored by many individuals.

Washington Square Park remains a forum for soap-box oratory, demonstrations, fashion parades, and impromptu performances of jazz, folk, rock, and rap. The annual Halloween Parade and the Gay Pride March draw thousands of participants and spectators. Because of the high real estate costs, the area is no longer home to the struggling artists that inhabited it in the mid-twentieth century, but rather to a large number of celebrities and other affluent families; nonetheless, the Village still maintains a strong communal identity reminiscent of its Bohemian past.

Ware, *Greenwich Village, 1920–1930* (Boston: Houghton Mifflin, 1935); *Greenwich Village Historic District Designation Report* (New York: Landmarks Preservation Commission, 1969); Edmund T. Delaney and Charles Lockwood, *Greenwich Village: A Photographic Guide* (New York: Dover, 1976); Terry Miller, *Greenwich Village and How It Got That Way* (New York: Crown, 1990); Jan Seidler Ramirez, *Within Bohemia's Borders: Greenwich Village, 1830–1930* (New York: Museum of the City of New York, 1990)

Jan Seidler Ramirez

Green-Wood Cemetery. Nonsectarian, not-for-profit, 478-acre (193-hectare) cemetery and crematory in Brooklyn, occupying a site overlooking New York Harbor. It was established in 1838 by prominent New Yorkers who saw a need for burial space outside of overcrowded Manhattan churchyards. The original design was by David Bates Douglass, who was also responsible for the Croton Aqueduct with strong assistance from Almerin Hotchkiss, who later designed Bellefontaine Cemetery in St. Louis and Chippiannock Cemetery in Rock Island, Illinois. Modeled after Père Lachaise Cemetery in Paris and Mount Auburn Cemetery in Cambridge, Massachusetts, Green-Wood was designed as a rural retreat where visitors could escape the difficulties of urban living. In an 1849 essay Andrew Jackson Downing wrote that, of America's rural cemeteries, Green-Wood was "the largest and unquestionably the finest . . . grand, dignified and park-like." Green-Wood became fashionable after the body of DeWitt Clinton was moved there from Albany and a large bronze memorial by sculptor Henry Kirke Brown was commissioned. The natural beauty of the cemetery, its design, its elaborate monuments, and the prominence of those buried there soon made Green-Wood a popular tourist destination. Its success inspired a competition to design a "Central Park" for New York City, with Calvert Vaux and Frederick Law Olmsted submitting the winning plan.

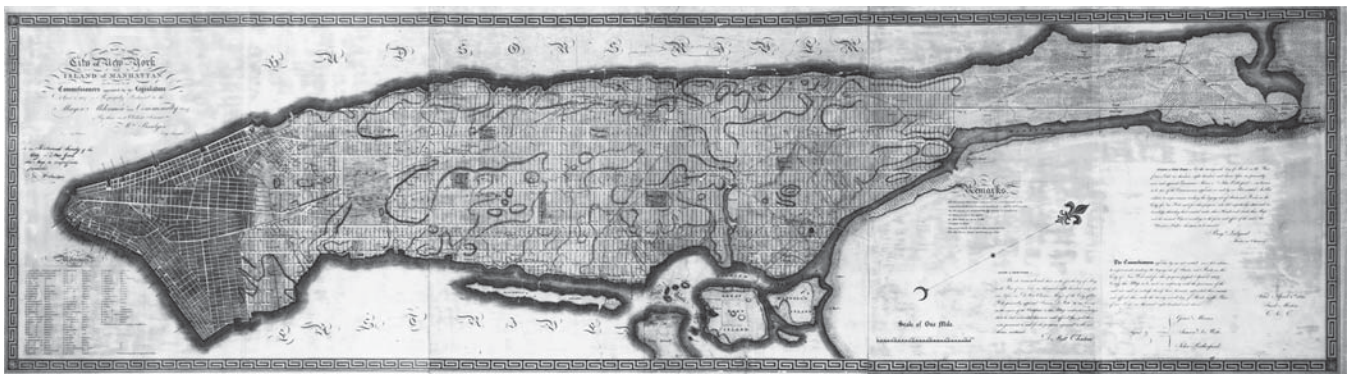
In 2006 Green-Wood was designated a National Historic Landmark. Its Gothic Revival entrance (1861) at Fifth Avenue and 25th Street, designed by Richard Upjohn and Sons,

Green-Wood Cemetery, 1852

Entrance to Green-Wood Cemetery, 2009

is a New York City landmark. Green-Wood contains nearly 7000 trees, including many rare specimens. Among its nearly 600,000 permanent residents are political leaders Seth Low and William M. Tweed; inventors Peter Cooper, Elias Howe, and Samuel F. B. Morse; artists Asher B. Durand, William Merritt Chase, George Catlin, John Kensett, George Bellows, Eastman Johnson, John George Brown, Philip Evergood, and Jean-Michel Basquiat; stained-glass competitors Louis Comfort Tiffany and John La Farge; composers Leonard Bernstein, Fred Ebb, and Louis Moreau Gottschalk; newspaper publishers Horace Greeley and James Gordon Bennett; actors Frank Morgan (*The Wizard of Oz*) and Laura Keene; abolitionist Henry Ward Beecher; lithographers Nathaniel Currier and James Merritt Ives (the men behind the firm Currier and Ives); many Civil War generals, including Henry W. Halleck and Henry W. Slocum; and more than 3000 Civil War veterans.

Richard J. Moylan



grid plan. Far-reaching plan approved by the state legislature of New York in 1811, also known as the Commissioners' Plan. Devised by a commission made up of the political leader Gouverneur Morris, the surveyor Simeon De Witt, and the lawyer John Rutherford, it established a basis for the orderly sale and development of land in Manhattan between 14th Street and Washington Heights by laying out a rectangular grid of streets and property lines without regard for topography. Twelve numbered avenues, each 100 feet (30 meters) wide, ran north and south. In the interior, Third, Fourth, Fifth, and Sixth avenues were 920 feet (280 meters) apart; along the riverfronts the avenues were closer together, in expectation of greater development. The signature of the plan was its 155 cross streets placed only 200 feet (60 meters) apart, producing a grid of about 2000 long, narrow blocks. Convinced that simple rectangular houses and lots were best, the commissioners avoided the addition of circles, ovals, and other features like those used by Pierre L'Enfant in his plan for Washington, D.C. The commission was instructed by the legislature to lay out streets and public squares of sufficient dimension to provide "free and abundant circulation of air" for public health. They provided small parks in the interior of the island at 53rd, 66th, 77th, and 120th streets and several large public spaces: one of 26 acres (11 hectares) uptown for a reservoir, another of 54 acres (22 hectares) on the Lower East Side for a wholesale market complex, and a third of 275 acres (111 hectares) extending from 23rd to 34th streets and from Third to Seventh avenues for a military training ground, or "parade" (which it was hoped would eventually become a central park).

The grid plan of 1811 was repeatedly altered because it lacked the support of a formal planning commission. Union, Tompkins, Stuyvesant, and Madison squares were added, as were Lexington and Madison avenues to bisect the long blocks between Third and Fifth avenues. More disruptive changes occurred with the elimination of the two large spaces provided for the market and militia. When plans for a park downtown were forestalled, the street plan was altered to allow for the extension of Fourth, Fifth, and Sixth avenues south to 14th Street, and for the extension northward of Broadway. The angled course of Broadway later made possible the development of such areas as Times Square. Despite these changes the basic plan for most streets and blocks survived and continued to dominate the city's development. The one great exception was the building of Central Park in the late 1850s. Later modifications were made along the riverfronts, notably at Riverside Park.

Commissioners' map of New York City, 1811

Grinnell, Minturn and Company. Shipping firm formed in New York City in 1815 as Fish and Grinnell by Preserved Fish (1766–1846?) and Joseph Grinnell (1788–1885), formerly merchants in New Bedford, Massachusetts. It became Fish, Grinnell and Company when Grinnell's brothers Henry Grinnell (1799–1874) and Moses H(icks) Grinnell (1803–77) became partners. After Fish and Joseph Grinnell retired and Henry Grinnell's brother-in-law Robert Bowne Minturn (1805–66) joined the firm, it was reorganized as Grinnell, Minturn and Company (1833) and became one of the city's great shipping firms. Its swallowtail flag flew over more than 50 vessels, including regular packet lines to Liverpool and London and the famous clipper the *Flying Cloud.* All three partners were officers of banks and insurance companies and were prominent in civic and philanthropic affairs. Henry Grinnell supported polar expeditions and was a founder of the American Geographical and Statistical Society, of which he became president. Minturn helped to establish organizations that aided immigrants and the poor in New York City and contributed to St. Luke's Hospital; he was both a president of the Union League Club and a member of the original Central Park Commission, as was Moses H. Grinnell, who was also president of the local Chamber of Commerce (1847, 1849–52) and the New England Society (1843–54). A close friend of Daniel Webster, Moses H. Grinnell became active in politics and in 1838 won election to U.S. Congress as a Whig. He later became a Republican, served on the Union Defense Committee at the outbreak of the Civil War, and in 1869 was appointed collector of the Port of New York by President Ulysses S. Grant. Among the junior partners in the firm was Franklin H. Delano, who married Laura Astor, daughter of William Backhouse Astor.

Griscom, John Hoskins (*b* ?New York City, 14 Aug 1809; *d* 28 April 1874). Physician and public health official. He began a private practice in New York City in 1836. Appointed city inspector in 1842, he wrote the influential report *The Sanitary Condition of the Laboring Population of New York* (1845). During the following years he became a leader in the movement for public health and sanitation reform. Among the measures that he advocated was the establishment of a powerful, professionally staffed board of health that would systematically collect vital statistics and other data. Griscom was a founding member of both the New York Academy of Medicine and the New York Medical and Surgical Society. He was also a physician at New York Hospital from 1843 until about 1870.

Charles E. Rosenberg and Carroll Smith-Rosenberg, "Pietism and the Origins of the American Public Health Movement: A Note on John H. Griscom and Robert M. Hartley," *Journal of the History of Medicine and Allied Sciences* 23 (1968), 16–35

Allen J. Share

grocers. Most food in colonial New York City was sold by vendors in public markets. One of the first such markets opened on Pearl Street in lower Manhattan in 1656; more elaborate ones also opened but eventually were superseded by small shops. As the population grew during the first half of the nineteenth century, more specialized shops sold produce, baked goods, meat, fish, dairy products, spirits, coffee, or tea. In 1882 James Butler opened a grocery store on Second Avenue; he had 200 stores that grossed $15 million annually and 1100 stores by 1934. Chain grocery stores were introduced in the first decades of the twentieth century, and the most important ones had their own warehouses, distribution networks, and manufacturing plants by the 1920s. In August 1930 the King Kullen Grocery Store was opened by Michael J. Cullen at 171st Street and Jamaica Avenue in Queens. Considered by many the first supermarket in the country, it had ample parking and was large and well stocked with a wide assortment of foods. It kept costs low by furnishing its stores sparsely and having customers serve themselves. Other stores adopted Cullen's methods and transformed the retail food industry, which operated with lower margins and higher turnover than formerly and became more efficient and profitable. Supermarkets also took advantage of improvements in food processing, packaging, preservation, and distribution. By the 1940s most large chains such as A&P had adopted Cullen's methods. After World War II there was fierce competition in the city among such large chains as A&P, D'Agostino, Daitch, Pathmark, Pioneer, and Waldbaum. As their marketing techniques became increasingly sophisticated, supermarkets came to rely less on display advertising in newspapers and more on circulars and broadcast advertising. There were also several large cooperative and independent supermarket groups, as well as small-scale convenience stores, "mom and pops," and bodegas, the last of which began to gain popularity in the 1970s as a growing influx of Hispanic immigrants began to open individually owned small grocery stores, often with signature red and yellow awnings. Several gourmet grocery stores have opened in recent decades: Dean and Deluca (1977), Whole Foods (2001), and Trader Joe's (2006). In the early twenty-first century supermarkets accounted for about 63 percent of retail food sales in New York City.

Peter A. Coclanis

Grolier Club. Club formed in 1884 by nine business and cultural figures who were collectors of books and prints. Named for the sixteenth-century French bibliophile Jean Grolier, its purpose was to encourage "literary study and the arts of the book." During its first century the club had more than 3000 members, mounted more than 600 imaginative exhibitions on diverse topics, published about 150 books, and held a large number of lectures and symposia in its impressive clubhouses. The first of these was in rented quarters; the second was built for the club at 29 East 32nd Street and is a designated landmark. The present building, designed by Bertram Grosvenor Goodhue, a member of the club, was completed in 1917 at 47 East 60th Street and enlarged in 1984.

James E. Mooney

Grosset and Dunlap. Firm of book publishers formed in 1898 as Dunlap and Grosset, a bookshop at 11 East 16th Street, by Alexander Grosset and George T. Dunlap. The name was changed to Alexander Grosset and Company when Dunlap left in 1899, and then to Grosset and Dunlap on his return in the following year. The first books published were pirated editions of Rudyard Kipling, most of which were already in the public domain because they had been republished earlier by other firms. In the first decade of the twentieth century the firm began the practice of reissuing the paperbound books of other publishers in hardcover form and managed to sell the new hardcover editions at prices not much higher than those of the original paperbound editions. This innovation made it one of the leading reprint publishers in the United States. In 1903 it moved its offices to 52 Duane Street, and in 1907 it expanded into children's books by purchasing the firm of Chatterton and Peck, thus acquiring the rights to the Rover Boys series by Edward Stratemeyer, which sold more than five million copies; it later published popular children's series based on the characters Tom Swift, the Bobbsey Twins, the Hardy Boys, and Nancy Drew.

In 1910 the firm moved its offices and manufacturing operations to 518 West 26th Street and opened a retail shop on 26th Street and Broadway (moved in 1916 to 1140 Broadway). It introduced such techniques as selling books at newsstands, drugstores, and department stores; made extensive use of retail displays and posters; and was among the first publishers

to coordinate the publication of popular novels with the release of their film versions. When Grosset died in 1934, Dunlap became president of the firm, which in 1939 moved to 1107 Broadway. In 1945 the firm joined with the Curtis Company, a nationwide book distributor, to form the paperback publisher Bantam Books, of which it became the sole owner in 1964. Grosset and Dunlap and Bantam were acquired in 1968 by the National General Corporation, which in 1974 sold Grosset to Filmways and Bantam to IFI International. In 1978 Grosset and Dunlap ranked third in hardcover sales and remained an important publisher of children's books, but in the next few years sales declined markedly. The firm was sold to the Putnam Publishing Group in 1982. In 1996 the Putnam Group was acquired by the Penguin Group. The offices are at 345 Hudson Street.

Marjorie Harrison

Ground Zero. Term used to refer to the site of the World Trade Center after the terrorist attacks of 11 September 2001 (see September 11). It was first used in print by a *New York Times* reporter in 1946 writing of the nuclear bombs that destroyed Hiroshima and Nagasaki at the end of World War II.

Group Theatre. Experimental theater group formed in 1931 by Harold Clurman, Cheryl Crawford, and Lee Strasberg, members of the Theatre Guild. Modeled on the Moscow Art Theatre and influenced by the teaching methods of Konstantin Stanislavsky, it was intended to be a permanent acting company with a repertory that would involve more than aesthetics—it would create a tradition of common values. Initial members included Stella Adler, Clifford Odets, J. Edward Bromberg, Sanford Meisner (later a director and acting teacher), and Morris Carnovsky and Franchot Tone of the Theatre Guild; the first directors were Clurman, Crawford, and Strasberg. The initial production was Paul Green's play *The House of Connelly.* Under Strasberg's direction and the auspices of the Theatre Guild, the play was well received at its premiere at the Martin Beck Theatre on 23 September 1931. Others who soon became members were Adler's brother Luther Adler, Margaret Barker, Phoebe Brand, Lee J. Cobb, Frances Farmer, Jules Garfield (later known as John Garfield), Elia Kazan, Ruth Nelson, and Art Smith; Sylvia Sidney and Jane Wyatt performed occasionally, and Boris Aronson often designed sets. They developed a style of acting called "the Method." Members were paid whether or not they performed and regardless of the size of their parts. During its leanest year, 1932–33, the group even rented a 10-room walk-up apartment on West 57th Street. There was also talk of opening a restaurant.

Critics applauded the group's innovative approach, and they introduced more than 20 new American plays by the most influential writers of the day, including Maxwell Anderson (*Night over Taos,* 1932, 48th Street Theatre), John Howard Lawson (*Success Story,* 1932, Maxine Elliot Theatre; *Gentlewoman,* 1934, Cort Theatre), Green and Kurt Weill (*Johnny Johnson,* 1936, 44th Street Theatre), Irwin Shaw (*Quiet City,* 1938, Belasco Theatre, score by Aaron Copland; *The Gentle People,* 1939, Belasco Theatre), and William Saroyan (*My Heart's in the Highlands,* 1939, Guild Theatre). The most important playwright was Odets, whose first play, *Awake and Sing!,* was performed in 1935 at the Belasco Theatre. He achieved critical success with *Waiting for Lefty,* a one-act play inspired by a strike of the city's taxi drivers in 1934. On its opening night at the Civic Repertory Theatre, 6 January 1935, the audience rose to its feet chanting "Strike! Strike!" as the main character, a strike leader, called to his workers. Within months the play was performed by leftist groups nationwide and by the Group Theatre in London, where it was an overwhelming success. The production was also an important example of the kind of cooperation between actors and the audience that the company sought to inspire.

The Group Theatre earned critical and commercial success with Odets's *Golden Boy* (1937, Belasco Theatre). In 1937 Strasberg and Crawford resigned, disheartened by the defection to Hollywood of such members as Clurman, Tone, Garfield, and Odets. The actor Bobby Lewis briefly ran the Group Theatre School (or Studio) in 1937–38 and Clurman soon returned. Despite its many successes, the Group Theatre never made enough money to establish a permanent company. Among its last productions were Shaw's *Retreat to Pleasure* (1940, Belasco Theatre, directed by Clurman) and Odets's *Rocket to the Moon* (1938, Belasco Theatre) and *Night Music* (1940, Broadhurst Theatre). Odets's *Clash by Night* (1941, Belasco Theatre, directed by Strasberg) is sometimes identified as the last production by the Group Theatre, but it was produced by Billy Rose with only two of the company's actors, and the name of the Group Theatre was deleted from the playbill. In 1941 the Group Theatre ceased operations.

Knopf, 1945); Cindy Adams, *Lee Strasberg: The Imperfect Genius of the Actors Studio* (Garden City, N.Y.: Doubleday, 1980); Elia Kazan, *A Life* (New York: Alfred A. Knopf, 1988); Wendy Smith, *Real Life Drama: The Group Theatre and America, 1931–1940* (New York: Alfred A. Knopf, 1990)

Grove Press. Firm of book publishers formed in 1948 on Grove Street by John Balcomb and Robert Phelps and purchased in 1951 by Barnet Rosset. It initially published reprints of the classics but early on began to acquire the rights to foreign works, including those of Samuel Beckett, Marguerite Duras, Jean Genet, André Gide, Eugène Ionesco, and Alain Robbe-Grillet. During the 1950s and early 1960s it published banned works of D. H. Lawrence and Henry Miller over which it fought and won important obscenity cases. It also published the *Evergreen Review* from 1957 to 1973. Grove Press was acquired in 1985 by Ann Getty, who was later joined by George Weidenfeld. In the early 1990s the firm merged with the Atlantic Monthly Press.

Montana Katz

Grymes Hill. Neighborhood in northeastern Staten Island, overlooking Upper New York Bay and bounded to the northwest by Victory Boulevard, to the east by Richmond Road and Van Duzer Street, to the south by the Staten Island Expressway, and to the west by Clove Road. It is one of three hills in the northern half of the borough and is bisected by Howard Avenue. Major George Howard bought the hill in 1830, and in 1836 it became the home of Mme. Suzette Grymes, the widow of the first governor of Louisiana; Jacob Vanderbilt also lived in the area during the nineteenth century. Horrmann Castle was built about this time. The mansion of William Greene Ward, a general in the Civil War, and that of the Cunard family became the campus of Wagner College in 1918. Notre Dame Academy opened in 1903 on the Wendt estate. In 1938 Notre Dame College bought the estate of John H. Gans, a shipping tycoon, and had a campus on the premises until 1971, when the land was taken over by the Staten Island branch of St. John's University. In the 1980s there was a modest settlement of immigrants from India, Korea, the Philippines, Honduras, and Yugoslavia. Housing developments in Grymes Hill include apartment buildings overlooking Silver Lake and the 12-story Sunrise Towers Condominiums facing the Staten Island Expressway. In the early twenty-first century much of the neighborhood remains generally upper middle to upper class and white.

Harlow McMillen

Guardian Angels. Volunteer crime-fighting organization of young men and women, formed by Curtis Sliwa (*b* New York City, 1954) in February 1979 as the Magnificent 13 subway safety patrol. Members adopted a uniform of T-shirts and red berets and rode the subways to deter crime, making citizen's arrests when necessary. The group took its current name by September of that year, and membership eventually exceeded 1000. The organization caused debate between those who cited improvements in community empowerment and safety and others critical of vigilantism. In 1995 group member Gabriel Hatcher founded CyberAngels, an online "neighborhood watch"

and Internet safety education program. In the early twenty-first century the Guardian Angels has more than 100 chapters in the United States and abroad and makes its headquarters at 717 Fifth Avenue.

Grai St. Clair Rice

Guardian Life Insurance Company of America. Firm of insurers formed on 10 July 1860 as the Germania Life Insurance Company to sell life insurance to German-speaking customers. The principal figure behind its formation was Hugo Wesendonck (1817–1900), a former member of the Frankfurt Parliament and a participant in its rump session who had fled Germany to escape a death sentence and settled in New York City as a political refugee in December 1849. He recruited for the Board of Directors a distinguished group of German-born New Yorkers that included the financier and diplomat August Belmont, the publisher Oswald Ottendorfer, the brewer Maximilian Schaefer, and the financier Joseph Seligman; he was also the first president of the firm (1860–97). The largest single holder of the firm's initial stock was his brother Otto Wesendonck, better known as a friend and benefactor of the composer Richard Wagner. With the onset of World War I, any identification with Germany became a distinct disadvantage: the firm ceased writing policies in Europe in December 1917 and on 1 March 1918 abandoned its original name in favor of its current one. Stock owned by German citizens was seized by the federal government and auctioned off in 1919. In the early twenty-first century the firm had its headquarters at 7 Hanover Square in downtown Manhattan.

Theresa Collins

Guggenheim, Meyer (*b* Langnau, Switzerland, 1 Feb 1828; *d* Palm Beach, Fla., 15 March 1905). Businessman and philanthropist. He moved to Philadelphia in 1848 and worked with his father Simon Guggenheim as a peddler of stove polish. Meyer later became wealthy as a lace and embroidery retailer, a coffee importer, and an investor in railroads, mining, and smelting. He gave equal partnership to his sons, Isaac, Daniel, Murry, Solomon, Benjamin, Simon, and William. In 1888 Meyer moved to New York City, where he lived at 36 West 77th Street and invested in a smelting firm, Guggenex. He amassed a fortune in copper, tin, gold, diamonds, nitrates, and rubber. Among the many charities he supported were The Mount Sinai Hospital and the New York Botanical Garden. His granddaughter Peggy became an important patron of modern art, Solomon conceived the Guggenheim Museum, and Simon was elected to the U.S. Senate from Colorado.

George J. Lankevich

Guggenheim, Peggy [Marguerite] (*b* New York City, 26 Aug 1898; *d* Composampiero, Italy, 23 Dec 1979). Art collector. After spending nearly 20 years abroad, learning about avant-garde art in Paris and establishing the Guggenheim Jeune, a gallery for modern art in London, she returned to New York City in 1941. A year later, she opened the Art of This Century gallery at 30 West 57th Street, which featured contemporary European and American artists such as Jackson Pollock, Mark Rothko, and Robert Motherwell until the gallery closed in 1947. After 1946 Guggenheim returned to Europe, where she established the Peggy Guggenheim Collection, housed in the Palazzo Venier dei Leoni in Venice, Italy. Her collection, which contained more than 260 works, exhibited cubist, surrealist, and abstract expressionist art and was one of the few galleries in Europe that included significant amounts of work by American artists. She bequeathed her holdings, estimated at $30 million, to her uncle's Solomon R. Guggenheim Foundation, with the proviso that the Peggy Guggenheim Collection in Venice remained intact. Her memoirs include *Out of This Century: Confessions of an Art Addict* (1946).

Stephanie Miller

guidebooks. Guides to New York City reflect continuously changing attitudes toward the city, as well as stages in its growth. The city's rise to commercial preeminence after the War of 1812 was confirmed by the appearance of competing guidebooks for visiting merchants published by A. T. Goodrich (1818) and Edmund M. Blunt (1828). Some guides for commercial visitors began to specialize according to trade; commercial and professional directories replaced several early guides. By 1860 New York City had grown so complex and its population was so large (more than 800,000) that general guidebooks found a market with local residents as well as business visitors. *Appleton's New York City and Vicinity Guide* provided thorough, brief accounts of places and institutions through a series of editions from 1849 to the 1890s; it was widely imitated. *King's Handbook of New York City: An Outline, History and Description of the American Metropolis* (1891 and later), edited by Moses King (1853–1909), offered a profusely illustrated, comprehensive guide to the city; its companion, *Views of New York* (1896; in later editions *Views of New York and Brooklyn*), was perhaps the most complete early portfolio of photographic views of the city. Population growth also inspired a new kind of guide, intended to provide a sense of moral order. George G. Foster's *New York by Gas-Light* (1850; repr. 1990), perhaps the first work of this kind, aimed at rural and small-town Protestants who confronted new ethical dilemmas and a loss of community in the new metropolis. After the Civil War many works created a "moral map" of the city, identifying areas plagued by crime, vice, and political corruption and populated by immigrants or the newly wealthy, and assigning degrees of moral "light" and "darkness" to each; a notable example is James D. McCabe, Jr.'s *Light and Shadows of New York Life; or, Sights and Sensations of the Great City* (1868). Churchmen responded with such guides as *The Catholic Churches of New York City* (1878) by John Gilmary Shea and *Handbook of Sociological Information with Especial Reference to New York City* (1894) by William Howe Tolman and William Hull; following the lead of businessmen, professional social workers transformed such guides into the comprehensive annual *Charities Directory.*

Nostalgic works on old landmarks, old streets, and "old New York" in general became popular in the 1880s, when the then-250-year-old city was beginning to develop its modern skyline. The first guides designed not so much for the business traveler or resident as for the tourist included Robert Shackleton's illustrated *Book of New York* (1917) and *Rider's New York City: A Guide for Travellers* (1916). By the 1920s tourists supported distinct guides to architecture, sculpture, art, and literature. Jacob A. Riis's *How the Other Half Lives* (1890) and Hutchins Hapgood's *The Spirit of the Ghetto: Studies of the Jewish Quarter of New York* (1902) served not only as works of social analysis but also as guides to immigrant neighborhoods. By the 1930s members of minority groups and immigrants were writing descriptions of their own communities for a general audience, such as James Weldon Johnson's *Black Manhattan* (1930) and Konrad Bercovici's *Around the World in New York* (1938), which provided an account of every ethnic neighborhood in the city. The new, more inclusive sensibility influenced the *New York City Guide* (1939), prepared by the Writers' Project of the Works Progress Administration, one of few general guidebooks to note the locations of union halls and famous strikes and to provide sympathetic and full descriptions of middle- and lower-income neighborhoods. Kate Simon's *New York Places and Pleasures* (4 edns, 1959–71) emphasized authenticity and gave detailed descriptions of streetscapes, little-known neighborhoods, museums, and commercial establishments, and the *AIA Guide to New York City* (1967; 3rd edn 1988), edited by Norval White and Elliot Willensky, earned a reputation as a comprehensive guide to architecture; both remained

popular into the twenty-first century, as did Gerald R. Wolfe's *New York: A Guide to the Metropolis: Walking Tours of Architecture and History* (1975; 2nd edn 1994).

Almost all the guidebooks of the 1980s, 1990s, and 2000s were designed for the tourist and consumer, such as *New York in Flashmaps* (1991) and R. S. Wurman's more complete *NYC Access* (1991), which detail the location, opening times, and cost of museums, shops, restaurants, theaters, and other amusements. Many fields have specialized guidebooks, including *Museums in New York, Secret New York, Kids' Guide to New York City,* and *The Audubon Guide to Finding Birds.* Guides to restaurants are published by the *New York Times,* Seymour Britchky, and Zagat; among the guidebooks to landmarks and historic sights are the Green Guides published by Michelin (1968–) and the *Blue Guide New York* (1983; 2nd edn 1991) by Carol von Pressentin Wright. One of the more unusual guides to the city is *Permanent New Yorkers: A Biographical Guide to the Cemeteries of New York* (1987), by Judi Culbertson and Tom Randall.

Other important historical guides to the city include I. N. Phelps Stokes's *The Iconography of Manhattan Island, 1498–1909* (1915–28; repr. 1967), John Atlee Kouwenhoven's *The Columbia Historical Portrait of New York* (1953), Moses Rischin's *The Promised City: New York's Jews, 1870–1914* (1962), and Nathan Silver's *Lost New York* (1967; repr. 1982).

David C. Hammack

Guinan, Texas [Mary Louise Cecilia] (*b* Waco, Tex., 12 Jan 1884; *d* Vancouver, Canada, 5 Nov 1933). Nightclub manager. After a career as a bronco rider and vaudeville performer she moved in 1923 to New York City, where illegal nightclubs flourished during Prohibition. In the subsequent year she opened the El Fay Club with backing from the organized-crime figure Larry Fay, and during the following decade she managed more than a dozen nightclubs in midtown. She became known for her flamboyant personality; her wardrobe of huge hats, ermine wraps, and garish jewelry (one bracelet had 586 diamonds); and her colorful speech (she greeted her customers with "Hello, suckers!" and originated the phrase "Give the l'il girl a great big hand"). Her nightclub troupes included such well-known performers as Ruby Keeler and Clare Luce. Guinan is buried in Calvary Cemetery in Queens.

Louise Berliner, *Texas Guinan, Queen of the Night Clubs* (Austin: University of Texas Press, 1993)

Warren Sloat

Gulf and Western. Industrial firm that later became Paramount Communications.

Gulick, Luther (Halsey, III) (*b* Osaka, Japan, 17 Jan 1892; *d* Greensboro, Vt., 10 Jan 1993). Reformer. He received a PhD in political science from Columbia University (1920). From 1921 to 1961 he led the Institute of Public Administration in New York City, and President Franklin D. Roosevelt appointed him to the Committee on Administrative Management, which issued a report in 1937 that inspired a comprehensive reorganization of the federal government. He was also the executive director of the Committee on Management Survey (1950–52) formed by Mayor William O'Dwyer to plan the reorganization of the city government, the city administrator (1954–55), and a member of the State Commission on Governmental Operations of the City of New York (from 1959).

Bernard Hirschhorn

Gun Hill. Neighborhood in the northwestern Bronx, lying within the neighborhood of Norwood and centered on Gun Hill Road between Jerome Avenue and the Bronx River. The name dates to the Revolutionary War, when the Americans dragged cannons to the area from the Battery for safekeeping; the cannons were spiked by Tories and took 11 months to repair. Gun Hill Road, an old Indian trail, was used from the colonial period onward as a vital artery to the King's Bridge. The northernmost part of the area was used for dairy farming in the nineteenth century before being purchased in 1863 as the site of Woodlawn Cemetery. In 1912 Montefiore Hospital opened as a home for tubercular patients on the crest of the hill at Bainbridge Avenue. The completion in 1917 of the Woodlawn line of Interborough Rapid Transit along Jerome Avenue led to the construction of apartment buildings in the 1920s that attracted many Jewish and Irish residents. In the 1980s African American and Latin American families began moving into the neighborhood.

Elizabeth Beirne

Gunther, Charles Godfrey (*b* New York City, 7 Feb 1822; *d* New York City, 22 Jan 1885). Mayor. The son of wealthy German immigrants, he was a successful merchant in New York City. Through wealth and friendships he became active in the Democratic Party; he helped to form the Democratic Union Club and was a member of the Young Men's Democratic Committee and the president of the almshouse governors in the city. He failed to win election as mayor in 1861 but succeeded in 1863 and served until 1866. His victory demonstrated the independent power of the German Union Democratic Party, which assembled a reform coalition and established itself as a force in Manhattan politics. After briefly concentrating on business as a railroad executive, he unsuccessfully sought a seat in the state senate. He is buried at the Green-Wood Cemetery in Brooklyn.

Stephen D. Engle

Guston [Goldstein]**, Philip** (*b* Montreal, 27 July 1913; *d* Woodstock, N.Y., 7 June 1980). Painter. A self-taught artist who began painting at the age of 14, he completed a number of politically charged works during the Great Depression and moved to New York City in 1936 as an artist under the Works Project Administration. He, alongside Mark Rothko, Adolph Gottlieb, and Robert Motherwell, was a member of the New York School, which was dedicated to contemporary art, particularly Guston's specialty of abstract expressionism in and around New York City during the 1940s and 1950s. As abstract expressionism gained notoriety within the city, Guston was featured in solo and group exhibitions at the Solomon R. Guggenheim Museum and the Jewish Museum in the mid-1960s. In 1965 he helped establish the New York Studio School for Drawing and Painting. Concerned with what he saw as the power of the New York art critics to influence art and painting, in the late 1960s Guston made an abrupt change in genres, from painting largely abstract pieces to figurative works that portrayed domestic items such as light bulbs, shoes, cigarettes, and clocks. In 1970 the New York Marlborough Gallery featured an exhibition of his figurative paintings, which signified his irreversible conversion to the genre of figurative art. His later compositions often portrayed enigmatic hooded figures, bearing similarity to one of his early paintings, *Conspirators* (*ca* 1930), which depicts a member of the Ku Klux Klan.

Stephanie Miller

Guthrie, Woody [Woodrow Wilson] (*b* Okemah, Okla., 14 July 1912; *d* New York City, 3 Oct 1967). Folksinger and songwriter. He grew up in Oklahoma and moved to New York City in 1940, where folk music had become well established. From the early 1940s he performed in barrooms and union halls and at political rallies and marches. He served in the U.S. Merchant Marines from 1943 to 1945 and after World War II returned to the city, where he lived in Coney Island. He wrote and adapted more than 1000 songs, many of which are about the struggles of the poor in the United States, the labor movement, and the hardships of the Dust Bowl and the Depression. One of his best-known songs is

"This Land Is Your Land"; he also wrote *Songs to Grow On* for children. After 15 years of affliction with Huntington's chorea he died at Creedmoor State Hospital in Queens. Guthrie was perhaps the most important figure of his day for folksingers of later generations, especially Bob Dylan, who emulated his music and his personal style; the folk music centered in Greenwich Village during the mid-1990s also had its origins in Guthrie's work. He lived at various locations in New York City: in 1940–41 at 130 West 10th Street in Manhattan, in 1942 at 148 West 14th Street, in 1942–43 at 74 Charles Street, in 1943 at 3755 Cypress Avenue in Brooklyn, in 1943–50 at 3520 Mermaid Avenue in Coney Island, in 1950–52 at Beach Haven Apartments (at 59 Murdoch Court in Gravesend), and from 1952 to the end of his life at 15913 85th Street in Howard Beach. He wrote the memoir *Bound for Glory* (1943).

Barbara L. Tischler

Guy, Francis (*b* Lorton, England, 1760; *d* Brooklyn, 1820). Painter. Trained as a tailor and dyer of fabrics, he came to America in 1795 and established a silk-dyeing business in Baltimore, Maryland. He picked up landscape and seascape painting and about 1817 moved to Brooklyn and settled in a house on Front Street. In the last months of his life, in 1819 and early 1820, Guy placed his easel near an upstairs window and produced two streetscapes titled *Winter Scene in Brooklyn*. One is now in the collection of the Brooklyn Museum. Besides providing true-to-life images of his neighbors (one is seen slipping on the ice), the paintings show old Brooklyn and New York City before the financial, economic, and immigration booms of the 1830s and 1840s transformed them permanently into cities. He was buried in the churchyard of the Sands Street Methodist Church (whose steeple can be seen in the far distance of the painting). After the church was sold to make way for the Brooklyn Bridge, his remains were transferred to the Evergreens Cemetery in Bushwick.

John Rousmaniere

Guyanese. Emigration from the South American state of Guyana to the United States was on such a small scale until the late 1960s that the Immigration and Naturalization Service did not keep separate statistics for it. The annual number of documented Guyanese immigrants rose to about 2000 in the early 1970s and about 10,000 in the 1980s and early 1990s. In 1980 there were 32,000 Guyanese in New York City. About 73,000 Guyanese were admitted for legal residence in the 1990s, during which undocumented immigrants were estimated to be as high as 210,000 to 250,000. Emigrants from Guyana of Chinese and Indian descent moved to the city to escape discrimination by the government of Forbes Burnham, which took power in 1964 and was largely controlled by Guyanese of African descent. By the early 1990s Guyanese of Indian origin accounted for 65 percent of the Guyanese community in the city and about half of recent immigrants; this group included mostly Hindus and some Muslims, who settled in Indian neighborhoods near the Grand Concourse, in Jamaica and Richmond Hill, and along Euclid and Crescent avenues in Brooklyn. The rest of the community was of African descent, mostly Methodist, Anglican, and Catholic, and lived in neighborhoods with other West Indian groups along Atlantic Avenue and to the south toward Foster Avenue and Flatbush Avenue in Brooklyn. The two groups have little contact in New York City. Many Guyanese professionals were among the immigrants; those unable to obtain permanent resident status and recertify in their professions often worked as domestic servants and in service industries and manufacturing. In 2000 Guyanese accounted for the third largest group of newcomers to New York City, with more than 130,000 people. Large communities existed in Richmond Hill (more than 30,000), Morris Heights, and Woodhaven.

Graciela M. Castex

Gypsies [Roma]. A name commonly but inaccurately applied to the Roma, or Romani, a people of Indian descent. The details of their ancestry and the time of their exodus toward the West (believed to be about A.D. 1000) remain unclear. The first specific reference to Gypsies in New York City was in the *New York Times* of 8 July 1852 noting that two Gypsy brothers from England arrived in the city in 1851. The first large-scale Gypsy migration from Europe was that from Serbia in the 1890s, which was brought about by government restrictions there on nomadism. Gypsies circumvented U.S. immigration laws by identifying themselves by their nationality rather than as Gypsies, and Gypsies from each European country tended to live in the same areas as other immigrants from the same country. Many settled at first with other Balkan immigrants on the Lower East Side, in an area bounded by First and Ninth streets, Avenue A, and the East River. After World War I large numbers of Gypsies from the Austro–Hungarian Empire settled initially on Fifth, Sixth, and Ninth streets on the East Side before leaving for Chicago and elsewhere during the 1920s. Gypsies moved to New York City from other parts of the United States after various relief programs were put into effect during the 1930s, and from Hungary after the revolution of 1956. In the 1970s and 1980s Muslim Gypsies from southern Yugoslavia settled in the Bronx, and in the early 1990s a sharp increase in attacks on Gypsies in eastern Europe brought growing numbers of refugees to the city. Gypsies in Greater New York are descended principally from liberated slaves and are known as the Vlax Roma; during the first four decades of the twentieth century most Vlax Roma in Manhattan belonged to the Kalderash, an ethnic division of the Gypsies concentrated in Russia. The Machvaya Vlax, from Serbia, settled in Brooklyn but after World War II moved into Manhattan in increasing numbers. The Lovari Vlax, from Hungary, settled for the most part in Newark, New Jersey.

Rena Gropper, *Gypsies in the City: Culture Patterns and Survival* (New York: Darwin, 1975); Ian F. Hancock, *The Pariah Syndrome: An Account of Gypsy Slavery and Persecution* (Ann Arbor, Mich.: Karoma, 1987)

Ian Hancock

Gyp the Blood [Horowitz, Harry] (*b* 1889; *d* Ossining, N.Y., 13 April 1914). Gangster and leader of the infamous Lenox Avenue Gang. Despite his small size, Horowitz was vicious and violent, supposedly willing to break a man's back over his knee on a two dollar bet. On 15 July 1912, Horowitz and three members of his gang murdered gambler Herman "Beansie" Rosenthal outside the Metropole Hotel at 147 West 43rd Street in Manhattan, allegedly at the request of New York City Police Detective Lieutenant Charles Becker. The case received sensational coverage in William Randolph Hearst's newspapers. This incident is said to have been the first use of a get-away car, a gray Packard. Horowitz was convicted of murder and executed at Sing Sing prison.

Anne Epstein

H

Häagen-Dazs. Ice cream brand concocted by Polish-born Reuben Mattus (1912–94). As a youth in the Bronx he delivered his mother's homemade ices and ice cream to local retailers. In 1936 Mattus married Rose Vesel, who would later develop the marketing of Häagen-Dazs. In the late 1950s Reuben created an ice cream with more butterfat and less air than the product then typically sold in supermarkets. He gave it a meaningless, foreign-sounding name. Häagen-Dazs ice cream went on sale in three flavors: vanilla, chocolate, and coffee. Daughter Doris opened the first Häagen-Dazs scoop shop in Brooklyn Heights in 1976. In 1983 Pillsbury bought the business for $70 million; Häagen-Dazs is now owned by General Mills.

Cathy Alexander

Hadassah. Women's volunteer organization formed in 1912 at Temple Emanu-El in New York City by Henrietta Szold and others to provide public health nursing in Palestine. It is the oldest and largest women's Zionist organization in the world. In 1913 it sent two nurses to Palestine to open a maternity center in Jerusalem, and in 1934 it founded Youth Aliyah to rescue German youths (of whom 4300 made their way to Palestine by the end of the war). Hadassah is committed to health care, Jewish education, and women's issues. It operates a teaching hospital and medical school affiliated with the Hebrew University in Jerusalem, as well as many clinics throughout Israel. At its headquarters in Manhattan the organization maintains an extensive film library documenting its projects and publishes *Hadassah* magazine. In the early twenty-first century Hadassah had more than 300,000 members, including 10,000 in New York City.

Jean Ulitz Mensch

Hagstrom Map Company. Company founded in 1916 in New York City by Andrew G. Hagstrom (1890–1977). It began with maps of the neighborhoods and boroughs of newly consolidated Greater New York and ultimately offered atlases, American city street guides, pocket maps, and New York City specialty maps, including the first complete map of the New York City Rapid Transit System and "How to Get In and Out of New York by Automobile." In the early twenty-first century Hagstrom is part of the Langenscheidt Publishing Group, a major publisher of maps in the United States.

Elizabeth L. Bradley

Haight, Charles C(oolidge) (*b* New York City, 17 March 1841; *d* Garrison, N.Y., 8 Feb 1917). Architect. The son of a rector at Trinity Church, he undertook many architectural commissions for clients associated with the church during the last quarter of the nineteenth century. His most notable designs include the midtown campus of Columbia University (1874–84, demolished), the quadrangle of the General Theological Seminary in Chelsea (1883–1902), the New York Cancer Hospital (1884–86, 1889–90) at 455 Central Park West, Trinity School (1894) at 139 West 91st Street, and a series of warehouses for the Trinity Church Corporation near Canal Street. In his later years Haight designed the neo-Gothic Second Battalion, 105th Field Artillery Armory, in the Bronx (1910).

Marjorie Pearson

Haitians. During the Haitian revolution from 1791 to 1803, as many as 4000 whites, free blacks, and slaves fled St.-Domingue (now Haiti) and settled in New York City. Some settled at once in the city, while others went first to other countries (especially France) or to other colonies, including Jamaica, Trinidad, and Cuba. Although many Haitians had hopes of returning soon to Haiti to reclaim their property, after several years a few set up their own shipping businesses or opened boardinghouses, and some worked in shops owned by French businessmen who had fled to the city during the French Revolution. Most Haitians, however, did not speak English and could obtain only menial employment. The city gave shelter and financial aid to white refugees, about 300 of whom lived without charge in a government house on Vesey Street until they could move to their own quarters. This aid was not extended to black refugees.

During the first half of the nineteenth century, the Haitian population became well established in Manhattan. Many Haitians met after Sunday Mass at St. Peter's Church, 16 Barclay Street, to renew their friendships and discuss recent events in Haiti. On 10 August 1801 about 20 Haitian refugees led by Marcel Sam attempted to stage a riot to liberate Haitian slaves in the custody of Jeanne Mathusine Droibillan Volunbrun. Their efforts were aborted and they were arrested and each sentenced to 60 days in jail, despite legal aid provided by the Manumission Society. The best-known and most widely respected immigrant of the period was Pierre Toussaint, a former slave who became a professional hairdresser to upper-class women and children. With money from his business he supported the widow of his former master, bought freedom for other slaves, gave to Catholic charities, and helped orphaned, homeless, disabled, and sick people from many ethnic backgrounds. By 1850 a second generation of Haitians integrated into the social and economic life of the city. As marriages to blacks from different backgrounds became more common, Haitians lost some of their ethnic distinctness. By the turn of the twentieth century, political unrest and the *kako* (guerrilla) movement in Haiti resulted in much of the Haitian business and political elite, including Haitians of Syrian and Lebanese origin, fleeing to New York City.

Immigration increased during the U.S. occupation of Haiti (1915–34). Between 1916 and 1945 the Haitian community in New York City was notable for its diversity. Much of it was in Harlem and included students on scholarship at Teachers College who were expected to return to Haiti after completing their studies; business leaders who had lost their holdings to the kakos; and writers and artists attracted to the literary explosion of the Harlem Renaissance. In Harlem, liberals and Marxist politicians found a place where they could express their nationalist ideas and their discontent with the U.S. occupation. Some Haitians supported the Universal Negro Improvement Association (UNIA), the organization behind the "back to Africa" movement initiated by Marcus Garvey. Among its leaders were several Haitians, including Elie Garcia, who led a delegation of UNIA members to Liberia in 1920 and later became the secretary of the Black Star Line; and the activist Jean-Joseph Adam, who served as secretary and interpreter for a UNIA delegation to the League of Nations in Geneva in October 1922. One of the most influential Haitian activists in the city was Jacques Roumain, who lived in Harlem from 1939 to 1941, during which time he befriended black writers and activists in the Communist Party and participated in several important literary and political events; he was himself a communist and often discussed his ideas and projects with his friends Paul Robeson and Ralph Ellison at the home of Louise Thompson.

Between the two world wars, Haitian immigrants in Harlem were largely middle and upper class. Some formed Utilités d'Haïti, a firm that became very successful through importing Haitian goods into the U.S. market. They also organized several clubs, including Solidarité, the Club Aristocrate, the Club l'Arc-en-ciel, and the Club Clair de Lune, where they could reflect on their country, collect funds for various causes, and form social bonds that lessened the pain of racism. Even after the U.S. occupation in Haiti ended, Haitian political organizations continued to flourish in Harlem. One of these, the Association Démocratique Haïtienne,

organized a memorial service for Roumain in May 1945.

From 1957 to 1986 most Haitian immigrants in New York City were political refugees who had fled the brutal dictatorships of François and Jean-Claude Duvalier. More than 34,000 Haitians moved to the city between 1983 and 1989, and the influx continued into the twenty-first century as political life in Haiti became chaotic and violence erupted in the streets there. Most who left during this time settled in Brooklyn, Manhattan, and Queens, with concentrations in Crown Heights, East Flatbush, the Upper West Side, and Cambria Heights. In these neighborhoods families opened many restaurants, barbershops, garages, grocery stores, record shops, bakeries, and various retail stores that catered to the Haitian population, often extending credit and speaking French or Creole during transactions. From the 1950s many Haitian women worked as domestics or in child care. A number of radio stations, television programs, and newspapers began to supply the Haitian community with information about events in New York City, in other Haitian communities overseas, and in Haiti itself. *Haïti-Observateur,* established in 1971 in the city, was the first weekly newspaper for Haitian émigrés. It developed a large distribution network in the United States, Canada, and France and was introduced in 1986 in Haiti itself, where it entered into competition with established local newspapers. *Haïti-Progrès* was first published in New York City in 1981, and more recently the Brooklyn-headquartered weekly newspaper *Haitian Times* published its first issue on 27 October 1999.

In 1986 many Haitians living in the city celebrated in the streets to mark the collapse of the government of Jean-Claude Duvalier. The community was also highly visible on 20 April 1990, when 100,000 Haitians blocked traffic in Brooklyn and lower Manhattan to protest the U.S. Food and Drug Administration's recommendation that blood banks reject donations from Haitian immigrants, who were presumed to be at a disproportionately high risk of carrying AIDS. At the same time Haitians with U.S. citizenship became active in government and politics: some were appointed to municipal agencies and others sought elective office at the city and state levels. On 24 April 2007, Mathieu Eugene, founder and executive director of Youth for Education and Sport, became the first Haitian American to be elected to the New York City Council, representing the 40th district in Brooklyn, which includes Crown Heights. Some city-based political organizations are affiliated with political parties in Haiti and lend financial and logistical support to candidates there. Likewise, candidates who vie for the Haitian office of the presidency campaign in Haitian American neighborhoods in search of financial contributions.

Haitian American hometown associations have served as engines of development for their respective villages because they sponsor projects (hospitals, schools, community buildings) in such Haitian localities. Hometown associations such as the Organization for the Development of Lascahobas, Comité de Support pour la Commune de Miragoâne, Solidarite Jacmelienne, Fraternité Valléenne, Association des Amis de Belle-Anse, Les Amis des Enfants de Lascahobas, and Organization for the Advancement of the Island of La Gonave actively collect funds to finance ongoing projects beneficial to their villages. While the activities of these organizations remain influenced by the homeland, community service centers such as the Haitian Centers Council, Flatbush Haitian Center, Haitian-Americans United for Progress, and Bedford Haitian Community Center attend to the needs of people in local neighborhoods.

The Catholic Church, a potent force in the Haitian American community, operates parish-based charitable organizations. Father Guy Sansaricq, born in Haiti in 1934, served for 22 years (1971–93) as a parochial vicar at Sacred Heart Parish in Cambria Heights and later as pastor at St. Jerome's Church in Brooklyn (1993–present). Pope Benedict XVI appointed him auxiliary bishop of Brooklyn on 6 June 2006. Haitian American Protestant churches, which provide social services and places of worship to their brethren, have contributed much to the community. Evangelical Crusade of Fishers of Men, which started in Brooklyn in 1973, is a leading example.

Two alleged cases of police brutality stunned the Haitian community in recent years. Members of the New York Police Department (NYPD) arrested Abner Louima, a 30-year-old Haitian American resident of Queens, after an incident at the Rendez-Vous nightclub on Brooklyn's Flatbush Avenue on 9 August 1997. The officers brought him to the 70th precinct station house. While handcuffed, he was taken to the bathroom of the facility and sodomized with a toilet plunger by two policemen. With a ruptured intestine and bruises over his body, he spent many weeks in a hospital and at home recuperating. On 27 February 1998 the court found five officers who participated in this ordeal guilty on several counts. The second case involved Patrick M. Dorismond, a 26-year-old unarmed and off-duty Haitian American security guard, who was shot by an undercover NYPD police officer while waiting in midtown Manhattan for a taxi on 16 March 2000. Amidst much protest from the larger African and Caribbean community, which declared the incident one of racism, a grand jury investigation concluded that this was an accidental shooting.

In January 2010 Port-au-Prince in Haiti was devastated by an earthquake. As the New York City Haitian community struggled to respond to the tragedy, Governor David A. Paterson and Mayor Michael R. Bloomberg in February announced the creation of the New York Haitian Earthquake Family Resource Center at the National Guard Armory at 1579 Bedford Avenue to provide daily reports on relief efforts; offer various legal services and grief counseling; and provide access to telephones and computers.

Michel S. Laguerre, *American Odyssey: Haitians in New York City* (Ithaca, N.Y.: Cornell University Press, 1984)

Michel S. Laguerre

Halberstam, David (*b* New York City, 10 April 1934; *d* Menlo Park, Calif., 23 April 2007). Author and journalist. Raised in the Bronx, he covered the civil rights movement for the *New York Times* during the 1960s. He also reported on the Vietnam War and won a Pulitzer Prize in 1964 for his work. Later in his career he shifted his focus to sports writing. He published several novels throughout his career, including *The Best and the Brightest* (1960), *The Next Century* (1991), and *Playing for Keeps* (1999). A lifelong New Yorker, he lived on the Upper West Side. He died in an automobile crash in the San Francisco area.

Jessica Montesano

Hale, Nathan (*b* Coventry, Conn., 6 June 1755; *d* New York City, 22 Sept 1776). Soldier and spy. After graduating from Yale College in 1773, he taught school for two years. He enlisted in the Connecticut militia as a lieutenant in 1775 and quickly rose to captain. Following the British victory in the Battle of Long Island in August 1776, Hale was selected for Knowlton's Rangers, a scouting unit headed by Colonel Thomas Knowlton, and volunteered to penetrate the British camp as a spy. He headed out in mid-September and was captured in Huntington, Long Island, on 21 September. He confessed to the British commander, General William Howe, that he had been spying and was hanged in Manhattan the next morning, probably at the intersection of what is now Third Avenue and East 66th Street. The words he is purported to have said before being hanged—"I only regret that I have but one life to lose for my country"—made him a hero of the American Revolution. A statue of Hale by Frederick MacMonnies was placed in City Hall Park in 1893.

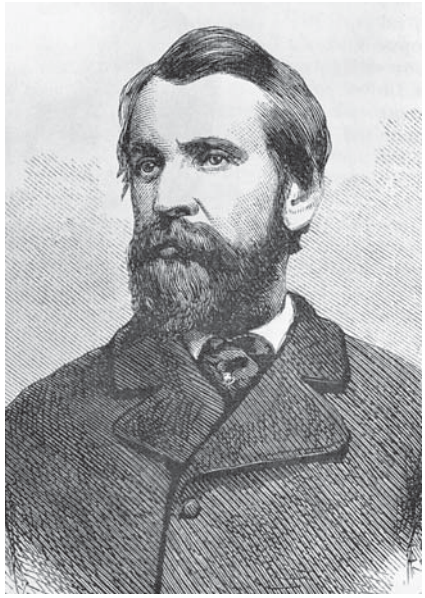
Henry Phelps Johnston, *Nathan Hale 1776: Biography and Memorials* (New Haven: Yale University Press, 1916); George Dudley Seymour, *Documentary Life of Nathan Hale* (New Haven: privately printed, 1941)

Richard E. Mooney

Hale House Center. Facility for drug-addicted children at 152 West 122nd Street in Manhattan. It was opened in 1969 by Mother

(Clara M.) Hale (1905–92) to care for the infant of a drug addict and was later expanded and managed by Hale and her daughter Lorraine E. Hale, a physician. A building at Manhattan Avenue and 113th Street was converted into temporary housing for reunited families in 1985, and during the same year Mother Hale was honored by President Ronald Reagan. Preferring foster homes to group homes, municipal agencies in October 1989 stopped sending children to Hale House, but the center continued to provide residential child care for children younger than five and expanded its programs to include education. Lorraine Hale was forced to resign in 2001 after being indicted for misappropriating more than $1 million. Subsequent leadership restored the organization's finances and reputation.

Alana Erickson Coble



Half Moon Hotel. Located at West 29th Street and the Boardwalk on Coney Island, it was built in an effort to change Coney Island's image from a honky-tonk day trip destination to a classier seaside resort. The 16-story, 400-room Spanish Colonial style building was among the largest in Coney Island during the 1920s and 1930s. Billed as "the only New York City hotel on the Atlantic," the Half Moon served as a popular tourist destination despite being far from the principal amusement areas located toward the eastern end of the peninsula. The hotel gained a different kind of notoriety in 1941 when mobster-turned-informant Abe Reles fell to his death from a police-guarded sixth-floor room the night before he was to testify against high-ranking Mafia figures and members of Murder Incorporated. During World War II the navy used the building as a hospital, and after the war it became a civilian hospital. In 1954 it was converted into a nursing home by the Metropolitan Jewish Geriatric Center. The building was demolished in 1995 to make way for senior citizen housing on the site.

Ben Silk

Hall, A(braham) Oakey (*b* Albany, N.Y., 26 July 1826; *d* New York City, 7 Oct 1898). Mayor. He was district attorney of New York City as a Whig and then as a Republican during the 1850s. In 1862 he joined the Democratic Party and became an ally of William M. "Boss" Tweed. As mayor from 1868 to 1872 he became entangled in the scandals of the Tweed Ring and was twice indicted for corruption. Although he was eventually exonerated, his career was ruined, and he chose exile in London. Hall later returned to the United States.

Jerome Mushkat

A. Oakey Hall

Hall, Cornelius A(loysius) (*b* Staten Island, 1889; *d* Staten Island, 5 March 1953). Borough president. Unlike most of his predecessors, who were mostly Republicans, he was an independent Democrat. During the 1930s he served as the commissioner of public works in Staten Island. As borough president of Staten Island from 1945 to 1953, Hall saw the Staten Island Ferry Terminal to completion in 1951.

Andrew Wiese

Hall, George (*b* New York City, 21 Sept 1795; *d* Brooklyn, 18 April 1868). First mayor of Brooklyn. A painter and glazier by trade, he belonged to the Temperance and Whig parties. He served as mayor for one year after the adoption of the municipal charter in 1834. After the city was enlarged by the annexation of Williamsburgh and Bushwick, he was elected in 1855 to a two-year term to the same office.

Ellen Fletcher

Hallett's Cove. Small settlement in northwestern Queens near the ferry landing at the foot of Astoria Boulevard. It was the site of one of Queens' earliest settlements, by Jacques Bentyn in 1638, who soon abandoned it. William Hallett, Sr., received this area as a land grant for 161 acres in 1652 from the Dutch. On 20 May 1721 Joseph Hallett donated some of his family's land to found the first local school. His family persists to this day, operating the Hallett Funeral Home in Flushing. The first ferry service from Manhattan to Long Island was from Horne's Hook (86th Street) to Hallett's Cove. Stephen A. Hasley wrote a resolution that in 1839 renamed the town Astoria, hoping that the town would enjoy the patronage of John Jacob Astor.

Vincent Seyfried, Henry Cooper

Hall of Fame for Great Americans. Monument in the Bronx, established to honor well-known Americans and dedicated on 30 May 1901 by Henry Mitchell MacCracken, president of New York University. It occupies a semicircular vaulted colonnade 630 feet (190 meters) long behind the Hall of Languages (1894), Gould Memorial Library (1899), and the Cornelius Baker Hall of Philosophy (1912) on the former campus of New York University. The first monument of its kind in the country, it relied on the public and an expert panel to choose its members. The first 29 members were honored with tablets designed by Tiffany Studios, and in 1907 the first of 97 busts was installed. In February 1966 the site was entered in the National Register of Historic Places. It fell under the jurisdiction of the City University of New York after the campus was taken over by Bronx Community College in 1973. Renovations costing $3 million were completed in 1985, but the last installation of a bust was that of Franklin Delano

The Hall of Fame for Great Americans, ca *1910, with the domed roof of Gould Memorial Library (designed by McKim, Mead and White) in the background*

Roosevelt in 1992, and in the early twenty-first century the Hall of Fame remains financially troubled and largely ignored by the public.

George J. Lankevich

Hall of Records. Name until 1962 of the building at the corner of Chambers and Centre streets now known as the Surrogate's Court.

Halloween Parade. Nation's largest public Halloween celebration. Officially titled New York's Village Halloween Parade and commonly known as the Greenwich Village Halloween Parade, it has occurred annually on Halloween night (October 31) since 1973 along a route that begins on Spring Street and runs straight up Sixth Avenue to 21st Street. It attracts approximately two million onlookers and 60,000 marchers dressed in creative costumes. The parade began when Ralph Lee, a Greenwich Village puppeteer and mask maker, planned a pageant for neighborhood children and their friends who marched from house to house. He eventually won a *Village Voice* Obie Award for his work with the event. Beginning in 1975, a local organization, Theater for the New City, took over the event to present the puppet show and parade on a larger scale. After 1979 Jeanne Fleming acted as the parade's artistic and producing director. By the twenty-first century it had grown into a nationally known event, respected for its contribution to the artistic and imaginative culture of New York City and providing a place for visual and performance artists to showcase their works.

Anne Epstein

Halpern, Moyshe-Leyb (*b* Zolochev, Galicia [now in Ukraine], 2 Jan 1886; *d* New York City, 31 Aug 1932). Poet. He immigrated to the United States in 1908 and soon had his first poems published in the Yiddish press in New York City. He led an itinerant and impoverished life and remained a largely independent figure among the Yiddish literati, though he was associated with the circle of writers known as the Yunge. In his two collections of verse, *In Nyu-york* (1919) and *Di goldene pave* (The Golden Peacock, 1924), he displays a distinctively direct and unsentimental voice capable of both lyric and imaginatively probing modern verse.

Ruth R. Wisse, *A Little Love in Big Manhattan* (Cambridge, Mass.: Harvard University Press, 1988)

Jeffrey Shandler

Hamburg–American Line. Firm of transatlantic shippers formed as the Hamburg-Amerikanische Paketfahrt Aktien-Gesellschaft (HAPAG) in Hamburg in 1847. It initially operated three copper-bottomed sailing ships including the *Deutschland,* which had a capacity of 220 passengers and first sailed for New York City on 15 October 1847. Monthly service between Hamburg and the city was offered from 1848; the average westbound sailing time was 41 days. The firm commissioned its first steamship, the *Borussia,* in 1856 and soon bought others because they were larger, safer, faster, and more comfortable than sailing ships. The finest ones, including the *Fürst Bismarck,* the *Augusta Victoria,* the *Normannia,* and the *Columbia* weighed at least 10,000 tons, had at least 13,000 horsepower, and could cross the Atlantic in as few as seven days. By 1897 HAPAG had opened lines to the Caribbean and South America and was the largest steamship company in the world. The largest and fastest ships were reserved for the American line, which had its offices at 37 Broadway and its main docking facilities in Hoboken, New Jersey. It provided service from Hamburg to Cherbourg, France, and Southampton, England, before docking in New York City and was crucial in encouraging immigration because it offered relatively inexpensive transatlantic fares. The line carried an average of 34,466 passengers a year from Hamburg to the city during the 1860s, 90,889 during the 1880s, and 60,041 during the 1890s. As the number of Germans immigrating to the United States declined before the turn of the twentieth century, southern and eastern Europeans accounted for an increasing number of the firm's passengers. HAPAG and its rival, North German Lloyd of Bremen, provided passage for a quarter of the European immigrants moving to the United States during 1906–7, and on its ships alone 150,633 emigrants sailed to New York City in 1907. Its largest steamships were admired throughout the world, among them the *Imperator* (1912), which registered 52,000 tons, had six decks, and carried 3,849 passengers. When much of the German merchant marine was seized by British and U.S. forces during World War I, the pride of the line, the *Vaterland* (1914), became an American troop carrier and was renamed the *Leviathan*. The Hamburg–American Line resumed service during the 1920s and in 1934 combined its resources with North German Lloyd at the insistence of the Nazi government, operating under the name HAPAG–Lloyd Union; service was suspended during the 1940s. After resuming operations separately in the 1950s the firms merged in 1969. In 1998 HAPAG–Lloyd was acquired by TUI AG, a German-based tourism company. The conglomerate runs an airline, offers round-the-world cruises, and has a fleet of more than 140 container ships.

Kevin Kenny

Hamill, Pete (*b* Brooklyn, 24 June 1935). Journalist and author. The oldest of seven children of Irish immigrants, he attended Regis High School in Manhattan but left there at age 16 to work in the Brooklyn Navy Yard. He later served in the U.S. Navy and used the G.I. Bill of Rights to study painting and writing in Mexico. He attended the Pratt Institute and then worked as a graphic designer until 1960, when he got a job at the *New York Post*. He eventually served as editor of both the *Post* and the *New York Daily News* and wrote short stories, television and movie scripts, and novels, many of which are set in either Brooklyn or Manhattan. His nonfiction book *Downtown: My Manhattan* (2004) is about his "love affair" with New York. He has lived in Brooklyn for decades.

Frank Dyer

Hamilton, Alexander (*b* Nevis, British West Indies, 11 Jan 1755; *d* New York City, 12 July 1804). Secretary of the treasury and revolutionary leader. He settled in New York City in 1772 and studied at King's College (now Columbia University). When the American Revolution began he organized a city artillery company; later he was a lieutenant colonel on George Washington's staff. His marriage to Elizabeth Schuyler (1780) connected him to one of the state's most powerful families. He was a delegate to the Continental Congress in 1782–83. From 1783 to 1790 he lived at either 57 or 58 Wall Street. As a prominent lawyer, he successfully defended the British merchant Joshua Waddington in a case (1784) that helped establish the principle of judicial review. That same year he helped to form the Bank of New York (1784). A forceful advocate of a strong central government, he was a delegate to the Constitutional Convention in 1787 and a leader in the successful campaign to secure ratification of the Constitution in New York. To this end he wrote at least 51 papers in the *Federalist.* Under the new federal government, Hamilton served as the first secretary of the treasury (1789–95). During his tenure he supported policies that aided the growth of New York City as a financial center. In 1795 he returned to practice law in the city. In 1800 he began construction in Harlem of his country home, the Grange (now called the Hamilton Grange National Memorial). Active in Federalist politics as the leader of a wing opposed to John Adams, he helped to launch the *New York Evening Post* in 1801 to further his views. As a strong opponent of Aaron Burr, he helped thwart Burr's candidacy for the U.S. presidency in 1800 and for the governorship of New York in 1804. He lost his life in a duel with Burr in Weehawken, New Jersey, on 11 July 1804, and is buried in the graveyard of Trinity Church.

Barbara A. Chernow

Hamilton Beach. Neighborhood in southwestern Queens, lying on a narrow peninsula separated from the eastern edge of Howard Beach by Hawtree Creek basin and bounded to the east by the Rockaway transit line and John F. Kennedy International Airport. Developed about 1926, it had a station on the Rockaway line of the Long Island Rail Road that closed in October 1955; municipal subway service began in 1956. In the mid-1990s Hamilton Beach lacked sewers and municipal sanitation service and had the only volunteer fire department in Queens. It has fewer than a dozen streets, which lie barely above the level of Jamaica Bay and flood easily. Nearly half the inhabitants are Irish and Catholic. Access to the area is provided by a wooden bridge from 102nd Street and a pedestrian bridge from 163rd Avenue. In the early twenty-first century new houses were being built, but the neighborhood remained tightly knit and multigenerational.

Vincent Seyfried

Hamilton Grange. Historic house in St. Nicholas Park in Harlem Heights. A country residence commissioned by Alexander Hamilton, who named it after his family's ancestral home in Scotland, it was designed in the Federal style by John McComb, Jr., an architect of City Hall, and stood 9 miles (14 kilometers) from town at the time it was built. The estate was completed shortly after Hamilton's death in 1804 and remained in the family until 1834. After a succession of owners the house was given to St. Luke's Episcopal Church in 1889 and was moved two blocks south to Convent Avenue and 141st Street. It was acquired in 1924 by the American Scenic and Historic Preservation Society and in 1933 opened as a public museum; its operation was taken over in 1962 by the National Park Service. In 2008 the house was moved again to St. Nicholas Park.

Hamilton Grange National Memorial: Report (Washington: U.S. Government Printing Office, 1988)

Jonathan Kuhn

Hamilton Heights. Neighborhood on the West Side of Manhattan, lying between Washington Heights and Morningside Heights and bounded by 135th Street to the south, 155th Street to the north, Edgecombe Avenue to the east, and the Hudson River to the west; it includes the Hamilton Heights–Sugar Hill historic district and is considered part of West Harlem. The neighborhood is named for Alexander Hamilton, who once owned much of the area and spent the last two years of his life in what is now the Hamilton Grange National Monument. Most of the housing dates from the extension of elevated and subway lines to the neighborhood in the late nineteenth and early twentieth centuries. This fairly elegant housing became less desirable to whites in the 1930s and 1940s as the African American population rose. The brownstone revival of the 1960s and 1970s led to a new movement of middle-class African Americans to the area. In the 1980s a large number of Latin Americans settled in the neighborhood; almost three-quarters of all the immigrants who moved there were Dominican, as smaller numbers arrived from Jamaica, Ecuador, Haiti, and China. In the early twenty-first century the demographics were continually in flux but remained largely African American and Latin American. One of the highest hills in Hamilton Heights slopes up from the Hudson River at 155th Street and contains the cemetery and mausoleum of Trinity Church. The campus of City College of New York lies along Convent Avenue between 132nd and 140th streets, and atop the North River Wastewater Treatment Plant, Riverbank State Park towers over the Hudson River from 137th Street to 145th Street.

Hamilton Grange, 2009

Hamilton Square. One of the five open spaces provided for on the decisive 1811 Commissioners' Plan, it was bounded by 66th and 68th streets and Third and Fifth avenues. Its 18 acres (7.3 hectares) were laid out in 1807 from former common land taken over by the city known as the Dove lots. Two large ovals, constituting the square, were bordered by 28 building lots, 14 on each side. For several years the lot owners and the city argued as to whether the square was to be public or private. The 1807 agreement called for a private square, but the 1811 plan called for a public one, with lots of a different size and position. The dispute was resolved in 1813 when the city agreed to refund the original lot owners their purchase price plus interest (dating back to 1811). In 1837 the square was rented out as pasture land to the Commissioner of the Almshouse, Bridewell, and Penitentiary. In the 1840s the square was slated to change in character when the city gave the Washington Monument Association a plot of land to build its long-desired monument. A huge ceremony and military parade was staged on 4 July 1847, attended by the New York State governor, to celebrate the laying of the monument's foundation. The project was never completed because of a lack of money. In 1865 a large portion of the square was regraded to became a parade ground for the New York State National Guard; some portions of it were given to charitable institutions and other portions were sold off and divided into 152 building lots. The area between Fourth and Fifth avenues was discontinued in 1867 and the remainder closed in 1868 for street expansion.

Lisa Keller

Hammacher Schlemmer. High-end housewares and electronics store. Opened in 1848 at 209 Bowery by German immigrants, it published its first catalogue in 1881. In 1926 it moved to 147 East 57th and added luxury housewares to its inventory. It was the first

store to introduce a pop-up toaster (1930), electric razor (1934), steam iron (1948), microwave oven (1968), telephone answering machine (1968), and cordless telephone (1975).

Jessica Montesano

Hammels. Former name of a section of Rockaway Beach in southeastern Queens, lying on the Rockaway Peninsula around Beach 85th Street. It began as four or five boardwalks that ran from the bay to the ocean. A hotel, the Eldert House, was kept by Garret Eldert and faced the bay on the east side of what is now Beach 85th Street; in August 1869 it was leased to Louis Hammel of Elm Park on Staten Island. The railroad ran within a few paces of the hotel after a trestle was extended across the bay in 1880; a railroad station was then built, and trains carried thousands of visitors annually. A dock in front of the hotel, Fifth Landing, was a regular stop for boats of the Iron Steamboat Company carrying day visitors from Manhattan. In later years hotels on the bay declined as resorts along the shore attracted most beachgoers. Hammels was incorporated with Hollands into the Village of Rockaway Beach in 1897. A large housing project, Hammel Houses, was built in 1955.

Vincent Seyfried

Hammerstein, Oscar (*b* Stettin, Prussia [now Szezcin, Poland], 8 May 1846; *d* New York City, 1 Aug 1919). Opera impresario, grandfather of Oscar Hammerstein II. After immigrating as a penniless teenager to the United States and settling in New York City, he made a fortune in the tobacco business by inventing machines for the manufacture of cigars and launching a trade journal. He later designed and built theaters, first in Harlem and then in midtown. With profits from the Victoria, a vaudeville house managed by his son Willie, he financed the Manhattan Opera Company, which opened in 1906 in a theater that he built on West 34th Street west of Eighth Avenue. His company posed a challenge to the Metropolitan Opera. It had a well-trained orchestra and chorus, leading soloists, and an adventuresome repertory: it not only mounted fine productions of the standard works but also gave the American premieres of Richard Strauss's *Elektra* and Claude Debussy's *Pelléas et Mélisande.* After three seasons of extravagant spending and the rejection of subsidies from wealthy members of fashionable society, he was obliged to sell his interests to the Metropolitan. Hammerstein designed all his theater buildings, which were praised for their impressive interiors and excellent acoustics; none survives.

George A. Thompson, Jr.

Hammerstein, Oscar (Greeley Glendinning), II (*b* New York City, 12 July 1895; *d* Doylestown, Pa., 23 Aug 1960). Librettist and lyricist, grandson of Oscar Hammerstein. Born on East 116th Street, he attended Columbia University and collaborated on operettas and musical comedies with Rudolf Friml and Jerome Kern. His most important contribution to the creation of the modern musical was *Show Boat* (1927, music by Kern), in which for the first time plot was a central element and the songs developed the characters. During the 1930s he worked primarily in Hollywood. He returned to Broadway with *Oklahoma!* (1943), the first in a series of collaborations with Richard Rodgers that included such successful works as *Carousel* (1945), *State Fair* (1945, film), *South Pacific* (1949), *The King and I* (1951), *Flower Drum Song* (1958), and *The Sound of Music* (1959), as well as several failures. His residences in New York City included buildings at Central Park West and 87th Street (1911), 509 West 121st Street (1917), 1067 Fifth Avenue (1930–31), and 157 East 61st Street (during the 1940s).

George A. Thompson, Jr.

Hammett, (Samuel) Dashiell (*b* St. Mary's County, Md., 27 May 1894; *d* New York City, 10 Jan 1961). Writer. At the age of 19 he began working for a detective agency, which later would provide material for his writing. He contracted tuberculosis during World War I and began writing detective novels, short stories, and mysteries. In 1923 his short story "Arson Plus" was published in *Black Mask* crime magazine. Some of his best-known works include *The Maltese Falcon* (1930) and *The Thin Man* (1934). In 1946 he was elected president of the New York Civil Rights Congress. He died at Lenox Hill Hospital.

Jessica Montesano

Hammond, John (*b* New York City, 15 Dec 1910; *d* New York City, 10 July 1987). Music producer. Born into the wealthy Vanderbilt family, Hammond grew up in Manhattan and from a young age was interested in music. He played both violin and viola but stopped to become a record producer at the age of 20. He discovered and produced records of several talented performers, including Fletcher Henderson, Bessie Smith, Billie Holiday, Charlie Christian, Teddy Wilson, and Count Basie. Hammond is known for integrating the music business by both breaking the color line among musicians and widening the listening audience. In 1938 and 1939 he organized a series of concerts known as Spirituals to Swing at Carnegie Hall. After a personal hiatus, be began working again, this time for Columbia Records, and in the 1960s and 1970s he launched the recording careers of Aretha Franklin, Bob Dylan, and Bruce Springsteen, believing the political singers showed the same vibrancy as the jazz singers of decades past. He also wrote a memoir, *John Hammond on Record* (1974).

Jessica Montesano

Hammons, David (*b* Springfield, Ill., 24 July 1943). Performance artist, conceptual artist, and sculptor. Through his artwork, he probes the black experience in America, embraces "dirty" materials that evidence human use, and dissects symbols and stereotypes. Before arriving in New York City from Los Angeles in 1974 he created a series of "body prints" by greasing and imprinting his body on chalked board. In New York City he relies on the city as the source and setting of his art. Scavenging Harlem for bones, coal, hair, wine bottles, and bottle caps, Hammons fashions ephemeral works in public spaces. Some performances, such as his 1983 *Bliz-aard Ball Sale* of snowballs in Cooper Square, subsist only as photographs. Sponsored by the Public Art Fund in 1986, he outfitted five poles with basketball hoops, patterned them with bottle caps, and erected the piece in Cadman Plaza Park, Brooklyn. Despite the elusive nature of his work, Hammons is featured in the permanent collection of the Museum of Modern Art. The P.S.1 Contemporary Art Center hosted a retrospective of his politically and racially charged work in 1990.

David Hammons, *David Hammons: Rousing the Rubble* (Cambridge, Mass.: MIT Press, 1991)

Clare Richfield

Hampton, Lionel (Leo) (*b* Louisville, Ky., 20 April 1908; *d* New York City, 31 Aug 2002). Bandleader and vibraphonist. He began his career as a drummer in Chicago and later Los Angeles. After a suggestion from Louis Armstrong, Hampton recorded playing the vibraphone, becoming the first jazz musician to do so. In November 1936 he moved to New York City to play in Benny Goodman's quartet, becoming part of one of the first racially integrated groups in jazz. Hampton lived at the Doris E. Brooks Houses on 137th Street, where he would continue to live for more than 30 years. After forming his own band in 1940, Hampton had many best-selling hits, including "Sunny Side of the Street" and "Flying Home." His virtuosity on the vibraphone was legendary and made him one of the most important figures of the jazz "swing" era of the 1930s and 1940s. Outside the music world, Hampton became an active proponent of low-income housing, founding the Lionel Hampton Development Corporation, which he partially self-funded. He built a complex of 350 apartments called the Lionel Hampton Houses at Eighth Avenue and 131st Street in 1971, and seven years later constructed the Hampton Houses on St. Nicholas Avenue and 130th Street. In addition to working as a musician and real estate developer, Hampton is

well known in New York City for his long-standing involvement in Republican politics. He wrote *Hamp: An Autobiography* (with James Haskins, 1989). Hampton continued playing and leading bands until his death. He is buried in Woodlawn Cemetery in the Bronx.

Ira Berger

Hand, (Billings) Learned (*b* Albany, N.Y., 27 Jan 1872; *d* New York City, 18 Aug 1961). Jurist. He graduated from Harvard University (1893) and Harvard Law School (1896) and practiced in Albany, moving to New York City in 1902 and joining the firm of Gould and Wilkie (1904). In 1909 President William Howard Taft appointed him to the U.S. District Court for the Southern District of New York. A supporter of Theodore Roosevelt in 1912, he unsuccessfully ran for chief judge of the New York State Court of Appeals on the Progressive Party ticket. Appointed to the Federal Court of Appeals for the Second Circuit (1924), he rose to senior judge in 1939 when Martin T. Manton resigned. During his tenure the court upheld the constitutionality of the Smith Act (1950). His age prevented his elevation to the U.S. Supreme Court by President Franklin D. Roosevelt, but he was called "the tenth justice." He retired on 15 May 1951 but continued to take on special assignments. He wrote more than 2000 opinions, including the Aluminum Company of America antitrust case, stating that Congress "did not condone 'good trusts' and condemn 'bad' ones; it forbad all" (1945); *Masses Publishing Co. v. Patten* (1917), sustaining the First Amendment right to send anti-war leaflets through the mails (overturned by the Second Circuit); and *United States v. Coplon* (1950), overturning an espionage conviction because the Federal Bureau of Investigation obtained evidence illegally. Hand gained national attention with his "The Spirit of Liberty" address at "I Am an American Day" in Central Park (21 May 1944). He lived at 142 East 65th Street.

Jeffrey A. Kroessler

Handy, W(illiam) C(hristopher) (*b* Florence, Ala., 16 Nov 1873; *d* New York City, 28 March 1958). Composer, cornetist, and music publisher. A self-taught cornetist, he was widely known as a performer and composer by the late 1890s. He moved in 1918 to New York City, where he established the Pace and Handy Music Company as the leading publisher of music by African American artists. During the Harlem Renaissance he lived on Strivers' Row. Handy's practice of incorporating syncopated rhythms into popular music earned him the nickname "father of the blues." He wrote more than 150 songs, including "Memphis Blues," "St. Louis Blues," and "Yellow Dog Blues," as well as the book *Father of the Blues: An Autobiography* (1941).

Cynthia Copeland

Hansberry, Lorraine (*b* Chicago, 19 May 1930; *d* New York City, 12 Jan 1965). Playwright. The daughter of African American activists, she left the University of Wisconsin in 1950 for New York City, where she took writing classes at the New School for Social Research and worked as an associate editor of *Freedom,* a radical black newspaper published by Paul Robeson. She achieved success on Broadway in 1959 with her play *A Raisin in the Sun*, which depicts a black family struggling to leave a slum of Chicago for a better neighborhood and was the first play produced on Broadway by a black woman. Hansberry became the first black and the youngest American to receive the New York Drama Critics' Circle Award. In 1964 she produced her next and last play about white intellectuals in Greenwich Village, *The Sign in Sidney Brustein's Window*, with the help of her former husband, Robert Nemiroff. Hansberry died of cancer at age 34 and is buried in Bethel Cemetery in Croton-on-Hudson, New York. Among her posthumous works are *To Be Young, Gifted and Black* (1969), adapted from her letters, essays, and other writings, and *Les Blancs* (1970), about an African leader caught between the conflicting demands of his tribal traditions and modernity. A musical called *Raisin*, based on *A Raisin in the Sun*, was staged in 1973.

HAPAG–Lloyd. Shipping firm formed by the merger of the Hamburg–American Line and the North German Lloyd Steamship Lines.

Hapgood, Hutchins (*b* Chicago, 21 May 1869; *d* Provincetown, Mass., 18 Nov 1944). Journalist. As a reporter from 1897 at the *New York Commercial Advertiser* (later the *New*

Happy Land Building, 2009

York Globe) he practiced the "personal journalism" championed by his city editor Lincoln Steffens and was introduced to the Lower East Side by his fellow reporter Abraham Cahan. A collection of his vividly written articles about the lives of Jewish immigrants was published in 1902 as *The Spirit of the Ghetto: Studies of the Jewish Quarter in New York*. Hapgood also described the Bowery and its residents and worked for other newspapers in New York City, including the *Morning Telegraph* and the *Evening Post,* before turning his attention to radical causes, an interest encouraged by his having taken part in discussions of anarchism, the labor movement, and Freudian psychology at the salon of Mabel Dodge. After World War I his career stagnated and he worked infrequently. In 1935 he exposed Theodore Dreiser's anti-Semitism in the *Nation*. Historian Moses Rischin described *The Spirit of the Ghetto* as "devoid of stereotype or sentimentality, sympathetic yet sober and realistic, intimate yet judicious and restrained." Hapgood's other published writings include *Types from City Streets* (1910) and an autobiography, *Victorian in the Modern World* (1939).

happenings. Artistic events of the late 1950s and 1960s that combined drama, music, the visual arts, and written texts and were at least partially improvised. Both the term and the earliest such event are attributed to Allan Kaprow, who presented "18 Happenings in Six Parts" in a loft at the Reuben Gallery on lower Fourth Avenue in the autumn of 1959. Frequently these impromptu spectacles included the audience, breaking down the distinction between viewer and art object. Their structure was inspired by the composer John Cage, whose seminars at the New School for Social Research drew many of the artists who made happenings in the city. Happenings were staged at diverse venues: by Kaprow in an abandoned brewery in the Bronx and in the courtyard of a derelict hotel in Chelsea, and by others in various lofts, art galleries, and public spaces. Claes Oldenburg staged his "Washes" in a swimming pool at Al Roon's Health Club and other happenings in his storefront on East Second Street.

Happy Land fire. Arson fire on 25 March 1990 at the Happy Land Social Club at 1959 Southern Boulevard in East Tremont in the Bronx where 87 people died. It was started by Julio Gonzalez, who after a quarrel with his female companion, Lydia Feliciano, splashed gasoline through the front door of the club (its only exit) and set the gasoline afire. Feliciano, who worked at the second-floor club, and four others survived the fire, but all the patrons inside were trapped and died within minutes from smoke inhalation. The club had been temporarily shut in 1988 for a variety of fire code violations, including a lack of fire exits, sprinklers, and emergency lights, but reopened soon after. In September 1991 Gonzalez was convicted of all charges connected with the crime and sentenced to 25 years to life in prison. In terms of fatalities, the Happy Land fire is one of the worst fires in the city in the past 50 years, exceeded only by the 2001 destruction of the World Trade Center.

Happy Land Monument (dedicated in 1995), 2009

Harcourt Brace. Firm of book publishers formed as Harcourt, Brace and Howe at West 47th Street on 29 July 1919 by Alfred Harcourt, Donald Brace, and Will D. Howe. Harcourt and Brace were both graduates of Columbia University and former employees of the publishers Henry Holt and Company. Ellen Knowles Eayres, Harcourt's secretary and later his wife, also played an important role in the company. The firm published *Main Street* (1920) by Sinclair Lewis, who had encouraged Harcourt to open his own firm: the book became its first best seller. Howe concentrated on textbook publishing; in 1921 he left the firm (which was consequently renamed Harcourt Brace and Company), and his efforts were continued by S. Spencer Scott. In the following years the firm acquired the list of Brewer, Warren and Putnam (1932) and the entire firm of Reynal and Hitchcock (1948). After Harcourt resigned as president in 1942, the firm was led successively by Brace

(to 1948), Scott (to 1954), and William Jovanovich, who had joined the firm as a textbook salesman and editor in 1947. In 1960 Harcourt Brace, now with publicly traded stock, merged with the World Book Company and was renamed Harcourt, Brace and World. In the following year Jovanovich began the first imprint arrangement in U.S. publishing by issuing books with Kurt and Helen Wolff, formerly of Pantheon. The firm moved to its own 27-story building at 757 Third Avenue in 1963 and in the following year had sales of more than $451 million (compared with $8 million in 1954). It acquired majority interests in the Canadian branch of Longmans, Green; in the English firm Rupert Hart-Davis (which ultimately was sold off); and in Grune and Stratton (1968) and Academic Press (1969). In 1970 the firm took the name Harcourt Brace Jovanovich, and in 1973 it purchased Pyramid Publications, which was renamed Jove Books and sold in 1978; it also acquired the History Book Club and the Instructor Book Club. In an effort to diversify, the firm acquired agriculture and business magazines, insurance companies, and television stations, as well as the profitable Sea World marine parks (1976), a purchase that met with some skepticism. The firm moved its trade department in 1982 from New York City to San Diego and in 1984 opened a newly constructed corporate headquarters in Orlando, Florida. It bought Holt, Rinehart and Winston from the Columbia Broadcasting System in 1986, thus strengthening its positions as one of the largest publishers of elementary, secondary, and college textbooks in the United States and a world leader in medical and scientific books and journals. To prevent a hostile takeover by the British press magnate Robert Maxwell in 1987, Jovanovich took on $2.6 billion in debt, a controversial tactic. In 1989 his son Peter became president and chief executive officer of the firm. To reduce its huge debt, the firm sold its four Sea World parks and two other parks for $1.1 billion in 1989. John S. Herrington, a former secretary of energy, replaced the elder Jovanovich as chairman of the board in 1990. In 1991 Peter Jovanovich recommended a sale to the General Cinema Corporation. Harcourt Brace Jovanovich had more than 11,000 employees in 1990 and recorded $1.8 billion in sales. In 1992 it changed its name to Harcourt Brace and in 2007 was sold to Houghton Mifflin and renamed again as Houghton Mifflin Harcourt. Its offices were at 15 East 26th Street.

Marjorie Harrison

hard-boiledness. The stereotype of the "hard-boiled" New Yorker expresses fundamental differences between New York City and smaller places. It identifies the New Yorker as brash, rude, tough, and cynically indifferent or sometimes hostile to the fate of others, but at the same time sophisticated, streetwise, and able to survive amid the pressures and dangers of city life.

The stereotype exists primarily in oral culture and may be traced back at least as far as the 1840s through popular literature, journalism, and entertainment. In Benjamin Baker's play *A Glance at New York in 1848* the actor Francis Chanfrau portrayed Mose the Bowery B'hoy, a combative workingman from the East Side. Mose, ruthless stock speculators and "confidence men," shrewdly independent newsboys, and remorseless prostitutes were depicted in novels and urban sketches written in the 1840s and 1850s by Ned Buntline, George G. Foster, and others. Once established, all these types continued to embody popular conceptions of the skills and attributes necessary to navigate the perils of big-city life. Some popular authors, including the novelist Horatio Alger after the Civil War and later the short-story writers O. Henry, Damon Runyon, and Ring Lardner, softened the outlines of the hard-boiled stereotype with elements of sentimentality and humor. Others, who wrote fiction and nonfiction about the city in the realist tradition, made no such compromises. In works like Stephen Crane's *Maggie: A Girl of the Streets* (1896) and Jacob A. Riis's *How the Other Half Lives* (1890) survival in the city's worst neighborhoods depends on the toughness and cynical indifference that form the grim core of the hard-boiled stereotype. Toughness and cynicism are central as well to a new popular genre of the twentieth century, the hard-boiled American detective story. This genre, which found its voice in the early 1920s in *Black Mask,* a magazine published in New York City, features a private detective who is both at war with the corruption and other stern realities of the metropolis and embedded within them, and who, like the earlier characters of Foster and Buntline, is able to prevail largely because he is an insider who knows how the evil city works. Numerous other detective stories of the hard-boiled genre featured cynical, tough, and fiercely independent protagonists whose grit and savvy helped them solve murders and navigate the big city, usually New York City, Chicago, or Los Angeles, written by the likes of Ross Macdonald, Mickey Spillane, and Walter Mosley.

Vaudeville, which flourished in New York City as nowhere else, built on the brashness and toughness of Mose the Bowery B'hoy and other traditional types to fill out the character of the "wiseguy" or "wiseacre" and to establish the wisecrack as the characteristic form of humor of the hard-boiled New Yorker. Tough, worldly Jewish women such as Sophie Tucker and Fanny Brice and such Irish American performers as James Cagney helped to give this kind of humor specific ethnic dimensions, and, more importantly, to build ethnicity into the hard-boiled stereotype in ways that reinforced the city's distance from rural and small-town America. Like Chanfrau before them, Cagney, Brice, and other vaudeville performers spoke in a distinctive accent that contributed to the image of the New Yorker as brash, cynical, and severe.

Stuart M. Blumin

Hardenbergh, Henry J(aneway) (*b* New Brunswick, N.J., 6 Feb 1847; *d* New York City, 13 March 1918). Architect. He designed such luxury hotels as the first Waldorf–Astoria at Fifth Avenue and 33rd Street (1893 and 1897; demolished), the Manhattan Hotel at Madison Avenue and 42nd Street (1896; demolished), and the Plaza Hotel at Fifth Avenue and 59th Street (1905–7). Each was dominated by a prominent mansard roof with gabled dormers. Under the patronage of Edward S. Clark, Hardenbergh was an early developer of the Upper West Side: he planned such structures as the Dakota at Central Park West and 72nd Street (1880–84) and two block fronts of houses on West 73rd Street (1879–80, 1882–85).

Marjorie Pearson

Harding, J. Horace (*b* Philadelphia, 31 July 1863; *d* New York City, 4 Jan 1929). Banker. In 1883 Harding joined his father-in-law's firm, C. D. Barney and Company, and soon became a senior partner. Respected for his financial acumen, he directed the New York, New Haven and Hartford Railroad Company, the New York Municipal Railways System, the American Beet Sugar Company, and the Bronx Gas and Electric Company. He was also the final trustee in closing the firm of Jay Cooke and took part in many corporate mergers and reorganizations. Harding supported a plan of the Long Island State Park Commission in the 1920s to build a scenic parkway from Queens to Lake Ronkonkoma in Nassau County (now the Northern State Parkway), and he also urged the construction of a highway from Shelter Rock Road in Nassau County to Queens Boulevard in Elmhurst to improve access to his country club; the road was named Horace Harding Boulevard after his death.

Alana Erickson Coble

Hare Krishnas. Members of the International Society for Krishna Consciousness, a religious society based on Hindu ideals formed in New York City by Swami Prabhupada in 1966. The society draws on traditions of *bhakti* (devotion) and the worship of Krishna, a popular god considered an incarnation of Vishnu, a member of the Hindu Trinity. Hare Krishnas often wear saffron robes and dance and chant in the street, and men shave their heads; they seek to spread their

ideas to others, often by distributing written materials on the street and offering free vegetarian food. The society has headquarters in West Virginia and chapters worldwide, including one on Schermerhorn Street in Brooklyn.

Madhulika S. Khandelwal

Haring, Keith (*b* Kutztown, Pa., 4 May 1958; *d* New York City, 16 Feb 1990). Artist and social activist. After moving to New York City to study at the School of Visual Arts, he became a part of the burgeoning street art and independent artist community. He organized exhibitions and performances at Club 57, the underground club in the basement of an East Village church, and other alternative venues to exhibit the art he and other artists, such as Kenny Scharf and Jean-Michel Basquiat, had created. In 1980 Haring began using blank advertising panels in subway stations to make drawings in white chalk. His various artworks, accessible and familiar, quickly became iconic. The "subway drawings" and pop culture symbols Haring created, such as his "radiant baby," earned the prolific artist international recognition, which in 1982 culminated in the first of his more than 100 solo exhibitions at the Tony Shafrazi Gallery. In 1986 he opened the Pop Shop at 292 Lafayette Street to sell merchandise bearing his art (closed in 2005). Haring created many public works in New York City and globally, including the *Crack Is Wack* mural (1986) on the FDR Drive and a mural made in honor of the 100th anniversary of the Statue of Liberty (1986). Through the Keith Haring Foundation, established in 1989, he gave support to AIDS-related organizations until he died at the age of 31.

Cecilia Magnusson

Harkness Ballet. Dance company formed in 1964 by socialite Rebekah Harkness (1915–82), and originally located in a limestone town house at 4 East 75th Street. Harkness, a benefactress of Robert Joffrey's ballet troupe (founded 1956), funded the international tours of Joffrey's company until 1964, when she and Joffrey had a falling out. Harkness broke with his troupe to form the Harkness Ballet, modeled after the St. Petersburg Ballet School, with Lawrence Rhodes as its first principal dancer. Harkness purchased and renovated the Colonial Theater in 1972, on 63rd and Broadway, renaming it the Harkness Theatre. Despite its prestige, the Harkness Ballet company disbanded in 1975.

Cecilia Magnusson

Harlan, John M(arshall) (*b* Chicago, 20 May 1899; *d* Washington, D.C., 29 Dec 1971). Supreme Court justice. Grandson and namesake of a Supreme Court justice, he graduated from Princeton University (1920), followed by three years as a Rhodes Scholar at Balliol College, Oxford. He earned his law degree at New York Law School (1925). Early in his New York City legal career, he alternated between private practice and service as a prosecutor under the U.S. attorney for the Southern District of New York. He also helped prosecute municipal corruption as a special assistant attorney general for New York. In the 1930s he built a reputation as one of Manhattan's top litigators. During World War II he served as chief of the operational analysis section of the Eighth Air Force. He gained national prominence after the war. In 1951 he became chief counsel to the New York State Crime Commission, which investigated the influence of organized crime on state government. President Dwight D. Eisenhower appointed him to the U.S. Court of Appeals for the Second Circuit in 1954 and to the U.S. Supreme Court the following year. Widely respected for his judicial craftsmanship, Harlan dissented from several of the activist decisions of the Warren Court.

Frank Scaturro

Harlem. Neighborhood in Manhattan, bounded to the north by the Harlem River, to the east by Fifth Avenue, to the south by 110th Street (Central Park North), and to the west by Morningside and St. Nicholas avenues; it includes Bradhurst, Strivers' Row, Manhattanville, Hamilton Heights, and Sugar Hill. The area was settled by Dutch farmers who named it Nieuw Haarlem, and because of its remoteness from settled areas of New York City, it remained a largely autonomous village for many years. During the eighteenth and nineteenth centuries it was known as Northern Manhattan, and 86th Street was sometimes considered its southern boundary. Many prominent families had estates there in colonial times, including the de Lanceys, the Bleekers, the Rikers, and the Hamiltons. At Harlem Heights in 1776 the Continental army defeated British troops advancing to the city. The population was 203 in 1790. During the 1840s and 1850s the farmland became unproductive so many farms were deserted and taken over by Irish squatters. Transport to the city was provided by horse-drawn streetcar lines and a steamboat that ran during the summer from 125th Street to Peck Slip.

During the 1880s elevated railroads were extended along Second, Third, Eighth, and Ninth avenues, encouraging development over the next 25 years. Initially the most dramatic changes occurred in adjoining neighborhoods: tenements were built in East Harlem and apartment buildings on the Upper West Side. As the population rose the neighborhood became predominately German; much of the housing consisted of brownstones. The boundaries of the neighborhood were generally placed at 155th Street, the East River, 110th Street, and Morningside and St. Nicholas avenues. Attractive "new law" tenements and spacious apartment buildings with elevators were erected between 1898 and 1904 when subway lines were extended along Lenox

Harlem, 1798, drawing by Archibald Robertson

Avenue. Oscar Hammerstein opened the Harlem Opera House in 1889 in the hope that middle-class families would move to the area in large numbers. This did not happen, but the neighborhood did attract a large number of eastern European Jews, who settled between 110th and 125th streets to avoid or escape from the tenements of the Lower East Side. About this time blacks first moved to the neighborhood, where they found better housing, a more attractive environment, and less racism and violence than in other parts of the city; most settled near 135th Street. Such organizations as the West Side Improvement Association tried to exclude blacks but had little effect, as tenants willing to pay full rent for vacant apartments were highly sought after by real estate agents. Between 1904 and 1908 the Afro-American Realty Company of Philip Payton was especially active in encouraging black tenants to move into the neighborhood. In 1914 the St. James Presbyterian Church moved to Harlem from West 51st Street. Several black churches were formed in Harlem or moved there: the Abyssinian Baptist Church (1923), Canaan Baptist Church, St. Philips Episcopal Church (formed 1818, moved to Harlem 1911), and St. Martin's Episcopal Church (formed 1928). Powerful black fraternal lodges and social clubs also developed.

At its height in 1917 the Jewish population in Harlem was 80,000; when combined with that of East Harlem (90,000), it made up the second-largest Jewish neighborhood in the United States, after the Lower East Side. The most important institution was probably the Institutional Synagogue, formed in 1917 by Rabbi Herbert S. Goldstein. Other highly influential congregations included Temple Israel, Ohab Zedek, Shaare Zedek, and Anshe Chesed, along with scores of storefront synagogues. The neighborhood declined during World War I owing to severe overcrowding, and after 1920 most Jews moved to newer neighborhoods on the West Side and in the Bronx, Brooklyn, and Queens. By 1930 the Jewish population had declined to about 5000. All the large synagogue buildings were sold to Christian churches during the 1920s and 1930s.

Between 1920 and 1930 the number of African Americans in Harlem increased by 120,000 (to more than 200,000), while the number of whites decreased by an equivalent amount. Most of the new black residents were from the American South; others were from other parts of New York City (such as San Juan Hill) and the Caribbean. Blacks from throughout the nation were soon attracted to the area by economic opportunities and a flourishing cultural life. Langston Hughes, Countee Cullen, Zora Neale Hurston, and other writers launched a literary and artistic movement known as the Harlem Renaissance; distinctive styles of painting were forged by Romare Bearden, William H. Johnson, and Richmond Barthé; black theater and dance flourished; and comedians such as Jackie "Moms" Mabley and "Pigmeat" Markham performed their routines at the Apollo Theater. Late in the second decade of the century James P. Johnson, Fats Waller, and Willie "the Lion" Smith helped to popularize Harlem stride, a vibrant form of early jazz piano, and jazz continued to flourish in the neighborhood for the next quarter-century. Fletcher Henderson, Duke Ellington, Chick Webb, and many other leaders performed big-band jazz at nightclubs in Harlem, and many famous jazz musicians lived in the neighborhood, among them Louis Armstrong, Coleman Hawkins, Bessie Smith, Ethel Waters, and the tap dancer Bill "Bojangles" Robinson. In the early 1940s the innovative style of jazz called bebop was developed at local clubs by Charlie Parker, Dizzy Gillespie, and Thelonious Monk. Critics such as Carl Van Vechten popularized the spirited musical and cultural life of Harlem and helped to attract a large white clientele, who patronized both segregated clubs such as Connie's Inn and the Cotton Club and integrated ones such as the Apollo Theater, Smalls' Paradise, and the Savoy Ballroom. The local branch of the Young Men's Christian Association became a meeting place for black intellectuals, writers, and artists. During this period Harlem became known not only as a neighborhood, but as a symbol of black cultural success and independence.

Harlem was also a center of black economic and political life. For the middle third of the twentieth century the neighborhood was the site of some of the most successful businesses owned by blacks, among them the Carver Savings and Loan Association; the United Mutual Life Insurance Company; several funeral homes, law firms, and medical practices; and two well-known newspapers, the *Amsterdam News* and the *New York Age.* From the efforts of such nationally known figures as labor leader A. Philip Randolph and scholar-activist W. E. B. Du Bois, to those of blacks in the local Democratic and Republican Party clubs, Harlem blacks during the 1920s and 1930s helped blacks attain federal, state, and city government offices and pushed government officials to embrace civil rights policies. In the 1920s Marcus Garvey, a Jamaican immigrant, became the first leader of a mass black nationalist movement in the United States with the foundation of the Universal Negro Improvement Association; although by 1930 the movement had largely ended, Harlem remained a fertile ground for black nationalism. The Communist Party, forthright in its opposition to segregation, also attracted a large following in Harlem during the 1930s.

Despite the onset of the Great Depression, the nightlife for which the neighborhood was known continued to thrive at the Rockland Palace Ballroom and the Savoy Ballroom. Yet, as was the case in previous years, this notoriety masked the profound hardships the community faced. The Depression devastated Harlem's local economy. Although blacks continued to settle in the neighborhood, the rents remained high and apartments were subdivided into ever smaller units. At one point the population density in the neighborhood was more than twice that of the city as a whole. The economic distress contributed to a new political assertiveness, directed in particular at local stores that depended on black customers but had no black employees. Using the slogan "Don't buy where you can't work," the National Urban League initiated a boycott against chain stores operated by whites. In the summer of 1934 more than 19,000 families were on relief; the unemployed gathered at the Tree of Hope (near the Lafayette Theatre) to touch its trunk. A riot broke out in March 1935 when a black youth who had been caught stealing a penknife in a department store on 125th Street was incorrectly rumored to have been beaten to death; a restless crowd smashed windows and looted stores along the street, and businesses lost millions of dollars. The riot brought government attention to Harlem's economic problems and helped strengthen partnerships between the city's political leaders, local celebrities, and Harlem's church leaders, including Father Divine; Adam Clayton Powell, Sr., of the Abyssinian Baptist Church; and George W. Becton. Yet the community's underlying problems remained unaddressed in several fundamental ways, and this would not be the last riot to occur in the neighborhood.

World War II compelled blacks to fight abroad for rights they were denied at home. Despite the symbolic boxing victories of heavyweight champion Joe Louis (who defeated Nazi Germany's boxing champion Max Schmeling), the armed forces remained segregated, and the playwright Loften Mitchell articulated the views of many blacks when he spoke out against military service. Blacks were excluded from working in the munitions industry until late 1941, when Randolph effected a change in policy by threatening to march on Washington, D.C. After a white police officer shot a black soldier in Harlem during a dispute, a riot broke out on 1 August 1943, and an angry crowd overturned automobiles and burned many businesses. This riot led to a continuation of the government–community partnership that had existed since the 1935 riot and helped local black politicians reach higher positions of power. Adam Clayton Powell, Jr., in 1944 won a seat in the House of Representatives, where he enjoyed a long, successful, and controversial career. J. Raymond Jones, known as the "Harlem Fox," became a district leader in 1945 and was an influential figure in local and national Demo-

cratic Party politics into the 1960s. Hulan E. Jack was elected the first black borough president of Manhattan in 1953. A more militant brand of politics was espoused by the charismatic leader Malcolm X in the 1960s.

In the postwar period the population of Harlem suffered a steady decline caused by crime, heroin addiction, and other social problems. The role of the neighborhood as the center of black cultural life in the city was eclipsed by Greenwich Village, where several black jazz musicians lived, and other areas such as Bedford–Stuyvesant. Despite the civil rights demonstrations, protests, and boycotts against segregation that occurred in the neighborhood during the 1960s, there were two more riots in 1964 and 1965 (and another in 1977) due to the longstanding problems of poverty, racial injustice, and poor relations between the police and the community. In the 1970s and 1980s, as the public schools failed to prepare students adequately, the number of high school graduates declined. The unemployment rate among young working-class blacks consistently exceeded 30 percent, and many families were headed by poor single mothers, a good number of them teenagers. The incidence of tuberculosis, AIDS, and cancer was astoundingly high: in 1990 the *New England Journal of Medicine* reported that men in Harlem had a lower life expectancy than their counterparts in Bangladesh.

Despite the limited and mixed record of government agencies in facing these challenges, black leaders from Harlem continued to be involved in government during the final decades of the twentieth century and into the opening years of the twenty-first. Charles B. Rangel, a local black politician, defeated Powell for his seat in the House of Representatives in 1970, beginning a decades-long congressional career that has helped shape Democratic politics and government policy in both Harlem and Washington, D.C. Other leaders whose early careers in Harlem's Democratic Party organizations subsequently led to major offices included David N. Dinkins, who was elected the first black mayor of New York City in 1989, and David A. Paterson, who became the first black governor of New York State in 2008.

The architectural record of Harlem is rich and varied. Although neglected residential buildings bear witness to the community's painful present, other architecture in Harlem recalls the neighborhood's proud heritage. The Morris–Jumel Mansion (1765) is one of the few remaining buildings in Manhattan predating the American Revolution, and the High Bridge (1837–48), originally part of the Croton Aqueduct, is the oldest remaining bridge connecting Manhattan to the Bronx. Coogan's Bluff, at West 155th Street, was the site of the Polo Grounds, home of the baseball team the New York Giants. The residences of the elite of black Harlem may be seen at the Dunbar Apartments (1928), on Strivers' Row on West 139th Street, and in Sugar Hill at 155th Street and Edgecombe Avenue. Despite its difficulties, Harlem has several thriving cultural institutions, including the Studio Museum of Harlem; the National Black Theatre; the Schomburg Center for Research in Black Culture, one of the most important research institutions of its kind; and the Dance Theatre of Harlem, one of the premier ballet companies in the nation.

A development boom in Harlem began in the 1990s and continued into the first decade of the twenty-first century as major renovations were undertaken on dozens of buildings north of 110th Street and east of Morningside Park. In addition, new luxury apartment houses became particularly common between 110th and 125th streets in central Harlem. Preliminary census figures in 2010 indicated that for the first time in almost a century, African Americans no longer constituted a majority of the population.

Harlem Commonwealth Council. Urban development corporation formed in 1967 with an initial grant of $400,000 from the Office of Equal Opportunity. Its organizers included Kenneth Marshall of the Metropolitan Applied Research Center; Billy Rolle of the United Block Association; Marshall England of Haryou–Act; Preston Wilcox, a professor at Columbia University; and Roy Innis, director of the Congress of Racial Equality. The council financed a study by Columbia of the feasibility of supporting business and industry in Harlem and, despite negative conclusions, began operations, securing federal grants of nearly $1 million by 1968 under the direction of Donald Simmons. Under James H. Dowdy the council in the following year formed alliances with businesses in New York City that led to the establishment and refurbishment of several businesses in Harlem, including the Acme Foundry, the Schultz Company, Nigel Contracting and Construction, and Ben's Lumber Yard. The diversified holdings of the Harlem Commonwealth Council, particularly in real estate, have enabled it to attract a number of popular franchises to the area. In the early twenty-first century the council also has an incentive scholarship and internship program to promote careers in health care and a New Ventures Program that offers training for business entrepreneurs.

Emilyn L. Brown

Harlem Hellfighters. Popular name of the 369th Regiment of the New York National Guard and the 15th Regiment, New York National Guard. It was formed in 1913 as the 15th Regiment and during World War I served with the 16th and 161st divisions of the French

The Harlem Hellfighters marching over a bridge in Harlem, 1919

army, being redesignated the 369th U.S. Infantry. All the enlisted men were black and most of its officers white. By the end of World War I the 369th had served 191 days in combat, longer than any unit in the American Expeditionary Force. The first two Croix de Guerre awarded to any Americans went to Corporal Henry Lincoln Johnson and Private Needham Roberts of the 369th, and the unit also earned the Croix de Guerre as a unit citation. Equipped by the French, the unit was not subject to American segregation policy despite the American headquarters' request to the contrary. The unit's band, led by the composer James Reese Europe, helped to introduce jazz to France during its tours of the nation. The unit returned home on 17 February 1919 to New York City, where more than one million people attended its welcoming parade. The troops, led by the Harlem Hellfighters marching band, paraded from Madison Square up Fifth Avenue, then across 110th Street and north on Lenox Avenue. During the year following the homecoming, the 369th built its first armory (at 142nd Street and Fifth Avenue), which remained in use into the early twenty-first century. From 1936 to 1940 Colonel Benjamin O. Davis, Sr., commanded the unit; he later became the first black American general. In 1940 the unit was mobilized for war, redesignated the 369th Coast Artillery (Anti-Aircraft), and sent to Hawaii, where it was known as Hooper's Troopers (after its commanding officer, Colonel Chauncey Hooper). It was renamed the 369th and 870th Anti-Aircraft Artillery Battalions in 1943 and in 1945 saw combat at Okinawa. The 15th Regiment of the New York Guard, under Colonel Woodruff Chisum, served stateside. In 1950 the 369th was mobilized for stateside active duty in the Korean War. It later became a field artillery group and (in 1974) the 369th Transportation Battalion. In 1990–91 two companies of the 369th and its headquarters detachment served in the Persian Gulf, earning a Meritorious Unit Citation, with the 15th New York Guard replacing it at home.

Harlem Hospital Center. Currently administered by the New York City Health and Hospitals Corporation, it opened in 1887 in a house on East 120th Street to accommodate patients awaiting transfer to facilities on Wards and Randalls islands. It also served as an emergency branch for Bellevue Hospital. In 1907 the hospital moved to 506 Lenox Avenue, where it gradually developed a full range of medical services. Louis T. Wright joined the outpatient department in 1920 as the first black physician to serve in a hospital in New York City and was named director of surgery after 23 years of service. The hospital's national reputation for trauma care was tested in 1958 when it successfully treated Martin Luther King, Jr., after he was stabbed during a visit nearby. It formed an affiliation with the College of Physicians and Surgeons of Columbia University in 1962, and its residency program became one of the largest training programs for physicians of color. The hospital shared in many of the financial difficulties of the municipal health-care system during the 1960s and mid-1970s; its 50-year-old nursing school closed in 1977 for budgetary reasons, and the widespread poverty in Harlem placed special burdens on its community health clinics. As of 2010 it had 272 beds in addition to a sickle cell anemia center, a burn unit, and more than 11 clinics in Harlem.

Harlem Renaissance. Literary and artistic movement that reached its high point between 1925 and the onset of the Depression in 1929. Writers and artists traveled to Harlem from throughout the United States to take part in the movement (Countee Cullen was its only important exponent who grew up in Harlem), not because it represented a single style or aesthetic but rather because it offered them the chance to become part of a vibrant community. Although the point at which the Harlem Renaissance began is open to debate, it is agreed that an important early influence was W. E. B. Du Bois's book *The Souls of Black Folk* (1903), which advanced the thesis that black American consciousness is composed of warring African and American influences. In 1917 the white playwright Ridgely Torrence staged his *Three Plays for the Negro Theatre*, which for the first time on stage depicted African American characters with sympathy and depth. The Jamaican immigrant Claude McKay responded to widespread rioting against blacks in 1919 with his defiant sonnet "If We Must Die," and in 1921 the popular all-black musical *Shuffle Along* by Noble Sissle and Eubie Blake brought authentic African American comedy, music, and dance back to the Broadway stage after more than a decade of exclusion. Jean Toomer's *Cane* (1923), a hybrid of prose, poetry, and drama, set new standards of accomplishment for modernist black writers.

These developments took place at a time when many northern industrial centers were expanding dramatically. Unstable real estate conditions in Harlem before World War I enabled African Americans fleeing harsh conditions in the South to settle in the neighborhood, which at the time was populated mainly by German Jews. A diverse community developed that included both blacks who had lived in other parts of New York City for generations and a large number of newcomers from the Caribbean. Religious institutions played a prominent role in the community, notably the Abyssinian Baptist Church on 138th Street and St. Philip's Protestant Episcopal Church on 133rd Street; the weekly newspapers the *New York Age* and the *Amsterdam News* were also important, as was the local branch of the New York Public Library, which sponsored lectures and was the intellectual center of the neighborhood. Despite the relative freedom enjoyed by African Americans in New York City, many were frustrated by high rents, crowded living conditions, and unemployment. The proposed remedies ranged from black nationalism, advocated by groups such as Marcus Garvey's Universal Negro Improvement Association, to eventual integration into American society, the goal of the National Association for the Advancement of Colored People (NAACP) and the National Urban League. As this debate continued, blacks regarded themselves as no longer needing to be subservient but aggressively urbane. Several publications played an important role in defining the militant, self-assertive image of what came to be called the "New Negro," among them the *Crisis* (1910), published by the NAACP and edited by Du Bois (later assisted by the novelist and literary editor Jessie Redmon Fauset) and *Opportunity* (1923), published by the National Urban League and edited by the sociologist Charles S. Johnson. Fauset, Johnson, the poet and diplomat James Weldon Johnson, and the aesthete Alain Locke advocated a genteel black art that would combat racism by proving that African Americans were "civilized." With the backing of Charles Johnson, Locke in 1925 compiled and edited a special issue of the monthly periodical the *Survey Graphic* titled "Harlem: Mecca of the New Negro." In the same year Locke expanded and published this material as *The New Negro: An Interpretation*, in which he called on black American artists to enhance their racial consciousness by studying African art and emulating its styles and themes.

Locke helped many visual artists to acquire patrons, such as Mrs. R. Osgood Mason (known as "Godmother") and the William E. Harmon Foundation (formed in 1922 by William Elmer Harmon, a millionaire from Ohio). The Julius Rosenwald Fund and the General Education Board also supported black artists and writers. Carl Van Vechten, author of the best-selling novel *Nigger Heaven* (1926), introduced many writers to potential patrons, and a literary contest organized by *Opportunity* culminated in an awards dinner on 1 May 1925 where African American writers and intellectuals met white authors and

editors from leading magazines and publishing houses; a result was the publication of the books of poetry *Color*, by Cullen (1925, Harper and Brothers), and *The Weary Blues*, by Langston Hughes (1926, Alfred A. Knopf). Fiction soon replaced poetry as the dominant literary form of the Harlem Renaissance. From 1924 novels were published by writers such as Walter White (*Fire in the Flint* [1924]), Fauset (*There Is Confusion* [1924]), McKay (*Home to Harlem* [1928]), Nella Larsen (*Quicksand* [1928]), Wallace Thurman (*The Blacker the Berry* [1929]), Hughes (*Not without Laughter* [1930]), Cullen (*One Way to Heaven* [1931]), and Arna Bontemps (*God Sends Sunday* [1931]).

The Harlem Renaissance was marked by vigorous debate over literary tradition, folk culture, political responsibility, and sexual freedom. Cullen and McKay modeled their work on traditional literary forms; Zora Neale Hurston and Hughes championed black folk expression, including jazz, blues, and common speech. Du Bois insisted that African American writers had an obligation to be propagandists for their race; Thurman and others pursued bohemian ideals that were largely divorced from issues of race. Locke believed that black artists must draw on African models to create a uniquely black art; others believed that the work of black artists was not essentially different from that of white artists, only that its development had been blocked by racial discrimination.

Among the painters associated with the Harlem Renaissance were Aaron Douglas, William H. Johnson, Palmer Hayden, and Malvin Gray Johnson. Douglas became known for his illustrations in Locke's *The New Negro* and James Weldon Johnson's *God's Trombones: Seven Negro Sermons in Verse* (1927), and for the covers of *Opportunity* and the *Crisis*. For the Countee Cullen branch of the New York Public Library (now the Schomburg Center for Research in Black Culture) he executed a stylized, multipanel mural titled *Aspects of Negro Life* (1934) intended to symbolize the strength of the "New Negro." William H. Johnson began his career in Paris and settled in Harlem in 1929, where he persuaded Locke to become his American agent. At first influenced by expressionism and later by primitivism, he was known for his treatment of southern religious and folkloric themes. Hayden moved to New York City in 1919 to study art at Cooper Union and at the urging of Locke treated African subjects in such paintings as *Fétiche et Fleurs* (1926) and *Nous Quatre à Paris* (1930). He lived in Paris for five years (1927–32) but continued to exhibit his works in New York City. During his later career he painted images of rural black life. Malvin Gray Johnson (1896–1934) studied at the National Academy of Design and became known for his interpretations of black genre themes and Negro spirituals. Although he was not African American, the German artist Winold Reiss also was strongly associated with the Harlem Renaissance and influenced the work of Douglas. He was commissioned to illustrate "Harlem: Mecca of the New Negro" and to produce (with Douglas) a series of portraits titled "Harlem Residents and the 'New Negro': The Young Leaders of the Harlem Renaissance" (1925). The painter Archibald John Motley, Jr., did not live in New York City, but an exhibition of his work at the New Gallery in 1928 was well received by both critics and artists. The most important sculptor of the Harlem Renaissance was Augusta Savage. After studying with George Brewster at Cooper Union she won a scholarship to study in France in 1923, but the invitation was later revoked because of her race. In 1930 she went to Europe on a grant from the Julius Rosenwald Fund and produced such works as *Gamin*, a bust of her young nephew that captured the exuberance of young artists in Harlem. She opened the Savage Studio of Arts and Crafts in Harlem in 1932 and worked to create opportunities for younger artists. Her heroic sculpture *The Harp* adorned the entrance to the Contemporary Arts building at the World's Fair of 1939–40. Three other sculptors were associated with the Harlem Renaissance although New York City was not their home. Meta Warrick Fuller (1877–1968) was born in Philadelphia, studied in Paris, and eventually settled in Framingham, Massachusetts. Her sculpture *Ethiopia Awakening* symbolized the restoration of African heritage to a high place in black American consciousness. Sargent Johnson (1887–1967) lived in San Francisco, but his works were shown annually in New York City at the exhibitions of the Harmon Foundation. In pieces such as *Chester* (1931) and *Copper Mask* (1935), which were heavily influenced by African art, he aimed to portray the natural beauty and dignity of blacks to a black audience. Richmond Barthé, who was born in Mississippi in 1901, studied at the Art Students League and the Art Institute of Chicago. His elegant sculptures of dancers, such as *Feral Benga* (1935), and his busts of West Indian and black American men and women embodied the sensuous, racial themes favored by many artists of the Harlem Renaissance. The photographer James VanDerZee, who was born in Lenox, Massachusetts, in 1886, maintained a studio in Harlem and documented the lives of its residents. His black-and-white portraits of subjects ranging from Marcus Garvey and the heiress A'lelia Walker to African American fraternities and funerals constitute the most complete visual record of Harlem in the period. The role of music in the Harlem Renaissance was important and at the same time peripheral: artists and writers heard jazz singers, instrumentalists, and bandleaders such as Bessie Smith, Louis Armstrong, Fletcher Henderson, and Duke Ellington at the Cotton Club, Smalls' Paradise, and the Renaissance Casino, but musicians were not normally associated with the goals of the movement.

Perhaps the most dramatic change wrought by the Harlem Renaissance was the sense that black artists gained by being part of a group linked by ethnic pride, political activism, and a shared cultural lineage. This sensibility was fostered by collective exhibitions such as those sponsored by the Harmon Foundation, which showed the work of leading black artists from Harlem and across the nation. At the same time there was debate about how much freedom artists and writers really enjoyed given their reliance on white patronage, a reliance made necessary by the failure to sustain independent African American cultural institutions. Among such institutions that were unsuccessful were *Fire!!: A Quarterly Devoted to the Younger Negro Artists* (1926), a magazine launched by Thurman and other writers that proclaimed radical intentions but appeared only once; the magazine *Harlem* (1928), also edited by Thurman; the Harlem African Art Museum; and the Salon of Contemporary Negro Artists. By 1930 the Harlem Renaissance was in sharp decline, but important work continued to be produced, notably novels by Hughes, Bontemps, Thurman, Hurston, and George Schuyler. The racially based riot that rocked Harlem in 1935 marked the definitive end of the movement.

A rich collection of materials related to the Harlem Renaissance was amassed by the bibliophile Arthur Schomburg and is now part of the Schomburg Center for Research in Black Culture.

Harlem Renaissance [Rens]**.** Professional basketball team. Created in 1923 by Robert L. Douglass, a native of St. Kitts and a former professional basketball player, the Harlem Rens, as they came to be known, were one of the first and most successful all-black traveling professional basketball teams in the country. The team name came from the Renaissance Casino and Ballroom in Harlem, where the team often played. Formed before the Chicago-based Harlem Globetrotters, the Rens competed against both black and white teams and in 1934 won 88 straight games. Between 1932 and 1936, the Rens won 473 games and lost only 49. In 1963 the entire team was inducted into the Naismith Memorial

Basketball Hall of Fame. The members included Charles T. "Tarzan" Cooper, John "Casey" Holt, Clarence "Fats" Jenkins, James "Pappy" Ricks, Eyre "Bruiser" Satch, William "Wee Willie" Smith, and William J. "Bill" Yancey.

Frank Dyer

Harlem River. Navigable tidal strait about 8 miles (13 kilometers) long between Manhattan and the Bronx, connecting the East River with Spuyten Duyvil Creek and the Hudson River. Its course was changed in 1923 when the Harlem River Ship Canal was cut through huge rock outcroppings between Inwood and Marble Hill in northern Manhattan, leaving Marble Hill attached to the Bronx. Six swing bridges, one lift bridge, and three arch bridges span the river, among these the High Bridge at East 173rd Street, built with massive stone arches in 1837–48 to carry the Croton Aqueduct system.

Harlem River: Its Use previous to and since the Revolutionary War (New York: J. D. Torrey, 1857)

Gerard R. Wolfe

Harlem River and Manhattan Bridge. Original name of the Washington Bridge.

Harlem River–Bronx State Park. Original name of Roberto Clemente State Park.

Harlem River Houses. Public housing complex opened in October 1937, nationally recognized for its attractive design. Bounded by West 151st Street to the south, West 153rd Street to the north, Macombs Place to the west, and Harlem River Drive to the east, the development contains 574 apartments in four- and five-story buildings. One of two New York City projects built by the Public Works Administration (PWA) during the New Deal (the other was Williamsburg Houses in Brooklyn), Harlem River Houses was intended specifically for African Americans. In a rare twist on the usual outcome of "separate but equal" policies, the complex was immediately recognized as architecturally superior to most federally subsidized housing produced for white occupancy during this era, and indeed, has been rated as one of the best designed U.S. public housing projects ever built.

Archibald Manning Brown, a society architect, racial liberal, and talented manager, led the seven-member architectural team, which included John Louis Wilson, the first African American graduate of Columbia University's School of Architecture. Team member Horace Ginsbern, with his pre-Depression experience designing garden apartment houses on the Grand Concourse in the Bronx, is thought to have been responsible for the perimeter-hugging layout, which creates for the passerby the impression of conventional New York City apartment buildings. Thus, the complex fits into its surroundings, unlike most large-scale public housing. The interior of the project reflects the classical architectural training of most of the team. The large central court, with its formal layout, London plane trees, benches, and cobbled walks, is reminiscent of a European park.

Harlem River Houses, 2009

While the architectural collaboration was important, the successful outcome can also be credited to the fact that the project originated in the PWA's experimental housing program early in the New Deal. This program aimed at creating appealing housing for a wide section of the population, not just the poor. Thus, Harlem River Houses benefited from a relatively generous budget and high aspirations for quality. By contrast, later public housing, with rare exceptions (many of them in New York City), became the bottom of a two-tier system that included for the upper tier generous tax subsidies for single-family houses. Community pressure was an equally important factor. Initially the city did not plan to build in Harlem, even though federal money was available, and African Americans were acknowledged to be the worst hit of all New Yorkers by the housing crisis of the Great Depression. The only suitable undeveloped parcel available in Harlem was owned by the Rockefeller family, which demanded a price double what federal guidelines for land acquisition allowed. Mass protests, outreach to the media, and appeals to public officials, coordinated by the Consolidated Tenants' League of Harlem, ultimately pushed the city to acquire the site by condemnation. In the twenty-first century Harlem River Houses continued to provide a quality living environment.

Gail Radford

Harlem River Ship Canal. Waterway connecting the Hudson and Harlem rivers. Work began in 1826, with the purpose of promoting

Harlem River Ship Canal, Third Avenue Bridge at 130th Street, ca *1905; Mott Iron Works is in the background to the right*

more efficient commercial shipping to Long Island Sound from the Hudson River and the system of barge canals crisscrossing upper New York State. In 1895 the first section was completed, making it possible for ships to circumnavigate Manhattan for the first time, and also separating Marble Hill from the rest of Manhattan. The entire project was completed in 1938.

Gary Hermalyn, "The Harlem River Ship Canal," *Bronx County Historical Society Journal* 20 (1983), 1–23

Gary D. Hermalyn

Harlem Savings Bank. Original name of the Apple Bank for Savings.

Harlem Square. One of the five open spaces provided for on the 1811 Commissioners' Plan. It was bounded by Sixth (Lenox) and Seventh avenues and 117th and 121st streets and consisted of 20 acres (8 hectares). It was discontinued in 1836 by the same act that established Mount Morris Square, which ran from 124th to 120th streets and Fourth to Sixth avenues.

Lisa Keller

Harlem YWCA. Branch of the Young Women's Christian Association (YWCA), formed in 1905. It met in rented rooms on West 63rd Street before following the city's black community north to Harlem, moving in 1913 to two rented buildings on West 132nd Street and in 1919 to a newly constructed building at 137th Street and Lenox Avenue. Housing a large cafeteria, reception and meeting rooms, classrooms, offices, a gymnasium, a swimming pool, showers, a laundry, and locker rooms, the new building was the best-equipped YWCA with a black membership in the United States. Later additions included an adjacent residence hall (1926) with a capacity of more than 200 and an annex to the administration building (1932). The construction of the annex was funded by John D. Rockefeller, Jr., a longtime supporter of the YWCA and of the Harlem branch in particular. In its earliest years the Harlem YWCA emphasized religious concerns: it sponsored vesper services and Bible study and admitted as members only women who were also members in good standing of evangelical Protestant churches. Participation was extended in 1912 to nonevangelicals and non-Christians. In addition, the organization held monthly public meetings at prominent churches in the city, where a musical program was followed by an educational address, often dealing with such issues as woman suffrage, antilynching legislation, U.S. involvement in World War I, education, and civil rights legislation. Speakers over the years included Ida B. Wells, Mary McLeod Bethune, Lucy Laney, T. Thomas Fortune, Bishop Alexander Walters, Mary Church Terrell, Madame C. J. Walker, and Booker T. Washington. Perhaps the greatest contribution of the Harlem YWCA to the life of black New Yorkers was its trade school, which trained women to become domestic servants, seamstresses, secretaries, beauticians, and nurses. For young girls there were team sports, after-school programs, a club called the Girl Reserve, and a camp in the Catskills, Fern Rock. The Harlem YWCA closed after the fiscal crisis that beset New York City during the 1970s.

Judith Weisenfeld

Harmonie Club. Social club formed in 1852 as the Harmonie Gesellschaft, a select German Jewish counterpart to the other social clubs in New York City; it took its current name in 1893. The club distinguished itself by having German as its official language and by hanging the kaiser's portrait in its hall for many years. In 1906 a clubhouse designed by Stanford White was constructed at 4 East 60th Street; the Harmonie Club was the first men's club in the city to admit women to dinner.

James E. Mooney

Harper, James (*b* Newtown [now in Queens], 13 April 1795; *d* New York City, 27 March 1869). Mayor and businessman. With his brother John Harper he formed the publishing firm of J. and J. Harper and Brothers in 1817. In 1844 he was elected mayor as the nominee of the American Republican Party with Whig and Democratic support; during his term he lived at 50 Rose Street. A reformer, he advocated frugal government, limits on city services, low taxes, and social controls. His most noteworthy achievement while in office was the formation of the Municipal Police, or Night and Day Watch, one of the nation's earliest organized police forces. He returned to his publishing house in 1845 and worked there to the end of his life. He lived at 4 Gramercy Park from 1847 until his death from a carriage accident in Central Park.

Jerome Mushkat

HarperCollins. Firm of book publishers formed in 1817 as a printing firm by the brothers James and John Harper called J. and J. Harper at the corner of Front and Dover streets in Brooklyn. It soon began publishing books as well as printing them, and after the founders' younger brothers Fletcher Harper and Joseph Wesley Harper joined the firm in the 1820s, it became the largest book publisher in the United States. In 1833 it changed its name to Harper and Brothers and moved into two buildings on Cliff Street, which eventually expanded as far as Pearl Street. By the early 1850s the firm occupied a number of five-story buildings, employed several hundred people, and handled all aspects of book publishing, from editing to sales. The firm had become the world's largest publisher when a fire on 10 December 1853 destroyed its facility at 333 Pearl Street; it then moved to a fireproof building on Franklin Square where a distinctive circular iron stairway became known as the "stairway to literary fame" because of the many major English and American writers published by the firm, including Charles Dickens, Anthony Trollope, Herman Melville, Edgar Allan Poe, Mark Twain, William Dean Howells, and the Brontë sisters. The firm also launched the literary and intellectual journal *Harper's New Monthly Magazine* (1850); the politically oriented *Harper's Weekly* (1857), which published Dickens's *A Tale of Two Cities,* Wilkie Collins's *The Woman in White,* George Eliot's *Middlemarch,* and Thomas Hardy's *The Return of the Native,* as well as illustrations by Winslow Homer and Thomas Nast; *Harper's Bazar* (1867), a magazine for women eventually sold to William Randolph Hearst (who amended the spelling to *Harper's Bazaar*); and *Harper's Young People* (1879, later renamed *Harper's Round Table*). At its high point during the 1880s the firm had nearly 800 employees and more than 4000 titles in print. The difficult economic climate of the 1890s forced it into receivership, and it procured an $850,000 loan from the financier J. P. Morgan and was reorganized. It continued to publish well-known writers in the early twentieth century, including James Thurber, E. B. White, Aldous Huxley, John Dos Passos, and Presidents William Howard Taft and Woodrow Wilson. In 1913 it sold one million copies of Lew Wallace's *Ben-Hur* (1880) to Sears Roebuck, the largest single sale of a book in history.

The firm ceased printing its own books in 1923, reorganized the ownership of its stock, and moved its offices to 49 East 33rd Street; in the following decades it branched out into religious books, bibles, textbooks, and books for young people. Twenty-one members of the Harper family spanning three generations worked for the firm until 1944, including James W. Harper, the first in the family to attend college (at Columbia University). Cass Canfield, who joined the firm in 1924, was its president from 1931 to 1945, chairman of the board from 1945 to 1962, and then director emeritus. In 1962 Harper and Brothers merged with Row, Peterson, and Company to become Harper and Row. During the 1960s Canfield recruited managers with financial experience such as Winthrop Knowlton and Brooks Thomas in an effort to keep the house independent as many publishers were bought up by corporate conglomerates. To this end he sold a large share of stock in the firm in 1965 to the Minneapolis Star and Tribune Company, owned by John Cowles, Jr., which had earlier bought *Harper's Magazine;* Cowles became chairman of the board at Harper and Row in 1968 and later was chairman of its executive committee. The firm moved its offices to 10 East 53rd Street in 1972. In 1974 it

suffered a 17-day strike by 320 of its employees in New York City, the first strike in the modern history of book publishing; there was also a weeklong strike in 1977 by 240 employees. Under the presidency of Winthrop Knowlton, Harper and Row acquired a number of other publishers, including Basic Books (1969), Thomas Y. Crowell (1977), and J. B. Lippincott (1978). It was itself acquired in 1987 by the News Corporation, led by Rupert Murdoch. In 1989 the firm acquired the textbook publisher Scott, Foresman. It took its current name in June 1990 after forming an affiliation with William Collins, a British publisher also owned by the News Corporation. In the early twenty-first century HarperCollins is one of the leading English-language publishers worldwide; its imprints and divisions in the United States published about 1600 titles a year, and a large children's division published books by Maurice Sendak, Shel Silverstein, Margaret Wise Brown, and Laura Ingalls Wilder. Its New York City offices are at 10 East 53rd Street.

Marjorie Harrison

Harper's Magazine. Launched as *Harper's New Monthly Magazine* in 1850 by the New York City firm of Harper and Brothers, it was intended to educate the general public while whetting its appetite for books published by Harper. The magazine contained articles on topics ranging from science to travel as well as reprints of fiction by such well-known English writers as Charles Dickens, William Makepeace Thackeray, Anthony Trollope, Edward Bulwer-Lytton, and George Eliot. It included work by American writers as early as 1851 and stressed American contributions after the Civil War. Among its features were a humor section titled "The Editor's Drawer" and such columns as George William Curtis's "The Editor's Easy Chair" and William Dean Howells's "The Editor's Study," which was introduced in 1886 and ran for six years. The magazine attracted such artists as Winslow Homer, Frederic Remington, Edwin A. Abbey, and John Singer Sargent. It appealed to educated middle-class families and became one of the most successful and influential magazines in the country's history. In 1900 it reached the peak of its success, was renamed *Harper's Monthly Magazine*, and published a 50th-anniversary issue that included pieces by Howells, Stephen Crane, Owen Wister, Mark Twain, and Theodore Dreiser. Adapting to changing tastes, during the next few years it stressed science, history, biography, and criticism over fiction and focused on current affairs after World War I. In 1925 it took its current name, changed its format, and became a magazine of ideas and editorial comment. It focused on politics, sociology, science, and economics during the 1950s and published William Styron's *The Confessions of Nat Turner* and Norman Mailer's *Armies of the Night* in the late 1960s. The magazine experienced financial troubles in the following decades and periodically sought a new identity under a succession of editors. In 1962 it merged with Row, Peterson and Company and later was acquired by the Minneapolis Star and Tribune Company. In 1984 the John D. and Catherine T. MacArthur Foundation and the Atlantic Richfield Company formed the Harper's Magazine Foundation, which publishes the magazine into the twenty-first century. In 2000 it was redesigned, and several old features were brought back. Also in the twenty-first century the magazine created several online blogs.

Harrigan and Hart. Team of comedians. Its members were the Irish musical comedy performers Ned (Edward) Harrigan (1845–1911) and Tony Hart (1855–91), who formed a successful partnership between 1871 and 1885. Harrigan wrote most of their material, including 33 plays that depicted life in New York City, particularly on the Lower East Side, where he was brought up. Although many of his plays such as the famous series on the "Mulligan Guards" centered on Irish immigrants, other ethnic groups such as Germans, Jews, Italians, and blacks were also treated sympathetically. Harrigan continued writing plays after the dissolution of his partnership with Hart and also owned several theaters in New York City.

John T. Ridge

Harriman, Edward H(enry) (*b* Hempstead, N.Y., 25 Feb 1848; *d* Arden, N.Y., 9 Sept 1909). Financier and railroad magnate, father of New York Governor W. Averell Harriman and E. Roland Harriman. In 1870 he became a stockbroker and bought a seat on the New York Stock Exchange. He was involved in the reorganization of rail lines, and he later became the director of both Union Pacific Railroad (1897) and South Pacific Railroad (1901). In 1902 he worked with J. P. Morgan, J. D. Rockefeller, and others to form the Northern Securities Company, a railroad trust that the Supreme Court dissolved two years later. Harriman funded a scientific expedition to Alaska in 1899. Harriman State Park in Bear Mountain, New York, is named for him.

Lloyd J. Mercer, *E. H. Harriman, Master Railroader* (Boston: Twayne, 1985)

Mary E. Curry

Harriman, E. Roland (*b* New York City, 24 Dec 1895; *d* Arden, N.Y., 16 Feb 1978). Businessman and philanthropist, son of Edward H. Harriman and brother of W. Averell Harriman. He graduated from Yale University in 1917 and in the same year married Gladys Fries, daughter of a manufacturing chemist with interests in the South. He was a founding partner in 1927 of the banking firm of Harriman Brothers and Company. Its successor, Brown Brothers Harriman and Company (1931), was for many years the only large commercial bank in the United States owned and operated by a partnership instead of a corporation. In 1950 he was named by President Harry S. Truman to succeed General George C. Marshall as chairman of the American Red Cross, a position to which he was reappointed to seven more three-year terms by Presidents Dwight D. Eisenhower, John F. Kennedy, Lyndon B. Johnson, and Richard M. Nixon. He also served for 23 years as chairman of the Union Pacific Railroad and even longer as president and chairman of the Boys' Club of New York, founded by his father in 1876. In his philanthropic activity Harriman advanced the principle that "a trustee should either work, give, get or get out." He maintained a home in Manhattan but regarded his primary residence as his estate in Arden, New York, where he was a leading patron of harness racing and the founder of the U.S. Trotting Association.

Kenneth T. Jackson

Harriman, W(illiam) Averell (*b* New York City, 15 Nov 1891; *d* Yorktown Heights, N.Y., 26 July 1986). Governor and investment banker, son of Edward H. Harriman and brother of E. Roland Harriman. He attended Yale University and was named to the board of the Boys' Club, an organization that his father had founded. By 1913 he was a director of the Union Pacific Railroad. In 1922 he formed W. H. Harriman and Company (later Brown Brothers Harriman) and became a successful investment banker. A Republican in his early career, he supported the Democratic presidential candidacy of Alfred E. Smith in 1928 and in 1933 was named chairman of the Emergency Reemployment Campaign in New York City by President Franklin D. Roosevelt. As the American ambassador

to the Soviet Union from 1943 to 1946, he assiduously cultivated a relationship with Nikita Khrushchev. He sought the Democratic presidential nomination in 1952, losing to Adlai E. Stevenson, and in 1954 he was elected governor of New York. After again being defeated for the Democratic presidential nomination by Stevenson in 1956, he sought reelection as governor in 1958 and was defeated by Nelson A. Rockefeller by 450,000 votes. On President John F. Kennedy's behalf he negotiated a limited but important nuclear-test-ban treaty with the Soviet Union in 1963. The W. Averell Harriman Institute for Soviet Studies at Columbia University is named for him.

Marjory Potts

Harrington, (Edward) Michael (*b* St. Louis, 24 Feb 1928; *d* Larchmont, N.Y., 31 July 1989). Writer and political activist. In New York City he edited the *Catholic Worker* and soon became a leading participant in the political culture of the leftist intelligentsia. Within a few years he shifted from Catholic radicalism to anticommunist democratic socialism, cultivating ties with labor unions and liberal politicians and opposing groups that he felt did not understand the dangers of totalitarianism, including Stalinists and the founders of Students for a Democratic Society. He succeeded Norman Thomas as chairman of the Socialist Party in 1968. Despite his ardent anticommunism he increasingly battled elements within the party that supported the U.S. intervention in Vietnam and rejected any collaboration with the New Left. In 1972 he resigned from the party, joining with other former members in the following year to form the Democratic Socialist Organizing Committee (DSOC). In 1982 he engineered its merger with the New American Movement, a group oriented toward the New Left, to form the Democratic Socialists of America, with headquarters in New York City. For many years Harrington taught at Queens College. The most influential of his many books, *The Other America* (1962), describes the plight of those untouched by the economic boom in the United States after World War II.

Richard Yeselson

Harris, Elisha (*b* Westminster, Vt., 5 March 1824; *d* Albany, N.Y., 31 Jan 1884). Public health official. He worked with Stephen Smith to improve sanitary conditions in New York City; their efforts led to the passage of the Metropolitan Health Act of 1866, which established the first effective health board for the city. He was the first registrar of records for the Metropolitan Board of Health (1866–69) and organized the first free public vaccination program for smallpox in 1869. Toward the end of his career he held several important posts: sanitary superintendent of the city (1869–70), registrar of vital statistics (1873–76), and original member of the New York State Board of Health (1880).

Joseph S. Lieber

Harrison, Hubert Henry (*b* St. Croix, Danish West Indies, 1883; *d* New York City, 1927). Political activist. He moved in 1900 to New York City, where he worked as a laborer during the day and studied at night. In 1909 he joined the Socialist Party, for which he wrote theoretical articles such as "Socialism and the Negro" (1912). In these he argued for the primacy of the black struggle in the socialist cause, and he became well known as a lecturer and soapbox orator. In 1914 he left the socialists, whom he saw as racist. He organized the Liberty League of Afro-Americans in June 1917, which was the first militant group of the "New Negro" movement, and in its newspaper, the *Voice,* he called for organizing labor, armed defense against lynch violence, federal action to protect civil rights, and socialism. When the league disbanded soon after, Harrison briefly rejoined the Socialist Party, edited the radical black periodical the *New Negro,* and led the Colored National Liberty Congress, which advocated laws against lynching. In 1920 he joined the Universal Negro Improvement Association, led by his former disciple Marcus Garvey, and he briefly edited its newspaper, *Negro World.* Dissatisfied with Garvey's plans to establish colonies of American blacks in Africa, he attempted to organize a Liberty Party to work for civil rights. He took U.S. citizenship in 1922 and became a lecturer for the New York Public Library, for which he helped to organize the Schomburg Center for Research in Black Culture. He formed a group in 1924 called the International Colored Unity League that proved short-lived and supported the creation of a black separatist state in the South. Harrison wrote two books of essays, *The Negro and the Nation* (1917) and *When Africa Awakes* (1920).

Greg Robinson

Harrison, Wallace K(irkman) (*b* Worcester, Mass., 28 Sept 1895; *d* New York City, 2 Dec 1981). Architect. He moved in 1916 to New York City, where he was a draftsman for McKim, Mead and White and also worked in the atelier of Harvey Wiley Corbett and the firm of Bertram Grosvenor Goodhue. He developed a style that incorporated classical and space-age motifs in such structures as the Trylon and Perisphere at the World's Fair of 1939–40 and the main terminal at La Guardia Airport (1964). He helped to form the firm of Harrison, Fouilhoux and Abramovitz, which was responsible for many of the city's distinctive skyscrapers; with Raymond M. Hood he designed Rockefeller Center. Among Harrison's best-known buildings are the United Nations (1953) and Lincoln Center for the Performing Arts (1966).

Edward A. Eigen

Harrisville. Obsolete name of Sandy Ground.

Harry N. Abrams. Firm of book publishers formed in 1950 by Harry N. Abrams as the first American publisher devoted solely to books about art. It began its operations at a time when the American market for art books was limited, restricted in particular by the inferior quality and prohibitive cost of American color reproduction. By opening an office in Amsterdam in 1953 the firm was able to take advantage of European expertise and technology, and it became the first publisher to issue art books of high quality in large quantities and at moderate prices for the U.S. market. The firm was acquired in 1966 by the Times Mirror Company, and Abrams left to set up a new firm, Abbeville. In 1997 the company was purchased by La Martinière Group of Paris.

Eileen K. Cheng

Harsenville. Former neighborhood on the Upper West Side of Manhattan, bounded to the north by 81st Street, to the east by Central Park West, to the south by 68th Street, and to the west by the Hudson River. It was named after Jacob Harsen and his family, who moved to the area in 1763 and built a large farm there; such prominent families as the de Lanceys, the Dyckmans, and the Somerindycks owned farms nearby. In 1803 Harsenville Road was built through what later became Central Park. A Dutch Reformed church was formed by the Harsens in 1805. The rural character of the area changed when schools, churches, a post office, shops, and saloons were built during the 1830s and 1840s. In the 1860s Mayor Fernando Wood lived at 77th Street and 11th Avenue (now West End Avenue). The Dutch Reformed church was eventually demolished, and Harsenville Road was torn up to make way for Central Park. By the 1880s the Upper West Side was developed and the former name of the neighborhood fell into disuse.

James Bradley

Hart, Kitty Carlisle [Conn, Katherine] (*b* New Orleans, La., 3 Sept 1914; *d* New York City, 17 April 2007). Arts administrator and actress. She studied at the Royal Academy of the Dramatic Arts and made her acting debut in 1932 under the stage name Kitty Carlisle. In 1933 she appeared in two films with Bing Crosby, but *A Night at the Opera* (1935) with the Marx Brothers made her famous. After marrying the playwright Moss Hart in 1946 she continued to act for several years and was a regular panelist on the television quiz show *To Tell the Truth* from 1956 to 1977. She was named the head of the state conference on women by Governor Nelson A. Rockefeller in 1966, a vice chairwoman of the New York State Council on the Arts in 1971, and the head of the council in 1976 (reappointed in 1982). She became best known as a prominent member of fashionable society and perhaps as the most well-known advocate for the arts in New York State and city. For more than 50 years Hart lived in an 11-room apartment at 32 East 64th Street in Manhattan. She continued to perform around the city until her death, often taking the stage at Feinstein's at the Regency Hotel. She is buried next to her husband in Ferncliff Cemetery in suburban Hartsdale, New York.

Rohit T. Aggarwala

Hart, Lorenz (Milton) (*b* New York City, 2 May 1895; *d* New York City, 22 Nov 1943). Lyricist. He grew up in Harlem and graduated from the Columbia University School of Journalism in 1917. His first important musical was *Dearest Enemy,* written with Richard Rodgers and performed at the Knickerbocker Theatre in 1925; the show included "Where the Hudson River Flows," one of his many songs inspired by New York City. He enjoyed a long partnership with Rodgers, whose romantic music he underpinned with wry and often cynical lyrics. During the last decade of his life, Hart lived at 320 Central Park West. In 1943, the last year of his life, he moved to the Delmonico at 502 Park Avenue and 59th Street.

Marc Ferris

Hart, Moss (*b* New York City, 24 Oct 1904; *d* Palm Springs, Calif., 20 Dec 1961). Playwright and musical theater director. He was born and raised in a tenement at 74 East 105th Street. After studying at Columbia University Hart produced his first successful Broadway play with George S. Kaufman, *Once in a Lifetime* (1930). Over the following years Kaufman and Hart collaborated on several Broadway hits, including *You Can't Take It with You* (1936) and *The Man Who Came to Dinner* (1939). After his split with Kaufman, Hart continued to write Broadway plays, although directing became a major occupation. Hart married actress Kitty Carlisle in 1946. Hart also wrote screenplays, producing *Gentlemen's Agreement* in 1947, for which he was nominated for an Oscar. He won the Tony Award for best director in 1957 for *My Fair Lady*, adapted from George Bernard Shaw's *Pygmalion* in 1956. His book *Act One: An Autobiography* (1959) was a best seller. Hart directed *Camelot* in 1960, his final show. He died of heart failure and is buried at Ferncliff Cemetery in suburban Hartsdale, New York.

Meghan Lalonde

Hart–Celler Act. See Immigration and Nationality Act of 1965.

Hart Island. Island in Long Island Sound, site of the largest potter's field in the United States. Originally known as Spectacle Island and Little Minnefords and now sometimes called Hart's Island, it is situated just northeast of City Island and is part of the Bronx. Acquired by Oliver de Lancey of West Farms in 1774 and later owned by the Haight and Rodman families and by John Hunter, the 101-acre (41-hectare) island has housed Confederate prisoners; yellow fever, tuberculosis, and psychiatric patients; city inmates; and a Nike missile base. It was bought by the City of New York in 1869, and the first interment was Louisa Van Slyke, an orphan who died in that year at Charity Hospital. About 850,000 people, all of them unclaimed and many of them unidentified, are now buried three deep in unmarked, mass graves. A granite cross erected in 1902 bears the inscription "He Calleth His Children by Name." At one time inmates from the Reformatory Prison on the island buried the dead; the task is now handled by prisoners from Rikers Island who volunteer and are paid a stipend for the approximately 1500 annual burials. The only access is by a ferry run by the Department of Corrections from Fordham Street on City Island. Hart Island is not open to the public, although visits are allowed for relatives of those buried there. In 2006 Manhattan artist Melinda Hunt, while working on a documentary film about the island, filed a Freedom of Information request for access to burial records, and in 2007 the Department of Corrections released about 50,000 handwritten records from 1985 to 2007. As part of her Hart Island Project, she has set up a Web site that provides a history of the island and an online database with information regarding who is buried there; in 2010 it had records from 1980 to 2008. Older burial records are kept by the Department of Corrections and the Municipal Archives, although thousands were lost in a fire in the 1970s.

Kenneth T. Jackson

Hartley, Robert M(ilham) (*b* Cockermouth, England, 17 Feb 1796; *d* New York City, 3 March 1881). Philanthropist. After moving to New York City from England he opened a mercantile firm. Inspired by evangelical Protestantism, he retired to direct the New York City Temperance Society; he later became one of the city's most influential philanthropists as the general agent of the Association for Improving the Condition of the Poor from 1843 to 1876. Although he denounced indiscriminate charity and distinguished between the "worthy" and "unworthy" poor, he also recognized the evils of slum environments and focused the efforts of the association on public health and housing reform. Hartley helped to form the Society for the Relief of the Ruptured and Crippled.

Marilyn Thornton Williams

Harugari. Fraternal order formed in New York City in 1847 by Philipp Merkle to promote German language and culture and the ideals of "friendship, affection, and humanity." Most of its members were artisans or skilled workers, and the group maintained close ties to the labor movement. By 1873 the order had 62 lodges with about 7000 members in the metropolitan area. Although Harugari suffered a decline in membership during the next decade, it recovered and continued operating into the twentieth century.

Stanley Nadel

Harvard Club. Club formed in 1865 for people associated with Harvard University who live or work in New York City. Its landmarked clubhouse at 27 West 44th Street was designed by the firm of McKim, Mead and White and constructed in phases from 1893 to 1915. Of neo-Georgian design with dark-red "Harvard" brick, it is a handsome building inside and out, and its great Harvard Hall (1905) is one of the most impressive interior spaces in the city. The club has dining rooms of various types and sizes, a library and reading room, and accommodations for squash and other indoor activities.

James E. Mooney

Harvey, George (Brinton McClellan) (*b* Peacham, Vt., 16 Feb 1864; *d* Dublin, N.H., 20 Aug 1928). Newspaperman and businessman. He worked for a newspaper in Vermont before moving to New York City, where he joined the staff of the *New York World;* he became its editor in 1891. After a few years he left to work on Wall Street, where he made a fortune. In 1899 he bought the *North American Review,* naming himself its editor; he took over *Harper's Weekly* in 1901. A strong supporter of Woodrow Wilson's presidential

candidacy in 1912, he later opposed Wilson's Fourteen Points and endorsed Warren G. Harding in the election of 1920. Appointed ambassador to London during the 1920s, Harvey also edited the *Washington Post* and wrote a biography of Henry Clay Frick that was published in 1928.

Willis Fletcher Johnson, *George Harvey: "A Passionate Patriot"* (Boston: Houghton Mifflin, 1929)

James E. Mooney

HARYOU–ACT. Comprehensive antipoverty program launched in 1964. It combined the efforts of two organizations: Harlem Youth Opportunities Unlimited (HARYOU), inspired by psychologist Kenneth Clark and funded in 1964 with grants of $100,000 from the city (made by Mayor Robert F. Wagner) and $230,000 from the House Committee on Education and Labor (the result of efforts by Representative Adam Clayton Powell, Jr.); and Associated Community Teams (ACT), established by the President's Committee on Juvenile Delinquency. The two groups differed in their methods, with HARYOU focusing on education, job training, and lobbying and ACT inclined toward rent strikes and the organizing of neighborhood boards. HARYOU–ACT achieved some success before ceasing operations in 1968, and its emphasis on community initiatives and youth programs proved influential.

Herbert Krasny, *Beyond Welfare: Poverty in the Supercity* (New York: Holt, Rinehart and Winston, 1966)

Emilyn L. Brown

Hasidim. Adherents of a mystical, revivalist form of Judaism that is inspired in part by the kabbalah and that celebrates various aspects of everyday life, frequently with song and dance. During the early twenty-first century more than 100,000 Hasidic Jews lived in New York City, mostly in the Brooklyn neighborhoods of Borough Park, Williamsburg, and Crown Heights. Hasidism was founded in eighteenth-century Poland by Israel ben Eliezer, a rabbi known as the Baal Shem Tov. The Hasidic migration to New York City occurred mostly after World War II; the majority were Hungarian or Polish Jews. In the Hasidic community adherence to Jewish law and practice pervades every aspect of life, as everything is holy or potentially holy. All children attend yeshiva (Jewish religious school), marry only other Hasidim, and have restricted interaction with non-Hasidim. Hasidic Jews have large families, contributing to the growth of the community. The primary languages spoken by Hasidim are Yiddish, Hungarian, and English; Hebrew is reserved for prayer. The largest Hasidic sects are the Lubavitchers, the Satmars, and the Bobov; others include the Ger, the Belz, the Tzelem, the Stolin, and the Papa. Tensions among Hasidim stem from differences over doctrine and leadership; there is also conflict with other residents of Brooklyn, especially racial minorities, over such issues as the construction of schools, housing, and police protection. Hasidim have been successful in political lobbying due to the fact they vote as a bloc.

Nicole Marwell, *Bargaining for Brooklyn* (Chicago: University of Chicago Press, 2007)

Jessica Montesano

Hassam, (Frederick) Childe (*b* Dorchester [now in Boston], Mass., 17 Oct 1859; *d* East Hampton, N.Y., 27 Aug 1935). Painter. After settling in New York City in 1889, he opened a studio on Fifth Avenue and 17th Street and joined the Society of American Artists. Hassam frequented the Players Club, where he met Julian Alden Weir and other artists with whom he formed the group known as Ten American Painters in 1898. He worked in an impressionist style and painted many street scenes of New York City, including *Fifth Avenue in Winter* (1899). In 1913 he displayed his work at the Armory Show. Hassam divided his time during the last 40 years of his life between East Hampton, Long Island, and his studio on West 57th Street in Manhattan.

Stephen Weinstein

Hastings. Name used from 1664 to 1683 for Newtown.

Haswell, Charles Haynes (*b* New York City, 1809; *d* New York City, 12 May 1907). Political figure, civil engineer, and New York historian. He was a member of the Common Council and Board of Corrections and a trustee of the Brooklyn Bridge; at his death at age 98 he was believed to be the oldest living member of Tammany Hall. At the age of 23 he built one of the first practical steam-powered launches. As the first engineer in chief of the U.S. Navy from 1836 to 1852, he lobbied for steam propulsion and iron construction against the firm opposition of the senior officer corps. He was more successful introducing the use of sacrificial zinc slabs to protect marine steam boilers and ships' bottoms from galvanic action. After being forced out of the navy for political reasons, Haswell served as U.S. surveyor of steamers, built steam engines for the Russian navy, and managed challenging civil engineering projects, including laying foundations for many New York City buildings. For many years he was the chief measurer of the New York Yacht Club. Haswell's entertaining and generally reliable memoir of antebellum New York, *Reminiscences of New York by an Octogenarian, 1816–1860* (1896), is a chronology of important and trivial events. The author said his aim was "to reveal New York as it actually was near eighty years ago, not to maintain 'the dignity of history.' "

John Rousmaniere

hatting and millinery. The hatting and millinery industries became concentrated in New York City in the early nineteenth century. The styles of men's and women's hats were set in the city, which was the center for fashion in the United States. One of the first prominent men's hatters was Charles Knox, who began his career as an apprentice for Leary and Company, a firm on Broad Street in which he eventually became a foreman. At the age of 19 he opened a small shop in 1838 that became known as "the hole in the wall" at 110 Fulton Street; he later moved successively to 128 Fulton Street and 212 Broadway. Competition arose about this time among the many small firms in the city making men's silk and beaver hats and led in 1850 to the "battle of the hatters," waged by Knox, John Genin, and Nicholas Espenscheid. In 1857 Robert Dunlap, an apprentice to Knox who had been denied a raise, opened his own business at 577 Broadway and became the most formidable competitor of Knox, with whom he dominated the hatting trade in the city by the 1870s; he eventually opened a large factory at 60 Nostrand Avenue in Brooklyn. In the 1870s Knox's firm was reorganized by his son Edward M. Knox, who opened a "business palace" beneath the Fifth Avenue Hotel at Madison Square. The Knox Hat Company opened two large factories in the 1890s in Brooklyn, at 340 Fulton Street and at the corner of Grand and St. Mark's avenues; its hats were sold throughout the United States, France, Germany, and South America. In 1919 it merged with Dunlap's firm. In addition to hat manufacturing, New York City became the national center for hat importing and jobbing.

Like hatting, millinery (the making of women's hats) was a business conducted by small firms that competed intensely with each other; many retail shops were run by women and employed five people or fewer. Prominent wholesale millinery manufacturers in the city in the late nineteenth century and the early twentieth included Hill Brothers, Ridley and Sons, and John Miles. Retail millinery offered unusual opportunities in business for women, and a few, including Lilly Daché, ran successful enterprises into the 1950s and 1960s. By the start of the twenty-first century the number of firms had declined because fewer men and women wore hats.

Robert R. Updegraff, *The Story of Two Famous Hatters* (New York: Knox Hat Company, 1926); *Rebuilding an Industry: The History of the Eastern Women's Headwear Association* (New York: Eastern

Women's Headwear Association, n.d. [1951]); David Bensman, *The Practice of Solidarity: American Hat Finishers in the Nineteenth Century* (Urbana: University of Illinois Press, 1985)

Wendy Gamber

Havemeyer, Henry O(sborne) (*b* New York City, 18 Oct 1847; *d* Commack, N.Y., 4 Dec 1907). Businessman. He was the son of Frederick C. Havemeyer, Jr., and made most of the deals that permitted his family to control the sugar industry. Ruthless and astute, he was the chief architect of the Sugar Trust (1887), which declined after his death. A building at Columbia University and a street in the heart of Williamsburg are named for the family.

James Bradley

Havemeyer, William F(rederick) (*b* New York City, 12 Feb 1804; *d* New York City, 30 Nov 1874). Businessman and mayor. The son of the sugar refiner William Havemeyer (1770–1851), he was born at 31 Pine Street. In 1828 he formed a partnership with a cousin in the sugar business, which he left in 1842 to enter local politics. A Democrat and a member of Tammany Hall, he was elected mayor nonconsecutively in 1845 and 1848 largely based on his reputation as a sound financial manager with integrity. After leaving office he resumed his career in business and then made a triumphant return to politics in 1872 when the scandals of the Tweed Ring prompted him to seek the mayoralty as a Republican. His independent style was not suited to the political patronage system of the time, however, and he lost the election.

J. C. Havemeyer, *Life, Letters and Addresses of John Craig Havemeyer* (New York: Fleming H. Revell, 1914)

James Bradley

Hawkins, (Cornelius) Connie (*b* Brooklyn, 17 July 1942). Basketball player. While a teenager in Brooklyn he was recognized as a great basketball player with an original and acrobatic playing style. Hawkins earned a scholarship to the University of Iowa but was subsequently kicked off the team and banned from the National Basketball Association (NBA) because of his association with notorious fixer Jack Molinas, despite never having played a collegiate game. Hawkins played first with the Harlem Globetrotters, then in the American Basketball Association and the American Basketball League. In 1969 the NBA lifted its ban and he joined the Phoenix Suns. His NBA career came to an end in 1975 with a career average of 16.5 points and 8.0 rebounds per game. Hawkins was inducted into the NBA Hall of Fame in 1992.

Cecilia Magnusson

Hawkins, Edler Garnet (*b* New York City, 13 June 1908; *d* Princeton, N.J., 13 Dec 1977). Minister and civil rights leader. He attended Bloomfield College in New Jersey (AB 1935) and Union Theological Seminary in Manhattan (BD 1938). As the pastor of St. Augustine Presbyterian Church in the Bronx from 1938 to 1970, he was noted for establishing a church youth ministry and for confronting racism within the church. Hawkins helped to form the national Commission on Church and Race of the Presbyterian Church and in 1964 became the first black elected moderator of the General Assembly of the United Presbyterian Church in the United States. He spent the later years of his career, from 1970 to 1977, as a professor of theology at Princeton Theological Seminary.

David Meerse

Hawkins, Erick [Frederick] (*b* Trinidad, Colo., 23 April 1909; *d* New York City, 23 Nov 1994). Dancer, choreographer, and artistic director. In New York City he studied at the School of American Ballet and danced with the American Ballet (1935–37) and Ballet Caravan (1936–39). In 1938 he became the first male member of the modern dance company of Martha Graham, eventually becoming her dance partner and husband. By 1951 his associations with Graham ended and he formed his own company. He evolved an innovative choreographic style based on smooth, unhurried, meditative movement, reflecting his interest in Buddhist philosophy and American Indian culture.

Brenda Dixon Gottschild

Hayden, Palmer (Cole) (*b* Wide Water, Stafford County, Va., 1890; *d* New York City, 18 Feb 1973). Painter. After serving in World War I he moved to New York City in 1919 and studied art at Cooper Union and at the Boothbay Art Colony in Maine. At the urging of Alain Locke he painted marine subjects and then African subjects (*Fétiche et Fleurs,* 1926). In 1927 he went to Europe, but he continued to exhibit his works in New York City with the encouragement of the Harmon Foundation and to explore African American subjects (*Nous Quatre à Paris,* 1930). He returned to New York City in 1932 and for the next decade concentrated on characterizations of rural black life. As his works became better known many blacks criticized his caricatured figures as being too close to prevalent white stereotypes of blacks.

Edmund Gaither

Hayden Planetarium. Named after Charles Hayden, financier and philanthropist, the structure was built in 1935 as part of the American Museum of Natural History at 79th Street and Central Park West. Its centerpiece, a Zeiss projector, was used in programs to show the movements of stars, the rising and setting of the sun and moon, and the precession of the equinoxes. During World War II the U.S. Army and Navy used the planetarium as an instruction center for courses on celestial navigation. Exhibits of rockets, satellites, and astronautics were added in the 1950s. With the advent of laser technology the planetarium offered dramatic programs on black holes and supernovas in the 1980s, using special photography, synthesized sound and music, and a Zeiss VI Star projector. The original Hayden Planetarium ceased to exist in January 1997, but in February 2000 it reopened after being rebuilt with significant improvements, including the installation of a customized Zeiss Mark IX Star projector as a part of the American Museum of Natural History's Rose Center for Earth and Space.

Ronald Rainger

Hayes, Helen [Brown, Helen Hayes] (*b* Washington, D.C., 10 Oct 1900; *d* Nyack, N.Y., 17 March 1993). Actress. At the age of

Sugar refinery of Havemeyer and Elder in Williamsburg, ca *1860*

Helen Hayes, 1977

eight she moved to New York City and won her first role on Broadway as a mime in Victor Herbert's *Old Dutch,* which opened at the Herald Square Theatre on 22 November 1909. After her success in Norma Besant's *Coquette* (1927), she appeared in hundreds of productions, becoming best known for playing the leading roles in *Caesar and Cleopatra* (1925), *Mary of Scotland* (1935), and *Queen Regina* (1935). During a career of more than 60 years on the stage she won three Tony Awards; she also won Academy Awards for her performances in *The Sin of Madelon Claudet* (1931) and *Airport* (1970). Often called the "first lady of American theater," Hayes was president of the American Theater Wing and the American National Theater Academy and directed women's activities for the March of Dimes. In 1983 the Little Theater on West 44th Street was renamed in her honor.

Janet Frankston

Hayes, Patrick (Joseph) (*b* New York City, 20 Nov 1867; *d* Monticello, N.Y., 4 Sept 1938). Catholic cardinal. Ordained on 8 September 1892, he graduated from Catholic University (1894) and was at the Church of St. Gabriel in the East 30s (now defunct) from 1894 to 1902. He was secretary to John Farley before becoming the chancellor and president of Cathedral College (1903–14). On 24 November 1917 he was appointed bishop ordinary to the chaplains of the U.S. Army and Navy; on 10 March 1919 he was appointed an archbishop. He signed the Bishops' Program of Social Reconstruction (1919), endorsed Irish independence but not violent revolution (1919–20), and promoted temperance but not Prohibition. In 1920 he launched the first fund-raising campaign for the Catholic Charities, an organization with which he remained closely associated. After his election as a cardinal on 24 March 1924 he remained active in workers' issues, encouraged the activities of the Catholic Worker movement begun by Dorothy Day and Peter Maurin and the Catholic Trade Union in his archdiocese, sponsored the Catholic Industrial Conference in 1933, and gave seminars to his clergymen in labor ethics (1937–38). In 1940, the cornerstone was laid for Cardinal Hayes High School in the Bronx, which as of 2010 remained at 650 Grand Concourse. Hayes is buried beneath St. Patrick's Cathedral.

Mary Elizabeth Brown

Haynes, George Edmund (*b* Pine Bluff, Ark., 11 May 1880; *d* New York City, 8 Jan 1960). Civil rights reformer. He took part in the Association for the Protection of Colored Women (1905), the Committee for Improving the Industrial Conditions of Negroes in New York (1906), and the Committee on Urban Conditions among Negroes (1910); was a founder of the National Urban League (1911); and became the first black graduate of the New York School of Philanthropy (later the School of Social Work of Columbia University; 1910) and the first to receive a PhD from Columbia (in economics; 1912). Later he taught black history and social work at City College of New York (1951–59). Haynes stressed interracial cooperation. He wrote *The Negro at Work in New York City: A Study in Economic Progress* (1912).

Samuel Kelton Roberts, "Crucible for a Vision: The Work of George Edmund Haynes and the Commission on Race Relations, 1922–1947" (diss., Columbia University, 1974)

Thea Arnold

Hayworth, Rita [Cansino, Margarita Carmen] (*b* Brooklyn, 17 October 1918; *d* New York City, 14 May 1987). American actress, dancer, and model. Born to Spanish-born flamenco dancer Eduardo Cansino and English/Irish American Ziegfeld girl Volga Haworth, she began performing with her parents at age six in a vaudeville act called "The Dancing Cansinos." The family left Brooklyn for California when Rita was still a teenager. After being discovered in a Tijuana nightclub and changing her name to Hayworth (adding a *Y* to her mother's maiden name), she eventually became famous as a pin-up girl and for her roles in such movies as *Gilda* (1946) and *The Lady From Shanghai* (1948). After a successful career in Hollywood, Hayworth returned to New York City and lived the remainder of her life in the San Remo apartment building on Manhattan's Upper West Side. She suffered from early-onset Alzheimer's disease; the Rita Hayworth Gala for the Alzheimer's Association is held annually in New York City and Chicago. The American Film Institute ranks her as one of the greatest stars of all time.

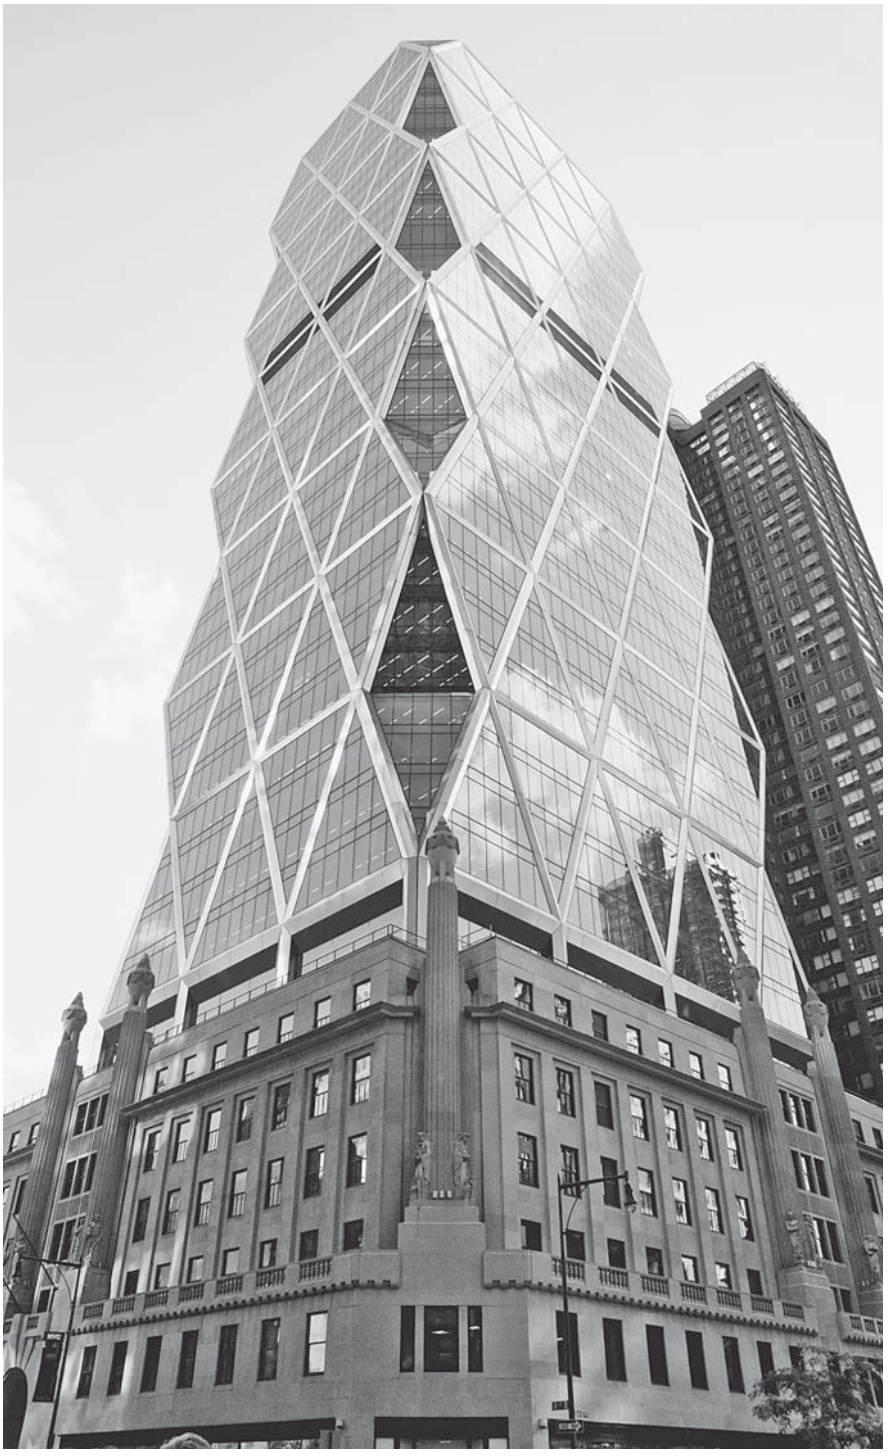
health. See Hospitals, Mental health, Occupational health, Public Health, and individuals and institutions relating to health care in New York City.

Health Insurance Plan [HIP]. Nonprofit health maintenance organization formed in 1944 under Mayor Fiorello H. La Guardia for the benefit of municipal workers and other middle-income wage earners. Organized and regulated under the state health code, it offers medical and hospital services through a network of more than 50 physician groups in the metropolitan region. In 2004 it opened its corporate headquarters at 55 Water Street in lower Manhattan. In 2010 HIP had about 1.4 million members in New York, Massachusetts, and Connecticut.

Robert A. Padgug

Hearst, William Randolph (*b* San Francisco, 29 April 1863; *d* Beverly Hills, Calif., 4 Aug 1951). Newspaper publisher and political leader. In 1887 he became the proprietor of the *San Francisco Examiner,* which was owned by his father, a millionaire mining entrepreneur and U.S. senator. After making a success of the *Examiner,* Hearst moved to New York City in 1895 and purchased the *New York Morning Journal.* In the following years, the heated competition between his now-evening paper, the *New York Journal,* and Joseph Pulitzer's *New York World* gave rise to what was known as "yellow journalism," a spectacular, often sensationalized, always reader-friendly form of daily journalism. By focusing on Spanish atrocities in Cuba, Hearst and his fellow New York City publishers helped to mold public opinion against Spain, contributing to the country's drift toward the Spanish–American War in 1898. He considered his "new journalism" an answer to the needs of a democratic society, and in daily newspapers selling for one cent he offered expanded sports coverage and illustrations, introduced comic strips such as "The Katzenjammer Kids" (1897), and covered events ignored by the "elite" press, especially workers' issues. The circulation of his newspapers exceeded one million by 1900, and in 1901 he renamed the morning edition the *American* and the evening edition the *Journal.*

After the turn of the twentieth century, Hearst used his newspapers to advance his political career. He was elected to two terms in the U.S. Congress (1903–7) from the 11th district in Manhattan. In 1905 he sought the mayoralty as a member of the Municipal Ownership League but lost to George B.



McClellan, Jr., the candidate backed by Tammany Hall, in a disputed election; in 1906 he unsuccessfully sought the governorship as a Democrat. He remained a force in New York State and City politics for another 20 years, though he never again held elective office. After establishing a reputation as a Tammany opponent, he made peace with the regular Democratic organization and was a major ally of Mayor John F. Hylan, who was elected in 1917 and reelected in 1921. He was an early and vocal opponent of U.S. intervention in World War I.

By 1922 Hearst's publishing empire included 20 daily newspapers, two wire services, the colossal King Features Syndicate, and half a dozen magazines, most of which were published in New York City. He was one of the first newspaper publishers to expand his media empire into film, newsreels, and radio. Though an initial supporter and contributor to the campaign of Franklin D. Roosevelt, he turned against Roosevelt in the mid-1930s and became a conservative opponent of the New Deal. Hearst, who wrote his own editorials, alienated many of his readers with his stridently anti-Roosevelt comments. Circulation fell at his newspapers, though his personal spending continued to climb. In 1937 his empire came close to bankruptcy; he recovered control of it only after World War II. After his death in 1951, his media empire included two newspapers in New York City: the *Journal-American* and a tabloid, the *Mirror.*

Hearst Building and Tower. Located at 300 West 57th Street and Eighth Avenue in Manhattan, the original six-story, 40,000-square-foot (3700-square-meter) design was completed in 1928 by publisher William Randolph Hearst and architect Joseph Urban at a cost of $2 million. The building was intended to house Hearst's 12 magazines. From its completion in 1929 the building remained largely unchanged, and in 1988 the Landmark Preservation Commission designated it a city landmark. With this designation came many obstacles for the addition of the tower, which the Hearst Board of Directors began discussing in 1997. The plans were finally approved with the contingency that the original stone facade be left intact. The tower, designed by architect Norman Foster, opened in 2006 and was the first skyscraper to rise from the city landscape after the terrorist attacks of 11 September 2001. It was also the first "green" commercial building in New York City to win the Gold award from Leadership in Energy and Environmental Design (LEED). The tower added an additional 46 stories to the preexisting stone facade and employed an unconventional diagonal-grid (diagrid) framing pattern that required 20 percent less steel than a conventionally framed skyscraper would have used; 90 percent of the steel used also contained recycled material. The building was designed with a number of environmental considerations, including heat-conductive limestone flooring and cooling systems that use rainwater collected on the roof. The building uses 26 percent less energy than a typical structure of its size and was awarded a gold designation by the United States Green Building Council. Owned by the Hearst Corporation, the building is the international headquarters for a number of publications worldwide, including *Cosmopolitan* and *Esquire.* The estimated cost for the completion of the tower was $500 million.

Hearst Building and Tower, 2009

In 2006 the tower earned the Emporis Skyscraper Award as the best skyscraper completed that year.

Hearst Magazines. Division of the Hearst Corporation with headquarters at 959 Eighth Avenue in Manhattan. It traces its origins to 1903 when William Randolph Hearst began publishing *Motor.* In the following years he acquired *Cosmopolitan* (1905), *Good Housekeeping* (1911), and other periodicals. Hearst Magazines became known for its diverse output, which it achieved in part by testing new magazines through sales of the first issue at newsstands rather than in costly direct-mail packages sent to potential consumers. Over the years its publications came to include *Colonial Homes, Country Living, Esquire, Harper's Bazaar, House Beautiful, Redbook, Smart Money, Town and Country,* and *Marie Claire.*

Melissa M. Merritt

Heartland Village. Neighborhood in west central Staten Island, bounded to the north by Rockland Avenue, to the east by Forest Hill Road, to the south by Richmond Hill Road, and to the west by Richmond Avenue. It is part of Community District 2. A middle-class residential area with a suburban character, it had its origins as a single development designed and built in the southeastern section of New Springville in 1968–71. The original development consisted of detached and semi-detached one-family houses of two and three stories, with built-in garages and underground utility connections. The area adjoins the Staten Island Mall (1973) and centers on Public School 69 and Intermediate School 72 (1975).

Charles L. Sachs

Hebrew Free Loan Society. Nonprofit organization that grants interest-free loans on a nonsectarian basis with the goal of fostering economic self-sufficiency. It was formed in 1892 at the Wilner Synagogue on Henry Street by 11 Russian Jewish immigrants who began with working capital of $95. By the early twenty-first century the society had lent more than $200 million to nearly 860,000 borrowers. Its offices are at 675 Third Avenue.

The Poor Man's Bank (New York: Hebrew Free Loan Society, 1943)

Joyce Mendelsohn

Hebrew Immigrant Aid Society [HIAS]. International service for Jewish immigrants and refugees, formed in New York City on 16 March 1909 by the merger of the Hebrew Sheltering Society (1889), dedicated to helping eastern European Jews, and the Hebrew Immigrant Aid Society (1902), formed to provide traditional burial for Jewish immigrants who died on Ellis Island. Initially a modest organization with an annual budget of less than $10,000, during its first decade it helped immigrants to gain legal entry into the United States, obtain work and schooling, and find relatives. Its facilities included an information office at 229 Broadway that in 1912 had more than 150,000 visitors. During the same year the service helped survivors of the *Titanic*, received nearly 15,000 immigrants (and provided shelter for more than 3000), and oversaw an English translation of its Yiddish-language bulletin, published under the auspices of the Connecticut Daughters of the American Revolution. By 1914 the service had a national membership and international affiliations. During and after World War II it opened offices to help refugees and displaced persons. It took its current name in 1954 after merging with the United Service for New Americans and the migration department of the American Jewish Joint Distribution Committee, consolidating all American Jewish refugee services. In 1965 the world headquarters moved from Lafayette Street to 200 Park Avenue South. HIAS was especially active during the Hungarian revolution in 1956; the Middle Eastern crises of 1956, 1967, and 1973; and the Iranian revolution in the early 1980s. It was one of the first aid agencies that went into Iraq in 2003 after the invasion of that country. In the early twenty-first century HIAS headquarters were at 333 Seventh Avenue in Manhattan. The board of directors has included such influential members as Louis Marshall, Jacob Schiff, Oscar Straus, Cyrus Sulzberger, and Stephen S. Wise.

Hebrew Mutual Benefit Society. Burial and mutual aid association formed in 1820 by several members of Shearith Israel who broke away in 1825 to found B'Nai Jeshurun. The society established temporary quarters in Washington Hall at 533 Pearl Street, where it adopted a constitution in 1826. Organized to aid the needy, visit the sick, help new immigrants, and assist in burials, the society opened its membership to all Jews in 1845. In the mid-1990s it reimbursed medical expenses and provided funerals and graves in suburban Hastings, New York, and Washington Cemetery in Brooklyn.

Joyce Mendelsohn

Hebrew Union College–Jewish Institute of Religion. Rabbinical school formed in 1950 by the merger of the Jewish Institute of Religion (1922) of New York City and Hebrew Union College (1875) of Cincinnati. In 1979 it moved to 1 West Fourth Street and became affiliated with New York University. The campus in New York City is one of four in the United States and Israel. A cantorial school, the School of Sacred Music, is also under its auspices.

Heck [née Ruckle]**, Barbara** (*b* Ballingrane, County Limerick, Ireland, 1734; *d* Augusta, near Prescott, Ont., 17 Aug 1804). A founder of Methodism. She moved to New York City on 11 August 1760 with her family. Dismayed at what she considered signs of spiritual poverty, including her brother's indulgence in card playing, in 1766 she formed the city's first Methodist congregation with her cousin Philip Embury. This initially consisted of five members and met in Embury's home on Augustus Street; it later built Wesley Chapel (now John Street United Methodist Church). Considered by many the "mother of American Methodism," Heck later moved to Canada and helped to establish Methodism there.

Charles Yrigoyen, Jr.

Hecker, Isaac (Thomas) (*b* New York City, 18 Dec 1830; *d* New York City, 22 Dec 1888). Writer, editor, and religious leader. As a youth he worked in his father's bakery and took part in a number of religious movements including Methodism, Unitarianism, Mormonism, and transcendentalism; he was also briefly a member of the political movement known as the Locofocos. Religious stirrings and the writings of the German Romantics led him to seek fulfillment and social purpose in communitarian ventures at Brook Farm and the Fruitlands in Massachusetts. Dissatisfied with his experiences there, he looked to Orestes A. Brownson as a mentor and in 1844 converted to Catholicism and joined a congregation known as the Redemptorists; he was ordained in 1847 and spent several years on a mission circuit devoted to immigrants. He later sought to open a center in New York City devoted to the conversion of American-born non-Catholics. After his plan was rejected by his superiors he and three other Redemptorists formed a congregation known as the Missionary Priests of St. Paul the Apostle (Paulists). To advance the congregation's work he launched two monthly periodicals, the *Catholic World* (1865) and the *Young Catholic* (1870), and formed the Catholic Publication Society (1866, now Paulist Press). Hecker wrote *Questions of the Soul*

(1855), *Aspirations of Nature* (1857), and *The Church and the Age* (1887).

Robert Emmett Curran

Heeney, Cornelius (*b* County Offaly, Ireland, 1754; *d* Brooklyn, 3 May 1848). Merchant and state legislator. After immigrating to the United States in 1784, he made a fortune selling furs in New York City, and at one time was partnered with John Jacob Astor in the fur trade. He gave large sums of money to his parish church, St. Paul's on Barclay Street, as well as Old St. Patrick's Cathedral, its school, and its orphanage. He also donated the land for the second Catholic church in Brooklyn, St. Paul's, and for the orphanage and industrial school that adjoin it. With the soapmaker Andrew Morris, he donated the property that became the site of the present St. Patrick's Cathedral on Fifth Avenue. The second Roman Catholic in the state legislature, he served from 1818 to 1822. He was instrumental in establishing a branch of the Sisters of Charity in New York City, and in 1820 he became the patron and guardian of a fatherless 10-year-old boy from Brooklyn, John McCloskey, who later became the second archbishop in New York City and the first cardinal in the United States. After the Great Fire of 1835 destroyed his mercantile establishment, he chose not to rebuild and instead retired to his house and farm in Brooklyn, where he continued his philanthropic work. In 1845 he formed the Brooklyn Benevolent Society, to which he left a bequest enabling it to distribute more than $2 million to the poor and homeless of Brooklyn.

John J. Concannon

Heins and LaFarge. Firm of architects founded by George Lewis Heins (1860–1907) and Christopher Grant Lafarge (1862–1938). It designed a number of religious and public buildings in New York City that were distinguished by their Guastavino tile vaulting. In 1891 the firm won a competition for executing the Byzantine–Romanesque design of the Cathedral of St. John the Divine; the choir, crossing, and two side chapels were built between 1892 and 1911, when the firm was replaced by Ralph Adams Cram. Heins and LaFarge also drew the plans for the administration building (1899) and six animal houses (1910) at the New York Zoological Gardens in the Bronx, and for the underground stations and control houses of the city's first subway system (1901–4).

Marjorie Pearson

Heisman Trophy. Annual award presented in December to the most outstanding player in college football for the season. It is named in honor of John Heisman, a former athletics director of the Downtown Athletic Club (DAC) and college football player and coach who died in 1936 (in 1935 it was known as the DAC trophy). The trophy, which is more than 1 foot (30.5 centimeters) tall and weighs more than 25 pounds, is in the mold of a football player carrying the ball under one arm, with his other extended to ward off potential tacklers. It was sculpted by Frank Eliscu and modeled after Ed Smith, who played at New York University in the early 1930s. The DAC presented the trophy at an annual dinner at its club at 19 West Street in Lower Manhattan from 1935 until 2000. The DAC's building was damaged during the terrorist attacks of 11 September 2001, and the award was presented at the New York Marriott Marquis in Times Square that year. In 2002 the DAC declared bankruptcy; the Yale Club has presented the award in subsequent years at a series of midtown locations, including the Nokia Theatre in Times Square beginning in 2005.

David White

Heiss, Carol (*b* New York City, 20 Jan 1940). Figure skater. She grew up in Queens and in 1953 placed second to skating great Tenley Albright in her first appearance at the U.S. Figure Skating Championships. Heiss remained in Albright's shadow for the next three years, placing second at the national championships each year and at the 1956 Olympic Games. She defeated Albright for the first time at the 1956 World Figure Skating Championships, her first of five consecutive world championship titles. Heiss also earned the gold medal at the 1960 Olympic Games at Squaw Valley, in California.

David White

Held, John, Jr. (*b* Salt Lake City, 10 Jan 1889; *d* Belmar, N.J., 2 March 1958). Illustrator. He began his career in New York City in 1912 designing streetcar posters and advertisements for Wanamaker's department store. During the 1920s he became known for his absurd but forgiving caricatures of "flappers"; his comic strips "Rah Rah Rosalie" and "Margy" and other work appeared in such magazines as *Judge, Life,* the *Smart Set, Liberty, Vanity Fair, Harper's Bazaar,* and the *New Yorker.* He later turned away from illustrating to write novels and short stories, work with watercolors, and make wash drawings of animals. In 1939 he exhibited several bronze sculptures of horses at the Bland Gallery in New York City.

Michael Joseph

heliports. Facilities for helicopter take-offs and landings, created by the city in the 1950s. Small heliports were maintained by the police department at the Battery and on 34th Street at the East River, and from 1953 by the Port of New York Authority at its bus terminal on Eighth Avenue; the first sizable facility opened at the foot of Wall Street in 1953. Service from commercial airports to a heliport atop the new headquarters of Pan American Airways began on 22 December 1965 after much controversy. The service proved unprofitable and was suspended in 1968. New York Airways used larger helicopters when it resumed service to the same site on 1 February 1977, but on 17 May the landing gear of a helicopter collapsed, killing four passengers and a passerby. After service was moved to a rooftop heliport near the World Trade Center, another helicopter crashed at Newark Airport on 18 April 1979, and service ceased altogether. In 1981 a new company, New York Helicopter Airways, began airport service from the eastern end of 34th Street, in what represented perhaps the final concession that heliports were not compatible with the area that needed them most: central Manhattan. In the twenty-first century there were three main public heliports: Pier 6 and FDR Drive, West 30th Street and 12th Avenue, and 34th Street and FDR Drive.

Paul Barrett

Heller, Joseph (*b* Brooklyn, 1 May 1923; *d* East Hampton, N.Y., 12 Dec 1999). Novelist. The son of Russian immigrants, he grew up in Coney Island, attended New York University (AB 1948) and Columbia University (MA 1949), and taught writing at City College. He drew on his experiences as a bombardier during World War II in his novel *Catch-22* (1961), an absurdist, antiwar black comedy that became a best seller and was made into a popular film (1970); Heller wrote most of the novel at 390 West End Avenue. His later writings include the novels *Something Happened* (1974), *Good as Gold* (1979), and *God Knows* (1984), as well as an account of his battle with Guillain–Barré syndrome, *No Laughing Matter* (1986), written with Speed Vogel. Heller's circle of friends in Manhattan included Mel Brooks, Zero Mostel, and Mario Puzo; he lived on the Upper West Side but later moved to East Hampton, New York.

B. Kimberly Taylor

Hell Gate and Hell Gate Bridge. Body of water running across a narrow strait between Astoria, in Queens, and Wards Island, connecting the East River with Long Island Sound, and the bridge spanning it. The name *Hell Gate* is a corruption of the Dutch *Hellegat* ("passage to hell"). The waterway was hazardous to navigation because of its powerful tides and many rocky outcroppings. The narrow channel's treacherous waters were

described by Adriaen Block, who made the first reported passage in 1612. In 1780 the British frigate *Hussar* ran aground and sank in the channel while carrying gold and silver for military paymasters in New York City (its treasure is still sought after by divers), and dozens of other ships had sunk by the time the U.S. Army Corps of Engineers in 1876 blasted out most of the dangerous underwater rocks by setting off what was then the world's largest explosion ever detonated. The channel was later widened and deepened, but remains difficult to navigate.

One of two bridges spanning the waterway is the New York Connecting Railroad Bridge, commonly known as the Hell Gate Bridge, which joins the Bronx and Queens and provides a direct rail link between New England and New York City. Completed in 1917 from plans by engineer Gustav Lindenthal and architect Henry Hornbostel, it is one of the finest steel arch bridges in the world. It is said that the picturesque Hell Gate Bridge was the model for Australia's Sydney Harbour Bridge. The Robert F. Kennedy Memorial Bridge nearby, designed by engineer Othmar H. Ammann, opened in 1936 and connects Manhattan, the Bronx, and Queens. Both bridges pass over Wards Island and Randalls Island, which were once separated by a shallow tidal creek called Little Hell Gate.

Description of the Government Works at Hell Gate (New York: n.pub., 1873)

Gerard R. Wolfe

Hellman, Lillian (*b* New Orleans, 20 June 1907; *d* Vineyard Haven, Mass., 30 June 1984). Playwright. She grew up in Manhattan, where she spent most of her life, aside from brief stays in Hollywood and suburban Westchester County. She lived from 1911 to 1925 at 330 East 95th Street and during the late 1930s at the Hotel Élysée (56–60 East 54th Street). A communist sympathizer and apologist for Stalinism, she became well known for her contemptuous testimony in 1952 before the House Un-American Activities Committee, leading her to be blacklisted in Hollywood. Her reputation revived during the 1970s when she published three volumes of memoirs, but she was harshly criticized by many liberal anticommunists, who accused her of distorting history. From 1970 to 1984 her principal residence was 630 Park Avenue. Hellman's published writings include the plays *The Children's Hour* (1934), *The Little Foxes* (1939), and *Watch on the Rhine* (1941), and the memoirs *An Unfinished Woman* (1969), *Pentimento* (1973), and *Scoundrel Time* (1976), which vividly depict her romantic liaison with the writer Dashiell Hammett and the turbulence of the 1950s.

Doris V. Falk, *Lillian Hellman* (New York: Ungar, 1978)

Lawson Bowling

Hellmann's Mayonnaise. Mayonnaise brand that was born in 1905 when recent German immigrant Richard Hellmann opened a delicatessen on the Upper West Side at 490 Columbus Avenue. In several dishes he featured his wife's recipe for mayonnaise, which became so popular that he sold it individually and eventually opened a factory for jarring mayonnaise in 1912. Hellmann lived in New York City until his death in 1971.

Jessica Montesano

Hell's Kitchen. Obsolete term for an area of the West Side of Manhattan that is now called Clinton and Midtown West, bounded to the north by 59th Street, to the east by Eighth Avenue, to the south by 30th Street, and to the west by the Hudson River. In colonial times most of the area was covered by forest and farmland. At the end of the eighteenth century the Hopper family owned the land north of the Great Kill (which met the Hudson at what is now 42nd Street); land south of the Great Kill to what is now 32nd Street was covered by the Glass House Farm, which contained a glass-bottle factory. During the first half of the nineteenth century these properties were divided into lots; a railroad station opened at 11th Avenue and 30th Street in 1851, and soon there were slaughterhouses, warehouses, lumberyards, factories, and tenements throughout. The Irish were the largest ethnic group, but Scots, Germans, and African Americans also lived there. By the end of the Civil War the area was one of the worst slums in the city, known for such notorious gangs as the Gophers. The name Hell's Kitchen was perhaps taken from that of a gang formed in the area in 1868 or was adopted by local police during the 1870s. An African American enclave in the northern part of the neighborhood became facetiously known as San Juan Hill. The Ninth Avenue elevated line was extended about this time. Greeks and eastern Europeans joined the Irish in the area after 1900, followed by African Americans from the South and Puerto Ricans in the 1940s. After the 1950s other immigrant groups moved there, along with a community of actors and artists, who were initially attracted by the close proximity of the theater district, the Actors Studio on West 44th Street, and the huge Manhattan Plaza apartment buildings on West 42nd Street that was built in the 1970s to house artists.

Several public works projects were undertaken during the 1930s, including the West Side Highway, the Lincoln Tunnel, the New York Central Railroad West Side Improvement Project, and the Port Authority Bus Terminal. Many families were displaced and tenements destroyed at this time, and Paddy's Market, a well-known pushcart market, was forced to move in 1938 from the area under the Ninth Avenue elevated line between 38th and 42nd streets; the elevated line closed in 1940. After two teenage boys were killed in gang wars in 1959, local organizations sought to improve the image of the neighborhood by calling it Clinton (after DeWitt Clinton Park, between 52nd and 54th streets west of 11th Avenue). During the 1960s, with the decline of the ocean liner, much of the waterfront and the piers were abandoned, and most of the housing in the northern section was demolished to make way for Lincoln Center and related developments. The creation of a Special Clinton District (SCD) in 1974 blocked changes for almost 20 years by trying to preserve the low-density nature of the neighborhood and requiring special permits for any construction. In the 1980s efforts were accelerated to renovate the neighborhood as a fashionable

Hell's Kitchen, Ninth Avenue

area, and a series of high-profile convictions reduced the influence of the Irish gang the Westies. The neighborhood slowly lost its warehouses, Irish bars, and ramshackle tenements as it became trendy during the 1990s and the early years of the twenty-first century; the booming economy and intensified demand for residential and commercial spaces led to gentrification. Zoning rules were relaxed after 2001, and the building boom in the neighborhood resulted in many large-scale projects, including the Hearst Tower at Eighth Avenue and 56th Street. Many buildings were converted to cooperatives and condominiums; television studios producing such shows as Comedy Central's *Daily Show* moved into the area; and cruise ships returned to docks on the West Side. The Intrepid Sea-Air-Space Museum, aboard an aircraft carrier from World War II docked at Pier 86 on West 46th Street, was opened in 1982 and became a popular tourist attraction; it was closed for renovations in 2006 and reopened in 2008. In the early twenty-first century the neighborhood features a wide array of cultural attractions, such as the Alvin Ailey American Dance Theater, CBS Broadcast Center, and Sony Music Studios. The area is also famous for its many restaurants and the numerous international food stores lining Ninth Avenue. The rough-and-tumble reputation of the neighborhood was celebrated in popular culture, notably in the ballet "Slaughter on Tenth Avenue" (from the musical *On Your Toes* [1936]) and the musical *West Side Story* (1957).

Lisa Keller, George Winslow

Helmsley, Harry B(rakmann) (*b* New York City, 4 March 1909; *d* Scottsdale, Ariz., 4 Jan 1997). Real estate developer. He grew up in the Bronx. With Leon Spear, a manager of properties in the garment district, he formed Helmsley–Spear in 1955. The firm became the city's largest in the business, and in 1961 it bought the Empire State Building in a complicated leaseback arrangement with the Crown family of Chicago (the owners of the building) and the Prudential Insurance Company (the owners of the land). As a partner of Lawrence Wien, Helmsley bought several valuable office buildings and hotels, including the Fisk and Lincoln buildings and the Plaza Hotel. Later in the 1960s he bought Wien's financial interest in the Empire State Building as well as several of the city's leading real estate brokerage and property management firms; he then erected the Pfizer Building and 1 Penn Plaza. In 1969 he bought the Furman–Wolfson real estate trust for $165 million, thus gaining ownership of 30 large buildings in New York City, Chicago, and Los Angeles. In 1972 he divorced his first wife of 32 years and married one of his employees, Leona Roberts; she became the president of the Harley and Helmsley Hotels, a subsidiary of Helmsley–Spear that bought and refurbished 21 hotels in the city, including the Villard Houses (renamed the Helmsley Palace) and the Harley (renamed the Helmsley). By the 1980s the Helmsleys' real estate assets were valued at more than $1 billion. The couple was indicted for tax evasion and mail fraud in 1988; he was declared incompetent to stand trial, but she was convicted of evading $1.2 million in federal taxes.

Richard Hammer, *The Helmsleys: The Rise and Fall of Harry and Leona* (New York: New American Library, 1990)

Lisa Gitelman, Marc A. Weiss

Helmsley [Roberts; née Rosenthal]**, Leona (Mindy)** (*b* Marbletown, N.Y., 4 July 1920; *d* Greenwich, Conn., 20 Aug 2007). Hotel and real estate executive. She worked in real estate for several years before marrying billionaire Harry B. Helmsley in 1972. As the president of Harley and Helmsley Hotels, a subsidiary of his firm that managed 21 hotels in New York City, she became widely known for a series of advertisements that portrayed her as an exacting supervisor intolerant of the slightest imperfections in hotel furnishings. Indicted for tax evasion in 1988, she was convicted of evading $1.2 million in federal taxes and sentenced to four years in prison after a celebrated trial at which many disgruntled employees testified about the Helmsleys' financial dealings and about construction work done on their mansion in suburban Greenwich, Connecticut. One witness quoted her as having said that "only the little people pay taxes." In her will, she left $12 million to her dog.

Richard Hammer, *The Helmsleys: The Rise and Fall of Harry and Leona* (New York: New American Library, 1990)

Henderson, Fletcher (Hamilton, Jr.) [Smack] (*b* Cuthbert, Ga., 1 Dec 1897; *d* New York City, 29 Dec 1952). Bandleader, arranger, and pianist. After settling in New York City he toured with the singer Ethel Waters (1921–22) and recorded accompaniments for blues singers. At the Roseland Ballroom (on Broadway at West 51st Street) he led an innovative big band from 1924 that included the cornetist Louis Armstrong (1924–25), the tenor saxophonist Coleman Hawkins, and the arranger Don Redman. Until the late 1920s this was acclaimed as the best jazz band in New York City, but Henderson was indifferent to success. The membership changed often and in 1934 the group disbanded. His own arrangements, including *King Porter Stomp,* were crucial to the great popularity of Benny Goodman's big band in 1935. From 1936 he resumed working as a leader, except for a period as a staff arranger for Goodman.

Barry Kernfeld

Henderson, Skitch [Lyle Russell Cedric] (*b* Birmingham, England, 27 Jan 1928; *d* New Milford, Conn., 1 Nov 2005). Pianist, conductor, and composer. He started playing the piano at the age of four under the tutelage of his aunt. After playing in roadhouses in the Midwest, including a 1937 MGM tour with Judy Garland, he moved to New York City to conduct the National Broadcasting Company (NBC) Symphony Orchestra. After World War II he worked as a music director for NBC radio, including for *The Philco Hour with Bing Crosby* (1948–55); Crosby allegedly gave Henderson the nickname "Skitch" for his remarkable ability to quickly transcribe music. Switching over to NBC television, he led the band for both *The Tonight Show* (1962–66) and *The Today Show.* He also released hundreds of recordings, including a groundbreaking version of George Gershwin's *Porgy and Bess,* for which he won a Grammy Award in 1963. In 1983 he founded the New York Pops Orchestra, a nonprofit orchestra that specializes in American pop music; he served as both director and conductor of the orchestra until his death.

Sarah Wansley

Hennock, Frieda (Barkin) (*b* Kovel, Poland [now Ukraine], 27 Dec 1904; *d* Washington, D.C., 20 June 1960). Attorney and public official. She attended Morris High School in the Bronx and graduated from Brooklyn Law School in 1924. From 1926 to 1948 she worked as a criminal and corporate lawyer in New York City. She was appointed commissioner of the Federal Communications Commission by President Harry Truman in 1948. She was the first female commissioner and served until 1955; during her tenure she successfully lobbied for the agency to set aside permanent educational stations for public broadcasting.

Jessica Montesano

Henri, Robert [Cozad, Robert Henry] (*b* Cincinnati, 25 June 1865; *d* New York City, 12 July 1929). Painter and teacher. Brought up in the western United States, he studied at the Pennsylvania Academy of the Fine Arts in Philadelphia and later in Paris. After returning to Philadelphia he became the teacher of the young painters John Sloan, George B. Luks, William Glackens, and Everett Shinn, all of whom followed him to New York City

after he moved there in 1900. He taught at the New York School of Art from 1902 to 1908 and then opened his own school. Rejecting impressionism and the genteel styles of painting favored by traditionalists, he urged the National Academy of Design to include the work of young realist painters in its annual shows. With Sloan in 1908 he organized an exhibition at the Macbeth Galleries of The Eight, which stirred controversy for its celebration of unconventional styles and its depictions of urban, working-class life. Henri's best-known works include *Laughing Child* (1907). His lecture notes and talks were published as *The Art Spirit* in 1930.

Patricia Hills

Henri Bendel. Firm of specialty retailers. In 1896 Henri Bendel (*b* Lafayette, La., 1858; *d* 1939) opened a small millinery shop at 10 Bond Street, which he moved to 67 East Ninth Street in the following year, to Fifth Avenue in 1906, and to 10 West 57th Street during World War I. The firm operated a number of boutiques that sold hats, women's clothing, perfumes, cosmetics, and home furnishings. The elegant, imaginative store window designs set the standard for other designers. The retailing firm The Limited, Inc. (later renamed Limited Brands) bought Bendel in 1985. In 1991 its main department store moved to a building at 712 Fifth Avenue, with three-story windows designed by the French glass designer René Lalique.

Leslie Gourse, Kenneth T. Jackson

Henry Holt and Company. Firm of book publishers, formed in 1866 in New York City by Henry Holt and Frederick Leypoldt as the firm of Leypoldt and Holt; in 1873 it became Henry Holt and Company when Holt became the sole owner. The firm published literary works and a highly regarded list of books by prominent nineteenth-century American scientists and social scientists. It was also a leading publisher of poetry (notably that of Robert Frost) and of textbooks. In 1960 the firm strengthened its educational division by merging with Rinehart and Company and John C. Winston Company to form Holt, Rinehart and Winston. The new firm was acquired in 1967 by the Columbia Broadcasting System (CBS), which in 1985 sold its trade division of the company to the German firm Verlagsgruppe Georg von Holtzbrinck. The new trade house formed by this transaction reassumed the name Henry Holt and Company. CBS sold the school and college departments, still known as Holt, Rinehart and Winston, to Harcourt Brace Jovanovich in 1986. In the 1990s Henry Holt had offices at 115 West 18th Street in Manhattan; in the early twenty-first century, the Macmillan group of publishers, of which Henry Holt is a part, had relocated to the Flatiron Building at 175 Fifth Avenue.

Eileen K. Cheng

Henry Street Settlement. Settlement house. It had its beginnings in the work of Lillian Wald and Mary Brewster, who from 1893 provided nursing care at home for the indigent on the Lower East Side. Their work was financed by Betty Loeb and her son-in-law, the financier Jacob Schiff. As other nurses joined them, their need for larger quarters led them to move in 1895 to a building at 265 Henry Street that became known as the Henry Street Settlement. Within a decade of its founding more than 20 nurses worked for the settlement, which was the first institution of its kind to have a visiting nurse service. They lived in the neighborhoods where they worked and by the turn of the twentieth century attended to 4500 patients, made 35,035 home visits and 3542 convalescent visits, and gave 28,809 first-aid treatments. Their nursing services were available throughout the city from 9 a.m. to 6 p.m., seven days a week. Patients were usually visited daily or as often as needed; night nurses, cleaning, and laundry were provided for the gravely ill. The nurses ran convalescent homes and first-aid stations, where they treated burns, infections, and injuries. In some sections of the city they provided assistance 24 hours a day to women in childbirth and held health conferences for the mothers of infants. The settlement had 46 residents by 1911, of whom 41 were women. By 1913 it occupied seven houses serving the Lower East Side and had branches in uptown Manhattan and the Bronx. Its citywide visiting nurse service made 200,000 home visits, and settlement clubs for boys, girls, and mothers had 3000 members and 25,000 participants in various programs.

The settlement operated a dance school where national and folk dances were revived, a playground (one of the first in the nation), a gymnasium, debating clubs, literary societies, a kindergarten, a savings and loan fund, and a cooperative food store. The year 1915 marked the opening of the Neighborhood Playhouse (now at 340 East 54th Street). This became the first theater in the United States to present a play by a black author with a black cast before a racially integrated audience (*Rachel,* by Angelina Weld Grimké), and by the 1920s the playhouse was a leading experimental theater. Wald retired in 1933, when the staff included 265 nurses. The nursing service, which achieved independent status in 1944, moved to 107 East 70th Street and became known as the Visiting Nurse Service of New York. In its first century of operation the settlement saw the ethnic composition of the Lower East Side change from eastern and central European to mostly Asian and Hispanic. The building on Henry Street was designated a National Historic Landmark in 1989. In the early twenty-first century the Henry Street Settlement occupied 20 sites, had a budget of more than $30 million, and served 60,000 people a year.

Karen Buhler-Wilkerson

Henry Street Settlement, 2009

Henson, Jim (James) Maury (*b* Greenville, Miss., 24 Sept 1936; *d* New York City, 16 May 1990). Puppeteer, television producer, and filmmaker. He moved with his wife to New York City in 1963 where he began to produce shows with fictional puppet characters he called Muppets. He introduced the concept of portraying puppets on television with the puppeteer working off screen. In 1968 Henson began collaboration on *Sesame Street,* a television program with both live actors and Muppets that dominated children's public television for several decades. Kermit, a green frog Muppet, was Henson's signature creation, and Henson brought him along for most television appearances and interviews. Henson continued to make films and television shows and appearances for his Muppets until his sudden death from complications related to pneumonia. A large public memorial service, which included numerous musical performances by Muppet characters, was held for him at the Cathedral of St. John the Divine in upper Manhattan.

David White

Henson, Matthew Alexander (*b* Charles County, Md., 8 Aug 1866; *d* New York City, 9 Mar 1955). First African American to set foot on the North Pole on 6 April 1909. He later became the first African American member of the Explorers Club, despite being previously excluded, and once worked at the American Museum of Natural History. After his North Pole expedition, Henson worked in a garage in Brooklyn while Commander Robert E. Perry, with whom Henson made the voyage, received numerous accolades for the exploration. African American politician Charles Anderson wrote to President William Taft in 1913 and arranged for Henson's civil service appointment at the New York Customs House. He worked there as a messenger boy for more than 20 years. He was buried at Woodlawn Cemetery in the Bronx after being denied burial rights at Arlington National Cemetery in Washington, D.C., but in 1988 his remains were moved, with those of his wife, to Arlington.

Kathleen Benson

Hepburn, Katharine (Houghton) (*b* Hartford, Conn., 12 May 1907; *d* Old Saybrook, Conn., 29 June 2003). Actress. She made her debut on Broadway under the name Katherine Burns in *Night Hostess* in September 1928 before appearing in November under her own name in *These Days* at the Cort Theatre. After working as an understudy and acting in many plays that closed quickly, she had her first long run in *The Warrior's Husband* at the Morosco Theater in 1932, in which she played an Amazon warrior and made her entrance bounding down stairs with a stag over her shoulders. The exuberance and success of this performance won her a contract with Radio–Keith–Orpheum (RKO) for George Cukor's film *A Bill of Divorcement* (1932). While filming *Woman of the Year* in 1941 she began a relationship with the married Spencer Tracy, which lasted until he died in 1967; she made nine motion pictures with him. One of her most explicitly feminist works, *Adam's Rib* (1949, with Tracy), was shot in New York City. In 1962 she appeared in the film adaptation of Eugene O'Neill's *Long Day's Journey into Night* (1962), directed by Sidney Lumet, which was rehearsed on Second Avenue and shot in a house on City Island. Hepburn received Academy Awards for her films *Morning Glory* (1933), *Guess Who's Coming to Dinner* (1967, with Tracy), *The Lion in Winter* (1968), and *On Golden Pond* (1981). Her autobiography *Me: Stories of My Life* was published in 1991. For many years Hepburn lived at 244 East 49th Street in the Turtle Bay neighborhood of Manhattan. After her death that block was renamed Katharine Hepburn Place in her honor.

Grai St. Clair Rice

Herald Square. Section of midtown Manhattan, centered at the intersection of Sixth Avenue, 34th Street, and Broadway and encompassing Greeley Square. The area is named for the *New York Herald*, which from 1895 to the 1920s had its headquarters in a two-story, arcaded Italianate building on 35th Street designed by the firm of McKim, Mead and White. It became the heart of the Tenderloin area during the 1870s and 1880s after the Sixth Avenue elevated line was built, and it was known for theaters, dance halls, seafood restaurants, hotels like the Herald Square Hotel and the McAlpin Hotel, and the Manhattan Opera House. The dry-goods firm of R. H. Macy bought and razed the opera house in 1901 and in 1902 opened its flagship department store. Other stores that moved to the area included Gimbel's, Saks Fifth Avenue, and Ohrbach's, making it a major shopping area. In the early twenty-first century only Macy's remained. In the center of the square is the Bennett Clock, named for James Gordon Bennett, Jr., publisher of the *Herald*.

Michele Herman

Herbert, Victor (August) (*b* Dublin, 1 Feb 1859; *d* New York City, 26 May 1924). Composer. He studied the cello and composition in Germany and moved to New York City in 1886 with his wife, Therese, a noted Viennese opera singer. He was a founder of the New York String Quartet and formed an orchestra for light music that came to be highly regarded. From 1898 to 1904 he conducted the Pittsburgh Symphony; he was also a guest conductor of the New York Philharmonic Society. Among his symphonic compositions are two cello concertos (1885, 1894) and the tone poem *Hero and Leander* (1901). In his mid-30s he began writing operettas, a genre at which he excelled: *Babes in Toyland* (1903), *Mlle Modiste* (1905), *The Red Mill* (1906), and *Naughty Marietta* (1910) were all successfully produced in New York City. He also wrote one grand opera, *Natoma* (1911), and a one-act opera, *Madeleine* (1913), and in 1916 composed music for the film *The Fall of a Nation*. Among his finest songs are "Kiss Me Again" (1905), "In Old New York" (known also as "The Streets of New York," 1906), "Ah, Sweet Mystery of Life" (1910), "I'm Falling in Love with Someone" (1910), and "Italian Love Song" (1910). He wrote almost 40 operettas, known for their memorable tunes, adept orchestrations, full-sounding textures, resourcefully manipulated harmony and rhythm, and waltz and march meters reflecting his European background. Although the tonal polish of Herbert's songs made him the most popular composer of his day in New York City, his melodies have extended ranges, demanding leaps, and chromatic alterations that make them more difficult to sing than most music from Tin Pan Alley.

Nicholas E. Tawa

Hernández, Victoria (*b* Aguadilla, Puerto Rico, 1897; *d* Trujillo Alto, Puerto Rico, 1998). Entrepreneur. A pioneer businesswoman, she was critical in the development of the city's Latin music industry. She arrived in New York City in 1919 with her brothers, Jesús and Rafael (a composer). Her first store, Almacenes Hernández, was El Barrio's first Latin music record store; it opened in 1927 at 1735 Madison Avenue but soon moved to 1724 Madison to provide a backroom for Victoria's piano lessons and Rafael's composing. Victoria became an intermediary between musicians and recording labels, among them Victor and Decca Records. She managed tours and bookings for Cuarteto Victoria, Rafael's group, and promoted her own record label, Hispano. Her second music store, Casa Hernández, at 786 Prospect Avenue in the South Bronx, opened in 1941, selling records and musical instruments on one side and women's dresses on the other. She married Gabriel Oller, who was noted for founding the Spanish Music Center in East Harlem and the Dynasonic record label.

Virginia Sánchez Korrol

Herrmann, Bernard (*b* New York City, 29 June 1911; *d* North Hollywood, Calif., 24 December 1975). Composer. His family lived at 214 East 15th Street; he attended DeWitt Clinton High School, graduated from New York University, and studied at the Julliard School. In 1933 he conducted the first concert of the New School's New Chamber Orchestra, and the next year he began working as a staff conductor at Columbia Broadcasting System (CBS). By 1943 he was the chief conductor of the CBS Symphony Orchestra. During that time he lived at 325 East 57th Street. He was best known for his scores of all of Alfred Hitchcock's films, notably *Psycho* (1960), *The Man Who Knew Too Much* (1956), and *Vertigo* (1958). He composed scores for television, radio shows, theater, and movies that included *Citizen Kane* (1941; his first film), *Cape Fear* (1962), and *Taxi Driver* (1976; his last film).

Jessica Montesano

Herter Brothers. Firm of furniture manufacturers and interior decorators, formed in 1864 by Gustave Herter (1830–98) of Stuttgart, Germany, and his half-brother Christian (1839–83). Its predecessor was a shop at 48 Mercer Street opened in 1851 by Gustave, who moved to the city in 1848, reportedly worked for the firm of Tiffany, Young and Ellis, and had brief partnerships with Auguste Pottier and Erastus Bulkley. The shop expanded to 547 Broadway and produced furniture, architectural woodwork, and decorations for banks and private residences in the city between 1858 and 1864. Christian joined the firm after studying in Stuttgart and possibly in Paris before moving to the city in 1859. In the years after the Civil War, Herter Brothers became known nationwide for the craftsmanship and innovative designs of its furniture. Christian acquired his brother's interest in the firm in 1870, and under his direction from 1870 to 1883 it became known for suites of furniture in an Anglo-Japanesque style commissioned by such customers as the financiers Jay Gould and Mark Hopkins. The last and most important commission he accepted was the design and interior decoration of William H. Vanderbilt's house at Fifth Avenue and 51st Street (1879–82); among the pieces he created for it was a mother-of-pearl inlaid rosewood library table (now in the Metropolitan Museum of Art). After he withdrew, the firm continued under William Baumgarten until 1891 and William Gilman Nichols until it ceased operations in 1906.

Katherine S. Howe, Alice Cooney Frelinghuysen, Catherine Hoover Voorsanger, et al., *Herter Brothers: Furniture and Interiors for a Gilded Age* (New York: Harry N. Abrams, in association with the Museum of Fine Arts, Houston, 1994)

Deborah Dependahl Waters

Herts and Tallant. Firm of architects. Established by Henry Beaumont Herts (1871–1933) and Hugh Tallant (1869–1952), it was best known for innovative theater designs. Herts and Tallant's first work was for socially progressive institutions, including the Harmonie Club (1898) and the Aguilar Library (1899). The firm was introduced to the theater world by Herts's sister, Alice Minnie Herts, an early director of the Educational Alliance who later established the pioneering Children's Educational Theater. Combining beaux-arts aesthetics and modern design principles with such technical innovations as cantilevered balconies, the firm's designs for theaters were nationally celebrated. Among these were the New Amsterdam Theatre (1903), the most important example in the city of art nouveau; the New Lyceum Theater (1903), in an ornate beaux-arts style; the New German Theater, in collaboration with art nouveau poster artist Alfonse Mucha (1908; demolished); and the Brooklyn Academy of Music (1908), featuring unprecedented terracotta decoration. After the partnership between the two men ended in 1911, Herts alone designed the home of the New York Giants baseball team, the Polo Grounds (1911; demolished); other theaters, including the Shubert (1913) and the Booth (1913); several synagogues; and Yeshiva University (1928).

Peter L. Donhauser

Heschel, Abraham J(oshua) (*b* Warsaw, 11 Jan 1907; *d* New York City, 23 Dec 1972). Rabbi, theologian, and author. He was born to a distinguished Hasidic family and received his doctorate in philosophy from the University of Berlin in 1933. In 1940 he fled the Nazis and moved to the United States, where he taught at Hebrew Union College in Cincinnati. He moved in 1945 to New York City and joined the faculty of the Jewish Theological Seminary of America, where he remained for 27 years (living at 425 Riverside Drive). Later he became one of the best-known and most widely respected Hasidic scholars and also worked to bring about greater ecumenism between different branches of Judaism and between Jews and Christians. In 1964 he risked the anger of Jews by meeting with Pope Paul VI, as a result of which the second Vatican Council issued the statement *Nostra Aetate* condemning anti-Semitism

and affirming the enduring validity of Judaism. In the following year Heschel became the first rabbi to receive a visiting professorship at Union Theological Seminary. He was also active politically and spoke repeatedly against racism and the Vietnam War. In 1965 he marched with Martin Luther King, Jr., in Selma, Alabama, and he was also a chairman of Clergy Concerned about Vietnam. Heschel wrote more than 20 books, among them *God in Search of Man: A Philosophy of Judaism* (1955).

John C. Merkle, *The Genesis of Faith: The Depth Psychology of Abraham Joshua Heschel* (New York: Macmillan, 1985); Donald J. Moore, *The Human and the Holy: The Spirituality of Abraham Joshua Heschel* (New York: Fordham University Press, 1989)

Edward T. O'Donnell

Heterodoxy. Women's luncheon and lecture club formed in Greenwich Village in 1912 by the former Unitarian minister Marie Jenney Howe. Over the years it enlisted 110 known members, including the social reformer Crystal Eastman; the suffragist Inez Millholland Boissevain; the schoolteacher and activist Henrietta Rodman; the anarchist Rose Strunsky; the socialist, peace activist, and suffragist Katherine Anthony; the lawyer and theatrical producer Helen Arthur; the novelist and playwright Ida Wylie; the novelist and teacher Helen Hull; the suffragist and prison reformer Paula Jakobi; and the writer and radio commentator Mary Margaret McBride; as well as Elisabeth Irwin, director of the Little Red School House in Greenwich Village; S. Josephine Baker, director of the New York City Bureau of Child Hygiene; and the writer Mabel Dodge, who described the members as "unorthodox women . . . who did things and did them openly." The group met every other Saturday in local restaurants to discuss controversial topics. In 1915 Edith Lees, wife of Havelock Ellis, spoke to the club, as did Gertrude Stein and Alice B. Toklas in 1934. Although most members were feminists, the club welcomed women regardless of their politics, background, or sexual orientation. It remained active until 1940.

Judith Schwarz, *Radical Feminists of Heterodoxy: Greenwich Village, 1912–1940* (Lebanon, N.H.: New Victoria, 1982)

Jan Seidler Ramirez

Hewitt, Abram S(tevens) (*b* Haverstraw, N.Y., 31 July 1822; *d* New York City, 18 Jan 1903). Mayor and industrialist. He graduated from Columbia College in 1842 and in 1845 opened an iron mill in Trenton, New Jersey, with Edward Cooper, a classmate whose father, the industrialist Peter Cooper, financed the operation. He produced a variety of new iron and steel products and invested in many firms, often serving on their boards. In 1855 he married Peter Cooper's daughter Sarah and began supervising the construction of the Union for the Advancement of Science and Art (later known as Cooper Union); he was chairman of its board of trustees until 1903. Influenced by Samuel J. Tilden, he began his political career as a Democrat and was active in the campaign against William M. "Boss" Tweed. He was elected to five congressional terms beginning in 1874 and was chairman of the Democratic National Committee in 1876 during Tilden's presidential campaign (when Peter Cooper mounted a rival campaign as the candidate of the Greenback Party). Backed by Tammany Hall in 1886, he was elected mayor in a dramatic campaign against the radical economic reformer Henry George and Theodore Roosevelt, the future president. Once in office he struggled to achieve his long-sought goals to unify business, labor, and taxpayers and to end corruption, improve municipal services (particularly rapid transit), and help the poor. In 1886 Hewitt ended his association with Tammany Hall after a dispute over patronage, and he was defeated for reelection. He remained active in philanthropic affairs and business to the end of his life.

High Bridge. Oldest of the great bridges in New York City, spanning the Harlem River at 173rd Street. It was built between 1837 and 1848 to bring water to the city from the reservoirs of the Croton Aqueduct system to the north. The original High Bridge was Roman in conception, and many artists portrayed its massive stone arches. In the early 1920s a single span of steel replaced the stone piers in the riverbed because they interfered with navigation. A pedestrian walkway, closed since 1960, offered a fine view of the entire area. The High Bridge Watch Tower on the Manhattan side of the bridge is a state landmark. The bridge was closed in 1970, but in 2007 Mayor Michael Bloomberg announced that it would be restored and reopened and set aside about $65 million for the project; in 2010 the New York City Parks Department awarded a $4 million contract to Lichtenstein Consulting Engineers to design the renovation.

Kenneth T. Jackson

Highbridge. Neighborhood in the southwestern Bronx, bounded to the north by the Cross Bronx Expressway, to the east by Jerome Avenue and the Edward L. Grant Highway, to the south by East 161st Street, and to the west by the Harlem River; it is about six blocks wide and 10 blocks long and lies northwest of Yankee Stadium. The area is named for the High Bridge (the oldest extant bridge in New York City) built across the Harlem River between 1837 and 1848 to carry water from the Croton Aqueduct to Manhattan. It was rural and in the mid-nineteenth century became a resort, accessible by river steamer and favored by many residents of Manhattan. Bridges to Manhattan for railroads and other vehicles were built during that time, but development accelerated after 1900 with the introduction of rapid transit service. The Jerome Avenue elevated line (1918) included a spur connection to the Ninth Avenue elevated line that passed directly through the area; the Grand Concourse subway (1933) had a stop nearby at 161st Street. During these

View of High Bridge from the Bronx to Manhattan at 174th Street, ca *1900*

years many five-story walkup apartment buildings and six-story buildings with elevators were erected. By 1940 the rapidly growing population consisted mostly of middle- and working-class descendants of Irish and Jewish immigrants. During the 1950s and 1960s the New York City Housing Authority built several high-rise apartment buildings overlooking the Harlem River. Many residents moved to the suburbs, and the population became predominantly African American and Latino. Scores of apartment buildings were abandoned by landlords during the 1970s as arson fires ravaged the area and the population declined; from the 1980s on the area stabilized, and some of the older housing was refurbished. In the early twenty-first century many new immigrants from Africa moved into the community.

Peter Derrick

Highland Park. Neighborhood in east central Brooklyn, bounded to the north by the border with Queens County, to the east by Force Tube Avenue, to the south by Liberty Avenue, and to the west by Pennsylvania Avenue; it is nearly coextensive with Cypress Hills, which is bounded to the east by Eldert Lane and to the south by Atlantic Avenue. It is named for a park of 141 acres (57 hectares) at its northern edge, which in the twenty-first century has been left to return to a natural state and is now one of few natural urban forests. The neighborhood was developed in the second half of the nineteenth century and by the 1890s was a large suburb. It was neglected by the 1970s, and Jamaica Avenue was lined with abandoned houses and empty lots. During the 1980s the neighborhood and its environs attracted many immigrants from Guyana, the Dominican Republic, and Jamaica. By 2000 the population was largely black, with a smaller number of Latin Americans, Italians, and other whites. Most of the housing in the area consisted of one- and two-family detached houses, along with some apartment buildings. Fulton Street and Jamaica Avenue are the main thoroughfares.

Ellen Marie Snyder-Grenier

High Line. Section of the former West Side Line elevated freight railroad, from Gansevoort Street to West 34th Street running 13 miles (21 kilometers) mostly along 10th Avenue. The West Side Line was used starting in 1847 to transport goods to and from the west side harbor on the street level. In 1929 the city elevated the tracks to its present 30-foot (9-meter) height, and it opened in 1934. By the 1960s the High Line was seldom used, and it was abandoned in 1980. The tracks became overgrown until the 1990s when neighborhood activists formed Friends of the High Line. The city-owned space was saved from demolition and in 2006 construction began for turning the High Line into an urban park and promenade. In June 2009 the first section opened, from Ganesvoort Street to 20th Street.

highways. See Brooklyn–Queens Expressway, FDR Drive, Streets and highways, and West Side Highway.

Hill and Knowlton. Public relations firm established in Cleveland in 1927 by John W. Hill, who in 1933 formed a partnership with Donald Knowlton. The firm opened a branch in New York City in 1938. During the mid-1940s Hill reorganized the firm and moved its headquarters to New York City. It later became a subsidiary of the firm J. Walter Thompson. Hill and Knowlton was the largest public relations agency in the United States until 1984. After acquiring the third-largest agency, Carl Byoir and Associates, in 1986 it was again the largest firm in its field, with combined revenues of more than $125 million. Some of its clients have included the American Heart Association, the government of Kuwait, the tobacco industry, and the Catholic Church in America. In 2010 its headquarters were at 909 Third Avenue in Manhattan.

Hillcrest. Neighborhood in central Queens, lying mostly in Jamaica and partly in Flushing and bounded to the north by Union Turnpike, to the east by Jamaica Estates, to the south by Hillside Avenue, and to the west by 164th Street. It was developed on 200 acres (80 hectares) of land in the spring of 1909 by William F. Wyckoff, who formed the Hillcrest of Jamaica Company. After the first two sections were prepared along Union Turnpike, development was hastened by the incorporation on 9 March 1910 of the Jamaica–Hillcrest Company under the direction of Bryan L. Kennelly. In succeeding months the company paved streets north of Hillside Avenue; installed gas, water, and electricity; and built houses ranging in price from $6500 to $12,000. Lots were sold at auction from 1910 to 1915, and by 1913 there were 60 houses. Further development was aided by the growth of Jamaica Estates. The opening of the elevated line along Jamaica Avenue in 1918 brought Hillcrest within the five-cent fare zone. The sale of houses in the northern section increased after Grand Central Parkway opened in 1933. By World War II Hillcrest had become densely built up with comfortable one-family houses. It became more ethnically diverse during the 1970s. About one-fifth of the immigrants who settled in the area in the 1980s were from Guyana; others were from Haiti, China, India, and Colombia. As of the early twenty-first century Hillcrest had developed a substantial Orthodox Jewish population.

Vincent Seyfried

Hillman, Sidney (*b* Zagare, Russia, 1887; *d* New York City, 10 July 1946). Labor leader. A refugee of the revolution of 1905 in Russia, he devoted himself to the labor movement. In 1914 he moved to New York City, where he became the first president of the Amalgamated

Clothing Workers of America, which challenged the timidity, nativism, and craft elitism of the men's clothing trade union affiliated with the American Federation of Labor (AFL). For this he earned the enmity of Samuel Gompers, president of the AFL, but gained the support of such progressive reformers as Louis D. Brandeis, Lillian Wald, Florence Kelley, and Fiorello H. La Guardia, who were impressed with his commitment to "industrial democracy" and the "new unionism." Hillman became known as the country's foremost "labor statesman" for introducing a new method of collective bargaining and innovations such as unemployment insurance, the union bank, and affordable cooperative housing. He worked closely with Governor Franklin D. Roosevelt and his aides, including Felix Frankfurter, Frances Perkins, and Rexford Tugwell. A ready supporter of the New Deal, he was appointed to the National Industrial Recovery Board by President Roosevelt, who relied on his political advice about labor and social welfare legislation. Hillman recognized the unique opportunity of the situation and with John L. Lewis formed the Committee for Industrial Organization (CIO; later renamed the Congress of Industrial Organizations) to introduce unionism to American heavy industry. He carefully built a relationship between the CIO and the Democratic Party and in New York City helped to form the American Labor Party, which proved more effective than the local Democratic machine in mobilizing the electorate. After a strike at Woolworth's department store in 1937, he helped to form the Department Store Workers Organizing Committee. During World War II he established the Political Action Committee of the CIO, which strengthened the alliance between the Democratic Party and the labor movement that endured for a quarter-century. At his death Hillman was recognized as a leader of both the national labor movement and the anti-fascist coalition abroad.

Steve Fraser

Hillquit, Morris (*b* Riga, Latvia, 1 Aug 1869; *d* New York City, 7 Oct 1933). Lawyer and political leader. He moved to New York City in 1886 and built a law practice by working closely with garment workers' unions. A leader of the Socialist Party of America (SPA), he sought election to the U.S. House of Representatives five times. He won 22 percent of the vote in the mayoral election of 1917 and sought the mayoralty again in 1933. Hillquit sought to preserve the SPA and the spirit of socialism in the city in the face of challenges from communism and the New Deal.

Melvyn Dubofsky

Hillside. Neighborhood in east central Queens east of Jamaica, bounded to the north by Hillside Avenue, to the east by 184th Street, to the south by Jamaica Avenue, and to the west by 175th Street. During the 1870s and 1880s it was variously called East Jamaica and Rockaway Junction (after the branch-off of the Rockaway line of the Long Island Rail Road at 178th Street). The developers of the Jamaica Estates extended 178th Street to the railroad; at their urging the railroad opened a station on 15 May 1911 named Hillside for its location at the foot of the terminal moraine below Hillcrest and Jamaica Estates. The name was also given to a group of houses built on surrounding streets between 1922 and 1924 but eventually became disused.

Vincent Seyfried

Hine, Lewis (Wickes) (*b* Oshkosh, Wis., 26 Sept 1874; *d* Hastings-on-Hudson, N.Y., 4 Nov 1940). Photographer. He moved to New York City in 1900 to teach nature study at the Ethical Culture School, where, given a camera as a teaching aid, he later offered classes in photography. One of his first projects at the school was a sympathetic depiction of immigrants at Ellis Island, which inspired him to seek commissions from social agencies; eventually he left the school to pursue a career in social documentation. In 1907 he was made the official photographer for a pioneering sociological study that was published as *The Pittsburgh Survey* (1910–13). Later he became a staff photographer for the National Child Labor Committee, which had its headquarters in New York City. Between 1907 and 1916 his work appeared in exhibitions, periodicals, and brochures sponsored by supporters of child labor laws. After working for a year in the Balkans for the Red Cross (1918–19) he returned to the city to find that social photography was no longer in great demand, and so he produced what he called "work portraits" of workers in various industries. In 1930 he was commissioned to document the construction of the Empire State Building, but throughout the rest of the decade he was employed only occasionally, mainly by the Tennessee Valley Authority, the Rural Electrification Agency, and the Works Progress Administration. Shortly before his death a retrospective exhibition of his photographs at the Riverside Museum briefly revived interest in his work, which treated working-class subject matter with warmth of feeling and visual force. Monographs of his work include *Men at Work: Photographic Studies of Modern Men and Machines* (1932; 2nd edn, enlarged, 1977).

Hines, Gregory (Oliver) (*b* 14 Feb 1946, New York City; *d* 10 Aug 2003, Los Angeles). Tap dancer and actor. He began his dance training early in life, studying alongside his brother Marcus with celebrated Broadway choreographer Henry LeTang from the age of three. At the age of six Gregory appeared with his brother at the Apollo Theater in Harlem with their song and dance act "The Hines Brothers." His Broadway debut came two years later in a 1954 production of *The Girl in Pink Tights* at the Mark Hellinger Theatre. Hines received Tony nominations for his Broadway roles in *Comin' Uptown* (1980), *Sophisticated Ladies* (1981), and *Eubie!* (1992) and won the award for Best Actor in a Musical for *Jelly's Last Jam* (1992). Hines's 1989 performance at Carnegie Hall alongside tap-dance greats like Jimmy Slyde, Arthur Duncan, Steve Condos, and the up-and-coming Savion Glover did much to repopularize the art form in the United States after decades of relative obscurity. Hines became involved in film as well, acting alongside his brother in 1984's *The Cotton Club*—a film set in the 1930s at the popular Manhattan jazz club. Hines was posthumously inducted into the Tap Dance Hall of Fame in 2004.

Patrick Barrett

Hines, James J. (*b* New York City, *ca* 1876; *d* Long Beach, N.Y., 26 March 1957). Politician. A former blacksmith, he became the Democratic leader in 1912 of the 11th assembly district (consisting of Morningside Heights and southwestern Harlem). Although a member of Tammany Hall, he often opposed the reigning boss, Charles F. Murphy. By the mid-1930s he was the most powerful politician in Manhattan, known for his success as a "fixer" and his public friendships with judges and organized-crime figures alike. Hines was eventually prosecuted by Thomas E. Dewey, district attorney of Manhattan, for protecting a numbers racket controlled by Dutch Schultz. He was convicted in 1939 and imprisoned; the case helped to make Dewey a national figure.

Frank Vos

Hinsdale. Name applied to Floral Park from about 1870 to 1890.

HIP. See Health Insurance Plan.

hip-hop and rap. Popular and primarily urban form of music in which one or more performers chant rhyming verses in counterpoint to a highly rhythmic musical accompaniment, usually recorded. Hip-hop evolved in the mid-1970s in the Bronx and other urban centers and became closely associated with African American residents of New York City. Rap, a variant of spoken-word poetry performed against a particular rhythm, is an

integral component of hip-hop and also developed closely in association with African American residents of the city. Hip-hop had many antecedents: patter by Jamaican disc jockeys at open-air parties, between and during musical selections (a practice known as *toasting*); a longstanding black convention of verbal sparring called *the dozens*, characterized by insults and braggadocio; and a tradition in black poetry of consciously evoking jazz, the blues, and popular music in language and orthography, a tradition that comprehends the poetry of Langston Hughes and Sterling Brown; of African American writers such as Amiri Baraka, who from the late 1950s read or improvised texts to musical backing; and of the improvised, militant, black-power declarations of the group the Last Poets in Harlem during the late 1960s.

Hip-hop flourished during the 1970s at parties that resembled the rent parties held in Harlem before the Depression. Using several turntables and recordings by such musicians as James Brown and George Clinton, disc jockeys (DJs) devised elaborate, layered musical patchworks that provided a backing for rapping and dancing. Among the techniques that they mastered was *scratching*, a sound effect created by moving a record clockwise and counterclockwise while the stylus is held against it. At the same time there developed a highly rhythmic, acrobatic form of movement known as *break dancing*. Rap soon evolved from a live genre to a recorded one, as recordings were made of rappers performing over other recordings. Some of the first widely popular rap recordings were made by musicians from New York City, including the Sugarhill Gang ("Rapper's Delight" [1979]) and Grandmaster Flash and the Furious Five ("The Message" [1982]). Although rap began as a true popular music that used inexpensive, widely available resources, it eventually became more complex and increasingly dependent on synthesizers and other sophisticated equipment, particularly with the integration of rap, rhythm, and melody typical of hip-hop. In the mid-1980s the popularity among white audiences of rap songs like "Rock Box" (1984) by Run-D.M.C. made large record companies recognize that rap had commercial potential. As commercial interests changed the nature of rap, the form moved from the streets and small clubs into large commercial venues; eventually, adulterated forms of rap found their way into broadcast advertising. The New York City–based Beastie Boys, a trio of white rappers, achieved high popularity with these new audiences. Def Jam Recordings, started by Rick Rubin and Russell Simmons, emerged as one of the first hip-hop music labels, promoting mostly New York City acts including the Beastie Boys and Run-D.M.C. Simmons became hip-hop's first major entrepreneur, launching a clothing line, Phat Farm. His forays into commercial ventures would be subsequently emulated by rappers Puff Daddy (Sean Combs) and Jay-Z (Sean Carter). In the early 1990s a number of prominent rap musicians continued to be associated with New York City, including LL Cool J (James Todd Smith), Big Daddy Kane (Antonio Hardy), KRS-One (Lawrence Krishna Parker), Rakim (Rakim Allah), and the groups Public Enemy and A Tribe Called Quest. The primary city radio station to emerge was WBLS but was later surpassed by WQHT, more popularly known as Hot 97. During this period, mix tapes—cassette tapes often releasing songs from an artist's upcoming album, unreleased songs, or exclusive freestyles—were a unique part of the New York City music scene. DJs Tony Touch, Doo Wop, Kid Capri, DJ Clue, and countless others were entrenched in the promotion of city artists.
